Everybody loaded with Gold, from the Oldest to the Youngest. A Magnificent Dowry—Twelve Loads of Fine Silver.

A NOVEL TRAP FOR PIRATES. A MINE TURNING OUT FOURTEEN MILLIONS STERLING PER ANNUM.

See Mr. THOS. THOMPSON'S Circular, 11th December.

PRESS OPINIONS OF THIS CIRCULAR.

Life, 6th December.

In our advertisement columns will be found Mr. Thos. Thompson's monthly circular, which contains useful information to intending investors.

Citizen, 1st December.

Clearly there are advantages in the process known as hydraulicing over all other classes of gold mining. Hydraulic mining, as Mr. Thompson, in his Mining and Investment Circular, points out, consists only in the disintegration of auriferous gravel with the help of an enormous quantity of water falling from an immense height through pipes or hose, and the automatic collection of the gold by means of the rough bottom, into which it sinks, of a sluice down which the gravel passes, together with the water used in its treatment. The system has the advantage over quartz mining in the large quantity of so-called gold dirt, which can be dealt with at the time, and the extremely low cost of the operation, seldom exceeding more than one penny to threepence per ton, thus yielding profits from ground which, under any other system, could not be made to pay. In this way and under this system it is not surprising that the Tetuan gold shares have risen accordingly, and, judging by what the *Financial News* says, that "the Tetuan will before long take its place among the dividend-paying list," and the *Money Market Review*, that "the confidence in the Tetuan gold shares appears to be well founded." The anticipation is not unlikely to be realised.

Stock Exchange, 15th September.

Mr. Thomas Thompson, the well-known mining broker, of 8½, Angel Court, will soon be among the first of the outside dealers. He issues a fortnightly circular, and judging by the general character of it, it is not surprising that he finds business increasing. Most of his predictions appear to be very near the mark where they do not exactly hit it.

Stock Exchange, 24th November.

We have to acknowledge the receipt of a copy of Mr. Thomas Thompson's Investment Circular. It is brimful of information, and has something to say about almost every mining share in which there are considerable transactions, besides a useful and wide review of the stock markets. Mr. Thompson has one advantage over a member of the House, in that he is not debarred from publicly expressing his opinions of the various markets, and he does this in a very fearless manner. Mr. Thompson, needless to remark, makes mistakes sometimes in his prognostications, but we may fairly say of his forecasts that they are generally correct.

Stocks and Shares, 15th September.

The last issue of Mr. Thomas Thompson's Mining and Investment Circular is as readable and, as appears by the rise in prices of the last few days, as reliable as ever. Mr. Thompson is showing himself both a capable writer and a good adviser on all matters connected with mining.

Society Herald, 1st October.

Those who have business in mining shares might do well to consult Mr. Thomas Thompson, the well-known broker of 8½, Angel Court, E.C. He issues a fortnightly circular, which will repay perusal, the contents being both useful and entertaining.

Capitalist, 17th November.

Mr. Thomas Thompson's Mining and Investment Circular for November is as full of information as usual. The remarks upon mines are particularly full, and put together in a very interesting form. There is a notice of Hydraulic mines, with the latest reports from the famous washings of Colombia. The great movements which have occurred in African Mines are noticed; some of the recent dividends are recorded; the returns of gold and the number of stamps at work, and opinions are given as to the probable course of prices. As this department is now almost absorbing the whole attention of people interested in mining share dealings, Mr. Thompson's advice is valuable as that of an expert at head-quarters. English, Australian, and New Zealand, Indian, and Venezuela Mines, are brought under review.

Capitalist, 1st December.

Mr. Thomas Thompson's Circular gives an excellent review of the mining markets. Great emphasis is laid upon the prospects of Colombian Mines, and of Tetuan in particular. This is the most recently started hydraulic mine of the district. The Colombian Hydraulic shares are worth 32s., and Oritas 40s. These are neighbours of Tetuan, and beginning to show results of great importance. Mr. Thompson looks forward to see these mines greatly advance in price, and he predicts that as soon as the Tetuan Mine is fully equipped with the necessary appliances the shares will rapidly overtake the others. News of importance is expected daily, which may send the shares up like a rocket.

Railway News, 1st December.

In Mr. Thomas Thompson's Mining and Investment Circular of the 24th ult., a feature is made of hydraulic mining, of which Mr. Thompson appears to have had considerable experience, as well as of South African Gold shares, respecting which a considerable amount of information is afforded.

Court Journal, 6th October.

Among "outside dealers" in stocks and shares Mr. Thomas Thompson is fast mounting to the first rank, and those who have business to transact in his way, especially mining shares, would do well to write for one of his investment circulars. These contain a large amount of useful information, besides some very readable articles upon a "marvellous Country," which appears to be as extraordinary as regards its mineral wealth, as it is little known. In many cases, as may be proved by former issues of this circular, many shares recommended at only one or two shillings in price have subsequently reached as many pounds.

Court Circular, 6th October.

We have before us the latest issue of Mr. Thomas Thompson's Investment Circular (8½, Angel Court, London), and can recommend it to the attention of all those who like an occasional "dabble" in mining shares. By comparing it with former issues, we find the advice given from time to time has proved exceedingly correct, and those who have entrusted Mr. Thompson with their business must, therefore, have every reason to be satisfied.

Court Circular, 17th November.

That there are outside brokers of undoubted reputation goes without saying, and in naming Mr. Thomas Thompson, 8½, Angel Court, Throgmorton Street,

(Continued on next page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

we name one who has been established a good few years, as may be seen by referring to the Directory. Mr. Thompson periodically issues a mining and investment circular, in which he gives both information and advice, the worth of which may be gathered hy the high encomiums passed upon it hy the leading financial papers.

NEWS OF THE WORLD, 7th October.

One of the best Miuing and Investment Circulars which have yet been published is that issued by Mr. Thomas Thompson, of 8½, Angel Court, London. It gives reliable information upon no less than 56 different mining properties, besides a comprehensive article upon other Stocks, including Foreign Loans, Railways, Americans, &c., and an article upon tbe United States of Colombia, a country which it is thought may prove an El Dorado to those possessing the energy, capital, and knowledge requisite for successful mining in any part of the globe. Those interested in mining shares especially will do well to ohtain a copy.

FINANCIAL WORLD, 17th November.

The present issue of Mr. Thos. Thompson's Mining and Investment Circular shows no falling off from the high staudard which it has already reached. Rather, in fact, the reverse, for it gives a large amount of information which is obtainable in no other quarter, while the correctness of the market-forecasts displays an amount of business knowledge and acumen altogether unusual. If Mr. Thompson serves his clients as well as he writes his Circular, he is fairly entitled to the excellent position he is taking among outside dealers.

FINANCIAL WORLD, 1st December.

Mr. Thos. Thompson is again dealing with the "marvellous," and gives in his Circular an account of Colombia as astounding as anything he has yet puhlished. He tells of a native town built on an extensive gravel deposit (this would be worked under the bydraulic system nowadays) "so rich in gold that after heavy rains the coveted metal is actually washed into the streets, and a military cordon is sometimes drawn round the town to protect it from the iuvasion of outsiders!"

STOCK EXCHANGE TIMES, 1st December.

The latest issue of Mr. Thos. Thompson's Mining and Investment Circular is about the best that has yet been published. It now covers 18 pages, and comprises within its limits a larger amount of information than is to be found in any other puhlication of the kind, and gives a forecast of the markets which has proved almost unequalled, as regards the success of those who have acted upon it.

WHITEHALL REVIEW, 22nd November.

Those who at any time have transactions in mining shares or other Stock Exchange securities might do well to peruse carefully the mining and investment circular issued by Mr. Thos. Thompson, whose advertiscment appears upon another page. This circular is 16 pages in length, and deals in an interesting manner with nearly all stocks and shares which for the moment are attracting the attention of the investing puhlic. Mining shares are dealt with at length, and much information of a detailed character is afforded as to South African Mines, which just now are expected to make returns as astonishing as they have generally been little expected. Those who care for lighter reading will find "A Marvellous Country" both interesting and instructive.

FINANCIAL CHRONICLE, 15th September.

Mr. Thos. Thompson's Mining and Investment Circular is one of the most interesting we have seen for a long time past. It differs both in form and character from the usual run of brokers' circulars, being more convenient in size and better got up. It covers in the matter it contains nearly all matters of interest in the mining world. Mr. Thompson is a reliable adviser upon mining matters.

FINANCIAL CHRONICLE, 29th September.

Mr. Thompson's Investment Circular has just been issued, and the brief notes it contains on the various mining shares usually dealt in will be found both instructive and reliable, while the article on the U.S. of Colombia will be found as attractive as any that have preceded it.

BULLIONIST, 17th November.

We have received Mr. Thos. Thompson's Mining and Investment Circular for the month of November. The articles upon South African mining and the Stock Exchange show that the writer has put himself in possession of a vast amount of almost exclusive information relating thereto. On another page will be found an extract upon "Hydraulic Mining and the Tetuan Gold Mines," in which, like the generality of the mining market, Mr. Thompson appears to place much confidence.

PUMP COURT, 21st November.

Mr. Thomas Thompson's last fortnightly circular is before us, and, in view of its successful predictions and recommendations heretofore, it merits the greatest attention. We have examined it hy the light of our own experience, and it bears evidence of a knowledge and foresight which are so indispensable for one who acts as a guide to investors. We notice that Tetuan Gold shares, which we spoke so favourably of last week, are strongly recommended in the Circular, which we should be glad to receive fortnightly. Those who have business in mining shares would do well to consult Mr. Thompson.

MONEY MARKET REVIEW, 1st December.

The latest issue of Mr. Thos. Thompson's Mining and Investment Circular is as interesting as heretofore. It comprises 18 pages of matter, together with a forecast of the market.

MINING WORLD, 1st December.

Mr. Thos. Thompson's Investment and Mining Circular has again been enlarged, and now reaches 18 pages. It is a most readable production, and full of information. It will, probably, be most useful to take an interest in mining shares. South African mines especially are alluded to with much force and acumen.

QUINLAND—LONDON.

THE MINING MARKET.

CITY, FRIDAY EVENING.

GOOD OPENING FOR THE NEW YEAR—PRICES GENERALLY FIRMER, THOUGH DULL IN CERTAIN INSTANCES—AFRICANS—METALS IN THE ASCENDANT.

THE Mining Market has been strong and almost buoyant, and prices, with few exceptions, have been firmer. Probably not a dealer on the market would differ from the opinion that during the next few weeks prices are likely considerably to rise. At all events the year has opened well—very differently from the one that has just closed.

The Indian market has shown steadiness, and prices have risen, in some instances notably. The crushings from Balaghat, Ooregum and Indian Gold—Glasgow—are to hand. The two former are decidedly good ; the latter never counts for much. Ooregum has returned 754 ozs. of gold from 397 tons of quartz. At the meeting next week the shareholders are likely to be very much gratified by what they hear.

Australian mines have been shaky, though in one or two instances slight firmness is shown.

Copper shares fell on the publication of the statistics for the year, but buying orders from Paris quickly gave a tone to the market, and though prices close a little below the highest, it cannot be said that the market has shown decided weakness. The formation of a big company to take over the syndicate's liability is already talked of, and in Paris it is said that the shares of the new combination are already quoted, before created, at 1*l.* premium.

The African Market has shown the greatest life. Prices are higher, particularly De Villiers Robinson, on the announcement that in the second level a leader of quartz has been discovered, averaging from 7 to 10 ozs. to the ton. This mine was sold a few years ago for 10,000*l.*, and its produce is estimated to yield profits equal to its nominal capital every month. Durban Roodepoort is stated to have cut a 9 ozs. lode. A good deal of the information published from South Africa does not bear the highest credentials of reliability, but still the ascertained facts are very remarkable. The public are wisely holding aloof from shares at the enormous prices some of these descriptions have reached. There has been rather more activity in the diamond market than we could chronicle for some weeks past. In the Miscellaneous Foreign Market there have been large dealings in Denver, Eberhardt, New Emma, Alturas (which have advanced since the meeting), Empire and Carlisle.

The Home Market has again been featureless. Stocks of tin have decreased during the month about 100 tons, and the available supplies for consumption are 3,424 tons less than they were 12 months ago. The shipments from the States were infinitely greater for the year just closed than for 1887. The statistics of copper are given in another column.

AFRICANS.

There has been a somewhat excited market for these shares again this week, notwithstanding the holidays, and in almost every case prices have improved. We still advise our readers to leave such shares as Robinsons and Salisburys severely alone, it being simply impossible for the companies to pay dividends on present quotations.

The following have had a rise :—Orientals, $\frac{7}{8}$; Republics, $\frac{1}{8}$; Sheba, $\frac{1}{16}$; Johannesburg Waterworks, $\frac{1}{8}$; Bothas Reefs, $\frac{1}{4}$; Central Langlaagtes, $\frac{3}{8}$; Dornkop, $\frac{1}{16}$; De Villiers (Robinson), 1*l.* ; Durban Roodepoort, $3\frac{3}{4}$; Ferreires, $\frac{1}{2}$; Johannesburg Pioneer, $2\frac{1}{2}$; Jubilee, 1 ; Jumpers, $\frac{7}{8}$; Langlaagtes, $\frac{7}{8}$; Mainreef, $\frac{1}{8}$; Modderfontein, $\frac{3}{16}$; Morkel, $\frac{1}{8}$; Salisbury, 4*l.* ; Spes Bona, $1\frac{3}{4}$; Stanhope, $\frac{3}{4}$; Star, $\frac{1}{4}$; Vogelstruis, $\frac{5}{8}$; while a fall has taken place of $\frac{1}{8}$ in Aurora, $\frac{1}{8}$ Crown Reef, $\frac{3}{8}$ Goldfields of South Africa, $\frac{3}{8}$ Heriot, $\frac{1}{8}$ Knights, $\frac{3}{4}$, Royals, and $\frac{3}{8}$ Wemmers.

Wolhuters	4⅛	—	4⅜

Diamonds.

The week opened somewhat dull for diamond shares, and very few transactions took place until Wednesday, when prices improved, and De Beers rose at one time on Thursday to 16¼ buyers, but afterwards fell, in consequence of there being no real support, to 15¼, and close this evening 15⅝, 15⅞. They therefore show a rise of about 17s. 6d. on the week. The other changes are a rise of 2s. in New Consolidated; ¾ in New Jagersfontein; and 1s. 6d. in South African (Pullinger); the only fall to notice being ⅜ in London and South African Exploration.

The following are the closing prices :—

Diamond Shares.

Anglo African	3⅝	—	3⅞
Bultfontein, new shares—	4	—	4¼
Central Dorsfontein	8	—	10
De Beers Consolidated	15⅝	—	15⅞
Gordon Diamond	20/	—	22/
Griqualand West	5⅝	—	5⅞
New Consolidated	24/6	—	25/6
New Jagersfontein	13½	—	13¾
South African (Pullinger)	17/6	—	18/6
Spes Bona (Bultfontein)	5/6	—	6/6
United	2⅛	—	2⅜
United Jagersfontein	18/6	—	19/6
London and Orange Free State Explor. ...	4¾	—	5¼
London and South African Exploration ...	17⅛	—	17⅜ x rights xd
Read's Drift	2⅞	—	3⅛

Australians.

These have been somewhat neglected during the week, and very few alterations have taken place, the chief being a rise of 3s. in Gympie Great Eastern and 6d. in Mount Shamrocks; while a fall of 2s. has taken place in Day Dawn Block. Other shares remain without change.

Copper.

This week has seen little business doing in Copper shares; the result being that where transactions have taken place, prices generally have been lower. Capes have had a fall of ⅛; Copiapo, ¼; Libiola, ⅛; Mason and Barry, ½; Panulcillo, 1/16; Quebrado, ¼; and ⅛ in Rio Tinto.

Indians.

A fairly good business has been done in these shares during the week, and in most instances at advanced quotations. From all appearances prices generally for Indian properties should improve further very shortly. A rise has taken place of 1s. in Colar Central. ½ Mysore, 2s. Goldfields of Mysore, 1s. Indian Consolidated and Mysore West, and 3s. in Nine Reefs, while a fall of 1/16 has taken place in Ooregum. Other shares are without change.

Foreign.

This market has shown a decided improvement this week, and in most cases prices have risen. Balkis were the chief excitement, the shares having been rigged up to 13s. 3d. buyers, but, as we stated last week, there was no foundation for such a rise, and prices later on fell to 10s. sellers. They, however, close somewhat firmer at 10s. 6d. to 11s., seeing an advance of only 3d. on the week. Alturas have had a rise of 1s.; Callao Bis, 4s. 6d.; Dickens Custer, 9d.; La Trinidad, 1s.; New California 1s.; New Emma 6d.; Palmarejo, 1s.; and Richmond, ¼; while a fall of 1s. has taken place in Orita; and ⅜ United Mexican.

The market for Tetuan shares has been very active, and the firmness of existing quotations points to an advance within the next few days.

The following list shows the principal changes in the mine which have taken place :—

	Last Week.			This Week.	
Anderton Tin	4/	6/	...	2/	4/

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—The directors have received the following cablegram from their resident agent, Mr. A. S. B. Oakley: "Crushing for December, 115 tons quartz; 295 ozs. gold." A stoppage of several days was made at Christmas for the purpose of making certain necessary repairs to the mill and machinery, otherwise the results for the month would doubtless have been better than above.

Ooregum.—A telegram dated 3rd January, gives last month's return of gold as follows :—"397 tons of quartz produced 754 ozs. of gold.

Indian Gold (Glasgow).—Cablegram: "Crushed 250 tons, yielding 37 ozs."

Colonial Mines.

Bonnie Dundee.—Cablegram from the managing director at Charters Towers: "Have crushed 92 tons of quartz for a yield of 91 ozs. of gold. There is a good reef at the bottom of the new underlic shaft.

English and Australian.—The company notify that their Six per Cent. Debenture Coupons, due 1st inst., are now payable at their bankers, Messrs. Barclay, Bevan and Co.

Durham and Lord Byron Amalgamated.—Cable from the manager at the mines dated 4th Jan.—"For month December the proceeds are 465 ozs."

Gympie Great Eastern.—An interim dividend of 2s. per share, free of income tax, has been declared, payable on the 15th day of January, 1889, to the shareholders on the books of the company on the 8th January, 1889.

Mount Leyshon.—Cablegram from the manager at Charters Towers: "68 tons, 37 ozs.; lost week holidays."

Ravenswood.—By a resolution of the board, dated 3rd inst., Mr Ross Robinson, of 6, St. John's Road, Eastbourne, and of Charters Towers, Queensland, a gentleman of mining experience in Northern Queensland, was elected a director of the Ravenswood Gold Company, Limited.

African Mines.

Consolidated Company Bultfontein.—The board have declared a dividend of 4 per cent.

De Beers Consolidated.—Dividend of 5 per cent.

Durban-Roodepoort.—Cable from the mine :—"Since our last cable (20th December) we have crushed 275 tons, producing 614 ozs. of retorted gold." This is the result of nine days' working. We have discovered South London and Robinson leader in our 10 claim block.

Jubilee Gold.—Result of last month's crushing, 680 ozs. of gold.

South African.—Particulars of work relating to the week ending 1st December :—Blue ground hauled, 2,410 loads; blue ground washed, 4,760 loads; diamonds obtained, 1,542 carats; estimated value, 1,350*l.*; reef hauled, 2,060 loads.

Transvaal Gold Exploration and Land.—The directors on Monday received the following telegram from the manager :—"We have struck a vein at Ophir Hill. I think there is a good prospect. Further particulars will be sent as soon as possible by telegraph."

Witwatersrand (Knight's).—Robert Whyte and Co. advise having received, ex Mexican steamship at Cape, two boxes native gold as follows :—789¾ ozs. on account of company (Knight's), and 309⅕ ozs. on account of Wolsingham Gold Mining Company.

Foreign Mines.

Anglo-Mexican.—The output of silver for month ending 20th December amounted to $60,425.

Colombian Hydraulic.—The directors have realised the gold bars produced during the month of October, netting 1,542*l.* 1s. 6d.

Dickens Custer.—The secretary notifies that the necessary amount to purchase all the outstanding debentures upon the company's property has been found, and the following cablegram has

been received from their bankers in Salt Lake City :—"We now hold Dickens debentures subject to your order."

LA TRINIDAD.—Sixth bullion shipment from Mr. Harvey, the general manager : "On the 25th December shipped 11 (eleven) bars of silver, of the value of $14,000 (fourteen thousand). The second section will start to-morrow."

NEW HOOVER HILL.—Cable from the mine :—"160 ozs. shipped. Parkin."

RICHMOND CONSOLIDATED.—Cablegram :—"Week's run, one furnace, $130, from 15 tons of ore. Furnaces closed Friday."

ROCKY BAR WIDE WEST.—Cablegram from the mine :—"For month of December, tons mined, 400 ; tons milled, 475 ; ozs., 277 ; 15 stamps running."

STAFFORD.—The manager, Mr. H. B. Silden, telegraphs under date 2nd January, particulars of the clean-up for the last two weeks in December :—"Crushed 90 tons which produced 40 ozs. of gold."

YURUARI.—The company notify that the interest on debentures issued by the Chile Gold Mining Company, Limited, due 31st December, will be payable on and after to-day at Messrs. Martin and Co., 68, Lombard Street, E.C.

FOR LATEST PRICES
AND ALL PARTICULARS OF FOREIGN AND HOME MINES.
SEE PAGES 8 AND 9.

LONDON METAL MARKET.

4.40.—Closing official report.—Copper : Chili bars, cash, 77¼, ¾ ; three months, 78, ½ ; best selected, 79½, 80 ; strong sheets, 83, 5 ; English tough, 79, ½ ; G.M. brands, cash, 77¼, ¾ ; three months, 78, ½. Tin : Fine foreign, cash, 99, ½ ; three months, 99⅞, 100⅜ ; Australian, 99⅛, ⅝ ; English ingots, 101, 2.

METALS.

COPPER has been dull. G.O.B. Chili bars and G.M.B. copper are quoted 77*l.* 5s. cash, and 78*l.* three months. Chili Charters, 1,100 tons ; visible supply, 104,105 tons, against 97,900 tons on 1st December ; delivery in December, 5,191. We quote English tough, 79*l.*, 80*l.* ; best selected, 80*l.*, 81*l.* ; strong sheets, nominally, 83*l.* ; India sheets, 80*l.* ; yellow metal sheets, 7¼d., 7½d. ; ore, regulus, &c., 14s. 6d., 16s. per unit.

TIN opened firm with business in the Straits at 100*l.* cash, but quickly declined to 99*l.* cash ; three months sold at 15s. to 20s. over cash. Closing price, 98*l.* 10s. cash, and 99*l.* 5s. three months ; Australian, 2s. 6d. to 5s. premium. The statistics are less favourable. The visible supply in England and America is given at 14,802 tons, against 13,797 on 1st December. The delivery in December was 1,344 tons, of which 180 tons went to America.

The Dutch market improved to, Banca, 60½fl. ; Billiton, 59¾fl. ; but declined to 59fl. and 58½fl. respectively. English Ingots, 102*l.*

TIN PLATES firm. We quote ordinary coke, Liverpool, 13s. 3d. per box.

SPELTER has improved, and is quoted 18*l.* 10s. for ordinary brands, ex ship here.

SHEET ZINC.—Out of 120 tons offered in P.S., 55 tons were sold at 20*l.* 5s. net.

LEAD steady. Soft Spanish, 12*l.* 17s. 6d. ; soft English, 13*l.* 13s. 5d. ; L.B. 14*l.* 5s.

QUICKSILVER. Rothschild still quotes 9*l.* 10s. ; seconds have improved from 7*l.* 17s. 6d. to 8*l.* 15s.

ANTIMONY steady ; 45*l.*, 46*l.*

THE "NITRATE KING."

COL. JOHN T. NORTH AND HIS FANCY BALL.

LONG before this time to-morrow morning all London, and very likely all England, will resound with the story of one of the greatest social events of the Christmas season—one of the biggest things in fancy dress balls that London has seen for many a year. Everybody, that is "everybody as is anybody," has heard of the twofold millionaire, the "Nitrate King," the successful agriculturist, the big-hearted philanthropist, the lavish entertainer—and there the knowledge of the majority stops. The following sketch will fill in some of the gaps :—John T. North was born in the year 1840 in a village in Yorkshire, not far from Leeds, where, at the age of 18, he was apprenticed to the engineering trade. When his time was out he entered the service of Messrs. Fowler, of Leeds, the steam plough makers. While in their employ young North was entrusted with the charge of some machinery which the Fowlers were sending to Chili for the manufacture of nitrate of soda for soil fertilisation. This machinery North was to put up and fix in some factories in Chili. He was by no means loath to undertake the work, as he already had a brother settled in South America, and he was pleased at the thought of joining him. So away he went, this vigorous, enterprising young Yorkshireman, perhaps with some idea of "bettering" himself, possibly with the hope of making the moderate sum which to him would seem a "fortune," but hardly with the smallest anticipation of becoming one day possessed of such enormous wealth as literally to be unable to compute its extent, for that is the present financial condition of Colonel North. Greatly due to the unconquerable determination of this man is the development which has taken place in the manufacture and use of nitrate of soda. While superintending the erection of the machinery with which he was sent out by the Messrs. Fowler 20 years ago, the young engineer first acquired a practical knowledge of the art of producing the nitrate from the raw material, or "caliche," as the natives call it, then a keen appreciation of the value of particular grounds in which the nitrate was likely to abound. In course of time he constructed factories of his own, and built lines of railway to each, connecting them with one marvellous railroad across the slopes of the Andes from Pisagua to Iquique, two ports from which the wondrous nitrate is shipped to all parts of the world. A few words about the nitrate of soda, which has given Col. North his sobriquet and his wealth as well, may not be uninteresting. Lying embedded in the sand on the west coast of South America, a coarse material, called caliche, much used by the natives for fertilising purposes, is found. From this material, by means of boiling and evaporation, the nitrate of soda of commerce is produced. For such worn out old soils as those of England and many European countries, the effect of this comparatively new fertiliser is simply marvellous, and it will nowhere be denied that to Colonel North's sagacity the introduction of nitrate of soda to farmers and cultivators is almost solely due. On his return to England some 15 years ago Mr. North settled down upon a beautiful farm at Avery Hill, Eltham, Kent, where he is renowned for his hospitality and excellent farming. A few years ago he was offered and accepted the colonelcy of the Tower Hamlets Royal Engineers, which, under his command, has become one of the crack volunteer regiments. Quite recently he accepted the mastership of the Mid-Kent staghounds, which hunt he conducts on a style of princely liberality. At the hunt breakfasts the tables groan with good things, for which huntsmen sigh, and champagne flows like water. A worthy partner and assistant in all Col. North's liberality is Mrs. North, who, with her only daughter, conducts the acts of hospitality at Avery Hill, in which the colonel delights. His son Harry has just completed his terms at Cambridge, and taken a commission in the Royal Munster Fusiliers ; he is an enthusiastic cricketer and good all-round sportsman. Such then is a brief account of the man whose name will be on everybody's lips to-morrow, whose hospitality will be received by a thousand guests to-night, who has taken an entire suite at the Métropole, consisting of ball-room and waiting and reception rooms, together with over 100 bedrooms, and who is one of the richest men in England to-day. It is certain that no expense will be spared to make the event of to-night unique, everything that can be done to give Col. North's ball a character of unparalleled magnificence and generosity will undoubtedly be carried into effect.—*Pall Mall Gazette*, 4th January.

The half-year's interest on debentures of Holland and Co., will be paid on and after Tuesday, January 1st, by Messrs. Williams, Deacon and Co., Birchin Lane, E.C.

Messrs. Morton, Rose and Co. notify the payment of the coupons for the six months' interest on the Minneapolis, Sault Ste. Maria and Atlantic Railway Company Five per Cent. First Mortgage Gold Bonds.

JOINT-STOCK ENTERPRISES.—The returns of joint-stock enterprises at Somerset House for the year just ended are truly phenomenal. The aggregate capitals amount to over 400,000,000*l.*, as against 168,000,000*l.*, in 1887. The returns for the month of December give capitals in the aggregate of 12,232,030*l.*, which amount accounts for 162 companies.

THE SHEBA GOLD MINING CO., LIMITED.

DIRECTORS RESIGN IN A BODY—A MEETING CALLED.

4th January.—I am instructed to inform you that the directors, with the exception of Mr. Thomas Hayes, have decided to resign their seats, in consequence of the dissatisfaction expressed with the constitution of the board and the apparent support given to the personal attack made upon them at the shareholders' meeting of the 21st ult., when Mr. Stewart Pixley was unseated and Mr. Arthur Chambers elected in his stead. At the recent general meeting, Mr. Stewart Pixley, as stated above, was unseated; and Mr. John Darlington, formerly the consulting engineer of the company, declined to allow his name to be put, and is, consequently, no longer a director. The directors who will retire immediately on the appointment of their successors are Mr. Benjamin Bloomfield Trench, Mr. Hugh Cameron Ross, and Mr. John MacFarlan. Mr. Thomas Hayes retains his seat; Mr. William Robert Brown, the director resident at Barberton, it is presumed, will do the same. Mr. Arthur Chambers was elected a director on the 21st ult. There will consequently be four vacancies to fill, and as the crisis is a grave one, it is hoped that you will not fail to attend on the 18th inst. (at Winchester House, No. 50, Old Broad Street, at 2 p.m.), and to inform the directors in the meantime whom you wish to nominate as their successors. Mr. Trench desires that it should be understood that although his official connection with the company is about to cease, any knowledge he has acquired by his recent visit to South Africa will be unreservedly at the service of the company.—J. Martyn Milne, Secretary.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (2nd Jan.)—The lode, or part thereof, being carried in driving the 40-fm. level east continues to look well, and produces from 7 to 9 tons of mixed ore per fm. In a stope directly above the splice referred to a few weeks since the lode is openiug up a fine course of copper and mundic ores. The several other stopes along the back of the 40 level are producing fairly well. Cook's stopes below the 30 east will produce from 10 tons to 12 tons per fm. In a rise in the back of the 30 the lode, or part thereof, being carried, will produce 7 tons of mundic per fm. More lode yet to be taken down. In the 40-fm. level east of junction near the old engine shaft the lode produces 7 tons of copper and mundic per fm. New engine shaft: Bearer holes are cut and bearers put in position with bed casing, ladder road, &c., and the pump work is ready to send down and fix at once. Very satisfactory progress has been made in this part of the mine with the work in hand.—T. Gregory.

BULLER AND BASSET (1st Jan.)—Tributes: Some miners agreed, on Saturday last, to go underground on Monday (yesterday) to see the 60-fm. level, re the looking after tribute ground. Machinery: The engines and pumps are working well, and the water is being mastered without any difficulty.—J. H. James.

D'ERESBY.—The No. 9 north of the Gors shaft is reported to be opening out very well, and will, if it continue, make a profitable piece of stoping ground. By this time there will have been a communication between the No. 8 and No. 9 by the rise and sump. Stoping will be commenced at once, and the ground between this and the No. 2 sump opened out as soon as possible. The No. 2 sump is valued at 40*l.* per fm., and the agent expects that it will yet increase considerably in value.

DRAKEWALLS (3rd Jan.)—At the engine shaft we have completed the skiproad from the 132 to 117-fm. level, thereby enabling us to get away the stuff much faster. The men are now engaged cutting top-plat at the 117-fm. level, and when made complete we shall commence to drive both east and west on the north part of the lode. We still continue to drive the cross-cut south, which is in a very fine lode of arsenical mundic, producing 12 tons per fm., mixed with a little tin throughout. In the 132 east we have just met with a cross-course, and hope to see the lode again on the eastern side in the course of another week. There is no change in the lode worthy of notice in the 132 west since my last week's report. Since the completiou of the winze, I have put the meu to take down a piece of lode in the side of the 132-fm. level west, where they are breaking some good work for copper and mundic ores. We are getting on with the buildings and all other surface work as fast as possible.—H. Rodda.

EAST BLUE HILLS.—A change in the management having recently taken place it has been thought desirable to open on the Pink lode at the deep adit, and for that purpose a horse whim is being erected on the Pink shaft. Probably next week the agents may be able to report on it. On the Baldhu lode the 30-fm. level is being driven west, which is opening up more stoping ground.

GREAT FORTUNE.—There is no change reported from this mine during the week, the values of the different poiuts being maintained.

HOLWAY UNITED (3rd Jan).—No change in 70 east; ground still hard. Winze sinking below the 60 level contains a very kindly lode, with an increase of lead ore. No. 2 pitch over this level: Lode become very tight, and not quite as rich for blende. No. 2 pitch over 80 west of Roskell's has improved for lead. Other places no change. On surface we are busy stocking the new pole, making staples, &c., and shaftmen are preparing all they can in shaft, and I expect to have all ready in the course of a fortnight for changing the plunger pole at Roskell's.—H. Hotchkiss.

MARKE VALLEY (2nd Jan.)—Since completing Bellingham's engine shaft to the 84 the men have been engaged in cutting the plat, as reported last month. In the 15-fm. level driving east the lode has been a little disordered during the past fortnight by the influence of the elvan, which is again wearing out, and the lode taking a more regular course, presenting a very promising appearance, with good traces of tin. Set for month at 4*l.* 10*s.* per fm. The 15-fm. level west is being driven at 4*l.*, where the part of the lode carried from 5 to 6 ft. in width, has improved, now worth 6*l.* per fm. The midway level is being driven east at 5*l.* 5*s.*, and the part of the lode carried continues worth 6*l.* per fm. We have not yet resumed the driving west, where the men have thus far been employed in stripping down the north side of level, which has been a hard capel, and worth from 8*l.* to 10*l.* per fm. We expect to complete this, and commence driving by the end of the present week. To drive the adit west at 4*l.*; lode without change since last report, worth 5*l.* per fm. The rise in back of adit has been suspended, the lode becoming small, and of little value. The men, after clearing their stuff, will commence stoping where the lode is worth 6*l.* per fm. There are seven other stopes being worked from the different levels, at prices varying from 27*s.* 6*d.* to 4*l.* per fm., and valued from 8*l.* to 12*l.* per fm.—W. George, F. Renals.

MID-DEVON.—Report for week ending 29th December.—Surface: The pumping machinery has done good duty throughout the week; 4¼ revolutions per minute copes with underground influx. A shaft: The 98 east, driven by nine men, 5 ft.; total distance from south cross-cut 88 fms. 3 ft. 6 ins.; the strata at eastern end of fissure referred to last week is easier and more porous, chiefly garnet, chlorite, a little capel, and axinite, interspersed with copper ore and arsenical mundic, the holes now being bored in breast of drivage are emitting water freely indicating another crossing vein. I intend in the early part of next week to commence cross-cutting the lode to ascertain its width and value, north first as the greatest flow of water is coming from that direction. C shaft—The 50 east: No. 2 stope worked on by six men is worth 9*l.* per cubic fm. No. 3 stope, by six men, 13*l.* 10*s* per cubic fm., and extreme end of drivage, by two men, 10*l.* per cubic fm. The Christmas holiday has retarded progress at surface and underground.—J. Neill.

PRINCE OF WALES.—The effects of the late breakage of the pitwork are completely overcome, and all the men have resumed work. The lode in the bottom level east is improving both in size and value, and the lode in the 135-fm. level is reported to be worth 10*l.* per fm. and improving; other points are unchanged. The weather is again more favourable, and all surface work is consequently being proceeded with more rapidly.

PRINCE ROYAL.—The workings are at present under water, caused by the continued heavy rains, and consequently operations are temporarily snspended.

ROMAN GRAVELS (3rd Jan.)—The lode at the 135 south is now in three divisions, which, we believe, will form a junction, and make a rich bunch of ore in front of present forebreast. Each division carries lead ore, but the footwall part, which was referred to last week, is the most productive, being worth 1½ ton of lead ore per fm. The stopes in back of this level are without any recent change. The stopes south of Edwards winze, in back of the 125 south, have improved during the last two or three days; and those in back of the 110 south are looking very well indeed. We are at present driving by the side of the lode at the 125, and 110 south in order to facilitate the progress. The lode at the 80, going north-west on caunter looks most promising. We believe that we have now met with the required quantity of second-hand pumps or pipes, and steps are being taken to bring about their delivery at the mine at the earliest possible date.—A. Waters and Son.

SOUTH DARREN (3rd Jan.)—In the 142 east the end men are shipping down part of the lode which was left when driving; this is producing very good ore. The winze in this level is worth 1 ton of silver lead ore per fm. The 142 end west is worth 10 cwt. of silver-lead ore per fm. A stope in this level is worth 10 cwt. of silver-lead ore with a good mixture of copper. The 110 end east is worth 10 cwt. of silver-lead ore per fm. A stope in this level is worth from 8 to 10 cwt. of silver-lead ore per fm. The 100 end west is in a very large lode containing a little lead and good stones of copper. The stope in this level is worth 12 cwt. of silver-lead ore and 12 cwt. of copper per fm.—J. Mitchell.

TIN ERA (1st Jan.)—We are forcing on the deep adit end with all possible dispatch, and hope, in a few fathoms further driving to intersect the second of the two lodes in the company's property, you will then be in a good position to extend the ends eastward on the course of the lodes, and thus get under the tin-bearing ground to a depth of 50 fms. which will, in all probability place the mine in a good position. Present price for driving is 12*l.* per fm.—R. Knott,

WEARDALE.—Report on Weardale mines for week ending 29th December:—Ore raised for the week, 65 tons; ore dressed for the week, 76 tons; ore smelted for the week, 141 tons, producing 72 tons of pig lead.

WEST CARZISE.—In the 30-fm. level cross-cut towards the old Carzise lode, there is a change of ground and other indications from which it is believed that the lode is near. There is no change in any other point.

WEST WHEAL GRENVILLE (1st Jan.)—The castings for plunger bottom have been sent down and placed in position. The shaftmen are now taking out timber and cutting grounnd for rearing up lift to the 60. The shaft being small at this point we are necessitated to do this. We are using every effort to get this lift at work at the earliest possible date. Steam pipes have been connected to boiler of pumping engine, and other fittings fixed to same, and shall, if possible, start the same to-morrow.—T. Hodge, J. Skeat.

WHEAL CREBOR.—In the 200-fm. level the lode is 5 ft. wide, carrying a small seam of copper ore, with sulphur mundic and felspar. At the 170-fm. level they are cross-cutting north, in order to prove whether there be any more of the lode standing in that direction. The various stopes and pitches are without change.

WHEAL METAL AND FLOW.—The Metal lode in the 35-fm. level east and west is still of a very favourable appearance, particularly the eastern end, which is producing stamping work for tin, and letting out much water. An adit shaft in the Flow is being cleared with a view of increasing the water for dressing purposes, which will materially increase the returns.

WHEAL UNY.—The increased water has much impeded operations in the bottom of the mine; but the 108 and 190-fm. levels east are being rapidly extended by boring machines; both ends very promising, and probably by this time the shaft and bottom levels are again being worked.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR.—Production to 21st Dec.: 13,340 tons crushed yielded 1,643¼ tons rich silver-lead ore. Corresponding period last year: 11,525 tons crushed yielded, 1,278 tons. The dressing operations for the past few weeks have been much impeded by snow-storms of great severity. Chief mine: The Petri level in air shaft is going forward in a strong masterly lode, about 2 metres wide, and worth fully 2 tons of silver-lead ore per fm. From all appearances we are opening a fine section of stoping ground here. We are getting good ore from a winze in Petri main level; and the lode just cut through east of the Savalan Pass is of good appearance and producing fine ore. New Mine Pappa Sawa; Bottom level east from winze. The lode in

the forebreast of this level is about 2 metres wide, and worth fully 1 ton silver-lead ore per fm. The winze sinking in the sole of this level is about 2 metres wide, and worth fully 25 cwt. silver-lead ore per fm. The lode in the end east from bottom cross-cut is 1 metre wide, and is at present showing a little lead. We are pleased to say it is giving indications of further improvement. Underground operations are going on full swing, and appearances are, on the whole, more promising.

BALAGHAT-MYSORE.—Capt. Pryor's report for fortnight ending 11th December is as follows:—North engine shaft: This shaft has been sunk 2 ft. 6 ins., or 78 ft. 9 ins. below the 330 ft. level; the lode is large and of a kindly character. The 330-ft. level north is still being pushed forward with the utmost speed; the end has been advanced 48 ft. 9 ins., or 275 ft. 3 ins. from the shaft. About 30 ft. behind the present end we struck some very rich quartz; this increased to about 12 ins. wide, and assayed over 13 ozs. of gold per ton. Since then the vein has been varying in size and quality, viz., from 8 ins. to 15 ins. wide, and of value from 3 ozs. to 10 ozs. of gold per ton. In the present forebreast the quartz is about 1 ft. wide, and worth 5 ozs. of gold per ton. I regard this improvement as a most important one, as it proves our northern shoot not only continues in depth, but is also lengthening southward, we having struck the payable quartz some distance earlier than anticipated. The 270-ft. level north has been driven 4 ft. 6 ins., or 624 ft. 9 ins. from the shaft; the lode is at present poor. The No. 3 winze in the bottom of this level has been sunk 4 ft., or 13 ft. below the level; the quartz is about 9 ins. wide, and assays 2 ozs. 1 dwt. 19 grs of gold per ton. The stopes in the bottom of the level produce quartz from 8 ins. to 1 ft. wide, assaying 2 ozs. 3 dwts. 2 grs. of gold per ton. The No. 2 cross-cut east has been advanced 7 ft., or 32 ft. 6 ins. from the level. The machine stopes in the back of the 270 ft. level yield quartz of an average of 1 ft. wide, and worth 3 ozs. 14 dwts. 23 grs. of gold per ton. The stopes in the back of the 205-ft. level produces quartz of about 9 ins. wide, but only assaying 9 dwts. 3 grs. of gold per ton. The 165-ft. level north has been extended 10 ft. 6 ins. or 436 ft. 6 ins. from the shaft, the quartz is about 9 ins. wide, and assays 5 ozs. 0 dwts. 14 grs. per ton. The No. 2 winze in the bottom of this level has been communicated with the rise in the back of the 205-ft. level (or, more strictly speaking, rise in the back of the 270), and has afforded good ventilation, besides laying open the ground for stoping. I may here remark the 205-ft. level north has long been discontinued, and will not again be driven or referred to as the 205-ft. level; the ground is, of course, being worked, but is included with the stopes in the back of the 270-ft. level. Air shaft: The party working at the winze in the bottom of the 95-ft. level north, being required at other parts of the mine, we have been obliged to suspend this work for the present, but shall resume it again at the earliest opportunity. There is, therefore, no change to notice here since my last report.

BRATSBERG (24th Dec.)—Hoffnung Mine: The breast of No. 2 adit level is unproductive, but, judging from the indications in the back of the level, we think we are just under the body of ore, and, therefore may expect the end to improve again shortly. The rise in the back of No. 2 adit level is worth 2 tons per fm. No. 3 level is undergoing a change for the better, and we hope the lode will soon be of value again. The rise in the back of No. 4 adit level is worth ½ ton per fm., and the mid-level at Ball's shaft 1 ton per fm. No. 4 level is much the same as when last reported. No. 5 level west is yielding ½ ton per fm. The same level east is producing a little ore, but not enough to value. The mid-level at Murchison's is worth ½ ton per fm. At the rise in the shallow workings the lode is large, 3 ft. wide, and letting down a good deal of water; worth for copper ore, ¾ ton per fm.; 87 miners have been employed during the past week. Johannes Mine: The cross-cut is progressing very well, and the erection of the engine with its connection to the air pipes is being done with satisfaction, but, owing to the nature of the place where we had to fix the engine, more time was taken up in fixing the necessary timberwork than we anticipated; 10 miners employed here. Næsmark Mine: There is no change on this mine worthy of remark since last report, and the same number of men are employed. Surface works and remarks: The dressing machinery was kept regularly at work during the whole of the week with very satisfactory results. Owing to the Christmas holidays the contractor with his men left several days since for their homes, consequently the work about the new machinery and the new cottages is at a standstill, but will be resumed after the holidays at New Year are over; 10 new cottages are completed and occupied.—J. D. HOLMAN.

CHARTERS TOWERS SOUTH.—The mining manager reports for the fortnight ending 10th November:—The No. 3 west level has been extended a further distance of 20 ft., making a distance of 90 ft. from the shaft. There is nothing fresh to report. The reef is from 1 ft. up to 2 ft., but of poor quality. The formation is small. The rock-drills are working splendidly and are giving satisfaction. The machinery is in good order.

CONSOLIDATED ESMERALDA.—Under date 30th November the superintendent wrote that it would probably take a month or more to reach the ore body on the lowest level. Cablegram forwarded Monday last states that he has not yet reached the ore body, but the indications are favourable.

CORTEZ (16th Dec.)—Ore hauled to mill, 115 tons; ore treated at mill, 170 tons; value, $53 per ton; bullion shipped, 15 bars, containing 15,735 ozs. fine silver, and 21 ozs. gold. Also shipped car load of matte and ore; weight, 15 tons; value, $8,000.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 10th November.—The contractors have sunk a further depth of 17 ft., making total depth of 359 ft. from the surface; country is still hard granite. Development: The total number of feet sunk and driven during the fortnight is 143. New mill on Burdekin River: Mr. Thomas, engineer, writes since my report of 27th October:—Fair progress has been made with the work here. The excavation for retort-house has been taken out, pipes have been laid through the tunnel and jointed, and all other work is in a forward state.

DAY DAWN P.C.—The report of the mining manager for the fortnight ending November 10th is as follows:—The output of quartz is 1,899 trucks, estimated at 1,146 tons. The amount of quartz hauled from the shaft and each level is as follows, viz.: From the shaft, 32 trucks; No. 10 level, 345 trucks; No. 9 level, 544 trucks; No. 8 level, 619 trucks; Nos. 6 and 7 levels, 229 trucks; No. 5 level, 130 trucks; total, 1,899 trucks. No. 2 underlie shaft has been sunk a further distance of 6 ft. in the past fortnight, making its total depth, 161 ft. The sinking in this shaft is very hard.

DEVALA MOYAR (10th Dec.)—Harewood reef: The pyrites winze is down 6 ft. below the deep tunnel. The lode is 5 ft. wide, and will yield 6 tons pyrites to the fm. sunk the length of the winze, being 10 ft. The end driving west has diverged so much to the north that we are driving into solid ground instead of stripping the lode down. The lode is 6 ft. wide, and will yield 5 tons pyrites to the fm., the pyrites being more equally disseminated through the lode than formerly. We are pursuing the same course in the east end. The lode is 3 ft. wide, with two well-defined walls, and will yield 1 ton pyrites to the fm.—J. WILLIAMS.

DENVER (22nd Dec.)—The tributers have been more successful this month, and their shipments for November are—6 tons, value $202.48; 2½ tons, 149.08; total, 352.36. The shipments from the drifts amount to 35 tons of mill ores, which has yielded from 4 to 5 dwts. per ton.—A. RICKARD.

ETHERIDGE UNITED.—The mining manager reports for the week ending the 29th of October, as follows.—Lady Franklin and Ropewalk: Nothing fresh has occurred with regard to these since writing last week. Canadian West: The new 140-ft. level east is now in a distance of 10 ft. from shaft; the reef is 4 ft. wide, highly pyritous, and altogether a nice-looking lode. In the 100-ft. level east the reef is 3 ft. 6 ins. wide; a ferruginous quartz with no pyrites. Canadian middle: I am busily engaged in erecting the engine, which I have transferred from the Canadian east. I hope to have it in working order by the end of next week. Etheridge reefs: Six men are employed in the east level, and six more on the west level, on Lord Nelson. These men are working on payable stone, and the result will be an increased quantity to commence crushing on. The surface and other operations are, under my supervision, being properly carried on. Drought: Although we have to-day experienced a few drops of rain, the general appearance of the sky shows no sign of the break-up of the drought. In consequence of having no horse fit to carry me to the reefs and back, I am not able to visit there as often as I could wish; however, I hear from Mr. Davis every few days.

GOLDFIELDS OF MYSORE (11th Dec.)—Fortnightly report. Sinking bridge shaft: An advance of 3¼ ft. has been made; total depth, 160¾ ft.; the bottom is in country. The north drive at 105 is in 50¼ ft., and the south drive 55¾ ft. In the north end there are a few stringers of low-quality quartz, and the south end is in country. Driving north of middle shaft: An advance of 5 ft. has been made; distance from shaft, 39½ ft.; the part of the lode 3½ ft. wide carried in the end is worth by assay 8 dwts. a ton. Driving south at the same level: An advance of 3¾ ft. has been made; distance from shaft, 38½ ft.; the part of the lode carried in the end is broken up and poor. The north drive at 108 ft. is in 115 ft.; the part of the lode, 3½ ft. wide, carried in the end is worth by assay 8 dwts. a ton. The winze below this level is down 42½ ft.; the part of the lode, 3½ ft. wide, carried in the bottom has an assay value of 16 dwts. a ton. Driving south at 108: An advance of 11½ ft. has been made; distance from shaft, 228½ ft.; the end is in old works. Champion lode: Coromandel shaft has been sunk 2¾ ft.; total depth, 151½ ft.; the bottom is in country. Driving south of the west cross-cut at 150: An advance of 7½ ft. has been made; distance from cross-cut, 9¼ ft. We are carrying about 2 ft. in width of mixed quartz and schist worth from 1 to 2 dwts. a ton. New Prospect shaft has been sunk 3 ft.; total depth, 167¾ ft. The north end of the shaft is just touching old workings about 12 ins. wide. There is a string of quartz about 6 ins. wide running away from the end of the old works, samples of which have been worth from 2 or 3 dwts. up to 2 ozs. a ton.—W. FRECHEVILLE.

HUMBOLDT ELECTRIC POWER AND MINING.—Humboldt Mine: The superintendent reports by cablegram that the east cross-cut on the 300 ft. level is looking well. At this point the vein is solid quartz 34 ft. thick to the west of the shaft, and the east wall has not yet been reached.

MYSORE REEFS (11th Dec.)—Harvey's shaft: The sinking of this shaft has been continued by rock-drills and a full force of men; 10 ft. 4 ins. have been sunk, which makes a depth of 63 ft. 10 ins. below the 250-ft. level. We had an hindrance last week otherwise as much ground would have been sunk this fortnight as last. The rock is still hard and sterile, but I hope by the end of the month to get the shaft to a sufficient depth to commence a 320-ft. level. No. 2 cross-cut east of the 250-ft. north level has been extended by one rock-drill 33 ft. 6 ins.; making a total distance of 85 ft. 3 ins. Irregular patches and stringers of quartz have been met with but of no value. We shall now remove this rock-drill to drive the cross-cut west from the plat. Stope in back of 250-ft. level north: The lode is wide but intermixed with bands of trap-rock which has greatly impoverished it. An average sample from it gave according to assay 2 dwts. of gold a ton. We shall rise and stope a few feet more, and, if it does not improve, clear the débris and commence to sink and stope below the level. Taylor's trial shaft: Stope in back of 120-ft. level, south of winze, the branch of quartz is 5 ins. wide, and assays 17 dwts. of gold a ton. Stope, north of winze: There are two branches of about a foot of quartz, which assays 8 dwts. of gold a ton. Taylor's engine shaft has been sunk, by hand labour, 13 ft. 6 ins.; total depth, 100 ft. 6 ins. Irregular branches and patches of quartz are intermixed with the trap rock, which assays 4 dwts. of gold a ton. Cross-cut west, at the 55-ft. level, has been extended 11 ft. 6 ins., which makes a distance of 102 ft. 3 ins. from level. This place is full of débris, and, as it would hinder the sinking of the shaft to remove it at present, I have put these men to drive the 120-ft. level, north of Taylor's, on the course of the branches, the eastern side of the formation.—M. SCANTLEBURY.

MYSORE WEST.—Reports for the fortnight ending 11th December.—Walker's shaft: This shaft has been sunk 7 ft. 3 ins. making 303 ft. 4 ins. from surface. We shall now sink a little deeper for a fork, fix sollar and get ready for cross-cutting as quickly as possible. The 225 north: This heading has been advanced 3 ft. 3 ins., making 101 ft. 7 ins. from shaft. The reef here is 3 ft. thick, of fair looking quartz, producing 7½ grs. of gold per ton. The 225 south: This heading has been advanced 4 ft. 9 ins., making 90 ft. 6 ins. from cross-cut. The reef here is 3½ ft. thick, and produces a trace of gold in the assay. The 159 north; This heading has been advanced 9 ft., making 312 ft. 7 ins. from cross-cut at Walker's. The reef here is 5 ft. thick, producing a trace of gold in the assay.—Capt. TREGAY.

OOREGUM (11th Dec.)—Fortnightly report.—Main shaft: The 250-ft. level driving south from cross-cut west, 12 ft. have been driven,

or 108 ft. 4 ins. from cr ss-cut ; the lode altogether is 2 ft. 9 ins. wide. with two branches of quartz ; one is 1 ft. wide, the other 6 ins. wide, with a band of country rock between these two branches, which is 15 ins. wide. A sample was taken from the two branches of quartz, which gives an assay of 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The 250-ft. level driving north from cross-cut west, 7 ft. 4 ins. have been driven, or 70 ft. from cross-cut west. The lode is 15 ins. wide, and gives an assay of 1 oz. 14 dwts. 20 grs. of gold per ton of quartz. Low's shaft : The 270 level driving south from cross-cut west, 3 ft. 4 ins. have been driven, or 9 ft. 8 ins. from cross-cut ; the lode is 10 ins. wide, and gives an assay of 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. The rise in back of the 270-ft. level south of cross-cut west, 2 ft. 9 ins. have been done ; the lode is 1 ft. wide, an assay from it give 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The 270-ft. level driving north of shaft, 4 ft. 9 ins. have been done, or 85 ft. 11 ins. from shaft ; there is no change here. The 200-ft. level driving north of shaft, 4 ft. 6 ins. have been done, or 253 ft. 5 ins. from shaft ; this level is still in the cross-course. The country rock appears to be changing, we hope soon to be through it. The winze sinking in bottom of the 200-ft. level north of shaft is down 24 ft. 6 ins. ; the lode is 10 ins. wide, and gives an assay of 4 ozs. 18 dwts. of gold per ton of quartz. The winze sinking in bottom of the intermediate level north of shaft has been sunk 5 ft. 6 ins., and has been communicated with the 200-ft. level, which has given us good ventilation here. The driving of the intermediate level north was resumed yesterday. The 200-ft. level driving south, south of shaft, 6 ft. have been driven, or 104 ft. 1 in. from cross-cut west ; we have come into the quartz again here, which is 1 ft. wide, and gives an assay of 14 dwts. 4 grs. of gold per ton of quartz ; the appearance of the lode has changed since the sample was taken. The intermediate level was commenced yesterday ; we have a lode of quartz standing here 4 ft. high, from bottom of level 2 ft. wide, which is the bottom of old workings, where we effected communication with these workings and those of battery shaft ; a washing from here was made yesterday, which gives fully ¾ oz. of gold per ton of quartz. The 100-ft. level driving south, south from shaft, 4 ft. 9 ins. have been done, or 39 ft. 6 ins. from old workings ; this level is poor and has been suspended. The winze sinking in bottom of the 200-ft. level at the end of cross-cut west, south of shaft, 3 ft. 7 ins. have been sunk, or 51 ft. 2 ins. below the level ; the lode is 1 ft. wide, and gives an assay of 15 dwts. 6 grs. of gold per ton of quartz. We hope soon to effect communication with this winze with the rise in back of the 270-ft. level below. Probyn's shaft has been sunk 5 ft., or 68 ft. below the 230-ft. level ; the lode is 4 ft. wide, and gives an assay of 3 ozs. 3 dwts. 3 grs. of gold per ton of quartz. The band of black rock in the shaft is 3 ft. wide, and dips a little to the north in the shaft, we shall soon attain the depth for our 300-ft. levels which will be commenced as soon as the shaft has attained the required depth for it, which we hope to effect by the end of the present month. The winze sinking in bottom of the 230-ft. level north of shaft. 6 ft. 9 ins. have been sunk, or 15 ft. 6 ins. below the level ; the lode is 2 ft. wide, and gives an assay of 8 ozs. 14 dwts. 5 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft, 4 ft. 9 ins. have been done, or 69 ft. 1 in. from shaft ; the lode is 3 ft. wide, and yields as per assay 1 oz. 3 dwts. 22 grs. of gold per ton of quartz. The 166-ft. level driving south from shaft, 5 ft. have been driven, or 171 ft. 1 in. from shaft ; the lode is 2 ft. 9 ins. wide, and yields as per assay 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The winze sinking in bottom of the 166-ft. level south from shaft, 2 ft. 2 ins. have been sunk, or 9 ft. 8 ins. below the level ; the lode is 3 ft. wide, and gives an assay of 1 oz. 8 dwts. 7 grs. of gold per ton of quartz. The rise in back of the 166-ft. level south of shaft, 4 ft. have been done, or 13 ft. above the back of level. The lode is 3 ft. wide, and gives an assay of 12 dwts. 21 grs. of gold per ton of quartz. Stope in back of the 230-ft. level south of shaft, from the north end of winze, 63 superficial ft. have been done, worked by six Moplahs. Stope in bottom of the 166-ft. level north of shaft, 112 superficial ft. have been done. The assays from this point were sent you with the last report for publication. North battery shaft : There is still 15 ft. of water in this shaft ; we have sunk down at the south end of battery workings 30 ft., and are now driving south from these old workings : 8 ft. have been driven. The lode is 2 ft. wide, and gives an assay of 2 ozs. 7 dwts. 21 grs. of gold per ton of quartz. This level is being driven underneath the north battery shaft to let the water down ; this we shall do by driving 12 ft. more. As soon as communication is effected with these two points, we shall resume the sinking of the north battery shaft. Stamps : These are working well, with 15 heads full time ; a fair amount of amalgam is being daily taken off the plates.—W. Martin.

OSCAR GOLD (21st Dec.)—Oscar lode : The shaft is sunk 33 ft. below the 400-ft. level. Composition of lode, chiefly slate and dioritic rock, traversed by strings of quartz and calcic carbonate, with occasional bunches of quartz. A little pyrites is seen just at the junction of the quartz with the slate. We have not seen any visible gold. The 400-ft. levels have been driven east 20 ft. and west 18 ft., the lode resembling in composition that in the shaft. From the shaft and these levels we have crushed 65 tons of a mixture of quartz, slate, and dioritic rock, which produced 7 ozs. 2 dwts. of gold. No. 3 lode in cross-cut has been driven 44 ft., composition a mixture of quartz, carbonate of lime, and diabasic rock, in which a little iron pyrites is seen. It is letting through a little water, and has a most favourable appearance. We have not met with any visible gold, but we have crushed 10 tons to prove its value. Result about 2½ dwts. to the ton. As the stuff crushed only contains about one-third quartz, it being impossible to sort it, we cousider this result satisfactory, especially as we have every reason to expect a change shortly, viz., a better concentration of the quartz. Daw's lode : The shaft is now 20 ft. below the bottom level. The quartz still confines itself to the two strings before reported on, but are a little wider. We think we can promise an improvement by the end of another month. The bottom levels have been driven north from shaft 30 ft., and south 35 ft. In the north end we have a little quartz, but not sufficient for crushing. In the south end we have about 6 ins. of decomposed rock, mixed with a considerable proportion of carbonate of lime and a little pyrites. This we have not stripped yet, as we wish to treat it separately. The 300-ft. levels, winze and stopes have averaged about 8 ins. of quartz. in which we occasionally see visible gold. We have crushed from here 120 tons ; result 48 ozs. 6 dwts., or 8 dwts. to the ton. You would be pleased to note this is an improvement on previous crushings, and the more so since we can say it leaves a good profit on the expenditure, even including all so-called development work, such as sinking shaft, opening new levels, &c., in this mine. 170 ft. level north is now 130·50 metres (say 425 ft.) north of shaft, whereof the first 400 ft. were in dead ground. The last 25 ft. have shown a considerable improvement, the matrix being well mixed with quartz and calcic carbonate, and, we think, is leading to another valuable shoot of auriferous ground.—J. Daw, jun.

PERSEVERANCE (10th Dec.)—The mine : There is hardly anything to say, save that it looks better as we open up. I have said before that a great deal of our gold is tarnished—not freely amalgamable. You can see it by taking up a handful of sand from the concentrator. When our furnace and pan are ready I think we will do much better. Mine measurements:—B tunnel 31st drive south in lode continued 4 ft. ; lode nearly all slate, containing specs of pyrites with band of quartz about 2 ins. in centre of breast. 2nd drive south in lode continued 5½ ft. ; lode thickness of drive containing good mineral. 2nd rise in lode continued 11 ft. Drive south in lode out of 1st rise continued 10 ft. A little work has been done in 1st aud 2nd sink, but they have had to be suspended owing to water. The men from one sink have started to continue the drive west from north side of the tunnel.

QUEEN.—Mill : The mill has been stopped the last fortnight whilst we have been accumulating stone, with which the yard is now well filled, there being a considerable paddock of our own ore, about 120 tons from Dan O'Connell, and a lot from the Great Britain, as well as what belongs to the tributers. The crushing for December has been cabled as follows :—"320 tons 240 ozs."

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 9th December.—Dunderberg : Owing to an attachment having been put upon both the furnaces here this last week by the Government, we have been unable to ship any ore to them during the week, and as yet I do not know when they will be able to resume smelting operations. Since my last report there has been little or no change ; we have ore in a number of places in the mine, but the pipes are small.

VICTORIA (LONDON) (23rd Nov.)—The following is the return of quartz raised and crushed at the South Clunes United Mine for the four week's ending 16th November :—Total quartz crushed, 2,383 tons ; total gold obtained, 1,249 ozs. 8 dwts. 8 grs. ; average per ton, 10 dwts. 11 2-3 grs. ; receipts and expenditure, sale of gold, tribute. &c., 3,821*l.* 1s. 7d. Payments, 2,793*l.* 6s. 1d. ; balance, credit, 1,027*l.* 15s. 6d. The expenditure includes 74*l.* 19s. 1d. expended in underground explorations and alterations to machinery at the No. 4 shaft. A dividend, No. 13, of 1s. per share has been declared, payable next week.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

NEW CALIFORNIA PROSPECTS.

To the Editor of the Mining World and Engineering Record.

Sir,—The cablegram just to hand from this company is, without doubt, the most satisfactory since its formation : "November output, 500 tons ; yield, 450 ozs. ; profit, $1,500 ; splendid lode 1,800 drift, and winze continues ; struck ore 1,900 and 1,600 east. I can increase returns when 1,800 connection made."

In explanation of the above, so far back as August last, the manager (Capt. Rickard) reported a rich strike in the 1,800-fm. level west ; or in the direction of the Hidden Treasure property of this company.

The lode has been opened upon right up to the present time with ever-increasing prospects of developing into a real "bonauza" as depth is attained—samples of picked stone taken from all over the face of the lode giving from 2 to 8 ozs. gold per ton, and 20 ozs. of silver. The cable to hand advises the strike of the same ore body in the 1,900 level, thus proving its continuity in depth, while it is more than probable that it will have a run of over 1,000 ft. right through the Hidden Treasure Mine into the adjoiniug property.

While this development is going forward in the west, the eastern properties, consisting of the California, the Badger, and the Oakland estates, are being prospected from the 600, 1,400, 1,600, and 1,700 levels, and here, too, at the 1,600 level the cablegram advises a rich body of ore being struck, probably more than doubling the area of ore returns in the near future.

Add to these simple facts that cross-cutting north and south is being prosecuted with equal vigour for the discovery of new ore bodies, and I think I shall have justified a belief that this property is fast coming to the front, and early in 1889 will assuredly enter the list of dividend-paying mines.

The monthly profits of 200*l.* to 600*l.* now being realised from the necessarily restricted ground of operations at the 1,800 level are very satisfactory indications of what will shortly be forthcoming for shareholders once the 1,900 and the 1,600 levels east are equally rendering their quota of ore.

The company's last dividend was paid in 1884, when the shares were selling at 25s. to 30s. The present market price is 9s. to 10s., and a cousiderable rise should immediately take place, as the company's prospects were never so bright at any previous period of its history.—I am, &c.,

B. M.'S.

We learn by telegram from Melhourne that the contract for the supply of 24,000 tons steel rails and fish plates for the use of the Victorian Government railways has been secured by James McEwan and Co., Limited, 27, Lombard Street, aud Melbourne. These rails will be manufactured in England.

Mr. Samuel Gifford starts on 9th January for Brazil on behalf of John Taylor and Sons, to visit and inspect mines in that country.

REPORTS OF MEETINGS.

WHEAL GRENVILLE MINING CO.

DIVIDEND OF 5s.—MAKING 22s. 6D. FOR THE YEAR—DIFFICULTIES WITH THE WATER OVERCOME.

A GENERAL MEETING of the shareholders was held yesterday, at the Offices, No. 7, Union Court, Old Broad Street—Francis G. Lane, Esq., in the abseuce of Mr. R. W. Goold, the chairmau, presided.

Mr. D. JULYAN (secretary) read the notice calling the meeting, and the various reports were taken as read.

REGRETTABLE ABSENCE OF THE CHAIRMAN.

The CHAIRMAN: I regret to say that Mr. Goold is not able to be with us to-day on account of bad health. He writes to say that he is better, but for the time he is enjoined to take rest and keep free from business engagements. Our last meeting was held in Cornwall, and was very well attended indeed.

ACCOUNTS.

Unfortunately, on account of the balance-sheet being brought down to the latest period (December 21st), we could not get these accounts made up, and the statement audited to enable us to call our meeting at the usual time in December. This is the fourth quarterly meeting for the year 1888; but the accounts now before you are brought up to the latest date, and audited on the 1st January. They show the balance brought forward from the last meeting to have been 3,308*l*. 15s. 6d., and sales of old materials 9*l*. 18s. 6d. The total tin return was 133 tons 12 cwt. 3 qrs. 18 lbs. The price of the tin averaged 59*l*. 9s. 3d. per ton, making a total, with carriage, of 7,944*l*. 10s. 5d. This sale does not average quite as much, within about 6 tons, as in the previous quarter, but the price obtained is 6*l*. 5s. per ton more; therefore we have a credit balance of 11,263*l*. 4s. 5d. We have paid the labour costs and merchants' bills, as well as dues and other expenses amounting to 6,569*l*. 12s. 9d. The average monthly cost has been 1,561*l*. 19s. 2d., as against the previous quarter of 1,581*l*. 19s. 3d. The difference is just about 20*l*. per month this quarter. It is unfortunate that that is the case, because the amount has been well spent in obtaining the tin from the mine. The present credit balance is 4,693*l*. 11s. 8d., and that is the amount we shall have to deal with to-day.

UPS AND DOWNS IN MINING.

The liabilities and assets, as you perceive, show the amount of 4,693*l*. 11s. 8d. We have no liabilities, excepting the lord's dues, which are taken into account in the balance now read. With regard to the report and our future prospects—like all miuing adventures those prospects fluctuate from time to time. If you will carefully read the report you will find that simultaneously several of the far ends have fallen off, and several of the far stopes. I think the present report will give you an idea of the truthfulness of all our previous reports. They are not made up for the meeting, but the agent goes according to the value of the various ends, stopes, and pitches represented in the miues at the time the report is written. We have during the past quarter met with several accidents. In the first place 16 of our stamps did not go to work until the end of October. That would, of course, reduce the returns in October, and during November there would be only a smaller quantity of tin returned, because when stamps go to work on new ground there is always waste. Then again, we had an accident to our stone breaker which caused further delay. We were delayed for want of stamping power, and delayed by the stone-breaker accident, and further by the large quantity of rain that has fallen during the past four months in Cornwall, so that our underground workings, to a certaiu extent, have been under water.

FLOODS.

It is unfortunate, because our great hope, as expressed to you at the the last meeting, was increased returns from the bottom levels—that is the 165, the 178, and the 205. The 178 has been under water for some time, and also the 165, but I am pleased to inform you that the agent to-day writes. "I see no risk in working our engine any more than any other engine. Of course, it is working fast, but we are gaining on the water now. The 178 is dry, and I hope we have seen the worst: we cannot put down any side lift to assist us." That is in reply to an inquiry whether we could not buy a side pump to assist the engine. Our engine has been, as you will perceive, pumping at the rate of 900 galls. per minute, which means 1,296,000 galls. a day. That is an immense quantity of water for any engine to pump; but our agent informs you that the machinery is in good working order, that we have got over the worst part of draining the mine, and I trust we have done it in a satisfactory manner. (Cheers.) On the whole, therefore, I cannot see that our accounts are at all of a disappointing nature. Capt. Hodge informs us that during the next quarter we may anticipate

SELLING AN EQUAL QUANTITY OF TIN TO THAT OF THE PAST FOUR MONTHS;

therefore we may fully calculate that our profits during the coming quarter will be as much as they are now, or probably more than we can distribute amongst you to-day. Looking again at the accounts, we have made a profit of 1,374*l*. 17s. 8d. on the sale of tin, and from old stores 9*l*. 18s. 6d., which will enable us to give you a dividend of 5s. a share—taking from the reserve fund 115*l*. 3s. 10d. We consider that we are justified in taking this small sum from the reserve as during the past year, we have been able to add to it at various times, and Capt. Hodge informs us that our returns for the next quarter will be as much as during the past four months. Therefore, we calculate that if we do not increase the dividends next time we shall be able to add to the reserves. I trust, therefore, with that explanation, you will receive these accounts and report, and pass them. (Cheers.) I shall be most pleased to answer any questions that you may address to me, and we will conclude by proposing: "That the statement and accounts as presented to this meeting be received and adopted, and circulated amongst the shareholders."

Mr. JOLLY seconded the motion, which was carried unanimously without discussion.

DIVIDEND OF 5S.

The CHAIRMAN: As I informed you, it is our intention to declare a dividend of 5s. per share. I am generally against taking from the reserve fund, because I look upon that fund as one that we should continually increase, so that at any future time we may develop our mine on a larger scale. At the same time, it is the opinion of my co-directors, and I agree with them that, as you have hitherto allowed us to add to that fund, this being such an exceptional quarter, we are entitled to take that small sum from it, so as to give you a dividend of 5s. per share.

RESERVE FUND.

Mr. WILLIAMS: What is the amount of the reserve fund?

The CHAIRMAN: At the last meeting it was 3,308*l*. 15s. 6d. after taking the 115*l*. 3s. 10d. from it, which would leave us a balance of 3,193*l*. 11s. 8d.

Mr. JOLLY: I submit that the directors are perfectly justified in taking that small amount from the reserve fund. I take it that the reserve fund is intended to equalise dividends in order that we may not be disappointed.

The CHAIRMAN then proposed a dividend of 5s., and said that the warrants were ready, and the shareholders present might take them with them as they left the room. This was the fourth dividend paid during the year, and the total would amount to 2*l*. 2s. 6d. per share for 1888. This he did not think a bad investment on the present price of the shares in the market. (Cheers.)

Mr. WILLIAM BELLINGHAM (director), seconded the motion, which was carried unanimously.

THANKS TO THE AGENTS.

The CHAIRMAN: When the mines become temporarily poor the anxiety of the agents and all connected with them is very great. Hence I trust that although the report is not so favourable as we should desire, the usual vote of thanks will not be omitted. (Cheers.) I know you will receive that report with satisfaction, because you can place confidence in the men who have written it, and give them your support by according them a vote of thanks for their services. The motion is "That the thanks of the meeting be given to the agents for the energy, perseverance, and economy they have exercised in the management of the mine." That is the usual form of resolution, and the directors cannot see any reason why it should be withdrawn. At our meetingin Cornwall, which was very largely attended indeed, everyone seemed satisfied that the agents were doing their duty, and that everything was being done for the development of this property in as excellent a manner as possible. We are getting on well with the sinking of the shaft, and when we get to the next level (which I hope will not be far distant) we may expect to increase the returns. Therefore, by the next meeting, I think you will hear from us a better statement of accounts than we have been able to lay before you to-day, although our present accounts are not such as should be despised. (Cheers.) They are encouraging because they are truthful, and because nothing is kept back.

Mr. W. H. BUMPUS: I have great pleasure in moving the resolution made by the chairman. I know from experience that the agents are doing their best for the company, and thoroughly deserve our thanks.

Mr. HOWARTH seconded the motiou, which was carried unanimously.

THANKS.

Mr. JOLLY proposed a vote of thanks to Mr. Lane for his services in the chair, and wished to couple with it an expression of the shareholders' regret at the absence of Mr. Goold. They were glad to hear he was recovering, but he would like that this expressiou of opinion should be sent to the chairman in the form of a letter.

Mr. BUMPUS heartily seconded the motion, which was carried unanimously.

The CHAIRMAN: I am sure any little feeling shown towards Mr. Goold by this meeting will be highly appreciated by him. He is willing at all times to do what he can to advance the interests of the shareholders, and nothing but the peremptory orders of his doctor would have kept him from being here. For my own part, I thank you for your kindness, and trust that during the current quarter we shall have a more satisfactory result. (Hear, hear.)

The meetiug was then brought to a close.

WEST GODOLPHIN MINE.

THE FUTURE OF THE MINE IN DEPTH—CALL—CONFIDENCE OF THE MANAGEMENT.

A MEETING of this company was held at the Offices, 7, Union Court, Old Broad Street, yesterday—Mr. F. G. Lane in the chair.

The SECRETARY (Mr. D. Julyan) read the notice calling the meeting, and also the agent's report.

AGENT'S REPORT.

2nd January.—We beg to hand you our report of this mine for the general meeting to be held on the 4th inst. The engine shaft is 10 fms. 3 ft. 6 ins. below the 107-fm. level, and we intend to sink for a 15 fm. lift. We believe our main point to be to see the different veins in settled granite, and we calculated to be in the granite in the shaft ere this; but looking at the plans, our shaft dips away from the granite, probably as fast as the dip of the granite hill. If this be so it will account for our not having granite in the shaft. However, the hands of nature beat all mining men, and we believe now that we have a good mine here; only require patience and a small outlay to prove the veins in the settled granite rock. Since your last general meeting we have intersected Bellingham's lode in the 107, and driven west on its course 12 fms. 1 ft. 10 ins., about 5 fms. of which passed through a very kindly lode; worth for copper and tin, about 5*l*. per fm.; present end showing a lode 2 ft. wide, producing low price tinstone. The 70 west on Pink has been driven since the last meeting 9 fms. 5 ft. 11 ins., generally poor; but from the appearance of the upper levels we expect an improvement soon. We have suspended all our stopes, and let the ground on tribute at from 10s. to 13s. 4d. in the £, to be paid 50*l*. per ton for black tin. We are curtailing all the expenses we can until we prove the veins deeper down. Our water charges are heavy; but for this we could work on a small cost. We still think our prospects are good, and have good grounds for hope that deeper working will lead us to a profitable miue.—T. HODGE, J. BODY.

ACCOUNTS.

The Chairman: I will now make a few remarks upon our accounts, and describe to you as clearly and briefly as possible our position as regards the working of the mine, and then call upon you to furnish us with the requisite means of continuing the workings. The balance brought forward from the last account was 127*l.* 4s. 11d.; the call of 2s. per share gave us 953*l.* 2s. 6d. We have sold tin during the year 9 tons 5 cwt. 9 qrs., which realised an average price of 61*l.* 6s. 3d.; the total being, with carriage, 568*l.* 1s. The average monthly sales during the past quarter have been 2 tons 6 cwt., as against 2 tons 16 cwt. in the previous quarter. On the other side we have the labour costs, merchants' bills, lords' dues, and other expenses, amounting to 1,455*l.* 16s. 8d. The average monthly cost during this quarter has been 369*l.* 19s. 11d., as against 407*l.* 0s. 7d. in the previous quarter. You will perceive from that, that although our costs have been increased, it has been because our agent found that we were raising tin at a loss. The consequence was that he dispensed with a good deal of the workings of the mine, which would account for the reduced returns, but we have more than saved—by the deduction in the monthly expenditure—so much that, whereas our previous quarter's average monthly loss was 255*l.* 13s. 1d., during the past quarter it has only been 221*l.* 18s. 9d. Those are the accounts, and the balance at present in favour of the mine is 192*l.* 11s. 9d., and these accounts I shall ask you to adopt after I have made a few remarks upon the agents' report.

WORKING OF THE MINE.

At our last meeting we had to sink the engine shaft 5 fms. below the 107. We are now down 10 fms. 3 ft. 6 ins. below the 107, and we are continuing to sink as fast as we can. We have been going down, but had several little "lets" in the sinking of the shaft by increase of water. During the past quarter the mines in Cornwall have suffered a great deal from the floods, and we have been no exception to the rule. As you are well aware, our main object has been, and still is, the sinking of our engine shaft, so as to get through the halvan and into the granite. In our last report Capt. Hodge says, "We think it is changing, and has the appearance of getting close to the granite. The lode is small, and we have no doubt it will continue so until we reach the change of rock." Now in this report he informs you, "We believe our main point to be to see the different veins in settled granite, and we calculated to be in the granite in the shaft ere this: but looking at the plans our shaft dips away from the granite." Well, gentlemen, we intend to sink 5 fms. more, so as to make a 15-fm. lift, and then we shall cross-cut towards the lode away from the shaft, and we believe, from the appearances we have already seen in the shaft and the appearances to-day, that we shall be then in a more settled country and in the grauitc. The other point was

THE CUTTING OF BELLINGHAM'S LODE.

That was referred to at the last meeting. We have since cut that lode and driven upon it 12 fms., and found in that district that the lode has been of a favourable character, producing both copper and tin. It appears to me we are not looking quite so well in the first 5 fms. driving, but in a large lode like Bellingham's lode we naturally expect variations, and if this lode continues to open up as it did in the upper levels, there is no doubt that our returns will be considerably increased. At the present time we are not returning more than about 2½ tons of tin per month, and we cannot expect to return more from the limited operations that have heen carried on in the stoping of the various points now at work. The cost of stoping is rather high. We are working at 10s. to 13s. in the £, but our main cost is in sinking the shaft, which is a very expensive operation. You have the accounts in your possession, and you have heard the report of the agent. I, in addition, have given you as much information concerning the mine as I can, but, after all, it comes to this, that our prospects are in depth. He winds up his report by saying, "We still think our prospects are good, and have fair grounds for hoping that deeper sinking will lead us to a profitable mine." Stronger expressions we cannot have from a man like Capt. Hodge, who realises the responsibility of what he says. I beg to propose in the usual form the adoption of the report and accounts.

Mr. Bellingham: I have much pleasure in seconding the motion.

Mr. Williams: How long will it take to sink these 5 fms.

The Chairman: We sank a little over 5 fms. during the past three months, and I anticipate that in another three mouths the work will be completed.

The report was unanimously adopted.

NO INTENTION TO STOP.

The Chairman: The next matter is to find funds for continuing our operations. Capt. Hodge informed us at the meeting held in Cornwall, that when he saw no chance for the mine he would recommend us to stop the work. Instead of doing that he has great faith in the ultimate results of this mine, especially in the deeper levels; therefore, the committee can only advise you to continue the operations, because they are led to believe they will lead to profitable results. The monthly loss is not great, and the amount required from the shareholders is really very small. I calculate that during the present quarter our loss will be 66*0l.* To meet this it will require a call of 1s. 6d. a share. I do not think we can ask you for less than that. That call will produce 630*l.*, and will be sufficient for our requirements with the balance we have in hand of 192*l.* We pay our costs every month, and take discounts. Hence we are enabled to work as cheaply as possible. The chairman concluded by proposing a call of 1s. 6d., payable on or before this day month, with a discount of 5 per cent.

VIEWS OF AN EXPERT.

Mr. Alfred Thomas: I rise to second the resolution, and, in doing so, I would say that the report has the appearance of being that of a poor mine at present; but, at the same time, we have no one to blame for that. I am sure that Captain Hodge and his under agents are doing all that is possible to place a different state of affairs before us. At the same time we cannot help thinking, with the worthy chairman, that the prospects are decidedly encouraging. The shaft is now at a depth at which we may expect to find a lode of value, and the chairman tells us it will take three months longer to sink it to a point at which we should cross-cut to the lode, in order to see a point of very great interest, and that is the lode at a greater depth than we have yet seen it—15 fms. We are also told that we shall also probably be in the granite, and if so, a change for the better may auy day take place. I have been directly or indirectly interested in West Godolphin mine for the last twenty years. It was always

A MINE OF SURPRISES.

When I first came to London, in 1868, the shares were selling at 4s. or 5s. each. A rich bunch of tin was struck, and the shares became marketable at 5*l.* each. History repeats itself. (Hear, hear.) I say again, the report reads as the report of a poor mine, but there is no telling how soon a different aspect may be put upon affairs. I think the directors are very wise in anticipating the next three months' expenses by making a call. It will give confidence to the shareholders that they will not be liable for any debts beyoud what they are told about. (Cheers.)

The Chairman: I am very glad to have heard these remarks, because Mr. Thomas knows the property. (Hear, hear.)

The resolution was carried unanimously.

WHAT GODOLPHIN SUCCESS WOULD MEAN.

The Chairman, in similar terms to those he had employed at the Wheal Grenville meeting, proposed a cordial vote of thauks to the agents. Two of the directors visited the miue in September, and were very well satisfied with what was going on. The agents were most anxious that this mine should turn out successfully, because it would open up quite a new district, and give employment not to a few hundred men, but to thousands.

Mr. Bumpus seconded the motion, which was carried uuanimously.

JUSTICE TO MR. LANE.

Mr. Williams, in proposing a vote of thanks to the chairman, said—we all have confidence in him, and in those associating with him. We hope to live to see the time when the thousands of people he has spoken of will be employed.

Mr. Thomas seconded the motion, and said he had reason to know that the chairman's heart and soul were in the success of this mine, and that he and his co-directors were doing all that they could to achieve it.

The motion was carried unanimously.

The Chairman: I thank you for your confidence, and will continue to exert myself for your interests as I have hitherto done. All the time that this mine requires from me I cheerfully give, because we are all working so well together. Your committee believe that the success of this mine will reward their utmost exertions. (Hear, hear.)

The proceedings then closed.

THE IQUIQUE SILVER CO., LIMITED.

STATUTORY MEETING—ARTICLES ALTERED TO MEET VIEWS OF STOCK EXCHANGE.

The statutory general meeting was held at the Cannon Street Hotel, on Thursday. Notice was further given that an extraordinary general meeting of the company would be held at the same place immediately at the conclusion of the business of the said statutory meeting, for altering the articles of association of the company. The special resolution was as follows: "That the articles of association of the company be altered by omitting from article 81 the words 'except in the case of the first directors,' and by omitting from article 83 the words 'notwithstanding any rule of law or equity to the contrary.'"

George Bush, Esq., chairman of the company, presided.

Mr. Alfred Kiver, (secretary) read the notice calling the meeting.

OBJECT OF THE MEETING.

The Chairman: Gentlemen, the first meeting referred to in the notice which has just been read by the secretary is the statutory general meeting, called in accordance with the Companies' Aets, which require that a general meeting of the shareholders should be convened within four months of the incorporation of the company. This meeting would not have been held quite so soon had it not been for the business whieh it is necessary to transact at the meeting which is to take place after this is concluded. The company has been formed such a short time that it is, of course, out of my power at present to give you much information beyond that which is contained in the prospectus, but I am able to inform you that the necessary legal documents have been forwarded to the company's representative in Chili, to enable them to obtain a transfer and possession of the property on behalf of the company, and so soon as this is done, the company will at once commence operations at the mines, and I hope at the next general meeting to be able to inform you that the favourable anticipations of the prospectus have been more than realised. I do not think I have anything further to add, but if any gentleman has any question which he desires to put to me I will answer it to the best of my ability. (After a pause): Gentlemen, we will now, if you please, resolve ourselves into an extraordiuary general meeting, which is the second meeting referred to in the notice. This meeting is a purely formal one, and is called for the purpose of altering the articles of association by omitting from article 81 the words, "except in the case of the first directors," and by omitting from article 83 the words, "notwithstanding any rule of law or equity to the contrary." This alteration is required to meet the requirements of the Committee of the Stock Exchange, and to enable the company to apply for an official quotation of its shares.

ALTERATIONS NOT MATERIAL.

We are advised that the words proposed to be omitted are not material, and as it is extremely desirable that application for a settlement and quotation should be made to the Committee of the Stock Exchange as soon as practicable, I presume that the special resolution mentioned in the notice will be passed as a matter of course. I will, therefore, at once put the resolution to the meeting, which is as follows:—"That the articles of association of the company be altered by omitting from article 81 the words, 'except in the case of the first directors,' and by omitting from article 83 the words, 'notwithstanding any rule of law or equity to the contrary.'" Those who are in favour of the resolution will please signify the same in the usual way; those who are against—carried. The resolution which has been passed to-day will be submitted for confirmation as a special resolution to a subsequent general meeting which will be held, as required by the Companies' Acts, and of which due notice will be given. This, gentlemen, concludes the business of the meeting.

Mr. HAYS: May I ask if the articles of association are being altered in accordance with the rules of the Stock Exchange.

The CHAIRMAN: Yes, that is the object. They need slight alteration.

Mr. DAVIS seconded the motion, which was carried unanimously.

The CHAIRMAN: The resolution which has been passed to-day will be submitted as a special resolution at a meeting to be held in accordace with the Act, of which due notice will be given.

Mr. DAVIS: I rise to propose a vote of thanks to the chairman for the able manner in which he has addressed both these meetings. I hope, when he calls us together again, he will have something more substantial to tell us as to progress and success.

The motion was carried unanimously.

The CHAIRMAN: We shall have the plans of the mine sent over shortly, and they will be on view at the office.

The proceedings then closed.

THE NUNDYDROOG GOLD MINING CO., LIMITED.

SATISFACTORY REPORTS FROM THE DIRECTORS AND MANAGER—MINE IMPROVING.

31st December.—We are requested to inform you that the directors had intended convening a half-yearly meeting of the shareholders, in compliance with the desire expressed at the general meeting held last June, but as the board now fully expect to be in a position to hold the usual annual general meeting much earlier than heretofore, it is thought more convenient to send out at once the annexed copy of Capt. Plummer's report, just received, and to defer the meeting until the annual reports and accounts can be presented, in March or April next. In view of the foregoing, of the continued publication of the weekly reports and the monthly returns, and of the information now given in Capt. Plummer's report herewith, the board believe that the shareholders will approve of this half-yearly meeting being dispensed with. The shareholders will perceive with satisfaction how well the mine has been opening up, that the rock-drill plant has been set to work, that good progress is being made in the exploratory operations, and that there is every reason to believe that the company has a valuable property, and one that will prove highly lucrative. With refereuce to the call recently made, the directors think it well to repeat what was said in their circular of the 15th August last, viz.:—"That with a view to make the payments in respect of the new capital light, and to spread them over a lengthened period, it was stipulated that the calls on the new shares should not exceed 2s. 6d. per share, and that there should be an interval of at least three months between each call. Although profits are accumulating from the working of the mine, it is necessary that the calls should continue to be made in order that the capital may be provided to defray the cost of the rock-drill plant and the new works for developing the mine more vigorously, leaving the profits to be available for distribution amongst the shareholders." We deeply regret to have to inform you of the sudden death, ou Thursday last, the 27th iust., of the secretary of the company, Mr. W. G. Williams.—JOHN TAYLOR AND SONS, Managers.

CAPT. PLUMMER'S REPORT.

4th December.—It affords me pleasure to be able to write such an encouraging account of the mines for the six months ending 30th June last, and, although the lode has not yet asserted itself to the north of the north cross-course, yet in Webb's shaft, and to the south of it there is a good wide and rich lode of quartz. Compressing engines and rock-drills: These engines have been erected in a very substantial manner, and are now working in such a way as to give entire satisfaction. The drills have been started, and the men are learning the business, so that in a few weeks more we may hope to do very well. Machinery: The whole of the machinery is working well; we have lots of reserved power in Taylor's pumping and winding engines; the 10-head mill has done good work, and the engineer has begun to prepare for the erection of additional 10 heads. When these are completed the stamping will be equal to at least 1,000 tons per month, which is sufficient for Nundydroog for a considerable time to come. Buildings: Good stone houses have been erected for the Englishmen who recently came out, and at this time we have in hand house accoumodation for the officers. Hitherto they have lived in places constructed of bamboo aud corrugated iron. These would soon require extensive repairs, and it was thought better to put up good healthy houses, than to expend largely in repairing indifferent aud uncomfortable houses. A new smith's shop, with six forges, has been erected, and the old smith's shop converted into a warehouse, so that the mine is now equipped with good stamping power, pumping and winding machinery, air compressing engines, rock-drills, workshops, and good stone houses for the Europeans. Stamping: From 31st December to 30th June 168 fms. were cut in siuking, driving, and stoping in Webb's shaft, and 7 fms. 2 ft. in sinking and driving in Taylor's shaft. All the ground cut in Taylor's shaft was barren. The 168 fms. cut in Webb's produced 1,619 tons of picked ore. This was treated in the mill and yielded 2,902 ozs. 12 dwts. of bar gold, equal to 1 oz. 15 dwts. 20 grs. per ton, yielding 9 tons 13 cwt. per fm., giving a money value at 3*l*. 15s. per oz., 65*l*. per fm. This was satisfactory, but the period from 30th June to 30th November has been much more so; 105 fms. 4 ft. 9 ins. were cut in Webb's shaft to the 20th November, and 8 fms. 2 ft. 6 ins. in Taylor's. The rock in Taylor's is unproductive, but the 105 fms. 4 ft. 9 ins. brokeu in Webb's shaft and the stopes produced 1,860 tons of picked ore, yielding from the mill 3,314 ozs. 19 dwts. of bar gold, equal to 1 oz. 15 dwts. 15 grs. per ton of rock; this yielded 17 tons 10 cwt. of picked ore per fm., and at 3*l*. 15s. per oz. a money value of 116*l*. 5s. per fm. Webb's shaft was sunk 46 ft., Taylor's 31 ft. in the first period under mention, and from June 30th to November 20th Webb's shaft was sunk 14 ft. and Taylor's 18 ft. 5 ins., making the total depth of the former shaft 384 ft. and of the latter 338 ft. The development is at present carried on by sinking Webb's and Taylor's shafts; the bottom of Webb's shaft is in the north cross-eourse, and the rock is comparatively poor. Taylor's shaft has not improved; the rock is hard and barren. We are immediately going to employ rock-drills in this sinking, and we hope, with their aid, to soon get down to the same depth as Webb's. Driviug the 300 north from Taylor's: This end is in extremely hard and barren rock; there are small strings of spar, and this we are following with as much vigour as possible. The 300 south of this shaft has been communicated with Webb's, and it has greatly improved the ventilation. Driving the 166 south of Webb's: There is a small lode in this end of fairly good quartz, but there are only a few more feet to drive before we get to the Ooregum boundary. The 230 south of Webb's shaft; This end has been in good paying quartz for some time, and there is a lode in the present end about 18 ins. wide of rich quartz. In the 300 south of Webb's shaft rock-drills are employed. There is a good lode valued at over an ounce per ton. In the intermediate level there is a lode 2½ ft. wide of good paying quartz. We are driving the 370 north of Webb's with rock-drills, and have employed the greatest force it is possible in this end. There is a mixture of quartz, cross-course spar, mica, and slate containing traces of gold. Up to this time, contrary to our expectation, the rich ore has not been found north of the north cross-course; it penetrated the south cross-course, and between these two bands there is very rich quartz 3 to 4 ft. wide. We do not, however, despair of finding it, and with a view to make as quick a trial as possible I have employed this force named above, and, after driving the 370 some 50 ft. north, it is our intention to cross-cut east and west to prove if the lode is heaved from its direct line. Stopes: The principal stope is to the south of Webb's shaft; between the 300 and 370 there is a very fine lode, 4 ft. wide, worth 2 to 3 ozs. per ton, and the stopes between the 300 and 166 contain quartz 2½ ft. to 1 ft. 6 ins. wide rich in gold. The stope north of Webb's shaft over the 300 contains a lode 2 ft. wide; worth about 30 dwts. per ton. All the work underground as well as at surface is going on with great regularity, and, now the rock-drills are got to work, we shall no doubt carry on the development to the entire satisfaction of everybody.—B. D. PLUMMER.

LATEST REPORT.

11th December.—Mining operations: The work underground progresses in a satisfactory manner. In the past week or two men have been employed putting in a stull and penthouse in the back of the 370 at Webb's shaft; this work we expect will be finished by the end of next week, then it is thought that Webb's shaft will be better protected, and that sinking will be more rapid. It is down 386 ft.; there is no change in the rock; the influeuce of the cross-course is still observable. The 370 north end has been driven 22 ft. 2 ins.; there is an improved appearance in the rock. Sometime after it was commenced it was composed of soft slabby stone and cross-course spar, now the soft rock is wearing out, and quartz is coming in, it looks like gold quartz, but a sample which was made yesterday gave a trace only. We have employed one rock-drill in sinking Taylor's shaft; one Italian, one Englishman, and a number of coolies are employed. They have not yet had the experience enough to be able to work the drill efficiently, but will doubtless improve, and as soon as they do better speed will be the result; two of the men are got to work very fairly, they drove 8 ft. 9 ins. in the bottom north end last week. There is an improvement in the appearance of the 300 end north of Taylor's shaft, besides small strings of quartz in the joints and fissures there is a good footwall. All the workings in the mine look very well. Stopes: In the 300 south between it and the 370 the lode averages 4 ft., assaying 2 ozs. 2 dwts. 12 grs. The 300 end, south of Webb's, has been extended in all, 68 ft. 9 ins.; the lode is 1 ft. 8 ins. wide, assaying 1 oz. 11 dwts. The intermediate level has been extended 54 ft. 4 ins., and the 230 has been driven 111 ft. 5 ins. in the former; the lode is 2½ ft. in the latter; it is 1 ft. 8 ins. wide, assaying 1 oz. 18 dwts. 12 grs., and 1 oz. 5 dwts. 6 grs. respectively. The rise in the back of the 230, north of Webb's shaft, is on a promising lode, 2 ft. wide, assaying 2 ozs. 13 dwts. 12 grs. The middle level, between the 230 and 166, contains a lode 1 ft. 8 ins. wide, assaying 3 ozs. 16 dwts. 18 grs. The 166 end, south of Webb's, contains a lode 1 ft. 3 ins. wide, assaying 5 dwts. 6 grs. per ton. The mill was turned idle for seven days to allow the new engine to be put in. It is completed except the condensors; aud the stamping resumed on Friday the 7th. The mill and pans are running well, and are producing a fair amount of amalgam. Rock-drills: The engine and compressors are working very well, and the men are getting better acquainted with the work. I hope soon to be able to report it as satisfactory as at Mysore. Weekly samples from the mill:—Rough quartz, 2 ozs. 18 dwts.; smalls, 1 oz. 15 dwts.—B. D. PLUMMER.

THE OOREGUM GOLD MINING CO. OF INDIA, LIMITED.

REPORT OF THE DIRECTORS.

December 29th.—In accordance with the promise made at the annual general meeting, held in July last, the directors have now the pleasure of inviting the shareholders to an intermediate general meeting to be held on the 8th proximo, at which, however, no formal business will be transacted. A report by Captain Martin is annexed, giving a summary of the work done during the six mouths ending the 29th September last. Since that date the mine has continued rich, and large quantities of highly auriferous quartz have beeu discovered. The mine is at present being developed from three centres—viz., Probyn's shaft, Low's shaft, and main shaft; aud from each place valuable pay shoots have been met with. Communication has recently been effected between Low's shaft and the old workings at Battery shaft, further south, and it is not unlikely that the development of the lode at the latter place may contribute largely to the resources of the mine.

The followiug are the results of crushing up to date:—

Month.	Quartz stamped.	Gold produced.
1888.	Tons.	Ozs.
May	150	169·15
June	150	325·50
July	205	415·50
August	255	533·20
September...	328	602·60
October	316	606·10
November...	318	622

With the object of more rapidly developing the mine, additional rock-drilling plant has been sent out, and is in course of erection. The six drills this machinery is designed to work will be employed in the northern part of the property. Main shaft, further south, is already equipped with rock-drilling machinery. The successful manner in which the mine is being opened up is very gratifying to the directors, and justifies them, they think, in taking a sanguine view of the future prospects of the company. The new rock-drills will probably shortly be at work, when a substantial increase in the returns and corresponding profits may be looked for.—J. GARLAND, Secretary.

The report of Capt. Martin follows, and is a synopsis of those we have published from week to week.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and jndgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

The extraordinary number of meetings held within the past few days necessitates the delay of much important news from African and other mining centres. Several reports of progress from the mines are also unavoidably omitted.

TO READERS AND CORRESPONDENTS.

P. A. G. (Chester).—Our opinion is favourable of Yuruaris at present prices.

A. M. B.—We have reason to believe that the circular of the brokers in question does not represent the actual state of affairs. Will write to you fully in a few days.

W. F. P. (Birmingham).—The capital of the company mentioned is 50,000*l.*, in shares of 5*l.* each, but there is no market for them.

W. Charles (Glasgow).—Your shares cannot be disposed of on the London Market.

E. W. G.—Thanks for your suggestion.

F. I. S.—The offices are at 30 and 31, St. Swithin's Lane, London, E.C.

J. C. Wilson.—No. 1 is good to hold. No. 2: You may expect a call of 6d. No. 3 should by no means be sold at present prices.

Jack S. M.—We have not as yet been able to get you the information, but will make a fresh effort next week.

S. E. A.—We never remember to have heard such a question raised before, and can therefore give no opinion. Under the circumstances, we advise you to consult a respectable solicitor.

G. S.—The shares you mention have lately had a rise. We advise you to buy the others at present prices.

Henry W. (Birmingham).—We have published many columns about this matter, and would gladly have inserted what you have kindly sent, but we really have not space.

The Mining World.

LONDON: SATURDAY, 5TH JANUARY, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

1889.

THE bells, wild and otherwise, having rung out the old year and rung in the new, we are now fairly started in the year of grace 1889; and judging from the way it has commenced, its career, from the mining point of view, promises to be cheerfully prosperous. It is, of course, early days yet to forecast what is to be the course of the mining industry during the year upon which we have only just entered, but all the information which has come to hand since we dealt with the prospects of the market a week ago goes to confirm the estimate we then ventured to form of the outlook. The results of the December crushings of the Indian mines have not yet been completely announced, but those which have come to hand have been exceedingly satisfactory, and go to prove that the gold-mining industry in India is being steadily established on a permanent basis. The return from the Ooregum Mine is by far the most satisfactory that has yet been received from that property, showing, as it does, a yield of nearly 2 ozs. to the ton—754 ozs. of gold from 397 tons of quartz. There is every prospect, therefore, that Ooregum will soon join Mysore and Nuudydroog in the dividend list. The Balaghat crushing is also a very good one, and the prospects there are decidedly brightening. We are not surprised, therefore, that Indian shares are generally higher than they were a week ago. We, indeed, look for a steady continuance of the upward movement which has set in, and fully anticipate that shares, such as Mysore West and Wynaad, Indian Consolidated, and some of the other shares which now stand at rubbish prices will shortly be quoted at a very different level. Queensland shares have moved less, but at the low range of prices for most of them we regard an early rise as pretty certain. The Day Dawn Block Company is working away vigorously, and now that the new mill, at a more advantageous site than the old one, is nearing completion, it is only reasonable to suppose that the returns will shortly be augmented. Gympie Great Eastern has declared a dividend of 2s. per share this week, making the return to the shareholders about 25 per cent. from the commencement of operations; and though we are fully aware that fears are entertained that the rich deposit worked upon so far will not yield much longer, there is every reason to believe that the sinking in depth will discover either a continuance of the same deposit, or another one of considerable value, seeing that the adjoining mine to the south, whose workings are somewhat lower than the bottom of the shaft in Gympie Great Eastern, is getting quartz worth 3 ozs. of gold to the ton. A distinctly favourable feature in the position of the Queensland mines is that works are now in course of erection in the colony for the treatment of the refractory ores which have hitherto proved a stumbling block to the progress of the industry. In the Transvaal, too, the prospect is that the De Kaap mines will again come into favour. Already, indeed, there is a distinctly firmer tone for the shares, in which the depression has been so marked. Among American mines again, we regard the outlook for Richmond, Montana and New Emma, as especially encouraging; and now that the necessary amount has been provided for redeeming the mortgage on the Dickens Custer properties, it would not be surprising if the price of the shares advanced materially. Apart from these, there are many American shares which picked up at present prices would almost certainly give a good profit within a few months.

Regarding home mines, generally, we need add little to what we said last week. Lead shares look like going better; while the latest accounts from the tin mines prove that the collapse in the metal market, which followed the rapid rise of the later part of 1887, and the early months

of last year, had less effect upon the Coruish industry than might have been supposed. Wheal Grenville has paid 2*l*. 2s. 6d. per share out of the profits made in the year, and South Condurrow has paid 1*l*. 15s. for the same period. Results such as these cannot but be regarded as satisfactory. They show that, under ordinary conditions, mining may be made to yield profits quite as regularly as most other industrial undertakings, the shares in which stand at relatively much higher prices. Whether we look at home or abroad, the indications seem to point to greater prosperity where prosperity already exists, and to success where success has not yet been attained, or, having been attained, has been temporarily checked. The year may not be one of leaps and bounds to greatly inflated prices; we trust it will not, for such movements only produce reactions; but so far as one can foresee, 1889 promises to be a year of steadily increasing prosperity in mining matters.

THE STOCK EXCHANGE AND THE WITWATERSRAND MINES.

CONSIDERABLE interest has been evoked by the following paragraph which appeared in Thursday's *Times*:—"A question as to whether the shares of certain South African Gold companies are a 'good delivery' has, we believe, been before the Stock Exchange Committee, with the result that the committee declines either to adjudicate on any question about securities which have not had a special settlement, or to recognise any bargains in them. If we are rightly informed, the further question arises of the legality of the transactions in these South African Shares." We have reason to believe that the information thus supplied is practically correct, and it is notorious that the committee of the Stock Exchange do not look with favour upon the latest phase of the speculation in South African mines. But dealings in these shares was hardly likely to be checked by the refusal of the Stock Exchange authorities to recognise bargains in them, because, as our readers are doubtless aware, very many mining companies are not officially quoted at all, and though plenty of business is transacted in shares, not recognised by the authorities of Capel Court, the transactions are not officially settled. Where a company is doing well, however, it matters little whether its shares are officially quoted or not. The greater objection to Witwatersrand shares, in our view, is that the companies are nearly all of local origin and management, few of them having any agencies in this country. Therefore, while we have no doubt about the great value of many of the properties, we would again caution our readers against entering into bargains which it would be very difficult, if not impossible, to enforce.

THE NEW MINING ENTERPRISE OF 1888.

FROM THE STATISTICAL TABLES OF MR. EDWARD ASHMEAD, F.C.A.

THE year 1888 has exceeded any previous year in the registration of Mining Companies, and compares with the preceding year as follows:—

	1888.		1887.	
	No. of Companies.	Nominal Capital.	No. of Companies.	Nominal Capital.
New Mining Companies registered, including reconstruction	365	52,663,400	269	34,002,041
Proportioned as follows, namely:—				
For Mining in Europe ...	45	6,556,070	23	1.736,000
" " Asia ...	14	1,785,000	9	1,562,511
" " Africa ...	73	10,533,205	42	4,760,500
" " N. America	84	16,531,000	67	12,298,830
" " S. America	31	6,858,600	13	2,660,000
" " Australia, New Zealand, &c.	39	4,563,200	52	7,503,000
and for British Mines ...	79	5,836,325	63	3,476,200

The 365 mining companies of 1888, by a singular coincidence, give an average of one company per day throughout the year. They include all re-constructions and consolidations of previously existing companies, which have been rather numerous in 1888. Out of the 365 companies, only a portion have appealed—by the issue of prospectuses and advertisements—to the public for subscriptions, and these compare thus with the preceding year. In 1888, 101 new mining companies, having a nominal capital of 14,272,000*l*., invited the public to subscribe for 7,805,462*l*., paid the vendors for the respective properties 75 per cent. of the nominal capital, and left for working cost, purchase of machinery, &c., 25 per cent. In 1887, 89 companies, with a nominal capital of 16,003,000*l*., invited subscriptions publicly for 9,218,200*l*., the vendors taking 74 per cent., and leaving for working capital, &c., 26 per cent.

The object for which the new companies of 1888 were formed, and compared with 1887, are:—

	1888. No. of Companies.	1887. No. of Companies.
Gold	169	124
Silver	30	24
Lead	15	19
Tin	18	12
Copper	33	7
Zinc	1	—
Iron and Coal	28	27
Slate and Stone	12	15
Manganese	1	—
Arsenic	2	—
Nitrate	5	2
Borax	—	1
Plumbago	—	1
Asbestos	1	—
Antimony	—	3
Precious Stones	6	4
Undefined, mostly exploratory ...	44	30

Gold is, as usual, the prevailing metal sought after.

African mines have caused 54 new gold companies out of the 169 to be formed:—North America, 46; Australia and New Zealand, 22; South America, 15; Europe, 12; Asia, 8; and Great Britain (Welsh), 12. It was the Transvaal last year that exhibited the greatest amount of gold mining activity—nearly all the new African mines being in that territory. Queensland alone exhibits a decrease in new mining enterprise. Wales has caused the creation of 12 gold companies, with 815,125*l*. nominal capital, of which the most important is the Morgan Gold Mining Company, which has a capital of 210,000*l*. in 1*l*. shares; and the smallest, the Goldfields of Great Britain, 125*l*. capital, in 10,000 shares of 3d. each. Copper mining shows out well in 1888, as might be expected from the rise that took place in the price of copper at the close of 1887. Lead mining has been inactive; the average price of lead in 1888 being rather under that for 1887. Several tin mining companies have been started; but the great drop in the price of tin has somewhat damped the ardour of the tin miner. Nitrate, in Chili, has been the cause of several large companies being formed in the course of last year. The largest capital mine company of the year 1888 is the Venezuela Mines, in South America—2,000,000*l*.; while the smallest is the one already alluded to, with 125*l*. capital only.

EMMA MINE—PROSPECTS OF ANOTHER BONANZA.

SOME 17 years ago the Emma Silver Mining Company, Limited, was floated upon the London market, with a capital of one million sterling. The shares were 20*l*. each, and the price to which they ultimately rose was 32*l*. The mine was the theme of conversation all over the City, and in every club and commercial circle in the kingdom. The name of the American Ambassador appeared as one of the original directors, and he is a large shareholder to this day. Members of Parliament, high in political and social influence, were on its board, and it came from New York supported by every credential that could give the imprimatur of respectability to its sponsors, and testimony to its mineral wealth. The truth was that in working the Emma Mine, not far from the surface, an exceptionally rich bonanza was found, out of which, from first to last, silver to the value of 2,000,000*l*. sterling was taken. The public caught the infection, and, as we have said, the 20*l*. shares—we had not at that date arrived at the sweet simplicity of 1*l*. shares—were greatly sought after at a big premium. There are those who well remember Mr. Trenor W. Park, one of the vendors, and a man who believed in the Emma Mine to the day of his death, offering the shareholders in public meeting 1*l*. per share, for the call of 40*l*. per share during the next six months, and, it is said, only one of them took him at his word. Such was the faith of the Emma Mine about the year 1872. Adverse rumours, however, began to circulate about the mine, and the truth gradually leaked out that the bonanza was rapidly becoming exhausted, and that there was an absence of fresh discoveries. Mr. George Attwood, the celebrated mining engineer, was sent to report upon the mine, and returned only to tell the shareholders that they had "a geological chance." Then it was that the Emma Mine fell upon evil days, and the shares fell rapidly, like a plummet cast into the water. Ultimately the company, after a series of misfortunes, largely caused by internal disputes, went into liquidation, and, worse still, into the law courts, both here and in America; but in the midst of all its vicissitudes, Prof. Blake, Prof. Raymond, Prof. Price, and a host of other experts, of the highest eminence, all stoutly maintained their belief in the existence of other ore-bodies, which would reward those who had the diligence, the patience, and the money to seek them. Directors were condemned; promoters were asked to disgorge, and officials were loaded with reproaches, but not a dog barked against the mine—in fact, the solitary point on which all were agreed was that the ultimate value of the Emma Mine would still be proved.

This concensus of opinion from men of reputation, and who had no pecuniary interest to serve by their statements, struck the mind of Mr. Frederick William Snell, who had been a good deal mixed up in

Emma affairs, and he thought the attempt to find another Emma bonanza was worth making. He made known his views to the shareholders, and they, with some difficulty, were led to provide the wherewithal. But the ship was in a storm, and it needed a strong hand to take the helm. Mr. Snell was asked to do it, and he has remained at his post from that day to this. The company, we believe, has been twice re-constructed, and the tenacity, for which our countrymen are said to be remarkable, was never more exemplified than in the dogged determination that has been shown to find in the Emma Mine anything that is to be found. After years of labour and research; after the expenditure of large sums of money; and in the teeth of almost unheard of difficulties, it really seems as if salvation has at last come to the Emma Mine, and if any proof be needed of this, it stands embodied in the speech of Mr. Snell, and in the letters and telegrams he read to the shareholders at their meeting on Monday last. To this meeting we have not hesitated to give the space, needed by the verbatim report, which its importance merits. The facts are not a few, and the inferences to be drawn from them are many; but let us consider the actual position as briefly as we can.

The operations at the mine divide themselves into two parts. There is, first, the work of the concentrators upon the 25,000 or 30,000 tons of fillings, and, next, the operations upon the rich seam of ore to which everyone who has the rudiments of mining must of course attach the greater importance. In regard to the fillings, they have become of value, for the reason that improved appliances can be adapted to their treatment, and their extraction from the mine can be economically carried out. The Bay City tunnel has proved to be a more fortunate purchase than was originally thought. It commands the whole of the Little Cottonwood Canon Mines, and must ultimately come to be used by them. If they do use it they will have to pay for it—as Mr. Snell laconically observed. The former owners charged the company $1 for every ton of ore taken out through the tunnel, but now that money is saved. The concentrators could only run 23 days during October, and the yield was $3,750, but when the weather breaks, as it usually does about the beginning of May, they can run continuously until perhaps the end of November. The "fillings" are known to be more valuable as they are penetrated, and from this source alone the company has the assurance of being able to pay the whole expense of the mine with a handsome profit to boot. For the purpose of adding to the "fillings," and also to hurry on the other workings of the mine, it has been decided by the board, since the meeting, to add to the force of men working during the winter by one-half—a decision that will give the shareholders a satisfaction similar to that felt when Mr. Palmer reported that the mine was worked in a manner to which no exception could be taken.

The most important feature in the working of the mine is undoubtedly the discovery in the No. 2 level of a seam, which has varied in width from 8 to 14 ins. of rich ore, worth, according to Judge Bennett, 125 ozs. of silver to the ton. The importance of this discovery, upon which we would wish to lay emphasis, is that the seam in question is going away from the former bonanza, and is apparently leading to a bonanza of its own. Mr. Cullins and Mr. Wallace are encouraged by the fact that the new discovery runs from the old ore body going to the north-west in virgin ground, and, therefore, cannot be an off-shoot from the rich body, but would, as we say, seem to point to a new body. All the present indications are similar to those which heralded the original Emma discovery. 22 tons of ore have already been taken out, of the estimated value of 440*l*. This ore is sent direct to the market—the concentrators dealing only with the tailings. This discovery in the No. 2 level is that upon which the shareholders should fasten their attention in reading the telegrams and reports, for upon its importance we cannot lay too great stress. They should accept the statements of the directors, whom they can trust, and who work for them for nothing, and not be led away by the "hairbrained chatter of irresponsible frivolity" they may hear outside. Should the Emma come into another bonanza the rise in its shares would be as remarkable as anything that has taken place in recent mining history. It should be remembered that the original capital of the company was one million sterling, but that it has now been reduced to 350,000*l*. Shareholders should also remember that no call will be required during 1889; that they have as their co-partners distinguished American citizens, who hold an enormous interest; and that the affairs of the company are administered with an economy that, at the same time, sacrifices nothing to efficiency. We entirely agree with the remark made at the meeting, that "the prospects of the Emma Mine never looked so bright as they do at the present moment."

COPPER AT THE CLOSE OF 1888.

The statistics, as published by the metal brokers for December, complete the figures for the year. The increase in the visible stocks of the metal held in England and France has been 6,199 tons during December, and the gross total is now 104,105 tons, as compared with 42,301 tons a year ago. Supplies of the metal are estimated at 50,000 tons, but there is no real basis for any such calculation. The total holding of the Syndicate is thought to be about 130,000 tons, or about 8½ millions sterling. Statistics are piled up against the Syndicate till the total, according to one writer, is 12,000,000*l*., but though it is undoubtedly large he might not have laid under contribution the figures of his fancy to such an extent as this. For the month of December the receipts of copper in France and England were fully 2,000 tons more than in December, 1887, and almost double that of December, 1886. For the year 1888, 125,710 tons have been received, as against 90,504 tons in 1887, and 93,137 tons in 1886. Deliveries have fallen from 111,493 tons in 1887 to 63,906 tons last year. Shipments from unspecified countries were 35,828 tons last year, only 16,001 tons in 1887, and under 20,000 tons in 1886. Rumours have lately been circulated of the breakdown of the combination, to be followed by a great fall in the price of copper, but we cannot learn that there is any question of breakdown at present. Even if the above stocks of copper were thrown on the market recklessly, it is certain that a new combination would come in and do more or less what is now in process of accomplishment by the French and English financiers, whose object is to promote a limited company to carry the main stock of metal. In Paris the shares (not yet created) of the projected Copper Company, Limited, are quoted 1 premium. The present forceful fact is that, despite the leaders that are thundered at it by various papers, it has weathered the storm of 1888, and, so far as present appearances go, may do those of 1889.

ARAUCO PROSPECTS.

The meeting of this company passed off satisfactory, as well it might do, considering the record of progress Col. North (who presided) was able to make. In the first place, he was able to state that 16 miles of the railway had already been completed, and he also foreshadowed the pleasing intelligence that dividends would not be long delayed. The principal business of the meeting, however, was to accept or reject an offer to buy a very large coal property, the output of which is about 70,000 tons a year. The price mentioned was 175,000*l*., and the bona-fides of the vendors would seem to be proved by the fact that they are willing to put 50,000*l*. into it. The contractor also wishes to supply 10,000*l*., and the manager 5,000*l*. The refusal was only given for 15 days, and the directors decided on purchasing. To provide the necessary funds there will be an issue of 10,000 new shares, of which the shareholders will have the refusal. When Col. North stated that he, as one of the largest shareholders in the company, was perfectly satisfied with the purchase the shareholders wisely basing their action upon the opinion of a gentleman of so much experience in affairs on the West Coast of South America, decided to close with the offer, and the future is likely to justify the wisdom of their decision.

FAVOURABLE OUTLOOK FOR THE STANLY FREEHOLD GOLD MINES.

The position of this company, as contrasted with what it was six months ago, must be judged by all candid shareholders to be greatly improved. Towards the middle of 1888 the company was surrounded with difficulties which threatened to overwhelm it. The position had then to be faced that the working capital was all gone, and there is too much reason to fear that a large part of it has been injudiciously expended, whilst the promises made in regard to regular returns had been absolutely unfulfilled. The company was then heavily in debt, and it was felt that only a vigorous effort could save it from a destruction which so valuable a property certainly did not merit. That dead past may be left to bury its dead. It is the present and the future with which we have to deal. When the directors met the shareholders last Monday they were able to announce that fresh capital had been raised; that the debts had all been paid; that a new manager had been appointed; and that the hydraulic works were being rapidly completed. The company's deliverance came by the issue of 50,000 preference shares, all of which were taken, with the exception of 2,000. Under new management the prospects of the concern brightened daily. From the very commencement operations indicated excellent results, and the great improvements which have taken place are not seen so much in rose-coloured statements in reports as in actual facts and results produced on the mines. Some very rich ore has been raised from the upcast shaft, and there is abundant evidence as to the auriferous value of the property. The veins upon which the late manager wasted so much money and precious time could not be expected to yield well at only 80 ft. from surface; and it appears to us now, as it did at the time, that it would have been far better if the money spent in such shallow explorations had been used in sinking the shaft 200 ft. or 300 ft. deeper, so as to open out a permanent mine.

At the present time every effort is being devoted to completing the hydraulic works as rapidly as possible. These are of an extensive character, consisting of a pipe line 20 ins. in diameter, and about 4½ miles in length, laid so as to bring the water of the Yadkin river to the mines. This work was commenced by the old manager, but, unfortunately, it appears to have been carried out in such a way as to necessitate its entire re-construction. The work is now being carried on under the direction of Mr. E. B. C. Hambley, late confidential agent to the well-known firm of Messrs. John Taylor and Sons, of Queen Street Place, and now managing director of the neighbouring

Sam Christian Mine. The plant is almost an exact counterpart of the hydraulic works that have recently been so successful on that property. The experience gaiued by Mr. Hambley at the last named property justifies him in stating, as he does, his confidence that the work on Stanly Freehold will soon be completed, and that the result will be eminently satisfactory to the shareholders. The machinery at Sam Christian was started in November, and was found to work without a hitch. It is reported that the washings have already exposed rich quartz veins in the bed rock, and from what we have heard about the Stanly Freehold Mines, there is no reason to doubt that when hydraulicking is there commenced discoveries of rich veins will also be made, as the characteristic of the whole of that part of the State of North Carolina is that the surface soil contains numerous small, but very rich strings, or veins, of quartz, dispersed throughout the whole deposit. There is no doubt that when these veins are developed in depth they will prove rich, but it is not intended at present to commence deep sinking. The one object of the manager is to get the hydraulic works completed, and from the day when active washing commences, there is no doubt that regular returns will be made. At some future time undoubtedly the company will explore the veins in depth, but at present "hydraulicking" work is as much as they feel justified in doing.

The delay hitherto caused has been largely owing to the fact that the late manager endeavoured to do too much, and that his estimates were found to be totally unreliable. For the mistakes originally made the company has suffered severely in time and money, but we believe that under the present direction an era of economy, retrenchment, and reform has severely set in. We have been informed by those who have visited the property that the existence of a great goldfield in this part of America is beyond doubt. It may be asked why capital from the North has not floated into North Carolina, but the truth is that the antipathy between the Yankees and the Southerners has by no means died out, and that the capital of the former has been sent to the Western States rather than to those in the South. We have seen the pay-sheets that have recently come from the mine, which show a very important reduction, ranging from 20 to 30 per cent. in the prices paid for labour, thanks to the careful management of Mr. H. A. Judd, who controls the financial department. If shareholders some six months ago were disposed to regard their money in Stanly Freehold as lost, their opinion ought to be altered by the facts we have adduced.

GRESHAM LIFE ASSURANCE SOCIETY.

THE report of the directors of the Gresham Life Assurance Society for the financial year, ended 30th June last, gave great satisfaction to the shareholders and policy-holders at their meeting on Friday of last week. It is some 40 years since this society first saw the light, and its steady progress is evidenced by the fact that it has now an accumulated fund of upwards of 4,000,000*l*. The business of the past year permits of 169,746*l*. being added to that fund, and the surplus upon the present triennium is 93,170*l*., of which 91,000*l*. is divisible as bonus. The usual apportioument of four-fifths will be made in favour of those policies which are on the participating scale, and one-fifth to the shareholders—the latter amounting to the very satisfactory sum of 3*l*. 10s. 11d. per share. The present healthy condition of the society reflects great credit upon the board of management and their able coadjutors, and, as was remarked by a gentleman at the meeting, when shareholders and policy-holders see the names of good men and true on the balauce-sheet, they may rest contented, and sleep the sleep of the just. The board are certainly directing their energies into channels which will be to the advautage of the society.

THE (NEW) LEEDS FORGE CO., LIMITED.

THIS company starts under satisfactory auspices. The fact that Col. North is one of the trustees for the debenture holders will give confidence to a very large circle of investors. This gentleman has had considerable experience in Leeds, as will be seen from the sketch of his life which we publish in our present issue. The directors are gentlemen of position and influence, and the business to be carried on is one that has proved profitable in the past and should be even more so with the new capital and energy which it is now proposed to infuse into it. The share capital of the company is 600,000*l*., and the issue is as follows:—40,000 7 per cent. preference shares of 5*l*. each, and 50,000 ordinary shares of 5*l*. each, payable as follows: 10s. per share on application; 1*l*. 10s. on allotment; and the balance on the 1st March, 1889; also an issue of 3,000 5 per ceut. first mortgage debentures of 50*l*. each.

The works are in full activity, and large orders are on hand. The company has secured the monopoly of certain patents, including Mr. Samson Fox's last invention for patent pressed steel frame plates for rolling stock, and corrugated furnaces, large numbers of which have been supplied to various important customers. Particulars of Mr. Fox's last invention and statistics as to the out-turn of work in recent periods are given in the report. But we observe that it is the intention of the directors to push vigorously the patent pressed steel frame plate business. The customers on the company's books include the principal Governments of the world and railway companies of the United Kingdom, not to speak of numerous marine engineering firms all over the globe. The certificate of the firm of Lovering and Co., chartered accountants (the full text of which is published in this issue), shows the profitable nature of the business; but it may be stated here that the profits from September to December inclusive (four months) were at the rate of 71,109*l*. per annum. The purchase price has been fixed at 564,000*l*., and the vendors stipulate to take the largest number of shares permissible by the rules of the Stock Exchange, to which it is proposed to apply for a quotatiou. We have said enough to intimate the lucrative nature of the business which the company proposes to acquire.

ACCOUNTS WITHOUT A CERTIFICATE.

IT is probable that the shareholders of the Sterling Gold Mines (Montana), Limited, whose meeting we report this week, will be most struck by the remarks made as to the absence of any auditors' certificate from the accounts. In order that they may be thoroughly enlightened as to the reasons which have actuated the well-kuown and highly respected firm of Messrs. Chandler, Pixley and Company in preparing a certificate and report, which the directors have not thought fit to publish, we give the full text of these documents:—

Sterling Gold Mines (Montana), Limited.

Draft auditors' certificate.

We have examined the cost and product account, the profit and loss account and balance-sheet to the 31st December, 1887, and have thought it desirable to make a special report to the members, in accordance with clause 169 of the articles of association of the company, to be read at the annual general meeting of the company.

CHANDLER, PIXLEY AND CO., Auditors.

24, Moorgate Street, London, E.C.
14th November, 1888.

Draft auditors' report.

To the members
The Sterling Gold Mincs (Montana), Limited.

Gentlemen,—In accordance with clause 169 of the articles of association of your company, we have to report that in our opinion the balance-sheet and accounts are not properly drawn, so as to show you a true and correct view of the state of the company's affairs in the absence of the following information.

The prospectus stated that the terms of purchase of the mine were 65,000*l*., leaving 35,000*l*. for working capital. The directors proceeded to an allotment on applications having been received for 6,696 shares of 1*l*. each.

The capital of 33,913*l*., referred to in the balance-sheet, includes 30,000 shares of 1*l*. each, allotted to six persons, without any payment having been received, although the prospectus stated that 2s. 6d. per share was to be paid on application.

Among the assets is included expenditure under the heading of "extraordinary expenses." In our opinion this expenditure should have been incurred previous to the allotment of shares, and have been borne by the vendor.

On inquiring for the title deeds of the property we were informed they were in America, in the possession of the agents of the mortgagees, and on our raising the question as to whether the property had been properly conveyed to the company, we were handed a letter from Messrs. Carter, Clayberg and Maddox, attorneys, of Helena, Montana, dated 16th December, 1887. This letter shows that, although the directors had allotted shares many months previous to this date, and had paid sums on account of purchase-money to the vendor, they had not acquired legal possession of the mine, and we consider that the shareholders should require this letter of the 16th December to be read to them at the annual general meeting, as we decline to accept any responsibility with reference to the title.

We have requested the directors to give us notice of the annual general meeting, so that the partner who has attended to the matter may be present, and answer questions, should the shareholders wish to put any to him.

We are, Gentlemen,
Your obedient servants,
CHANDLER, PIXLEY AND CO.

We will not venture to forecast what the judgment of the committee appointed by the shareholders at the meeting may be; but they will lamentably fail in their duty if they do not give to the certificate and report of the auditors the attention which they certainly merit.

A GROUP OF CORNISH MINES.

ON the score of dividends there is no reason to complain of the Cornish mines whose meetings have taken place this week. On Monday Dolcoath led the way with a dividend of 1*l*. 10s. per share for the 16 weeks, being precisely the amount paid at the meeting last October. The mine is looking uncommonly well, although a slightly less quantity of tin was sold. At South Condurrow the dividend was 10s., out of a good profit. Here, too, a most encouraging report was presented. At Wheal Grenville yesterday the report, though not quite so good, at least led up to a 5s. dividend, which was the same amount as declared at the very successful meeting held in Cornwall about three months ago. West Godolphin is still in the call stage, but a very slight improvement would enable it to turn the corner. The year has been, for Cornish mines generally, a somewhat unfortunate one, but although tin has undergone some extraordinary fluctuations, it cannot be said that the markets have been wholly unfavourable to the mines. On the year most of the concerns show a decline in the prices of their shares. A circular has been issued by Mr. W. J. Reynolds, of the West Polbreen Miue Company, calling a meeting for half-past ten on Wednesday, a time when, as the *Financial News* critically remarks, "most British shareholders have hardly finished breakfast. If the shareholders are not there, they cannot grumble; but the grumbling powers of those who do happen to be there will be possibly in-

creased by having been roused out of bed so early. Mr. W. J. Reynolds may have overlooked this. The New Kitty Mine has a meeting at 11.15 at the same office, so that the time to be given to grumblers is evidently limited. Both mines are 'conducted on the 'No credit' system.' Does this mean no credit to the companies, or no credit to the shareholders."

IMPROVEMENT IN THE ECTON MINE.

THE report of Mr. Ludlam, corroborated by the statements of Mr. Chas. Smith, a gentleman of mining experience in Australia, who has just visited the property, comes opportunely, as some of the shareholders may be disposed to think; but, as a matter of fact, the directors have been expecting this improvement for some time past, and are only surprised that it has not taken place sooner. To this the apt and business-like remarks of Mr. Urwick (the chairman) conclusively pointed. We have in several previous articles pointed out the valuable nature of this property, and on more than one occasion have sent a representative to view it, and these circumstances may be accepted evidence of what we think of its potential value. The truth is, that the expected mineral bodies have not been found so early as expected, but that the manager is proceeding in a sure direction to find them his latest reports, coupled with the statements of Mr. Charles Smith, abundantly testify. The directors have no wish to re-construct the company if they can adopt any means by which the interests of the old shareholders can be preserved intact. They have therefore devised a scheme which ought to meet with support from the shareholders, upon whom it imposes a very slight burden, and gives the great advantage of a 20 per cent. Preference. It appears that the directors hold 9,000 unissued Preference Shares of 1*l*. each. They propose to call special meetings to convert these into 36,000 shares of 5s. each, and to issue them with the Preference we have named. The proceeds will furnish the working capital (9,000*l*.) now needed. If the shares be taken up with anything like the heartiness manifested at yesterday's meeting, the interests of the original shareholders will be preserved. Failing this, re-construction will have to take place in the ordinary course, in which case the shareholders will lose every penny of their original capital. The duty of all who can possibly do so is to take up these Preference Shares, and at once put the company on a solid financial basis.

HILL'S WATERFALL ESTATE AND GOLD MINING CO., LIMITED.

THIS is another property hailing from the rich Witwatersrand district. It has an African board and a London board, but perhaps the sooner it gets rid of the African directors the better, for the simple reason that duplicate boards rarely work in harmony. Whether they will do so in this case remains to be seen. Apart from this qualification, the prospectus seems to us to merit the attention of investors. The company proposes to work large quartz and banket reefs "already opened out and proved." The property is described as being in the immediate neighbourhood of those which at the present time are commanding such extraordinary premiums. The reports of the agents are certainly very encouraging, and in one case at least the author is a gentleman well known and respected in Cornish mining circles. The facilities for working are good, and the prospectus estimates that the annual profit will be 66,375*l*. The statement is made that the quantity of quartz for stoping is calculated already to exceed 100,000 tons, "sufficient with 200 heads of stamps to keep the battery running night and day for the next 15 months." When the vendor is settled with 35,000*l*. will remain as working capital, of which it is not expected that more than 20,000*l*. will be required. The subscription list will open on Monday, the 7th inst., and close on or before Tuesday, the 8th, for London.

OUTLOOK FOR COLAR CENTRAL.

LAST week we called attention to the circumstance that the accounts of the Colar Central Company then presented were a year old, and that the shareholders might justly have expected greater promptitude from the directors and officials, who are known to be men of business capacity, and certainly not given to keeping back information from those entitled to receive it. The explanations given by the chairman, Mr. Malcolm Low, M.P. (whom we are heartily glad to welcome back in restored health), go far to explain the reasons for the delay of which complaint has been made. The interesting speech which he delivered on this occasion, and which we report in full this week, should be read not merely as explaining the matter in question, but as a synopsis of what has been done at the mine during the year. The reports read, one by one, have of late appeared somewhat uninteresting, but the manner in which the chairman grouped the facts will show that the shareholders will be extremely unwise if, when making up their balance-sheets at this time of the year, they take no account of the prospective value of a property which has as much right to expect rich lodes as any in the Colar field, and even more, for it has 38,000*l*. with which to develop them.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

ON Monday last—the last day of the old year—the Money Market was very tight, owing to the withdrawal of nearly six millions in loans by the Indian Council since the Saturday, part to pay off the holders of the Oude and Rohilkund Stock, and part to meet dividends falling due, and the applications at the Bank were heavy, and as much as 6½ per cent. was paid for the day. All this, however, was changed on New Year's day, when money was offering at 3½, 4 per cent., and bills at 3¼, ½ per cent. Since then the supply has increased, and rates have further fallen under the influence of the allotment of Treasury Bills, which went at 3 per cent. for six months, and 3 3/16 per cent. for three months' drafts. Discount has receded to 3⅛, ¼ per cent., and money has been quite unlendable, and has been offering even at 2 per cent. The discount houses, on Tuesday, reduced their terms for deposits ½ per cent., and yesterday considered about a further reduction, but resolved to await the distribution of the dividends payable on Monday. With the New Year we have the issue of Messrs. Truman and Hanbury's Brewery as a limited company, but only 800,000*l*. Four per Cent. Debenture Stock is offered. The Bank return shows a fall of over 10 per cent. in the proportion of reserve to liability to 30 per cent. An increased note circulation has reduced the reserve by half a million to 11,086,000*l*., and the demand for accommodation usual at the close of the year has caused an increase in the private securities of 8,600,000*l*., of which 7,926,000*l*. has been transposed to the private deposits.

Some heavy commitments which fell due to-day were well met, without causing any change in the market, where the rates were no better than yesterday, notwithstanding the Consol settlement and its being the 4th of the month. In the early part of the day money was charged about 2½, but the inquiry fell off, and it was again unlendable at 2 per cent. Discount was still 3⅛, ¼, with less demand.

The Bank to-day bought 306,000*l*. in Russian gold, and 50,000 sovereigns were received from Australia. Bar silver was steady at 42⅞d. per oz., and Dollars 41½d.

This has been a broken week at the Stock Exchange owing to the usual holiday on the 1st having been observed. Money being cheap and the anticipations of the re-investment of the dividend which will be paid shortly, raised the hopes of speculators for the rise, and prices all round were forced up a point or so, attention being chiefly directed to the investment class. The Bank return, referred to above, acted as a "damper," and prices gave way all round, although there was an absence of any wish to realise. The political situation has altered, if anything, for the better. The Constitution proposed by King Milan has been accepted, but considerable uneasiness is felt in France concerning the result of the next election. The Funds have given way to a slight extent, but Indian Government and Colonial Inscribed and Home Corporation Securities have been well sustained, and in many cases prices have risen 1 per cent. Foreign Government Bonds were supported by the higher values received from the Continental Bourses; but the only movements of importance have been in Egyptian issues, including the Ottoman Defence and Tribute Loans. Home Railways have shown an almost buoyant feeling, and notwithstanding a slight realisation, the majority show an advance of ½ to 1 per cent., with 1½ in Great Northern "A," South Western, and Midland Stocks. American Railway Securities have been ruled by the movements in the Wall Street market, and after showing some irregularity finally close with unimportant alterations, and these are about equally divided. Grand Trunk Stocks have been a quiet but fairly steady market, but Mexican Stocks have receded. Cable Stocks were in request. Banks were firmer; while several commercial and industrial undertakings closed at enhanced values.

Business at the Stock Exchange to-day has been practically featureless, and a dull tendency has prevailed throughout the day until near the close, when a rather better feeling sprang up, owing to a report that a large sum of gold had been withdrawn from the Bank. Consols, after touching 98¼, finally closed only ⅛ lower on the day. Foreign Government Bonds were idle, and ⅛ to ¼ per cent. lower all round; Uruguay, and one or two of the South American Currency Loans being about the only exceptions. Home Railways were almost neglected; the tendency, however, has been irregular, and the changes on the day are about equally divided, and with the exception of a rise and fall of 1 in Great Northern and Sheffield issues respectively, do no not exceed ¼ per cent. Operators in the American Railway Market appear determined to follow rather than lead the New York Market, and as prices from there came weak, the market here was dull and lifeless, and a reduction of ⅛ to ¼ was shown all along the line, with slightly heavier reductions in Milwaukee and Louisville issues. Grand Trunk Stocks were quiet and firm, and Mexican Railway Stocks were also neglected. Miscellaneous Securities were without particular feature.

Annexed are the final quotations to-day:—Consols Account, 98 3/16, 98 5/16; Egyptian Preference, 102, 102¼; Egyptian Unified, 83⅛, 83⅜; French Four-and-a-Half per Cents., 103¼, 103¾; Hungarian, 84⅛, 84⅜; Italian, 93⅞, 94⅛; Mexican, 39, 39¼; Peru Five per Cents., 14⅝, 14⅞; Peru Six per Cents., 16⅛, 16⅜; Russian, 1873, 99½, 99¾; Portuguese, 63½, 63¾; Spanish, 72 3/16, 72 5/16; Turkish, 1871, 83½, 84; Turkish Defence, 95½, 96; Caledonian, 117⅜, 117⅞; Great Eastern, 68¾, 69; Great Western, 151½, 151¾; Brighton "A," 132½, 132¾; North-Western, 173⅜, 173⅝; Metropolitan, 76¾, 77¼; Metropolitan District, 33, 33½; Midland, 137⅜, 137⅝; North British, 56¼, 56½; North-Eastern, 163⅛, 163⅜; South-Eastern "A," 107⅞, 108⅛; Hull and Barnsley, 33½, 34; Grand Trunk, 10¼, 10⅜; Ditto First Preference, 65½ 65¾; Ditto Second, 45½, 45¾; Ditto Third, 25¼, 25½; Canadian Pacific, 53½, 53¾; Denver, 17, 17¼; Erie, 27⅜, 27⅝; Milwaukee, 63¾, 64; Lake Shore, 105⅞, 106⅛; Louisville, 58, 58¼; Atlantic First, 34½, 34¾xd; Ontario, 15⅜, 15⅝; Ohio, 21⅜, 22¼; Norfolk and Western, 51⅞, 52⅛; Reading, 24⅞, 25⅛; Reading Bonds, 93½, 94½; Union Pacific, 65⅜, 65⅞; Wabash Preference, 25⅜, 25⅝; Ottoman Bank, 11¼, 11⅜; Anglo-Telegraph 48¾, 49¼; United Telephone, 14⅛ 14⅜; Hudson's Bay, 18⅞, 19⅛; Suez Canal, 85¼, 85¾xd; Guinness, 31, 31¼; Allsopp's 7⅞, 8⅛; Bryant and May, 12⅞, 13⅛; Nitrate Railways, 28⅜, 28⅝; Bell's Asbestos, 17⅞, 18⅛; Tarapaca Water, 16½, 17.

REPORTS OF MEETINGS.

SOUTH CONDURROW MINE,

COMMITTEE RECORD A SATISFACTORY IMPROVEMENT IN THE YEAR'S WORKING—DIVIDEND OF 10s. A SHARE.

A GENERAL MEETING of the adventurers in the above mine was held at the Office, Windsor Chambers, 20, Great St. Helens, on Thursday—H. J. Marshall, Esq., presiding.

The SECRETARY read the notice convening the meeting, and the minutes of the meeting of 22nd November.

FINANCIAL STATEMENT.

The financial statement for the 20 weeks ended December 22ad, 1888, was read, showing payments amounting to 7,136*l.* 0s. 8d., including cost-sheet (to December 1st) paid on that date, and all other debts incidental to the 20 weeks' working; and receipts amounting to 10,316*l.* 2s. for tin ores, &c.; the last sale being on the 19th December.

A CONSIDERABLE AMOUNT OF MONEY TO THE GOOD.

The CHAIRMAN: Gentlemen, you have heard the financial statement read, and will have gathered from it that during the last 20 weeks we have been able to do pretty well again, as we have done heretofore, and that there is a considerable amount of money to the good in the shape of profit. On comparing the past year's working with that of the previous year, you will find that the quantity of tin returned has been a little less. In the year 1887 we returned 458 tons of tin; in the past year we returned 445 tons. The price realised has been slightly in excess this year. The average price last year was 54*l.* 1s., and this year, 68*l.* 6s. 1d.; so that our receipts have been 30,396*l.*, as compared with 30,051*l.* in the previous year. The cost of winning that tin has been 40*l.* 6s. per ton, and in the preceding year it was 39*l.* 8s. 2d. At our meeting in August I called your attention to the fact that according to the new Act—the Amendment to the Stannaries Act—it was necessary for us to hold a meeting at the expiration of 16 weeks, and I proposed that the meeting should be a purely formal one for the purpose of producing and publishing the accounts in conformity with the requirements of the Act; and that we should continue to hold our annual meetiug, as we have done for many years, in this first week in January, for reasons which were stated then, and which are well-known to all of you, viz., that our year's working should be capable of comparison with its predecessors. The meeting was held, and the Act has, therefore, I believe, been strictly complied with. The secretary has read you the minutes of that meeting. You will all remember, also, that our meeting in April last year was held in Cornwall, and I may say it gave decided satisfaction to the adventurers who lived in the West of England, and they expressed a wish that it should be made the custom. I am, therefore, going to propose that our April meeting this year shall be held in Cornwall; but I will be very glad to hear anybody's opinion upon the point. With these few remarks I beg to move, "That the accounts now read be received and passed." (Cheers.)

Mr. CHARLES CLARK seconded the motion, which was carried unanimously.

AGENT'S REPORT.

2nd January.—The 40 end east of engine shaft is worth 7*l.* per fm. Three stopes in the back of this level are worth 10*l.*, 12*l.*, and 15*l.* per fm. respectively. The 50 end east is worth 10*l.* per fm. Three stopes in the back of this level are worth 35*l.* per fm. The winze below the 60 is worth 15*l.* per fm.; but the sinking is suspended for the time till the water is drained. Two stopes in the back of the 60 are worth 14*l.* per fm. each. The stope in the bottom of the 60 is worth 15*l.* per fm. We have put out a cross-cut north above the 70 and intersected the tin lode to the north of West Basset lode; this north section of the tin lode is worth 12*l.* per fm. The back of the 80 east is worth 7*l.* per fm. The 93 east of King's is worth 9*l.* per fm. We have put in new tram-road in the 66-fm. level west of Marshall's and have resumed the extension of the level west; the lode has been unsettled in the last few fathoms by means of an elvan dyke; we have passed through this elvan and are now putting out a cross-cut north to prove if the main part of the lode is not standing in that direction. Marshall's shaft is in full course of sinking below the 108-fm. level and is down nearly 5 fms. below that level; we purpose sinking about 10 fms. deeper and then cross-cutting north to intersect the main tin lode. We would explain that the lode in Marshall's shaft has a much less dip or underlie than the main tin lode, consequently these lodes will be in conjunction in depth. The lode in the 108-fm. level west of Marshall's is fully 3 ft. wide, and shows a very promising appearance; it is worth 5*l.* per fm. for tin. The good second-hand pumping engine recently erected on Marshall's shaft is working satisfactorily, and is of ample power to prove the lodes in depth.

Capt. RICH said: I do not know that I can add anything to that report, more than to say that

THE KEY TO THE FUTURE

of the mine, as I will call it, will be the sinking of Marshall's shaft. As I have said, we are down now about 113 fms. from the surface, and I have begun to drive west at the 108-fm. level. This side lode has a good width at that depth, but it is a feeder upon the main tin lode. We look for better things as we go deeper in this part of the mine, for the geological features seem to say "Let us go deeper here." In the eastern part of the mine we are working at the 40, and there is a very good lode there. It is a very promising feature that the 108-fm. level west of Marshall's the lode is larger, and although not so tinny as we could wish, still it is very kindly looking. We purpose sinking 10 fms. deeper, and then to put out a cross-cut north and intersect the great tin lode. When that is done we shall have 35 fms. to work upon on the main tin lode. We have sunk a winze on it, below the 70, 15 fms. and have some very good tinstuff there. The chairman has informed you that the cost of producing the tin this year was a little more than last. That is rather fallacious and may possibly be misleading, for this reason—the richer the tinstuff, the less it will cost to return per ton. I am speaking from memory, but I think we have stamped quite as much stuff during the past year, but the produce has not been quite so high, and, therefore, it has cost us about 1*l.* a ton more. You must also bear in mind that a little extra cost might have been brought about by putting the new engine in Marshall's shaft, building the engine house, &c.; and doing 115 fms. of pitwork cost money and we have not called upon the shareholders for anything, but paid for it out of the proceeds of the mine. It has been my aim, and the aim of the committee with me, to try and keep the thing as regular as we can, and to look to the future, and I think we have done that. We have put in the engine, and it is working very well indeed; we have ample power to prove the mine in depth.

NOT STINTING THE MINE.

We are not stinting the mine by any means. I do not pretend to say what we shall do in the future, beyond stating the fact that we will do the best we possibly can. It is now 14 years since I first had the honour of working for the shareholders. (Hear, hear.) That means a good portion out of a man's lifetime; but we have not been idle, and although the mine is by no means large—extending only over 14 or 15 acres of ground—and not deep, we have produced 169¾ tons of tin in the last 20 weeks, realising 10,278*l.*; but the total quantity of tin sold has been 7,611 tons, realising 387,000*l.* The total profit has been 102,000*l.*, or about 30 per cent.; and the mine is now in good working order, and well-equipped with machinery. (Cheers.) We are hoping that the western part will turn out well, and I have every reason to believe it will. I have now told you all I know about the property. Of course all mining is, more or less, speculative, and I do not hold out any promises; but, from a mining point of view, we have very good prospects of success on going deeper in the western part of the mine. (Cheers.)

A SHAREHOLDER: How long will you be going down the 10 fms.?

Capt. RICH: About five or six months.

The CHAIRMAN: You have heard Capt. Rich's report which is as clear and concise as usual, and I hope it will be generally considered satisfactory. (Hear, hear.) You will remember that when last we met here we were in the middle of the

WILD FRENZY OF THE TIN SYNDICATE.

Tin was then at 167*l.* a ton, and we were all revelling in the high price, but with the full knowledge that the sword was hanging over our heads, and that sooner or later the dissipation would have to be paid for. We expected—at least I did—a long and continued time of depression, and that the payment for those good times would be rather severe. Things worked out, however, much better than we expected, and we have now a very steady market. We have had foreign tin at about 100*l.* for something like three or four months. This time last year it was 167*l.* I think you will all allow that we have been able to do pretty well with the existing price. Capt. Rich has told you that his object, and the object of those working with him, has been to produce steady results, and I think you will admit that we have achieved that. (Hear, hear.)

THEY DO NOT BLOW THEIR OWN TRUMPET.

We have never been great hands at blowing our own trumpet here; and we have always considered that results were better than promises. Capt. Rich has told you that he does not make very great promises; he has never promised more than to do the best he could, and I think we are all thoroughly conscious that he has kept his promise in that respect. (Hear, hear.) He has told you about our prospects for the future, and has pointed out to you that the shaft, which is called Marshall's, is the key to the mine—the most interesting point. He has already got into paying ground there. Some time ago we got 11 tons of tin a month from that part of the mine, and then the end got poor, and a certain time had to elapse before he could make up his mind as to whether it would be well to put a pumping engine there or at Pendarve's shaft. Various matters had to be considered, but eventually he came to the conclusion that it would be well to pump at Marshall's, and an engine was accordingly erected and pumps put down. That has been paid for out of profits, and we have every reason to believe that the results derived therefrom will be beneficial for many years to come. (Hear, hear.) You will remember that land was granted to us in conjunction with South Tolcarne, when we were working under the name of West Condurrow, by Mr. Pendarves—land of considerable promise. The question arose, would it be well to put an engine on those workings somewhere west of Pendarves' shaft; or would it be well to spend the same money in driving our levels up to that ground under Pendarves' shaft, and bringing our water and our stuff underground towards our existing floors, and the decision we came to was that it was better to spend the money underground rather than at surface.

UNDERGROUND WORK.

Since we last met, the 66-fm. level has been driven west, and is now under Pendarves' shaft. Capt Rich is going to put up a rise there, which will probably be holed about the time we next meet in Cornwall. Then we intend proceeding to undercut that ground, which everybody considers full of promise to the westward of us. Already he has got the 108-fm. level started west, and as soon as he gets his shaft down another 10 fms. he proposes to cross-cut under the winze below the 70 in. the flat lode. He will then have 30 fms. of backs there, and we have every reason to expect good ground available for stoping. I think you will all allow that these are very favourable prospects. We have changed our base of operations in the face of the enemy without any serious loss, and with a decided prospect of advantage.

THE DIVIDEND.

The profit on the 20 weeks working is 3,180*l.*, and we propose that you should declare a dividend of 10s. per share, which will absorb somewhat less than that—3,061*l.* 10s.—adding the surplus to the existing balance. (Hear, hear.) I, therefore, now move "That a dividend of 10s. per share be and is hereby declared payable forthwith." (Applause.)

Mr. CHAS. CLARK seconded the motion, which was carried unanimously.

AGREEABLY SURPRISED.

Mr. SUCKLING proposed the re-election of the Committee of Management, stating that he had been agreeably surprised at the satisfactory result of the working, having regard to the fall in the price in tin. Including the dividend now declared, the adventurers had received a return of 35s. per share, which could not be regarded otherwise than satisfactory. (Hear, hear.)

Capt. Rich seconded the proposal, remarking that they were all in the same boat, endeavouring to bring the cargo home safely.

The Chairman briefly replied, and with the usual complimentary vote of thanks the proceedings terminated.

WEST INDIAN GOLD MINING CORPORATION, LIMITED.

REASON FOR DELAY IN HOLDING THE MEETING EXPLAINED—PRESENT POSITION—AN ADJOURNMENT RESOLVED UPON TILL MARCH 29th, 1889.

The second ordinary general meeting of this company was held on Saturday, December 29th, 1888, at the Cannon Street Hotel—Sir Kingsmill Grove Key, Bart., presided.

Mr. W. Nightingale (the secretary) read the notice calling the meeting.

The Chairman said: Gentlemen,—This is the first annual ordinary general meeting of the West Indian Gold Mining Corporation, Limited, it being, as you are aware, necessary, under the Act of Parliament, as well as under the articles of association of the company, that one ordinary general meeting of the company, at least, should be held in every year; and let me at once state the reason why the holding of this meeting has been delayed until so late in the present year. It is not, as has been suggested by one or two shareholders, because this is a holiday week; but it is because the law says that a meeting must be held in every year, and the holding of the meeting was delayed in order that information might be given to you up to the very last possible moment. And there have been special circumstances to induce the directors to put off holding this meeting. Many of you, no doubt, were present at the extraordinary general meeting which was held on 27th February last. On that occasion I was unfortunately absent in consequence of ill-health, but the chairman then made a very full and exhaustive statement as to the property, and the anticipated prospects of the company. That statement was printed and circulated among the shareholders, and, as you are aware, it was published in the public newspapers. Unfortunately, for many reasons, which the directors were unable to control, the anticipations expressed then have not yet been fulfilled. At that time Mr. Nasica, one of the vendors, was the superintendent of the company in San Domingo, and he had received on the property a five-stamp mill for the purpose of prospecting some portions of the large gold reefs stated to exist upon the company's property. The assays which had been made gave results which led the directors to expect that the systematic working of the property would be highly remunerative, and in addition to this, as you know, Mr. Nelson Boyd, at the meeting referred to, and at other times, has expressed like opinions as to the nature of the gold deposits upon the company's different concessions.

THE MILL FAILS TO WORK WELL.

Mr. Nasica, however, did not appear to be able to get the mill into operation, so as to forward regular results of crushings from any part of the company's property, and, in addition to this, it was found that the mill, which had been purchased from a London firm, was in many respects defective. In the meantime, previously to the meeting of February 27th last, a 10-stamp mill had been ordered, and was, in fact, then on its way to the property. Of course, the directors anticipated that this mill would be erected immediately, although they necessarily made allowances for delays consequent upon the badness of the roads and the difficulties of transport in San Domingo. In June, 1888, the directors not having received from Mr. Nasica any of the promised results, superseded him by appointing in his stead Mr. John Miller. Previously to this, in order that the mine might be worked upon the English principle, the directors had on May 1st, 1888, appointed Mr. Henry Cock captain of the mine, who went to San Domingo and took charge of the operations there for some time; but, not giving satisfaction to the directors, his appointment was terminated in September, 1888. Mr. John Miller, before mentioned, was appointed on May 17th, 1888, to go to the mines, and supersede Mr. Nasica, which he did in June, as I have before stated. Mr. Miller stated upon his arrival at the property that he was not satisfied with the work which had been done there in any way; the five-stamp mill was not satisfactorily erected, nor would it work satisfactorily. The 10-stamp mill was not built, and he had to select a position for it, and arrange for its erection. The company had previously, on 6th April, 1888, sent out a machinist, named Mr. E. M. Tate, who was to superintend the erection of this mill. The work seemed to progress no more satisfactorily under the superintendence of Mr. Miller than it had previously, and, his engagement having terminated, he left San Domingo in November last. In the meantime, the directors then engaged Mr. Fieux, who has the highest recommendations, both as a miner and an engineer. He was appointed on November 8th, 1888, and arrived at San Domingo on December 6th. The managers who have been sent out in this manner from time to time have none of them up to the present time rendered satisfactory accounts. All that the directors have been able to get from them has been statements of expenditure in bulk, without proper details and without vouchers, and the consequence is that is has not been possible in London to prepare the accounts and balance-sheet to submit to this meeting

IT MAY SEEM TO YOU EXTRAORDINARY

that so little control is possible to be exercised over managers having charge of the company's property, and that the directors have been unable to procure the accounts which they require; but I should point out to you that San Domingo is not in direct communication with this country by telegraph, that it is out of the ordinary run of all English steamers, and that, although the directors have exercised every possible care in the selection of the persons whom they have appointed, personally interviewing those persons and procuring the best references obtainable with regard to them, when any of them have arrived in San Domingo they have been, to a very great extent, out of the reach of the directors in consequence of the difficulties of communication in every way.

WHAT THE NEW MANAGER WILL DO.

Mr. Fieux, the present manager, will, it is believed, immediately, or as soon as he finds it possible, take steps to set the accounts of the property in proper order. He arrived, as I have said, on December 6th, since which the directors have received a telegram announcing his arrival, and stating that his first impression of the property was very favourable. What the directors suggest is—but, of course, they leave themselves in the hands of the shareholders with regard to it—that this meeting should be adjourned for a period of say, three months, within which time Mr. Fieux will have been able to examine the whole of the company's accounts in San Domingo, and to forward full and explicit statements to the London office. These can then be entered in the books, and a proper audit of the accounts can be had and the balance-sheet of the company, which, had the accounts been in order from the other side, would have been submitted to you to-day, can then be circulated amongst you, and you will meet again after its receipt and discuss anything you wish with reference to it. In the meantime, also, Mr. Fieux will have had an opportunity of thoroughly examining your property, and will be able, as the directors hope, to give you, not only results ascertained by analyses, but the substantial results obtained from your own machinery.

UNABATED CONFIDENCE.

I may at once state that the directors themselves still continue their confidence in the value of the property unabated; and, notwithstanding all the delays which have taken place, annoying as they have been throughout, the whole of the correspondence which has been had with the managers who have gone to the property from time to time runs the same expression of opinion as to the great value of the property. Another point which has been publicly mentioned, I think, should also be noticed. The writer of a letter to a public journal suggests that, whilst there has been the mismanagement which he himself has heard of in San Domingo, the directors have been sitting at home quietly taking their fees; and the writer suggests that they have been leaving the affairs of the company to drift in the hands of incompetent persons. This is absolutely incorrect. The present directors of the company have never taken any fees.

THE DIRECTORS HAVE WORKED HARD.

They have worked hard for the company, have regularly held board meetings and discussed seriously the business of the company. They have controlled it to the best of their ability, but they have never received for all their services, or for any travelling expenses which they have incurred, or for anything else, one sixpence for fees. Gentlemen, under the articles of association two of the directors retire. You can either elect these directors now, or, if you decide to adjourn the meeting, you can leave it until another time. You will, I am sure, be glad to hear that a recent telegram has been received, in which Mr. Fieux states that he is now working the alluvial as well as the mill, by which means he hopes to obtain at the same time other speedy results. (Cheers.)

Mr. Dorchester: May I ask how long the present directors have been on the board?

The Chairman: One year.

Mr. Dorchester: I think that at the last meeting the shareholders ought to have been told that the company was badly wanting cash. (Hear, hear.) It seems an extraordinary thing that they should have been offered 50,000*l.* in cash, and 150,000*l.* in shares, and have refused it.

Mr. Nightingale: I was not the secretary of the company at the time the offer was made. It was an offer of 200,000*l.*—50,000*l.* in cash, and 150,000*l.* in shares. I have never seen any documents relating to it, but I had expected Mr. Gordon Smith here to-day to explain it.

Mr. Gordon Smith: I am here.

Mr. Nightingale: Thank you, sir. The offer was not refused by the directors; it was refused by the shareholders at an extraordinary general meeting convened to consider the subject.

Mr. Dorchester: I quite understand that. It seems to me, however, that it would have been the duty of the directors to have explained to the shareholders that the matter was of the utmost importance to the company. (Hear, hear.)

Mr. Nightingale said that it had to be borne in mind that they did not part with a certain part of their property, reported on good authority

TO BE WORTH 1,600,000*l.*

for 50,000*l.* in cash, and 150,000*l.* in shares.

Mr. Dorchester: I should have done so under the circumstances. Who is the competent person to whom you refer?

Mr. Nightingale: Mr. Nelson Boyd.

Mr. Buckley: I was the fool apparently who proposed that the offer of the French syndicate of 50,000*l.* in cash, and 150,000*l.* in shares, should be refused. (Hear, hear.) It was carried by the meeting that was then convened. The description of the property, that which we had received from Mr. Nelson Boyd and others, was of such a flattering description, especially for that part that the syndicate wanted to get hold of, that it was declined by the shareholders, and I believe almost unanimously Of course, I was not at the time aware of the position of the company as regards its finances, or it might have made a difference.

AN ADJOURNMENT PROPOSED.

Mr. Rouse: I think that it would be advisable to adjourn this meeting until the directors can lay before the shareholders a statement of accounts. (Hear, hear.) We are now simply working in the dark.

Mr. Dorchester: Is the offer of the French syndicate open at the present time?

Mr. Nightingale: I believe not, sir.

Mr. Gordon Smith: The offer was made, and the offer was rejected. Since then a suggestion has been made that the syndicate is prepared to take up a certain portion of this property, to find the necessary capital, giving the company a share of the profits; that is since the first proposal. The French people speak in the highest terms of the property. Mr. Nelson Boyd speaks most highly of it, and Sir George Elliot said that he thought the property had been mismanaged, but his confidence in it was as strong as in the past.

A THREE MONTHS' ADJOURNMENT AGREED TO.

Mr. Husband: Gentlemen, I think that the time has arrived when we might come to a conclusion with respect to the business of to-day. We have had a fair statement with regard to the position of the property. I am perfectly convinced that the board have been

extremely unfortunate with regard to matters over which they have had no control. At present we are in a position that we cannot fairly review the affairs of the eorporation, for the simple reason that the information is not at hand to do it. It appears to me to be a reasonable thing that we should adjourn for three months, and I will move "That the meeting be adjourned till Friday, 29th March."

Mr. BARWELL, C.B., seconded the resolution, which was unanimously agreed to.

A vote of thanks to the chairman and directors closed the meeting.

THE NORTH MEXICAN MILLING AND MINING CO., LIMITED.

CHAIRMAN VISITS THE MINE—PROSPECTIVE DISCOVERIES—WORKING CAPITAL £25,000, AND MINE FULLY EQUIPPED.

THE statutory meeting of the above company was held on Thursday, the 3rd of January, at the company's registered Offices, No. 20, St. Helen's Place, London.—Mr. Anthony Pulbrook presided.

Mr. JNO. V. ASPLAND (the secretary) read the notice eonvening the meetiug.

HOW MR. PULBROOK HEARD OF THE MINE.

The CHAIRMAN: Gentlemen, there is an old saying "That good wine needs no bush." We have a good property, and no mistake. I first became connected with this company because I saw a report from J. P. Kimball—not a report, but a paper written by Prof. Kimball in one of the scientific papers of America on this property. I knew who Prof. Kimball was, and for Prof. Kimball to say that the mineral lodes of Cusihuiriachie have fully maintained their elaim to rank with the best in Mexico when these mines are fully 1,000 miles from any port, told me that there must be something more than ordinarily good in them, because his is an unbiassed opinion given for scientifie purposes. Perhaps you do not know who Prof. Kimball is. I knew his reputation in America, and that reputation is borne out by the fact that he has since been appointed director of the United States Mint. We obtained this property on very excellent terms, and certain geutlemen found the money to erect the mill. The vendor was bound down so that he eould not dispose of his shares, or make any profit out of them, until the company returned profits. The gentleman who found this money in this instance engaged in their first mining adveuture. They were entirely ignorant of mining, and the first thing they did was to erect their mill, but to stop all mining developments, and all (as they called it) speculative work. I warned them what would be the result, and said that we had commeuced tunnelling, and finding that that did not do, and that we must get down to the water level, I said

"FOLLOW THE CORNISH MOTTO OF 'SINK, SINK, SINK.'"

The manager, Mr. Ottokar Hofmann, told them that the work done at the upper regiou showed bunchy oxydised ore, but that so soon as they got to the water level they would find continuous bodies of ore. They, however, ignored his opinion, and sent out an English engineer who said "Tunnel," after we had proved that tunnelling did not pay in these mines. They continued tuunelling for two years, and then found that they had no ore, and the consequence was that I, haviug resigned, because I told them they would come to grief by their way of management, and Mr. Hofmann having resigned for the same reason—they came to me again, and I offered to take the matter over and re-eonstruct the company; and this is the re-constructed company. Of the 200,000 shares into which that company was formed, 100,000*l.* represents the actual outlay of the property, which was formed with 200,000 shares of 1*l.*, with 17s. 6d. paid, these gave a working eapital of 25,000*l.* That is the present position of your property—that you have issued 200,000 shares with 17s. 6d. paid, giving

A WORKING CAPITAL OF 25,000*l.*

(Hear, hear.) Now, what is your present position as a mining company? You are in this very happy position, that the whole of the Cusihuiriachie lodes are controlled by two companies. One was formed by the eminent firm of Messrs. Kidder, Peabody and Company, and the other is our company, and they adjoin. The lodes running from one company's grant go also into those of the other company. The other company started two or three years before ours. It went through the same process as we did, and last spriug its mines, with a bonded debt of 200,000*l.*, were sold for 20,000*l.* to the Master of the Mint in the locality of Chihuahua. He gave up his residencc in that city, and went out to these mines to take the management. Being on the spot he knew what they were, and profited by the experienee previously gained. He commenced to work where Mr. Hofmann prophesied we should find ore, namely, under the ereek level. What did he do? What did he find? I will detail to you the exact particulars. There are four main lodes in this district, two of them pass from the Cusihuiriachie Company's sett into ours. The other two lodes are parallel. I am now reading from the uotes I made as I went down level by level in the mine. At the 75-ft. level driving towards the creek a seam of rich sulphuretted ore comes in about 18 ins. wide, and on the table you will find a speeimen from that point along with an interesting collection of other samples. It is nothing more that what in Cornwall they would call a gossan—in other words, like what you would get from a cinder fire. That changes direetly you get to the water level to the mixture of brown gossan and blue stuff; that is 18 ins. wide and gives 70 ozs. to the ton. When I went down to the 120-ft. level I found the same seam eontiuued, but wider; then I went down to a level eommeneed ou the 5th of May last at 240 ft. deep. At this point the seam had widened to 6 ft., and the

ORE AVERAGED 60 OZS. TO THE TON.

Then I went down to the 350-ft. level. The same seam was very much wider still, from 10 to 20 ft. wide, averaging 50 ozs. Then I went down to the 515-ft. level, driven all the way in ore 400 ft. in length, through a lode averaging from 15 to 18 ft. wide, all ore. The ore averaged from 80 to 90 ozs. (that is the ore we send to be smelted), and milling ore 50 to 60 ozs. Then I made a note that the old 82 level is driven within 250 yds. of our boundary, and they find the same ore there. Then I went into another parallel lode, which I found at the water level, in which they agaiu eame into this sulphuretted ore, rich throughout; and then I went into the lowest level of all, approached by a cross-cut from the north-east, to our boundary on a lode which (you see by the map) goes directly into our grant. And what did I find there?

A VALUABLE POINT.

The Provalencia lode, 10 ft. wide, assaying 60 to 80 ozs. of milling ore, native silver combined with eopper glance. (Cheers.) Samples taken from the level reached 160 ozs. to the ton. (Sample exhibited.) That is within 250 yds. of our boundary. Our ore is precisely the same as theirs above, and there is no reason whatever why we should not at the same level find the same ore. At the present time, since this gentleman took possession of the mine and sunk in that direction, he has laid open sufficient ore to keep a 50-stamp mill running day and night for two years without opening out any fresh ore, besides shipping 300 tons a month of 150 oz. ore. In fact, he had more ore than he eould get the men to stope away. That is the present position of the mine. We have on the plan shown the principal workings on that lode, were on our property and at the junction of the two lodes a shaft was sunk 100 ft. That shaft has been sunk since I left another 37 ft. The report received yesterday shows they are getting into the black ore and soft ground, which is just the eharacter of ore they found in the adjoining company 70 ft. above, and they are goiug down now as fast as they can get down. If you will turu to Mr. Hofmann's report, you will see he says that in 250 to 300 ft. we may reckon upon a certainty of finding that ore. I do not believe myself in sending an expert to a mine, and not accompanying him. I believe it is the duty of a direetor to go over every part of a mine with the expert to see how he does his work.

MR. PULBROOK RISKS HIS VALUABLE LIFE.

Altogether I went down 800 ft.—twice the height of St. Paul's. 400 ft. we had ordinary ladders, but the other 400 I descended on scaffold poles, with notches at intervals—that being the only means of going down. I went down, however, and everything I am telling you of to-day is what I saw, and what I can vouch for. (Cheers.) Anyone can go out there and see for himself, because in this mine and in this company we have no secrets. If we get the ore we have a mill, and if you cast your eyes upon the photographs you will see what

YOU HAVE FOR YOUR MONEY.

You have value received for 50,000*l.* in these works. That mill has proved itself in working the ore capable of turning out 270 tons a week, at a eost of $9.75 per ton. With that ore you have only to make a calculation of 50 ozs. and 250 tons a week, and taking the great price of $10 for mining you will be making 50,000*l.* a year profit with that alone. That is what you have to look forward directly you eut that lode in the same way; and why we should not do it I do not know. You will see what Mr. Hofmann says. He is most cautious iu his reports. He says: "The problem of the Cusihuiriachie lodes is practically solved by the works of the Cusi Mining Company, and all you have to do is to take advantage of it." Then he goes on to say: "The information furnished by the work of the Cusi Company is of inestimable value for your company. It tells us not only that we have ore, but it tells us also where and when we will find it, and that it will take a eomparatively small outlay of money to reach the ore." You seldom find such a deliberate statement as that about a mine. And then he says: "It makes it almost a certainty that by sinking the shaft you will strike the same kind of ore." This is not an assumption; he puts his reputation at stake upon his statements. Now, gentlemen, you see the mills upon the photograhs. I have photographs of your property that you may examine at your leisure. From the photographs, I think, you can fancy yourselves almost at the mines. You ean see the adjoining property, how it is situated and everything about it.

A GOOD MILL.

You cannot see all the interior of the mill, because it is a very gigantic affair. A silver mill is a far more complicated affair thau a gold mill. There are six different platforms in that mill, besides several other outbuildings where other processes take place. What is your position generally? Humboldt spoke of your mines as beiug "among the best in the State," and the old Spanish book says "The Bufa is like a trunk of a tree with all the lodes radiating from the centre"—and you hold the Bufa. The adjoining company turned out 750,000 ozs. of silver last year, and your position is this. In all mining it is the second eompany that pays. The first company has laid out, and well laid out 100,000*l.* hard cash within the last four years, and you take the benefit of that expenditure. You have no expense to go to for machiuery. Time and money are necessary for mining. Both have been expended, and all you have to do now is to sink your shaft another 100 ft. when you may expect to eome upon the same ore in your lode that the adjoiuing eompany has found at a similar depth—that is within 250 yds. of your boundary. In half-a-dozen places that company when it got down to the water level haphazard hit upon this lode; therefore it would be very extraordinary that you should pass through it.

BIG MINES.

These mines have already returned 8,000,000*l.* sterling, because it is upon that sum that they have paid taxes. They have been worked at the upper surface since the year 1600, but have never been sunk to the water level, the ground being so soft that the people were afraid to work, and they had no knowledge of timbering as we have to-day. Mr. Hofmann prophecied three years ago that when these mines got to the water level they would find continuous ore bodies. You find that they have done so, and, therefore, everything tends to show that you have a wonderfully valuable property, and that in five or six months' time you will be in a dividend-paying state, because the mill is in a perfect condition, and immediately you tap this ore you can set it running, and begin making profits. There is one important point, namely, you are producing that which is the current coin of the realm in Mexico. Your mill turns that out in a fit state to be coined into silver dollars so that within a fortnight of your extracting the ore from the mines it will come back to your works in silver to pay your miners, and you have not to send it thousands of miles away to get a market for it.

SILVER.

People are saying silver is going down, and a large number point to the fact that for the last eight years this, like all other metals, has reached a low point. That point is its lowest. There is no doubt

whatever that in a very short time we shall have bi-metallism. At once the price of silver will go up. Then, again, we are opening up Asia and Africa with their unreached countries hitherto, and they have no coinage at present. They must have it. What is the first coinage of all those countries? Silver. A large number of mines have not been much opened of late because people will never go into a mine upon a falling market, yet that is the right time to join them because suddenly the supply runs short and the price runs up from a small amount to a very large one. Take the history of all metals and you will find it so. You have seen this recently with copper. It has always been the case and it always will be; therefore, I look with great satisfaction to the future of silver mining, and believe that silver will be one of the best paying metals of the day. I am here to answer any question you may put to me. I have seen everything for myself. I went out expecting a good thing, but I have now got something very much better than I expected. I believe that in six months time I shall be able to hold a meeting, and tell you that you are now making profits, and if you have ordinary luck that will be the case. Of course in mining we never known what will happen. We may have to go 150 ft. deeper, or we may find the ore at a less distance than we anticipate. That is

THE CHARM OF MINING—

its uncertainty; but taking it all in all everything poiuts to this—that we have one of the most certain things in mining that has ever existed. (Cheers.) I will now formally move the reception and adoption of the directors' report.

CHAIRMAN COMPLIMENTED.

The Hon. H. C. Roper-Curzon (director): I have great pleasure in seconding the motion, particularly after the speech of the chairman, who has done so much in our service. He has pointed out to us the advantage which generally accrues to a man from marrying a widow. (Laughter.) One of the best advertisements which a well-dowered widow can make, is the handsome monument she erects to the memory of the "dear departed," and that monument we see in the noble mill which is photographed, and which is very encouraging to us. I think we have been fortunate where we might have been very unfortunate. Our position is owing, however, very much to the great genius of Mr. Hofmann and the dogged perseverance of our chairman, who refused to know when he was beaten, and who did what I think very few men would have done—he has gone to the mine and seen everything for himself, and moreover has taken up a concern which was dropped by no ordinary men, but by men well known in the City of London to be of experience and of great financial resources, and that is what Mr. Pulbrook has done. We ought not to forget that any more than we ought to forget his predecessors. I think the late chairman and his friends, although they did not go the right way to work did succeed in keeping alive a property which will become very valuable to us, their successors. I daresay you know as well as I do

THE MERITS OF MR. HOFMAN.

The old system of treating ore was one of tank lixiviation. The system which he invented for our benefit, and which he arrived at by experiment with our ore, is that of trough lixiviation. The solution is the same, but the quantity of salts employed is less—½ per cent.—which not only takes much less time into desilvering the ore than a solution containing one per cent., or double the quautity, but does it far more effectively. That is a great lesson in science. I do not know that anything more is required from me, after the very gratifying description we have received from the chairman.

QUESTIONS.

Mr. Alfred Bull: Did the capital of the first company, 200,000*l*., allow 100,000*l*. for the value of the mine?

The Chairman replied that it did.

Mr. Bull: What is the present value of the property, machinery and buildings?

The Chairman: That is a difficult question to answer. I can only judge from the value of these appurtenances on the adjoining property when sold by auction, and bought with a bonded debt of 200,000*l*., and everyone said our property was equally as good, if not better, than theirs. Our mill is decidedly better, and we may take it that we have fair value for our capital.

Mr. Bull: That is with 25,000*l*. capital.

The Chairman: Certainly.

Mr. Bull: Then the present value of the shares should be 1*l*. 2s. 6d.?

The Chairman: I think that is fairly the intrinsic value, and it certainly ought to be the price, and will be the price when we pay a dividend. I hope it will be the price of the shares in six months time.

VIEWS OF AN EXPERIENCED DIRECTOR.

Mr. Chas. Clark: I know a little of Mr. Hofman. The only thing which surprises me is that any expression of opinion regarding Mr. Hofman should be necessary. From the first time of seeing his name, one easily discovered that he was a man of the highest character and of unrivalled experience, especially in connection with mines in the western part of America and New Mexico. Two or three years ago I was connected with a company which was offered to the British public for the purchase and working of a mine in Colorado, and one of the reports which was put before us was by Mr. Hofmann, and that was the occasion of my first seeking what could be known about his antecedents. But the company was not formed because the capital was so large. Euquiry was incidentally made of Mr. Hofmann, and in the result the company was not floated. The subscriptions which we had received were returned, Mr. Hofmann having taken pains to briug to the notice of the intended board of directors, of whom I was one, that the caleulations he had made were upon an infinitely smaller capital than that which we were told the property required. We learned a little experience, and came out of that with a very high opinion of Mr. Hofmann, and I place great reliance in what he says.

The motion was carried.

The proceedings then closed.

THE ECTON CO., LIMITED.

IMPORTANT DISCOVERIES—INTEREST OF OLD SHAREHOLDERS PRESERVED—TERMS ARRANGED.

An extraordinary general meeting of the members of the above company was held at the Great Eastern Hotel, Liverpool Street, yesterday, "for the purpose of considering, and, if so determined, passing resolutions to the following effect, viz.:—

(1.) "To wind up the company voluntarily." (2.) "To appoint a liquidator or liquidators." (3.) "To authorise the liquidator or liquidators to transfer the whole of the company's property and effects to a new company, incorporated with limited liability, having a capital not exceeding 40,000*l*., in 80,000 shares of 10s. each, in consideration of the payment by the said new company of the debts due from and claims upon this company. also the costs of and incidental to the transfer of the property and the liquidation. Also the allotment of 80,000 shares in the said new company credited with 7s. 6d. paid (leaving a liability of 2s. 6d. on each share) the whole of such shares to be offered in the first instauce to the members of this company. The liquidator or liquidators to have full power in the arrangement of the details to make such modifications as may be found necessary to give effect to this resolution."

W. W. Urwick, Esq., chairman of the company, presided.

Mr. Newman Goldman (secretary) read the notice calling the meeting and also the following report:—

December 24th.—Clayton mine: When I last reported a fortnight ago, I estimated having a yard to cut to communicate 110 south winze with 125, the next day we put a bore hole through, and have since enlarged the hole. This has set us at liberty to follow indications of ore in the neighbourhood, with the result of the discovery in two places of good copper. One place is some 4 fms. north of the winze where three small branches of ore were taking into the west side of the level, these we have followed, and find they come nearer and get richer, and produce good saving stuff, with prospect of further improvement. The other place is the extreme north end of 110 level, where a few shots reveal the best ore we have ever taken out of the mine, it is going down in the floor of the level, where a strong east and west vein crosses the north and south ore belt. The west cross-cut from the 80 also looks very promising; the spar is very strong, and there are spots of copper, the ore-ground I estimate to be less than 5 fms. in front of this end. There is not much change at 125, although we are now in a better part of the pipe, but there is too much black spar and blende for us to like the prospect for rich copper. Water Bank: The four men employed cross-cutting from the 45 have just cut the lode, but are not yet through it. It contains lead and blende. The lode had gone over our workings in the 45-fm. level to the west, and it now appears that what we have got our ore from: is a pocket or portion of the lode dropping through and below the footwall. Taking all things together it is a long time since I saw the mines looking so well. I am sending copy of invoice of last parcel of copper sold.—A. Ludlam.

DIRECTORS CAUTIOUS IN PUBLISHING REPORTS.

The Chairman: Gentlemen, the report you have just heard read came to us on 24th December, and it entirely changes the aspect of things at the mine, and consequently the course which we think it will be advisable to take. The report being so favourable we did not send it out to the shareholders or publish it, as we desired, first of all, to obtain a confirmation of it—not that we have any reason to doubt Mr. Ludlam's reporting correctly as to the position of the mine ou the day on which he was writing, for I will say this of him, that a more truthful servant iu his reports no directors or shareholders ever had—in fact, I know that he is incliued rather to underestimate than over-estimate the position of affairs. Our mine does vary, but that he cannot help; he canuot see into the rock any more than you or I can. You may, however, always depend upon what he says, and I would be glad, when shareholders complain that the directors have sent out these reports for their own particular purposes, if one or two of them would go down and test the accuracy of the reports by inspecting the mine themselves. We hoped this morning to have received confirmation of the exact state of the mine as it was yesterday. Unfortunately, I had a telegram from Mr. Ludlam this morning informing me that he had missed the post but that a Mr. Smith, a shareholder, had been down there and intended to be present at the meeting to-day, and would speak as to the contents of the letter, and as to how he found the mine. I am very glad to have the opinion of an independent shareholder, who I may say is a perfect stranger to every member of the board,—at least, I have never spoken to him before he came into this room to-day and introduced himself as a shareholder from the mine. Presently I will ask him to give his opinion of the mine, and we will then be able to see if it coincides with the opinion we have formed of it. But in regard to Mr. Ludlam's report, I should like to call your atteution to one or two things.

MR. JOSIAH THOMAS A TRUE PROPHET.

You will remember that Mr. Josiah Thomas, in his report, told us not to go down deeper than the 125 (Clayton), but, he said, "if you have indications of mineral at that point follow them." Mr. Ludlam has done so, and you see with what results. That was one of the first things that Mr. Thomas recommended in his report, and to a certain extent it has been verified, and I think it warrants us still in persevering in that course. Again, Mr. Josiah Thomas recomuended that we should try Water Bank. At the time he was there there were no indications, for owing to advice given some 18 months ago, we had rather left the mineral; but. following Mr. Thomas's advice, Mr. Ludlam has commenced driviug at Water Bank, and he has already found lead and blende. Whether there is any copper mixed with it I do not know. That information we should have received this moruing in the letter which unfortunately was not posted. That appears to me to be in the western course. There is also in the Water Bank an eastern course. That eastern course, higher up, contaiued copper nodules of considerable size, so that we have indications of lead capping copper at Water Bank. Mr. Thomas recommended us to drive upon that, and we have been successful there so far. Again, Mr. Thomas urged—what the directors have, rightly or wrongly, been sweet upon for some time—he urged that the cross-course at the 80-fm. level in

Clayton should be pursued to the west. That cross-course has gained in strength and size; I believe it is now 3 ft. or 4 ft. wide. You will notice also in the report of Mr. Thomas—I go back to them, because he is the last person who inspected the property, and he is a man whom we can thoroughly trust—he spoke of the cross-courses in Ecton as not being ore-bearing to any considerable extent, but when they came in contact with the south and north vein, they then became prolific ore-bearers, as was instanced in the Ecton and in the Clayton mine itself, down to the 310 level. I think these cross-courses of great value to us. The Ecton and the Clayton are on the north portion of the vein that runs right through your property north and south about 300 fms.

TWO GOOD MINES.

You have two good mines on the western group of saddles. The north and south veins run through the whole extent of your property, and have even crossed out of your property into another property, where they have produeed copper. I think we should be wise if we persevere and follow these cross-courses. One can scarcely imagine that two mines within 300 fms. of eaeh other are the only mines on those western saddles, when you have the north and south lodes running the same distance. Therefore, to my mind, it would be the height of folly to give up persevering to find ore in those saddles. In our correspondence with shareholders we have had promises of support. Some, however, say they cannot go into the new company, and they lament their inability to do so; while others have urged us to try another scheme. A scheme has been brought under our notiee by a shareholder, and curiously enough the same thing had occurred to the minds of two of the directors, and we have determined, instead of going into liquidation, to give the shareholders a trial, as they promise support, and thus still

PRESERVE THE RIGHTS OF THE SHAREHOLDERS.

(Cheers.) We are anxious, where shareholders have paid up their 1*l.* for their shares, that their property should be preserved to them; and as it is their money that has brought about the present state of things, as we think they ought to have the advantage of what has already been expended upon the property. Of course, if we had to go in for new ground, new shafts, and so forth, there may be some reason, and a very justifiable one, for forming the new company; but seeiug that the money of the old shareholders has brought about these discoveries, I think we should struggle to preserve to them that which by their patience they have won. Acting on that, the course we intend suggesting to the shareholders is this, and it is a course which our solicitor informs us we have power to recommend. We have about 9,000 unissued shares. By issuing these as 20 per cent., preference shares and dividing them into 5s. shares, we will be giving to each shareholder the option of taking one 5s. share for every 1*l.* share he now holds. In that way he will have the preference of 20 per cent. and we shall make the calls as light as we possibly can. Sixpence will be payable on application, 6d. on allotment, and 6d. again towards the end of the year, and so on. Of course, we would not make a call unless it was absolutely necessary. We ought in this way to have the means wherewith to thoroughly test our property, and save it to the shareholders; but we must urge upon you to do your best to assist us, and, one and all, put your shoulder to the wheel. (Cheers.) We will do all in our power to save the property, and I am sure that you can thoroughly trust those gentlemen who are acting for you at the mine. (Cheers.) When we send out reports from the mine, it is that shareholders may know what is going on; we like them to be as well informed as ourselves. We have been found fault with, but I say that no shareholder has any right to complain of the directors if he has given 2*l.*, 5*l.*, or 10*l.* a share. I may with just as much reason blame him because I have not sold mine. I have not sold my shares because I have confidence in the future of the mine. Having made those few remarks, I shall ask Mr. Smith to give us his opinion of the mine, and to state what he saw when there.

A RECENT VISITOR TO THE MINE.

Mr. CHAS. SMITH: I will preface my remarks by saying that the directors are totally unknown to me, and I do not suppose they ever heard my name before. I have been a shareholder in this company for three years, and bought some of my shares at 1*l.* Since then, I have purchased somemore at 14s. 9d. I have had seven or eight years' practical experience of mining iu Australia and New Zealaud, and though mining in those parts may perhaps be very different to what it is here, yet I think I may lay claim to knowing something about it. Some few years ago I happened to take up a mining report, quite accidentally, and read a speech of Mr. Bowman at the Ecton meeting. I was struck with the man's straightforward tone, and I thought to myself if ever those shares go down to 1*l.* I will buy some for I firmly believe that man is an honest man, and means what is he sayiug." I soon after became a shareholder, and a short time ago, I visited the mine with a view to gettiug some idea of the surface plan to enable me more easily to understand and appreciate the reports. Quite unknown to the directors, I wrote to Mr. Ludlam, and told him I was going down, and he kindly met me, and conducted me over the mine. Most of the workings are surface scratchings, and no machinery of any kind appears to have been brought to bear upon them. I believe this is a

THOROUGHLY HONEST CONCERN,

because I have seen the people in the neighbourhood, and talked to them, and they know well what is going on. Two of the directors have been down there many times, and I believe at their own expense. I believe the venture to be bona fide, and that every penny of the money now subscribed will go on underground development, because the machinery on the mine is equal to all present requirements.

JUSTICE TO MR. BOWMAN.

No one can fail to be struck with the workmanlike manner with which everything has been done, and I am bound to say this, because I know what mines are in Australia. Mr. Bowman is one of the greatest losers in this concern so far, and I have every sympathy with him. I believe you should be very careful before you employ rock drills, as I consider the ground entirely different from what I have seen in other countries. If we subscribe the money we have everything to gain, and next to nothing to lose. We shall have another run of two years, and it will be strange if something does not occur in that time to advance the shares beyond the half-crown we are now called upon to give.

The CHAIRMAN cordially thanked Mr. Smith for his valuable opinions, and said they entirely coincided with those of the directors and Mr. Ludlam.

Col. HERSCHEL said he came to oppose the liquidation, but he was decidedly in favour of the issue of these shares. At the same time, he thought the 20 per cent. preference too high.

Dr. DUNHILL supported the board, and pointed out the smallness of the calls; the long intervals between each of them, and the possibility that the later ones might not have to be made at all.

Mr. KERLY said the position was just this—They must have more money or shut up the mine. Even if they were successful in finding ore, they must have capital to raise it, and wait until they were paid for it. The directors were most anxious to preserve the interests of the shareholders, and this was the best scheme that had occurred to them. If they failed, of course they would have to face re-construction in the ordinary way, but added his thanks to those of the chairman to Mr. Smith for his services. He spoke of the enormous amount of time the directors had given to the affairs of the company, and further explained that the directors would convert the 9,000 unissued shares into 36,000 preference shares of 5s. each. These, if taken up, would give 9,000*l.* additional capital for the mine. The shares would all be offered to the present shareholders in the first instance. Two more meetings would be required to make this proposal legal, and he appealed to the shareholders to do their utmost to support the directors, particularly in the face of the present satisfactory reports. These reports might surprise the shareholders, but they did not surprise the directors, who had been expecting them for some considerable time.

AN HONEST FACE.

Mr. ADAMS said he could see by the face of Mr. Bowman that he was an honest man. (Cheers.) He supported the scheme because he believed there was yet hope for the mine.

A motion was proposed by Mr. HAMPSON, and seconded by Col. HERSCHEL, coinciding with the proposal of the directors, and requesting them to call the necessary meetings to consider and adopt it.

A vote of thanks to Mr. Urwick for presiding closed the meeting.

RUSSELL UNITED MINES CO., LIMITED.

ENCOURAGING REPORT FROM THE MINE.

THE annual ordinary general meeting was held at 2, Drapers' Gardens, on the 29th ult.—Mr. Thomas Stephens in the chair.

Mr. ASHMEAD (the secretary) read the notice convening the meeting.

The report of the manager, Capt. W. George, was also read, as follows:—

VIEWS OF THE AGENT.

26th December.—In submitting the following report, I beg to say the progress made in developing the mine during the past year has not been so satisfactory as contemplated, consequent on our having had various unexpected hindrances occasioned by the breakage of one of the main bearings of the large pumping wheel, as well as several partings in the long linement of rods; these, in addition to the extraordinary wet season, have prevented our working in the bottom level as expected during the past three months; but, the surface water having abated, I calculate, at the present rate of forking, to resume operations there on the commencement of another week. You have already been informed that the lode has been intersected at the 80-fm. level, and opened on about 5 fms., where it has produced some very good quality copper ore with a small percentage of tin. It will be remembered the 67-fm. level was driven through a short bunch of ore, commencing at about 11 fms. from the cross-cut, and to get under that at the 80 there remains about 7 fms. more to be driven from the present western end, and, judging from the change in the character of the lode from the 57 to the 67, I still think the prospects of having an improved lode at the 80 are most encouraging, and therefore it is with great regret I have to report our not reaching that point ere this. I also think the continuance of the cross-cut to intersect the south lode, about 5 fms. from the present end, is a point of interest, and advise that being driven as well as the western end in the course of the lode when the water is in fork. At present a rise is being put up for trial in the back of the 67, where the lode is producing some good quality copper ore, and looks very promising for an improvement. A winze has been sunk below the deep adit about 7 fms., from the bottom of which we have driven from 3 to 4 fms., and find the lode contains a little tin, but not sufficient to value. I am pleased to say that at present all the machinery is working very well, and I hope, in the near future, to be in a position to report more favourably on the opening out of the 80, both on the lode already intersected, as well as that to the south, by continuing the cross-cut. —W. GEORGE.

The accounts, previously printed and circulated, were taken as read.

The CHAIRMAN briefly explained the position and prospects, and moved the adoption of the report and accounts, which, seconded by Mr. STORY, was carried unanimously.

Mr. Edwards, retiring director, was re-elected, as was also Mr. Waddington, the auditor.

The meeting terminated with a vote of thanks to the chair.

HOLLOWAY'S PILLS.—Teachings of Experience.—The united testimony of thousands, extending over more than 40 years, most strongly recommends these Pills as the best purifiers, the mildest aperients, and the surest restoratives. They never prove delusive, or give merely temporary relief, but attack all ailments of the stomach, lungs, heart, head, and bowels in the only safe and legitimate way, by depurating the blood, and so eradicating those impurities which are the source and constituent of almost every disease. Their medicinal efficacy is wonderful in renovating enfeebled constitutions. Their action embraces all that is desirable in a household medicine. They expel every noxious and effete matter; and thus the strength is nurtured and the energies stimulated.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, JANUARY 5, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

NEW EMMA SILVER MINING CO., 1886, LIMITED.

ON THE EVE OF A BIG DISCOVERY—MINE NEVER LOOKED SO WELL SINCE LAST ORE CHAMBER WAS DISCOVERED THAT YIELDED TWO MILLIONS STERLING—INTERESTING MEETING.

THE third ordinary general meeting of this company was held at the City Terminus Hotel, Cannon Street, on Monday, to consider the accounts and the directors' report, and for the dispatch of the ordinary business of the company—Fredk. William Snell, Esq. (chairman of the company), presided.

Mr. RICHARD L. HOBBS (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

A PROGNOSTICATION FULFILLED.

The CHAIRMAN: This, as you have heard from the notice calling the meeting, is the third ordinary general meeting of the company, when the directors come before you to present an account of their transactions for the year ending 30th June, 1888. This is the anniversary of the meeting held last year, and at that meeting I ventured to make the statement that I did not think the prospects were at all bad—in fact, that they never were so bright, and that I did not believe the year then coming upon us would close without our having something definite upon which to congratulate ourselves. I think in the view of the facts that have been lately laid before you, you must come to the conclusion that that prognostication has been amply justified by the facts, and that we come before you to-day with good news with reference to discoveries in the Emma Mine, and to tell you that, in the opinion of the board, and of the manager and those largely interested in the mine residing at Salt Lake City,

THE PROSPECTS NEVER LOOKED SO BRIGHT AS THEY DO AT THE PRESENT MOMENT.

Before I sit down I will read further reports which have reached the board since the report of Mr. Wallace, dated the 1st December. First, I will call your attention to the plan that has been sent. The south-east level is coloured orange; the north-west No. 2, upon which the new discovery has been made, is coloured blue. Levels Nos. 3 and 4 are coloured red. The raise from No. 3, which has been put up for the purpose of extracting the "fillings," green, and the No. 4, orange. At the last annual meeting information was given to you that the company had purchased the

BAY CITY TUNNEL,

through which it is most convenient to work the developments at the Emma Mine. That property was purchased at a total cost of 1,643*l.* 5s. 2d., which you will find inserted in the present balance-sheet. I think you will agree with me that that was a very wise purchase—(cheers)—to be made on behalf of the company, as you will find we had, or would have had, to pay $1 for every ton of ore that came out of the mine. Therefore, if we had not bought that tunnel, the 25,000 or 30,000 tons of fillings in the mine would have involved an expense to the company of close upon 6,000*l.*

ADVANTAGES OF BAY CITY TUNNEL.

It really was not worth while working the "fillings," having to pay that large amount of royalty per ton; therefore it was that we entered into negotiations and purchased the Bay City Tunnel. There is another benefit from the purchase, and that is that we can put our men under cover and save them from the danger of snow slides, avalanches, and the like; besides, they work with a good deal more confidence. During the year a good many observations have been made which have come to the ears of the board with reference to the management of the operations in Utah. The board therefore obtained the services of Mr. O. A. Palmer, the best man they could find in the States, to go into the mine, make a report, and let us know whether the operations were carried on in a proper and miner-like way, and whose report has been circulated amongst you. He is very well known in the States, and has been 12 years mining engineer to the Ontario Silver Mines of Utah, which has paid enormous dividends amounting to $900,000 in 1887 alone, and adding over $700,000 to the reserve fund. He has had the management and laying out particularly of that mine. Therefore I thought we could not get a better man to report upon the mine than Mr. Palmer. He surveyed the mine, and as you know sent us home his report with plans. That report we consider very favourable, but there was one omission in it, viz., that Mr. Palmer did not say anything at all as to whether the workings were being carried on in the way he thought most advisable. Thereupon I cabled to Judge Bennett on the 5th December, asking him "Is Palmer's opinion mine properly worked?"

THE REPLY WAS "YES."

That is very satisfactory, but I thought we might have had a letter from Mr. Palmer, stating that the operations were being conducted in a proper manner. It has not arrived. The same day that telegram came, or the next, another arrived, stating that there were 14 ins. of rich ore above No. 2 level, and that 10 tons of ore were extracted, &c. This telegram you have had. I want to say one word with reference to the publication of these telegrams.

DIRECTORS PUBLISH ALL NEWS.

We have been charged by various shareholders and by various newspapers with having received information in London with reference to good news or bad from the mine, which we have not published. Now you will bear with me when I recall to recollection what I have always stated, that it is the determination of the board to publish everything they get from the mine—good or bad—and let the shareholders know as soon as possible all the information the board have. I think you will agree that that is the proper course for the board to take. We get no information that we do not publish, but we do not intend to take notice of any outside reports we may hear with reference to the mine. We do not intend to notice anonymous letters which are written to the papers, or even of leaders or leaderettes as they are called, which are put in the financial papers, accusing the board of keeping back information which they have not received. If the shareholders wait for news from the mine from the board, they will be wise, and they will be wise also if they pay no attention to rumours they hear outside. We have impressed upon the managers in Salt Lake City to give us every information, and if it is your wish we will have a telegram weekly from the mine, which we will publish, and certainly if any good news comes we shall send it round to all the shareholders individually, for which purpose we shall have a set of postcards ready addressed that we can send out. (Cheers). In this way we hope to put the shareholders, who are in the country, upon the same footing as those in London. The telegram I have read having been received—we were very anxious to know what the value of this rich ore was, and we cabled to Judge Benuett for the assay value of the rich ore, and whether the 10 tons came from level No. 1, as to which there was some little doubt in the telegram, and the reply came which you all have seen:—"125 ozs. silver to the ton; 60 ft. above No. 2 level; 50 ft. N. of Attwood winze. Never looked more favourable."

WHAT MR. CULLINS THINKS OF THE RECENT DISCOVERY.

That being so, on the 10th December I wired Mr. Cullins (not knowing from whom the telegram came, but thinking it was from him) to give us full details, and to report upon the prospects generally. His reply was as follows:—

"No important discovery; irregular seam of ore near footwall, above winze, near old works, averaging 8 ins. wide. 12 tons first class ore on hand, assaying 90 ozs. to the ton; prospects good for continued appearance; other points improve."

You see that that does not bear out exactly the cablegram we received from Judge Bennett, but those old shareholders who have been in the company long know that Mr. Cullins is a very careful man. He is particularly so since he was blamed for telegraphing about a discovery which afterwards gave out in a few days. He was very strongly reprimanded by the board, and has been very careful since. He says, "I will take care never to send you a telegram again that won't thoroughly bear out the statements I make." Therefore, you get a telegram from him not so favourable as the one from Judge Bennett, but when you know that they have driven on this seam in level No. 2 25 ft., and that Cullins tells us that the average is 8 ins. wide, you may be sure the news is good.

100 OZS. OF SILVER TO THE TON.

Judge Bennett said the width of the ore at the point struck was 14 ins. That may be so, and probably is, but Mr. Cullins gives it as 8 ins. With regard to the assay value, I have heard from Judge Bennett, who says he got his information direct from Mr. Wallace up at the mine. There is a telephone between Salt Lake and the mine. I believe at the present time there is a snowstorm, and that 3 ft. of snow fell in 36 hours, so that access must be difficult. If we get enough ore at 90 ozs., I do not think we shall have much cause to complain. The later reports bear out the strong opinion in which Mr. Cullins coincides, that the seam is fully of the value of $100 to the ton—that is 20*l.* per ton, and I think it is very satisfactory to know by cable that they have taken 22 tons of that ore out in December, which is of the value of 440*l.* That pays, at any rate, all expenses of the mine, including the salary of Mr. Wallace for the month of November; we have in addition the concentrating works. From the report of Dr. Dunhill and Mr. Hutton it was considered advisable by the manager, now that we have bought the Bay City Tunnel, to

ERECT MACHINERY FOR CONCENTRATING THE ORE.

We did not think it advisable to do so before, because, first of all, the

machinery for concentrating was not in such a forward state, not so far advanced as it is now, to incur the expense of putting it up, and in addition we had to pay the royalty to the owners of the tunnel; but as soon as we bought the tunnel Mr. Cullins advised, and the directors who went to the mine agreed with him, that the concentrating works should be put up and that the "fillings" should be dealt with. Those concentrating works were put up at a cost of 1,420*l*., including the house to cover them. The mill is capable of concentrating 50 to 60 tons of ore in 24 hours. It started running in July, and we had hoped it would have continued running until the winter, and the season broke up. Unfortunately the rise or level in the mine for the purpose of bringing down the "fillings" to the mill became closed, some of the old works caving in, and therefore all access to the "fillings" was denied, and they had to close down the mill. It took about two months, as the reports in the mining papers have shown, to re-open, or rather to drive a fresh rise into the old workings to get out these "fillings." That was completed about the beginning of October, and the mill again set to work. It ran very successfully after a few alterations, and the information we have from our manager is that it is a splendid mill, and can do all the work intended.

FIRST MILL RUN.

It ran for 23 days during October, but the winter came on, and they were obliged to shut it down on the 31st, but during that time it only ran 10 hours a day, including stoppages and the total proceeds you will see stated in the report, and may be taken at $3,750, and we are told in the spring he will be able to run the mill from the 1st of May to the 1st of November, and it will not only pay the mining expenses, but also leave a very handsome profit—that is, from the concentrating works alone. (Cheers.) That has nothing to do with the rich ore, which is sent direct to the market and sold, and does not go through the mill.

FALSE REPORTS V. FACTS.

There have been several reports that the mine has been closed down, and that nothing was done. That is a great mistake. We had 20 miners engaged all last winter, and we have the same number now doing development work in different parts of the mine. (Cheers.) That can be continued, and I believe that even better arrangements are in contemplation for next year. This mine is 10,000 ft. above the level of the sea. Frosts are long and severe, and there is a great difficulty with the water; but I believe the pipes will be put underground, and some means of supplying water be found, so that they may be able to work the mill all next winter. At any rate, if not, we may rely upon this, that the mill, barring accidents, will run from the 1st of May until, possibly, the end of November, but in the meantime

DURING THE PRESENT WINTER WE HAVE THESE MEN DOING DEVELOPMENT WORK,

in various parts of the mine, and bringing out the fillings ready for the mill, directly it starts work next spring. They will get out the rich ore from the No. 2 level, and there are indications of finding similar ore in other parts of the mine where the prospects are also very good. I believe you may take it thus that when we begin work in the spring there will probably be from $5,000 to $10,000 of 100-oz. ore taken down to Salt Lake City, which means about 2,000*l*., besides large quantities of concentrates, part of which are now at the mine. There are 35 to 40 tons of concentrated ore, and 10 tons in Salt Lake City, but the manager says he will be able during the whole season to keep up constant shipments of concentrates to the market, so that we may expect during the year that is now coming upon us to have some good return from the mine. I do not know I have anything else to say, but will soon come to the report, which I will read to you. There is a question, however, about the remuneration to be paid to Dr. Dunhill and Mr. Hutton. At the meeting in February when they presented their report it was suggested that some remuneration should be given them for their services. A certain amount had been paid for travelling expenses (250*l*.), and it was thought that something should be given them in addition. They visited the mine in a winter which was most severe, and it was no easy task to get to it. They tell me their lives were several times in danger, and I do not think they would have undertaken the journey if they had known what was before them. They now unite in saying that they would never go out again under such circumstances. (Laughter.) I do not think there is anything in the accounts that requires explanation. It seems to me that all the items are fully set out. You will see that we have expended at the mine about 12,000*l*., which we always expected we should do, and we think we shall be very fortunate if we can limit the outlay to that amount.

HAVING STOPPED THE PUMPING

and the lower development, we think we shall succeed in doing so. We had a long conference with Judge Bennett about that, and agreed with him that it was advisable for the present, as coal is such an enormous item in our account, to stop the sinking of the lower parts of the mine, thereby saving the whole of the pumping expenses. We require from 1,500 to 2,000 tons of coal a year, which costs from 2*l*. 5s. to 2*l*. 10s. per ton, or 3,750*l*. or 5,000*l*. a year. We have now, fortunately, when we feel inclined to pump again, 1,000 tons of coal ready, and it is suggested that we should continue the developments from the Bay City tunnel and adjoining levels, and then we get into a little better position to re-commence sinking should we deem it advisable to do so. There is one item in the balance-sheet that will strike you—the arrears of call due by shareholders. The call was only made in May, and the balance-sheet is made up to the 30th of June so that a large number of shareholders had not paid at that time. A great part of the money has since been received. It also included shares issued for payment of dividend on debentures, which contract was not carried out in consequence of the decision of the Court of Appeal, that shares could not be issued at a discount. Those shares have not been issued. I shall be happy to answer any questions with reference to the balance-sheet or report, and I will now read letters that the board have received from the mine. The last one published was dated December 1st; this is a letter from Mr. Wallace, dated December 10th.

10th December.—My last report was under date of 1st inst., and I now have to report work carried on at the mine for the week ending Saturday 8th inst. as follows:—Level running to the east from No. 1, advanced 11 ft.; total, 43 ft. Seam of iron continues, rock a little softer, and heavily stained with oxidised iron. Level running north-westerly from No. 1, advanced 15 ft.; total, 69 ft. We are getting into the old caved ground with this level, and, therefore, will have to advance carefully, and timber closely. We should be near a better grade of fillings, and in larger quantities; however, the fillings we are now getting here are much better than those below. Level No. 3 advanced 5 ft.; total 238 ft. An improvement is noticeable in face, rock is more seamy, is getting softer, and shows considerable more mineral stains. We now have our air pipe in place, so that the difficulty of bad air is overcome. We shall, therefore, push this level, and start a cross-cut from near present face, and run to the footwall. The seam of ore north-westerly from raise from Attwood winze, as mentioned in my letters of November 24th and December 1st, continues, and the last few feet shows an improvement. The course is changed by leaving footwall, and now running towards hanging-wall, the rock around it getting much softer, which gives great encouragement of permanency. I have not heretofore considered it of any importance, believing it to be only a small spur from the old ore body, and rather expecting it to cut out at any time; but now I feel greatly encouraged, although it may not continue any great distance, but hope for the best. We have mined from this seam during the week some 5 tons, making now fully 12 tons ore from the seam that will average fully $100 per ton. This seam is above the head of Attwood winze, and between old No. 4 and old No. 3 levels, and about 50 to 60 ft. north-westerly from Attwood winze. I shall keep Mr. Cullins constantly advised of any and all changes in all the workings of the mine, who will cable important discoveries at once. We are also taking out fillings for next season's run, as mentioned in my last reports.—H. C. WALLACE, Superintendent.

I should tell you that the first "fillings" are of a poorer grade than those that are likely to follow as you get further into them. I have brought here the old model, which was used in the litigation connected with the Emma Mine. It is interesting to the shareholders, because at a glance that gives them a pretty accurate idea of the works they are now engaged upon. (This model should be inspected by all shareholders. It shows the ore body, out of which

2,000,000*l*. STERLING WORTH OF SILVER ORE WERE TAKEN,

on the strength of which discovery the Emma Mine was originally floated in London. It shows also the Atwood winze, the model being in fact made by Mr. George Atwood, the celebrated mining engineer. It also shows the Bay City Tunnel and the direction of the present discoveries, to which much importance is attached.) The great feature which makes Mr. Cullins and Mr. Wallace so encouraged (continued the chairman) is that the new discovery runs away from the old ore body going to the north-west; therefore, it cannot be an offshoot from the rich body, but would seem to point to a new body. On the same day, 10th December, we had this letter from Mr. Cullins.

10th December.—I received the following cable this morning:—"Cable full details reported discovery, and prospects generally." Now, we have a seam of very good ore running along the footwall, varying from 8 to 12 ins. wide, which was reported by Mr. Wallace in his letter of 24th ult. I did not consider it of importance enough to cable, as I considered it only an offshoot from the old ore body above, and liable to shut out in a few feet, as has been the case several times before. However, Mr. Wallace, who is now here, informs me that this ore seam is widening, and running towards the hanging-wall, and the surrounding rock is getting much softer, which gives strong hopes of its opening out to quite a body of ore, but I have been disappointed so often that I feel very reluctant in cabling until I am fully satisfied a reasonable important discovery has been made. Mr. Wallace is just down from the mine, and will report fully work done, and general appearances in the different parts of the mine, which, from his report to me, is very encouraging. Should any important discovery be made Mr. Wallace will report to me immediately, and I will cable at once. I, therefore, hope the directors will pay no attention to information from other sources.—G. CULLINS, Manager.

RUMOURS.

When you hear rumours from Salt Lake City it would be as well that you should wait for their confirmation. People in London have correspondents there who send all sorts of rumours, and it does lay a heavy burden upon the board if they are to be made responsible for them. It is the intention of the board to instruct Mr. Cullins to keep them fully informed of the various alterations in the mine. I have written to Judge Bennett asking him for some explanation with reference to the cablegram, and I will read you what he says:—

11th December.—I have your cablegram of this date, and in explanation of the discrepancies between my cablegrams and that of Mr. Cullins yesterday have to say:—My cablegrams were exact repetitions of information received by telephone from Mr. Wallace, he then being at the mine. That information was received on the 5th and 7th inst. On the 8th Mr. Wallace came to the city and gave Mr. Cullins the same information as he had also done by letter on the 6th. Of course the assay value of the ore could not be given accurately, as no market sample lot had been, or has as yet been, assayed. Wallace had, however, had hand samples assayed, and judging from results of such assays he was, and is of opinion, that the mass will average 125 ozs. Cullins, however, to be very conservative and within the mark, prefers the lower estimate of 90 ozs. As to the thickness of the ore, Wallace gave me its thickness as it was on the 5th and 7th. Cullins gives the average thickness for the distance they have run on the seam, viz., about 25 ft., and in that he is about right. Wallace says that on the 8th they had out from this seam 15 tons. Cullins, to be entirely safe, says 12 tons. Of course, they have not stoped any. All they have has been taken out in running the drift 25 ft. Wallace says the face of the drift is now beyond north-west of the old openings in solid ground, and looks very promising. To-day he tells me it still looks the same, and, further, that they have the air-pipes into level No. 3; have commenced work there again, and that the rock is improving as to softness and mineralisation. The fact that the manager and superintendent differ so widely in their estimates as to the assay value of the ore lately found, leads inevitably to the absolute necessity of having an assaying plant at the mine. Probably it would cost 50*l*. or 60*l*. Wallace can do the assaying.

13th December.—In compliance with your cable of 11th inst., calling for report on mine to be presented at the shareholders' meeting to be held 31st inst., I submit the following. Heretofore, as you are aware, the annual report has not been made up until 1st of the year.

I therefore had not as yet commenced to prepare my report, and now the time is so very short I shall not be able to report as fully as I would wish, as this must leave by to-day's mail in order to reach you in time for meeting. All work done in and about the mine for the present year, together with contemplated future operations and present appearance, you will see in Mr. Wallace's report to me accompanying this, in all of which I fully concur. In April last I let the Utah and Montana Machinery Company a contract to build at the mine a concentrating mill of 50 tons per day (of 24 hours) capacity to cost $5,150, exclusive of house, which cost $2,000, making the total cost of mill $7,750 for the purpose of concentrating fillings in old works and low-grade ore found in other parts of the mine. Owing to the impossibility of getting machinery up the Canyon the mill was not completed until late in July, was operated but a few days when a cave occurred in the mine, cutting off all openings to the concentrating ore; consequently had to shut down the mill until a new opening could be made, which took fully two months. On 5th October the mill was again started, and run until 31st; then storms set in, and, the railway company refusing to transport freight down the Canon, because of snow and ice on the track, I directed the mill closed down, as it would be impossible to get the ore to market before road was again opened in the spring. We had at that time at the mill from 35 to 40 tons of concentrates (which is still there, of an average value of $50 per ton. The few days that the mill was run in July was on the lowest-grade ore we had until we could get the mill properly adjusted; hence product was very small, amounting to only 8 tons 340 lbs., which averaged 36·25 per cent. lead, 47·4 ozs. silver, sold for $42 25c. per ton—$352 36c. On 5th October mill was again started, but it took several days to get it properly adjusted to the close saving of the ore, when it was run steadily until 1st November, then closed down as before mentioned. From last run we marketed 42 tons 579 lbs., which brought $2,088 46c. This amount, with the ore left at the mill (estimated at $1,750), will show a total production of $3,838 for less than 20 days' steady run of 10 hours each. A considerable portion of the ore milled was of our poorest quality, the last week's run producing nearly one-half of the entire sum, showing that the fillings improve as we advance, and demonstrating beyond a doubt that the mill will pay a large profit next year, as it can be started as early as May 1st and run continuously until November 1st. The question may arise in the minds of some of the shareholders that the fact of large quantities of low-grade ore and fillings having been known to exist in the mine, why a concentrating mill had not been provided for before, should the above question arise, two reasons can be given. First, concentrating low-grade ores on a large scale have only been made successful in the last two or three years owing to the imperfect knowledge of proper machinery. Second: The New Emma Silver Mining Company, 1886, Limited, had a right of way only through the Bay City Tunnel, which expired last year, and not knowing whether the lease could be renewed or the tunnel purchased at a reasonable figure it was not advisable, under the circumstances, to go to so great an expense. The company having purchased the Bay City Tunnel last year, I deemed it advisable to build a concentrator, and so recommended to Messrs. Hutton and Dunhill; when here officially last December they took the matter under advisement, and on their return to London instructed me to proceed to build mill as early as season would permit, which was fully complied with. In regard to working below Bay City Tunnel one great item of expense has been cost of fuel, which amounted to fully 25 per cent. of the total expenses, besides engineers, fireman and pumpmen, which, added to the above, made the cost of exploration very high; in fact, too high for the limited number of men that can be advantageously employed in that part of the mine, I would therefore recommend not resuming work there for the present, unless if the directors so desire, and satisfactory arrangement could be made with the Joab Lawrence Company or other adjoining mines to work their properties through the tunnel, and also from below, sharing the expenses of pumping the water, which would be decidedly the cheapest plan for them. This, of course, is merely a suggestion. The mine is in good working condition, and the future outlook is much brighter than at any time for the past five years. I have very great hopes of important developments in the levels we are running easterly. In regard to expenses during the year, you have full reports which have been forwarded monthly. Time is so limited it is impossible to take an inventory of plant and supplies on hand. It will be forwarded first of the year as usual; however, will say we have fully 1,000 tons of coal on hand.—G. CULLINS, Manager.

12th December.—In accordance with your request just received I herewith transmit a full statement of work carried on at the mine from January 1st, 1888—date of my taking charge as superintendent — to present date. Almost immediately upon taking charge of the mine I was instructed to stop the work below Bay City tunnel level and confine explorations to that level and above, I therefore began exploring at the following points, as fully explained in my weekly reports. Level No. 1 was started from a point about 150 ft. above Bay City level from old incline, and run in a south-westerly direction diagonally across the vein toward the footwall, a distance of 257 ft., following a seam of oxidised iron, showing occasionally very small bunches of low grade ore. I followed this seam until it disappeared entirely. Level No. 2 was started from a point above and near the head of Attwood winze, running north-westerly a distance of 286 ft. in highly-stained vein matter, but not meeting with the desired favourable results I have discontinued work at this point for the present. Level No. 3 was started from near end of Bay City tunnel, and run south-easterly a distance of 238 ft. This level is in very favourable ground for ore. Unfortunately I was obliged to temporarily stop this level because of bad air, which difficulty is now overcome by putting in air pipes, and work again resumed. This is very favourable ground for ore, and explores entirely virgin ground east of any explorations heretofore made. Level No. 4 was started from Bay City tunnel, and run 186 ft. north-westerly towards main shaft. I have also made cross-cuts from this level a distance in all of 94 ft. This level was started on a narrow seam filled with iron, and showing occasionally a little ore, which was followed until it pinched out. From level No. 1 I started an uprise in a seam of ore, iron, and soft vein matter, which I followed 209 ft. in its different meanderings, until I became satisfied it would not lead to anything of importance as it was nearing the old works. Besides the foregoing I made an opening to the fillings, which, as you are aware, unfortunately caved, cutting us off just as we were getting into paying fillings. This necessitated going back, and starting a new uprise in solid ground which has been carried up 130 ft. to old works; from here ore was taken out for concentrator during October. This uprise is a permanent and safe chute for mining material from entire old works to tunnel level. I have also started a level from old incline shaft near level No. 1 (new work) running it in an easterly direction, which is now in 43 ft., in kindly vein matter, being highly mineral-stained which improves as we advance. I would urge its continuance as it—like No. 3 mentioned above—is developing virgin ground east of original ore body. I am also opening ground north-westerly from this level; have advanced 69 ft.; am now in old works where I am extracting ore for the mill. About the 1st of June last, I began pumping and had the mine drained by 19th, when sinking main shaft, running No. 3 level, and raising from same was resumed. Shaft was sunk to a distance of 47 ft. below third station. Level No. 3 extended 94 ft.; uprise from this level advanced 34 ft. On the 30th of August I received instruction to close down the work below Bay City tunnel, since which time nothing has been done in bottom of mine. Some 60 ft. above head of Attwood winze, and about 50 ft. north-westerly, I started on a seam about 15 ins. wide, filled with soft vein matter, and showing some little ore. I have run on this seam some 25 to 30 ft., the ore now averaging from 8 to 12 ins. in width. From assay samples I feel confident this ore will average fully $100 per ton; have extracted about 15 tons of this ore. The seam has been running along and near footwall, but is now changing its course toward hanging-wall, which gives great hopes of leading to a larger body, as it now points towards a great space of undeveloped ground. In regard to the building of concentrating mill and the working of same you have all the data. I therefore consider it superfluous to dwell upon this matter. In conclusion, I consider the outlook in the different parts of the mine we are now working much more promising than at any time since I have taken charge of the same.—H. C. WALLACE, Superintendent.

Our very latest news is conveyed in the following telegram, received this morning:—

"Nothing fresh to report; appearance very promising."

Judge Bennett telegraphed:—

"North-west vein a little narrower; 22 tons extracted; level No. 1 upper works, 6 ins., vein iron, containing small amount of silver; very much improved in appearance; Bay City Tunnel rock heavily mineralised and improving constantly."

(Cheers.) There is one point I want to mention with regard to the Bay City Tunnel.

THE KEY OF THE UTAH MINES.

There have been some suggestions that the mines adjoining the Emma, particularly the Vallejo, can carry on operations better through our tunnel than their own workings, because they are on the other side of the canon. They have to haul the ore to the top of the hill, and then take it down to Salt Lake City, whereas they might bring it out through our tunnel. They are getting some rich ore, and some suggestions have been made as to the terms upon which the Emma Company will allow them to take it through the tunnel. If arrangements should be made for the Vallejo, the Eclipse, and the Flagstaff Mines to work through the tunnel, I believe it can be done without detriment to the interests of this company, and then the Bay City Tunnel will be a source of profit to us, and

A MUCH BETTER PURCHASE THAN I EVER THOUGHT IT WOULD BE.

(Cheers.) I have told you as much as I know, and may fairly claim to have exhausted the subject. (Cheers.) I have one or two other letters from Judge Bennett, but have read you the most important. He is a very large shareholder, and has great faith in the mine, and so also have Mr. Cullins and Mr. Wallace. The directors retiring are Mr. L'Amy and myself. Mr. Hutton is now in San Francisco; Mr. L'Amy is on the Continent, and Mr. Askew is unable to face the fog. With these observations I will move:—"That the report and accounts as circulated among the shareholders be received and adopted." (Loud cheers.)

A SHAREHOLDER: How many tons of low grade ore will be necessary to produce 3,000*l.*?

The CHAIRMAN: I believe the concentrator produces 1 ton of concentrates to every 10 tons treated. We will write to the manager, and ask him to give the information you want. The concentrates will produce roughly $50 and upwards per ton. That would be a sort of rough estimate of what they are worth. I can only refer you to the statements already made, and the estimates of Mr. Cullins and Mr. Attwood. That was the estimate Mr. Cullins gave us when we put up the mill. It was advisable to put the lowest grade ore through the mill first.

Mr. KLENCK seconded the motion for the adoption of the report.

DEBENTURES.

A SHAREHOLDER: How are you going to deal with the arrears of interest on the debentures?

The CHAIRMAN: That is rather a puzzling question to answer. I hope the House of Parliament will pass a Bill relieving companies who have issued shares at a discount. If so, we shall be able to pay the debenture-holders in that way, but if not, we shall have to call the debenture-holders together, and ask them what course to pursue. The company are entitled to pay the debenture-holders in shares, four for every 1*l.* of interest, but while there may be a liability attaching to them, we do not think it advisable to issue them. I have to thank the debenture-holders for the consideration they have shown the board.

Dr. DUNHILL: The chairman himself is a large holder of debentures.

The CHAIRMAN: A Bill was introduced into the House of Lords, and was read a second time, but in Committee it was pointed out by the Lord Chancellor that the Bill was rather too wide in its operation. There was no chance of getting it through the House of Commons this Session, and it was thought better to withdraw it and bring in a fresh one at the opening of Parliament in February. An influential committee is sitting to consider the terms of this new Bill.

NO CALL DURING 1889.

Mr. POWELL asked whether in respect to the calls outstanding, there was any serious amount not likely to be paid.

The CHAIRMAN: There is no doubt whatever that all the calls are good. The whole amount called up is 3s., and the shares would fetch

a higher price than that in the market. With regard to the question of another call—it is impossible for me to make a statement with absolute certainty, but my own impression is that there will be no necessity for another call. (Loud cheers.)

Mr. POWELL: For what time?

The CHAIRMAN: I hope there will never be the necessity for another call, because if this discovery which they are working upon, and in which they seem to have such great confidence, should lead them into a large ore body, our position will soon be vastly changed for the better. There is no doubt that the whole of the geological evidence given during the trials in America was that there are other large ore bodies in this limestone formation. The Vallejo Company found one, and so has the Flagstaff, in past times. Equally so has the Eclipse, and according to the present workings and indications,

THERE IS EVERY PROSPECT OF AN ORE BODY BEING FOUND IN THIS MINE.

(Cheers.) The two millions sterling were taken out of a spot like that represented on the model. It was almost solid silver, and all the indications were preceded by this kind of oxidised ironstone. That ore was discovered at the top. Supposing they had discovered it at the bottom, there would be a little narrow seam of ore, which would cut out to quite a thread, very strongly impregnated with oxide of iron. That would develop into a low grade ore, a narrow seam, and then above that would come the richer ore, which would then widen out into this large ore body. We are on the inverse ratio. We have the oxidised stone, and now we have in this north-westerly level the richer ore. I am therefore hoping that we shall cut into an ore body. But failing that altogether, we have the concentrates, and the concentrator will not only pay all the expenses of the mine, but

LEAVE US A HANDSOME PROFIT.

There certainly cannot be any necessity for any call next July. The coal is an enormous item, and the men are paid about 17s. 6d. a day. Notwithstanding that, I think we may say there will be no call this next year. (Cheers.) The average number of men employed in the winter is 25, but in the summer we have as many as 60.

UTAH HOLDERS.

Dr. ALEXANDER: Do the books show that any considerable number of shares have passed into the hands of the local people?

The CHAIRMAN: The secretary tells me that the people in New York have been buying the shares. About six months ago there came a report that a rich body of ore had been struck, and some 10,000 or 20,000 shares were bought on the market—some by Americans who were resident here. They had great faith in it, and believed that a large body of ore had been struck. People wanted me to telegraph about it, but I said, "If a large body of ore had been struck our people there would have informed me of it." Thereupon letters appeared accusing the directors of having information which they did not disclose. It appears that the men came down from the mines, and talked in the streets, "We have a big strike in Emma." Someone telegraphed this to London, but the manager refused to communicate anything to us until he had ascertained the facts.

AMERICAN OPINION.

The Salt Lake people hold their shares, and also Mr. Gager, of New York, and Genl. Schenck, and other Americans, all of whom having great faith that the Emma will some day turn out according to the repeated statements that have been made about it.

MR. CULLINS.

Dr. ALEXANDER: I believe their hopes are well founded, but it is the general belief there, I am told, that with your present manager no ore body will ever be found. He is commonly spoken of as an "old fossil"—I refer to Mr. Cullins. It is also said it was a singular coincidence that there should be this cave in at the time a large purchase of shares was contemplated.

The CHAIRMAN: Your observations are almost the pith of a letter which has appeared in the papers, in which Mr. Cullins is called an "old fossil," but, perhaps, an "old fossil" can find an ore body as well as any one else. Mr. Cullins has been connected with the Emma Mine for some years, and has always expressed the opinion that it would turn out some day or other a great success; that there was a large body of ore to be discovered, and I cannot believe that he is doing anything whatever to prevent that ore being found. (Hear, hear.)

JUSTICE TO MR. CULLINS.

From all the information we get from him, he is adopting the best means, we think, to find that ore, and that is the opinion of the Salt Lake people, and also of Mr. Palmer. I know where all this comes from. There are people who are jealous of Mr. Cullins, and they are making these statements for the purpose of inducing the board to get rid of Mr. Cullins; but the board, unless the shareholders are strongly of the opposite opinion, have no intention of getting rid of Mr. Cullins. (Cheers.) Mr. Cullins has, from time to time, offered to resign, but the board have pressed him to remain, at least as consulting manager, rather than the real manager directing the affairs of the mine. In addition to the confidence the board have in him, the directors which were in Salt Lake City came back with a report about him from Judge Bennett, Mr. McCormack, and the representative of Wells, Fargo and Co., all of whom said that the company could not get a better man, and I say it without hesitation that George Cullins, as a mining engineer, stands as high as any man in Utah, and as for honesty—I think he stands as high, or higher than anyone else. (Cheers.) I complain rather that Mr. Cullins is not sanguine enough, but he is rather the other way. Recollect also, we have now the opinion of Mr. Palmer that the mine has been properly worked. (Cheers.)

The report was then unanimously adopted.

The extra remuneration of Messrs. Hutton and Dunhill, after a short discussion, was fixed at 100*l.* each in addition to what they have already received, and a motion to this effect was unanimously passed—moved by Mr. MADGE, and seconded by Mr. POWELL.

DIRECTORS FEELESS.

The CHAIRMAN: We work for nothing. If the mine turns out well we will ask you not to forget our poor services. (Cheers.) I move the re-election of Mr. L'Amy as a director.

Dr. DUNHILL seconded the motion, which was carried.

Dr. ALEXANDER moved the re-election of Mr. Snell.

A SHAREHOLDER said he had great pleasure in seconding this motion. He was sure the time Mr. Snell had given to this mine had been very considerable. He did not think it would be possible to find a better chairman of a mining company in London. (Cheers.) He believed that under his direction the Emma Mine would again be one of the successes of which men would talk and wonder. (Cheers.) If Mr. Snell's exertions could make it so, that success would be achieved.

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, said: I can only say that I have great faith in this mine, and as I said last year that I believed we should have something good to report, so I say now that we shall have something even better to tell you during the coming year—1889. I think we may congratulate ourselves upon our improved position, and that there is not likely to be any call this next year. (Cheers.)

On the motion of Dr. ALEXANDER, seconded by Mr. MADGE, the auditors, Messrs. Cooper Brothers and Co., were re-elected, and the proceedings terminated after a cordial vote of thanks had been passed to Mr. Snell, for his able conduct in the chair.

THE STERLING GOLD MINES (MONTANA), LIMITED.

DISPUTE WITH THE AUDITORS WHO RESIGN—THE CHAIRMAN FULLY REPLIES TO THEIR STATEMENTS.

THE ordinary general meeting of the Sterling Gold Mines (Montana), Limited, was held on Monday at the Cannon Street Hotel—Mr. James Hastings in the chair.

The SECRETARY read the notice convening the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, before I move the reception of the directors' report and the adoption of balance-sheet and accounts, copies of which I presume you have all received, you will naturally expect to hear some particulars of what has been done since the board had the pleasure of meeting you last year. At that period of the company's history you had as chairman Mr. Herbert Tritton Sankey, a gentleman of large legal knowledge, as well as of theoretical mining experience. Unfortunately a severe illness compelled him to relinquish all his business engagements, and he therefore resigned his position as chairman of this company. With great reluctance I consented to accept that position. Gentlemen, the directors greatly regret that this meeting could not have been held in October or November last, but we have been compelled to await the arrival of our solicitor's letter about the titles. We declined to call a meeting during the Christmas holidays.

THE AUDITORS' REPORT.

Then, again, the publication of Messrs. Chandler, Pixley and Co.'s critical report with the balance-sheet would have been manifestly unfair to the directors, who could not reply to it at the same time. "We have examined the profit and loss account and balance-sheet to 31st December, 1887, and have thought it desirable to make a special report to the directors, in accordance with clause 169 of the articles of association of the company, to be ready at the annual general meeting of the company."

Mr. PIXLEY: I will now ask you why you have taken upon yourselves to adopt a course almost unparalleled, in the suppression of our certificate in sending out the printed accounts to the shareholders?

The CHAIRMAN: I think my answer will be a very reasonable one. You will have every opportunity of discussing your report, but that report is here, and will be replied to.

THE CHAIRMAN REPLIES TO THE AUDITORS.

I will reply to the first charge. "In accordance with clause 169 of the articles of association of your company we have to report that in our opinion the balance-sheet and accounts are not properly drawn so as to show you a true and correct view of the state of the company's affairs in the absence of the following information." To this charge the secretary will inform you that Messrs. Chandler, Pixley and Co. had the arrangement of the accounts submitted to them in draft before the books were opened. On the completion of their clerical audit they left it to be inferred that they were satisfied subject to two or three alterations being made, which were at once carried out in the balance-sheet. They also state that "the prospectus stated that the terms of purchase of the mine were 60,000*l.*, leaving 35,000*l.* for working capital. The directors proceeded to an allotment on applications having been received for 6,696 shares of 1*l.* each." This is not correct. The purchase price was stated at 38,000*l.* cash, in 27,000 shares, and the board went to allotment, not on 6,000*l.* odd shares, but on over 9,000*l.*, having made arrangements with the vendors' agent justifying such a course, as I shall explain later on.

THE ISSUE OF THE CAPITAL.

"The capital, 33,913*l.*, referred to in the balance sheet, includes 30,000 shares of 1*l.* each, allotted to six persons, without any payment having been received, although the prospectus stated that 2s. 6d. a share was to be paid on application." This statement is also incorrect. The capital should be 39,913*l.*; and with regard to the 30,000*l.*, this was a special arrangement made with a syndicate for a special object, and this arrangement would have been carried out but for the grevious and entirely unforeseen delays, which the directors have alluded to in their report for this meeting.

EXTRAORDINARY EXPENSES.

"Among the assets is included expenditure under the heading of 'extraordinary expenses.' In our opinion this expenditure should have been incurred previous to the allotment of shares, and have been borne by the vendor." This expenditure was principally incurred in the legal and engineering charges connected with special examinations of the property, and subsequent to allotment, but at the request of the old board and several members of the company, and could not have been incurred previous to allotment. However, I am happy to inform you gentlemen that the vendors have consented to this amount, viz., 1,137*l.* 14s. 4d., being charged to the purchase price.

THE TITLE DEEDS.

"On enquiring for the title deeds of the property, we were informed they were in America, in the possession of the agents of the mortgagees, and on our raising the question as to whether the property had been properly conveyed to the company, we were handed a letter from Messrs. Carter, Clayberg and Maddox, attorneys, of Helena, Montana, dated 16th December, 1887. This letter shows that although the directors had allotted shares many months previous to this date, and had paid sums on account of purchase-money to the vendor, they

had not acquired legal possession of the mine, and we consider that he shareholders should require this letter of the 16th December, to be read to them at the annual general meeting, as we decline to accept any responsibility with reference to the title." Now, gentlemen, what is my reply to this clause? It is this. The title deeds are deposited with the First National Bank in Helena, together with the mortgage deed (to which I shall refer later on), and all these deeds have been strictly examined and reported upon by our own company's solicitors, the leading firm in Helena, Messrs. Carter and Clayberg. They being satisfied with the titles, and being the only parties qualified to judge them—we are satisfied. Not one farthing was paid over to the vendors, nor any shares issued until the manager was in actual working possession of the mine, and until the modified terms were settled and agreed to by the solicitors to the vendors and the company's solicitors. But as Messrs. Chandler, Pixley and Co. seem to think that our solicitors' letter of the 16th of December last is rather a remote date, I will read you a new one only received a fortnight ago from Messrs. Carter and Clayberg. He read the letter referred to, which stated that the titles were in perfect order. Now gentlemen, I did not know that the auditors were expected to investigate titles, but I suppose it is so, or Messrs. Chandler, Pixley and Co. would not have sent us in a claim for thirty guineas for merely auditing the accounts. If they will again refer to our articles of association they will see that their remuneration is not to be determined by themselves.

THE AUDITOR VOLUNTEERS TO ANSWER QUESTIONS.

"We have requested the directors to give us notice of the annual general meeting, so that the partner who has attended to the matter may be present and answer questions, should the shareholders wish to put any to him." We shall be very happy indeed to hear what this partner has to say, but in order, gentlemen, to meet Messrs. Chandler, Pixley and Co.'s strictures fully, and completely refute, I trust, charges, which on their face bear so dangerous a meaning, the directors placed the books before the well-known firm of Messrs. Ball, Baker and Co., one member of which firm is not only a shareholder himself in our company, but represents several others. I have but to add that Messrs. Ball, Baker and Co. have passed our statement of accounts as correct, and signed the balance-sheet, as Messrs. Chandler, Pixley and Co. have also done.

A COMMITTEE SUGGESTED.

But the directors having nothing to conceal will be very glad if you will appoint a committee of the largest shareholders to verify our statements, and to assist us with their advice in raising fresh capital.

THE FLOATING OF THE COMPANY.

Well, gentlemen, the old board went to allotment on the 17th of November, 1886, and Mr. Sankey resigned the chairmanship on the 26th of April, 1887. The property was reported upon by Dr. James P. Welch, who was recommended by Messrs. Wells, Fargo, and Messrs. McCormack and Co., bankers, and also by Mr. W. C. Child, and Mr. H. W. Childs. Now, gentlemen, the reports from these three experts were of the most satisfactory character, and two months prior to allotment we were assured that the mines were netting $6,000 a month. They were closed down shortly afterwards, pending the completion of their purchase by this company. In November, 1886, the company was floated, but the response of the public had not been so satisfactory as the directors hoped for; the vendors' representative signified his willingness to modify the terms of purchase, and under these circumstances—believing in the value of the property as the successors to those directors just as fully believe to-day—they proceeded to allotment. The modified arrangement which was made in the first instance by the first directors was that 8,000*l.* cash, 2,000*l.* of which should be retained as discount, should be paid to the vendors, 30,000*l.* debentures, and 27,000*l.* in fully paid-up shares. But in the meantime, owing, as I have before said, to the many delays, the syndicate declined to take the shares. The mining market also became depressed and stagnant, and the efforts of the new board to obtain further working capital have thereby been seriously hindered.

CRUSHING MACHINERY.

But we procured crushing machinery in the form of a Huntington mill, and continued developing work under the managing superintendence of Mr. R. B. Wallace, but as matters did not proceed so satisfactorily as we could wish, the board accepted Mr. Read's offer to go out and specially report upon the position of the company in all its aspects.

A DIRECTOR'S VISIT TO THE PROPERTY.

Mr. Read is a director who has been working most indefatigably in the interests of the company before and since July last year. In that month he visited your property, and on his return prepared the report, which is not before you, and which I am sure, gentlemen, must in your estimation bear the fullest testimony to the merits and value of the Sterling (Montana) Mines. While at Helena he made the previous owners agree to waive interest on the mortgage for two years and three months, namely, until 31st March, 1890. Mr. Read, I am sure, will be happy to answer any questions you may put to him. I have lost no opportunity of asking Montana men their opinion of the Sterling Mines, and in every instance I have received a favourable one. There seems to be no doubt that if the board can complete the financial negotiations which they have in hand for procuring further working capital and erecting a suitable plant, the mine itself will yield sufficient paying ore for years to come. The great bulk of the ore is undoubtedly low grade, but it amply compensates for that objection by its quality and permanence, and the new machinery of to-day can work ore at a profit, which a few years ago was left on the dumps as worthless tailings. I hope, therefore, gentlemen, that you will not go away from the room to-day dissatisfied with your property, but rather that you will show your faith in it by supporting the board with your approval. The directors have given almost daily attention to the business of the company, through discouragement and difficulties, and entirely without remuneration, for no fees have been paid. But we believe in the future of the mine when once we get to work with suitable machinery. In conclusion, the chairman moved the acceptance of the directors' report, and the adoption of the statement of accounts and balance-sheet for the year 1887, with the technical alterations suggested by Messrs. Ball, Baker and Co.

Mr. NUTT: I beg to second the motion.

THE AUDITORS' STATEMENT.

Mr. PIXLEY: The only remark I have to make is that I considered it my duty to take the course I have done. I have written to the directors and stated that I did not wish to be re-elected an auditor. The first matter I have to refer to is the suppression of our certificate. I cannot see that the chairman has given any reason whatever for the suppression of our certificate. (Cries of "Oh, oh.") I state that deliberately. (Interruption.) I did not expect to receive support at this meeting. There are too many vendors' shares out for it to be possible for me to receive proper support at this meeting.

A SHAREHOLDER: Is that a proper remark?

Mr. READ: Allow me to state I and my friends have put in 7,000*l.* hard cash.

THE AUDITORS' CERTIFICATE.

Mr. PIXLEY: My certificate is: "We have examined the balance-sheet to the 31st December, 1887, and have thought it desirable to make a special report to the directors, in accordance with clause 169 of the articles of association, to be read at the annual general meeting of the company." I defy the chairman to say there was anything damaging to the company to have printed that simple certificate on the accounts.

The CHAIRMAN: I certainly am of the same opinion that a sort of vague suggestion of that kind going out was not doing quite justice to the directors, who could not then reply. Absent shareholders would wonder what it was. I will ask the reporters to take notice that, so far from the vendors being represented at this meeting, about four-fifths of capital is bonâ fide capital.

Mr. PIXLEY: We have been at this audit since May last, so that you may imagine the amount of trouble we have had. The result was that several balance-sheets were put before us for signature in each of which we suggested alterations. In the first there was an amount of 922*l.*, which was an amount due from the vendors having been, as far as the books showed, over paid him. It was the duty of the directors to ascertain that the mine was a mine producing ore, and whether it was a proper property before they made an allotment of shares, and therefore this item of extra expenses, which is placed in the balance-sheet as an asset, amounting to 1,337*l.* out of a capital of 9,100*l.*, ought to have been first expended before any allotment took place. I think they ought to have required the vendors to prove whether the mine was likely to produce gold or not.

Mr. FOSS rose to a point of order, and said that Mr. Pixley was making a personal attack on the board.

THE OPINION OF THE LATE SOLICITOR, MR. SMITH.

Mr. EDWARD SMITH: I believe all the directors did their duty in the interest of the shareholders. I do not think these statements of Mr. Pixley are correct.

Mr. PIXLEY proceeded to state that the directors ought to have investigated the value of the property before the prospectus was issued. After some further remarks of a somewhat personal character.

On the motion of Mr. HINDLEY, seconded by Mr. FOSS, it was put to the meeting whether Mr. Pixley should be further heard or not, and carried in the negative.

Mr. PIXLEY stated that this resolution relieved him from any further responsibility towards the shareholders, and then retired from the room.

ATTEMPT TO WRECK THE COMPANY.

Mr. HINDLEY: After the mis-statements which have been made, it is only fair to tell the shareholders of this company that, until two or three days ago, I had no knowledge of who were the accountants of this company. The very first intimation I had was the accountant calling on me, bringing his solicitor, and asking me to take proceedings which would practically wreck the company. The company's accountant and the solicitor would enable me to get my money back whatever might come of it. (Cries of "Shame.")

OPINIONS OF A MINING EXPERT.

Sir CHARLES CRAUFORD said that the mine contained a large quantity of low-grade ore, but at the same time they might come upon shoots of high-grade ore. He was told out there that the mine had been worked in a very unminerlike manner. When he was there he took away a sample of the ore from the footwall, and it assayed about $70 to the ton; that was not the body of the lode, but it was an indication that gold was there. To deal with the mine properly they wanted more efficient machinery. They had plenty of timber for fuel purposes, and an ample supply of water, and he was satisfied that they would have a good supply all the year round. He was prepared to come forward and supply his proportion of fresh capital.

OPINIONS ON THE SPOT.

Mr. READ said that he went out there in June, and he took the opportunity of seeing every mining man available. He saw all the leading men, including the superintendent of the Moutana Company, and everyone knew more or less all the mines in the neighbourhood. Their opinion was universally that this was a very good mine; that it required adequate plant to be put up, because the ore was now low grade ore, ranging from $5 to $7. That was taking it at the lowest figure. They had a vein there in one place which ran up to 14 ft. wide, and any mining man would tell them if they had a vein of that width; although the ore was low grade, it was about the best description of mine they could have. The Huntington mill he did not consider suitable for working the Sterling ore. At the same time, it had never had a fair trial, because it had never had the proper sort of breaker erected. If they could put up plant sufficient to crush 60 to 100 tons a day they would have a mine capable of paying good profits. The previous owners and themselves had taken out between 10,000 and 12,000 tons, so that he did not think any man had a right to say there was no such a mine, and that the mine was a swindle, as gentlemen had been saying. He might tell them that the ore the owners took out averaged from $50 in the upper level down to about $10. There was an article about a year ago in a magazine published out there on the mines worthy to be noticed, and in that article the Sterling Mines were noticed.

The motion was then put to the meeting and carried unanimously.

FRESH AUDITORS.

Messrs. Ball, Baker and Co. were appointed auditors.

COMMITTEE OF CONSULTATION.

Messrs. Foulston, Marsland, Hindley, Wynne and Robinson, with power to add to their number, were appointed a committee of consultation.

A vote of thanks to the chairman and directors then terminated the proceedings.

GYMPIE GREAT EASTERN GOLD MINING CO.

THE SCHEME OF RE-CONSTRUCTION OUT-VOTED—CHEERFUL VIEW OF GYMPIE GREAT EASTERN AFFAIRS.

An extraordinary general meeting of the shareholders was held at the City Terminus Hotel, Cannon Street, on Monday, for the purpose of considering the following resolutions :—

(1.) "That it is desirable that the company should be re-constructed, and accordingly that the company be wound up voluntarily, and that Lewis Henry Evans and John Garland be and they are hereby appointed liquidators for the purpose of such windiug-up." (2.) "That a new company be formed, to be called the Barambah Mining Company, Limited, with a capital of 75,000*l.* divided into 75,000 shares of 1*l.* each, with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors of this company." (3.) "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidators of the one part, and the Barambah Mining Company, Limited, of the other part be and the same is hereby approved, and that the said liquidators be and they are hereby authorised, pursuant to Section 161 of the Companies' Act, 1862, to enter into an agreement with such new company (when incorporated) on the terms of the said draft, and to carry the same into effect with such (if any) modifications as they may think expedieut."

Henry Weld-Blundell, Esq. (the chairman of the company), presided.

Mr. John Garland (the secretary) read the notice convening the meetiug.

The reports were taken as read.

The Chairman : Gentlemen, to begin with I must express our regret at the absence of oue of our colleagues, Mr. Alfred Romilly, who, I am sorry to say, is suffering from rheumatic fever, and is unable to attend the meeting to-day.

THE PROPOSED PURCHASE.

At the last meeting, which was held some few weeks ago, your directors informed you that as soon as we were able to complete our arrangements with regard to the suggested purchase of a property, we would call you together again, and bring it all before you. We have in the meauwhile made all our arraugements, aud completed all the necessary preliminaries for placing before you a scheme for the purchase of a property, which we considered well worthy of your attention, namely, the Gooraujan Mine, in the Barambah district. A great many miues, mostly of a small character, were brought before us at different times since last April or May, when we had reason to suppose it might be necessary to increase the area or obtain some mine upou which to exteud our operations. Some of the mines were in the neighbourhood of the Gympie Great Eastern Mine ; but upon mature consideration we did not think any of them were worth spending our money in developing. They were prospecting mines, and although the original cost might be very small—for some of the claims could have been obtained for 400*l.* or 500*l.* each—in every instance it would have been necessary to sink a shaft 300, 400, or 600 ft., and even then, though we should probably have hit the reef, it might not have contained gold. The mine which seemed most worthy of your attentiou was

THE GOORANJAN PROPERTY.

This was brought to our notice through Messrs. John Taylor and Sons, their agent, Mr. Benjamin Davey, having reported fully upon it during his stay in Queenslaud. Mr. Beujamin Davey's report has been before you, and I suppose has been carefully read by all of you. He describes the property as far as he is able, consideriug that there has not been auy large amount of development upon it. A few shafts have been suuk, and a certain amount of ore exposed, but uot any large amount of development upon it. It was put under offer to us for a sum of 10,000*l.* We did our best to get some reduction in this original price, but the original owners, or vendors, in the Colouy refused to reduce their price in any way whatever. We then instructed our local directors to send an expert on to the ground to report upon it fully on our behalf, and they sent Mr. Charles Boase, a mining expert residing at Gympie, who is described by the local directors as being a gentleman of very high repute. He is well-kuown in Queensland, generally as a man of large experience.

MR. BOASE'S REPORT.

Mr. Boase went to the ground and reported upon it, and in due time his report reached us. We found that the report from Mr. Boase gave even a better accouut of the mine ; he described the character of the reefs as being really more valuable, and that the prospects, both for gold and copper, are better even than as described by Mr. Davey.

DESCRIPTION OF THE PROPERTY.

The two plots of ground are described as giving a continuous run of about 3,500 ft., containing three lodes, Bushnell's, Kingston, and Black Watch, running throughout the entire length of the property. Sinkings have beeu made upon the property, with varying results. Of course there is no denyiug the fact that it is not a regularly proved mine. If it were, it would not be offered to us for 10,000*l.* The assays which have beeu made, however, give from 5 to 7 ozs. of gold to the tou, and up to 24 per cent. of copper. Of course, if the mine was proved with reasonable certainty of returns such as these through the whole length of the property, aud to a considerable depth, the figure at which it would have been offered to us would have been nearer 100,000*l.* thau 10,000*l.*, which I consider a very reasonable sum in view of the prospects.

GEOLOGICAL CHARACTERISTICS.

One reason, I think, why the local miners have not been able to do very much with it, and why, possibly, they have not had very much faith in the Kilkivan district, has been that, although the reefs contain a great deal of gold it is found for the most part in refractory ores, that is, in ore in combinatiou with antimony or other minerals which make it difficult to treat. I speak with some knowledge as a resident in Queeusland for many years. Kilkivan is known as a very rich district, and alluvial workings have been carried on with great success, though the reefs have not been so successfully worked. The reason has been that the miners and local smelters have been unable to deal successfully with the refractory ores.

TREATMENT OF THE ORES IN SWANSEA.

We propose to send over those portious of mineral which is so refractory that they cannot be dealt with in the country ; and in order that we should not be misleading you by suggesting the purchase of a mine containing ores so refractory that they could not be dealt with to a profit here, we had a few specimens sent to some Swansea works, and the account we received was of an exceedingly satisfactory kind. Two pieces, each about as big as my fist, were sent, which was sufficient to show the kind of ore found there, and the firm offered to purchase at a price which would give us an exceedingly good margin of profit any quantity that we could produce. That puts an end to any doubt as to these refractory ores being readily and profitably treated in England.

LOCAL SMELTING WORKS.

But, possibly, in the course of a year or two we may be able to treat them successfully in Queensland. There is a company with which I have been brought into contact, the chairmau of which is Genl. Fielding—I think it is called the Queensland Smelting Company—which is about to put up some very considerable works on the very latest model, iu the immediate vicinity of Maryborough. They have obtained as manager for carrying on the works there an Auerican mining expert who has had very large experience on first class mines in America. The works will be put up for the express purpose of treatiug these refractory ores, and if they are successful we shall be put in a much better position for dealing with these ores on the spot in Queensland without having to send them home at all.

ASSAYS SUBSEQUENT TO MR. BOASE'S REPORT.

I do not know that I need do more than refer you to the reports from Mr. Boase and Mr. Benjamin Davey ; but there is one point in the report of Mr. Boase which, perhaps, you may not have observed. Unfortunately, at the time that Mr. Boase wrote his report, although he had taken specimens of ore, he had not had them assayed. The consequence was that he wrote his report without knowing what would be the result of the assays ; and I cannot help feeling that if he had known how the specimens were going to turn out he would have written in a somewhat different way. You will have noticed that iu regard to assay No. 4 from Bushnell's lode, which is apparently the better of the two, he says, "No. 4 sample should be a good criterion in regard to quality." This No. 4 sample turns out to contain about 7¼ ozs. of fine gold to the ton, 9 ozs. of fine silver, and 24.39 per cent. of copper. His No. 5 sample was taken from a heap of about 12 or 14 tons, and he says it should "furnish something like an accurate idea of what the upper portion of the lode at this point is worth." Well, his No. 5 sample produced 5 ozs. 2 dwts. of fiue gold, 3 ozs. of silver, and 17.19 per cent. of copper. These are, of course, exceedingly satisfactory results if only we could feel assured that there is auy considerable amount of this mineral to be found in the reef. There has been some idea that the expenses of transportiug these ores to this country would be great ; but I may say that the mine is only about 35 miles from the railway terminus, which is only about 70 miles from the port ; so that the expense of sending the ores home to England would be very small indeed.

THE NECESSITY FOR RE-CONSTRUCTION.

After having looked carefully into the question of the purchase of the property, the question arose as to how we should lay it before you. Counsel advised us that under our memorandum and articles of association it was not practicable to purchase any property outside the Gympie goldfield ; and we shall therefore have to re-construct the company.

POSITION OF THE COMPANY.

That is doubtless a very serious question for a company that is in a really prosperous condition, and that has to its credit, as we have now, a balance of 36,000*l.*, and with a very fair prospect indeed of continuing for many months yet to come upon our present reefs. (Cheers.) There is no immediate sign, according to the reports we get from our local directors, that the reefs we are working on now will cease to be productive, and more than that there is the undoubted prospect that the reef we are sinking for, and which has been found in the No. 1 South Great Eastern, may very probably be rich also. The last telegram from our local directors, which was published a few days ago, reporting a crushing giving a profit of 3,000*l.*, mentioned that in No. 1 South Great Eastern the reef was yielding 3 ozs. of gold to the ton. The probability is that we shall strike that reef very soon. But because our prospects are certainly fair with regard to our present mine, it does not follow at all that we should not be wise in extending our operations elsewhere, and it is on that ground that I earnestly recommend the scheme we are laying before you to-day. We found that the only mode of re-constructing the company was to wind-up and hand over the whole of the assets of the mine as it stands at present to the new company, which we propose to call the Barambah Mining Company. We had at first intended calling the new company the Great Eastern Mining Company, but we found that it would not be allowed at Somerset House, so we proposed to call it the Barambah Mining Company, and to fix the nominal capital at 75,000*l.*

OBJECTIONS TO THE SCHEME.

A great many shareholders in the present company have objected very much iudeed to a scheme which hands over the whole of the assets of the company to a new company with a very much reduced capital. (Cheers.) The chairman went ou to explain that the plan had been decided upon in view of the fact that some of the shareholders might dissent, and have to be paid out at a price to be fixed by arbitratiou. In that case shares would remain in hand, and as these could not be allotted at a discount, the company might find itself in want of funds.

A Shareholder : Would the value be fixed at to-day's date, or at some future tiue ?

The Chairman : That will depend entirely upon the liquidators, and the law as to arbitration as between themselves and the dissentient shareholders. They will get whatever is looked upon as a fair value for their interest in the miue. The chairman went on to refer to the proposed memorandum and articles of association, and, in conclusion, moved the resolutions set forth in the notice convening the meeting.

Mr. P. MEADOWS TAYLOR seconded the resolutions.

THE DISCUSSION.

Mr. PECHEY opposed the scheme as it stood, though it might be worth while to take a lease of the mine at a royalty. He did not for a moment believe that the Gympie Great Eastern Mine, whieh gave a profit of 3,000*l*. last month, was anything like played out, and he thought it would be much better to spend the fuuds iu hand in developing it.

Mr. JOHN TAYLOR: We are doing so.

Mr. PECHEY thought the prospeets very good, and strougly advised the husbanding of the resources for the development of their own property. (Cheers.)

Mr. F. MORRIS, Mr. ROBARTES, Mr. PAINE, Mr. HUSBAND, and one or two other SHAREHOLDERS also opposed the purehase of the Gooranjan property: while

Mr. CLAYTON thought it would be well worth while to spend something in exploring the property on a lease for a twelvemonth before purehasing it outright.

Mr. BLADON suggested that the eapital of the new compauy should, in any case, be the same as that of the existing eompany, so that the shareholders would have share for share, for he believed that the proposal to reduce the nomiual capital by two-thirds would be fatal to the scheme. He moved an amendment to that effeet; but after some further eonversation, it was decided to vote upon the original proposition.

The CHAIRMAN briefly replied upon the points raised in the discussion, and the resolutions were then put to the meeting, aud lost by a very large majority.

THE PROXIES NOT TO BE USED.

The CHAIRMAN said the board had received a very large uumber of proxies in favour of the resolutions, but in view of the opposition to it shown by the shareholders present, they did not propose to use the proxies. (Cheers.)

Mr. COOPER proposed a vote of thanks to the chairman aud directors for their management of the affairs of the company.

Mr. PECHEY, in seeonding the proposition, said the directors were deserving of the utmost praise for deeiding uot to use the proxies against the feeling of the meeting. (Cheers.)

The vote having been passed,

The CHAIRMAN acknowledged the compliuent, and the meeting then closed.

LATEST REPORT.

November 15th. — During the past fortnight the cross-cut at the 634-ft. level has been extended 15 ft.; total from the shaft, 85 ft. The country was very hard, and bad to break, for the fortnight, it being nearly all quartz. There is a floor of grey slate in the bottom of the level, but the quartz does not go through it. We should have the reef in about 6 ft. more should it keep its present course. I plumbed the underlay of the winze down, and find we will have to go 91 ft. at the 634-ft. level to the reef. The winze on the Great Eastern reef has been sunk 11 ft.; total, 52 ft.; there is a large body of crushing stuff showing a little gold. The winze at the 580-ft. level in the eastern cross-cut to cut the No 1. South Great Eastern reef has been sunk 15 ft. and timbered 5 ft. The stopes above the 500 and 580-ft. levels are all showing fair gold; those above the 580-ft. level are nearly worked out, there being only about 20 tons of stone left. The stopes above the 400-ft. level are all showing a little gold. The 10 heads of stampers that were crushing for the Nicholl's lease have been hung up sinee 5th Novemher. Everything about the mine and winding engine are in fair working order. There are 78 men employed; 71 at the mine and seven at the battery. There are two men putting up the weigh-bridge, aud two men, with horse and dray, making approaches to the same.—J. JAMES.

THE ALMADA AND TIRITO CO., LIMITED.

(IN LIQUIDATION.)

ALL CLASSES OF SHAREHOLDERS TAKING UP THE NEW SHARES —THE NEW SCHEME LIKELY TO BE A DECIDED SUCCESS— IMPROVEMENT IN THE MINE.

AN extraordinary general meeting of the shareholders was held at the company's Offiees, 47, Finsbury Circus, on Wednesday, when the following resolutions, passed at the extraordinary general meetiug of the shareholders, held on Monday, the 17th day of Deeember, 1888, were submitted for eonfirmation :—

(1.) "That the liquidators be authorised to sell and transfer all the undertaking and assets of the eompany to a new company, upou the terms of a scheme of re-constructiou now submitted to the meeting."

(2.) "That the draft agreement now submitted for carrying out the above objects, and embodying the proposals, which draft is signed for the purposes of ideutificatiou by the chairman, be, and the same is, hereby approved, and that it lie in the offiee for 14 days for iuspection by the shareholders."

Samuel J. Wilde, Esq. (one of the liquidators), presided.

Mr. J. A. MORGAN, F.G.S. (secretary), read the notice of meetiug.

THE OLD SCHEME AND THE NEW.

The CHAIRMAN: Gentlemen, at the last meeting a poll was demanded, and I will now read the result. You will kindly remember that this is not aecurate as regards the real wishes of many present, but it embodies the figures I shall have to report to the chief clerk. A good many of the shareholders who had given proxies for the scheme have voted against it. The moncy represented in favour of the old scheme was 5,538*l*. 2s., and 4,075*l*. against it, leaving a majority in favour of the old seheme, but not the legal majority of two-thirds. Hence the old scheme beeame dead.

SUCCESS OF THE NEW PROPOSAL.

Niue persons require to be paid in cash representing 85*l*. 10s.; 16 persons ask that they may have 2,549 shares in addition to those they hold, representing 318*l*. 13s. 6d.; deduct from that the 85*l*. 10s., and it leaves a balanee to the good of 232*l*. 2s. 6d. 60 persons require to receive fully-paid up shares equal to the amount they have paid. That represents 22,107 shares. 118 persons take 21,680 shares with the extra sixpence liability, representing 1,232*l*. 13s. Sixpence on the old shares represents 5,250*l*., making a total to the good of 6,715*l*. 15s. 6d. In round numbers we have had only answers from one-third of the ereditors or shareholders in number.

Mr. THORP: What is the amount in money?

SATISFACTORY STATEMENTS.

The CHAIRMAN: I have not had time to go into it, many forms having come in at the last moment; but I should imagine that the bulk of the largest shareholders have answered, and that the smaller ones are those whose replies have not yet been received. In addition to the figures I have given you I should say we have every reason to believe that a gentleman who holds 12,000 new shares will take up shares with 6d. liability. His partner has done so, and they generally act together. Mr. Schofield has taken fully-paid shares for what he has paid, and his friends have gone—some one way and some the other. The amount of claims by creditors at the time of the winding-up order was 15,351*l*. 10s. 6d., which is now wiped off to the extent of a sum of 4,678*l*. I am not certain about these figures, but believe they are uear the mark. That leaves 10,689*l*. still to be wiped off, without reckoning the gentleman who holds the 12,000 shares.

Mr. THORP: You are still liable to pay 10,000*l*. to the creditors.

The CHAIRMAN: I have no doubt that that amount will be very greatly lightened.

Mr. MORGAN (secretary): We have parted with Mr. Schofield as a creditor, and his family, six in number.

The CHAIRMAN: We have not heard from the other two-thirds of the new shareholders or ereditors, but if they agree in anything like the proportion to those who have already replied, I think we shall have to pay very little indeed. What we propose to do is to send out another circular to the

TWO-THIRDS WHO HAVE NOT REPLIED,

requesting them very strongly to send a reply, one way or the other, immediately, because until we know a little more than we do we are not in a position to register the new company. We think we ought to see our way to having 10,000*l*. clear cash available for the new coupauy: but if we do not get that, and if the money we have in the bank, together with that to come in by way of calls, does not amount to this suu, we should not be justified in going on. With 10,000*l*., however, we feel sure we can do thoroughly what is necessary to prove whether we have a good mine or not. 10,000*l*. will be ample to thoroughly test the mine, leaving a good margin for contingencies. I think you will all agree with me that that sum would be a safe one with whieh to begin the new company. (Cheers.) We had closed our books, but we propose to re-open them for the sake of clearing off the transfers whieh have come in. They will remain open until the deed is signed, transferring the property of the old company to the new, which we think will be iu a fortuight's time. Directly that deed is sigued we cannot accept any more transfers.

A CHEAP LIQUIDATION.

The liquidators have received "the very large sum of 47*l*. each" —(laughter) — in addition to the fees they would have had if they had remaiued as directors. Henee I do not think any shareholder can grumble at the expense of liquidation. (Cheers.) I know I have worked very hard for that 47*l*., and so has my colleague. I will eall upon the secretary presently to read recent letters from the mine, aud to explain, as he goes on, the features of these communications.

QUESTIONS.

Mr. THORP: How much cash have you at the bank?

The CHAIRMAN: About 2,200*l*. We reekon before the new company is actually registered that it will not be more than 1,500*l*.

Mr. WHEELER: You would not register the new company unless you saw your way to 10,000*l*.?

The CHAIRMAN: No, I think not. I do not think there is the slightest chance of the scheme falling through. The new company ought not to start with less than 10,000*l*. iu cash, and I would not like to go into liquidation agaiu. We have abont 7,000*l*. towards this sum, accordiug to the figures I have just read out. We are positive the old shares will be taken up, or failiug that they will be sold, and the buyers will be liable for the sixpence. Many people are asking for additional shares. No circular has yet been sent to the old shareholders.

ORE AT THE MINE.

Mr. B. D. KERSHAW: Has not a large amount of ore been developed whieh could be turned into cash? I uuderstood we had something like eight months' supply of ore in sight and ore raised.

The CHAIRMAN: A eertain amount has been raised, but the large block of it is in reserve, and has not been stoped away.

Mr. MORGAN: We have 5,000*l*. of orc in hand—at least, it is calculated to produce that, deducting all the expenses of treatment as soon as the reduction works are put iuto order.

The CHAIRMAN: We can either reduee the ore under the old system or we can wait and put up new works and treat it on the dry systeu, whieh is far more economieal, and would enable us to treat the ores iu a better way. We do not think it right to go to the expense of new maehinery until we are certain we have suffieient ore to keep it going. Therefore the 5,000*l*. is not an available asset at the present time.

Mr. MORGAN: It is estimated the alteration of the stamps from wet to dry erushing would eome to about 4,000*l*.

The CHAIRMAN: We have more to do than that, because we want additional pipes and a better water supply. If you ask me as a rough guess I should say we should waut something like 10,000*l*. to do everything properly, which ought to be done—that is if we have really a good mine.

Mr. THORP: You do not propose to lay out that money until you know you have a good mine?

The CHAIRMAN: Most deeidedly not. If we earry out this scheme we shall have 80,000 shares, whieh we are not going to place now, but I fully expect to be able to place them by and by, and at a very considerable premium.

Mr. WHEELER: Why not turn the orc iuto money now?

The CHAIRMAN: It would be simply wasting it with our present applianees.

Mr. WHEELER: I think if you were to reduce part of it it would give the shareholders confidence.

A SHAREHOLDER: Would the cost of the ore being turned into silver be more than it is worth?

The CHAIRMAN: It depends upon the percentage of silver; and it would be months before we could give you the results. If the remainder of the shareholders respond as the others have done, there is no doubt that there will be very little to pay to the creditors.

POSITION OF THE WORKINGS.

Mr. MORGAN: I am going to read you extracts from the letters of Mr. Sanchez, on the subject of the 50 fm. level which is being driven from the Balvanera shaft. The first extract is from a letter, dated November 27th, 1888. "We are bending the drift about 15 degs. west of north, so as to penetrate into the lode more rapidly, and explore its western part sooner." On the 6th of December, he says: "The total length is 108 ft. north of Balvanera shaft. In the last day or two an improvement has taken place in the character of the lode, which has given occasional stones of green ore, sprinkled with specks of copper glance. The winze below the 36 is already drained, and this week we are fixing ladders and windlass over it, and getting it into shape for resuming sinking next week." On the 11th December he says, "The total length driven is 114 ft. The lode is becoming more homogeneous, and contains occasional stones of green ore." Then he says, "We resumed the sinking of the winze below the 36 on the 100 lode, with a view to hasten communication and coutact with the 50, which is expected to be accomplished about 10 weeks hence." The effect of that will be that

IT WILL ENTIRELY VENTILATE THE WHOLE OF THE WORKINGS,

and then by means of communication there will be thorough ventilation right through. That will be a most important point when completed. Then being absolutely free from water, there will be no difficulty in sinking; as he has found ore in two places, there is every reason to think it will continue, and be met with going down the winze, so that the prospects seem reasonably fair for ore there. One important thing is that it is turning from a zinc and lead ore into silver and copper ore. Wherever in the history of these mines we have come upon copper, it has always been associated with more silver than when the ore contains lead and zinc. The specimens on the table are almost entirely mixed with rich copper. The mine seems to be changing in depth.

Mr. THORP: Is that below the water level?

Mr. MORGAN: Yes, it has been drained by pumps. Everything below the adit we have to pump, so that we are considerably below the water level of the country. That adit level is the water level because the brook runs outside. There is very little water in these mines, irrespective of what comes to us in the shape of floods. It is a granite formation, which does not contain any large quantity.

Mr. THORP asked that the chairman would let the shareholders know how the new arrangement was working.

The CHAIRMAN: We are going to send out a fresh circular to those two-thirds of the shareholders who have not applied for shares, pressing them to reply without delay, and we shall, as an extra inducement, send them a stamped envelope. (Laughter.) Directly we get a sufficient number of assents to warrant our going on we shall register the new company.

Mr. WHEELER: What do you propose about the new company?

NEW COMPANY'S ARRANGEMENTS.

The CHAIRMAN: My own idea is to carry it on as before. I think we ought to have five directors, and we will leave it to the shareholders to fix their remuneration. We propose to ask those who have only paid 6d. immediately to pay the other 6d. Within a limited time, to be fixed, we propose to ask them to pay another 6d., and so on, until we get the shares all paid up to 2s. Directly that is done we shall only have two sets of shares. We shall register no transfers of shares upon which 2s. has not been paid. (Hear, hear.) It is very important to have only one class of shares.

Mr. THORP: The adit level I took to be a very deep level.

Mr. MORGAN: This adit is 80 fms. from surface. If you were to sink on the lode below the adit you would find water.

The CHAIRMAN then proposed the confirmation of the first of the resolutions as given above.

Mr. PHILLIPS seconded the motion which was agreed to unanimously.

The CHAIRMAN then proposed: "That the draft agreement for carrying out the above purchase be, and the same is hereby approved, and that it lie on the office table of the company for the inspection of the shareholders for a fortnight." The time specified had already nearly elapsed. I think you will find that the shares to be dealt in will be those 2s. paid, and the great bulk of them are 2s. paid already. It is extremely improbable that we shall want to call up more than 2s. per share for at least six months.

Mr. PHILLIPS seconded the motion, which was unanimously agreed to.

Sir HENRY CARTWRIGHT: It should be mentioned in the circular that that call will not be made until the money is absolutely wanted, and certainly not within six months.

QUOTATIONS V. DEALINGS.

Mr. THORP: Mr. Schofield said the shares were quoted at 6d.; but after the meeting at which he said this, when I went into the market and tried to buy them at anything like that price I could not get delivery.

Mr. WHEELER said his experience recently had been somewhat similar.

The CHAIRMAN: When the new company is registered there will not be the slightest objection to allowing the shareholders to send in renunciation papers in the names of their own nominees instead of in their own names, without the expense of a transfer form.

THANKS DUE AND THANKS GIVEN.

Sir HENRY CARTWRIGHT: I propose a vote of thanks to the chairman, to whom, I think, we are very greatly indebted for the labour he has undergone on our behalf. The position we are in, which is very favourable contrasted with what it was, is very largely owing to him and his co-liquidator. I have really come to think that there is a very good future before us. (Cheers.)

Mr. KERSHAW seconded the motion, and with the brief reply of the CHAIRMAN the proceedings were brought to a close.

THE STANLY FREEHOLD GOLD MINES, LIMITED.

DIRECTORS HAVE FAITH IN THE FUTURE OF THE PROPERTY—MR. JUDD EXPLAINS ITS PAST POSITION AND PROSPECTS.

THE second ordinary general meeting of this company was held on Monday last, at the Charing Cross Hotel, London, S.W.—Mr. James Judd, J.P., presiding.

The CHAIRMAN, having read a letter from Lord Francis Godolphin Osborne, expressing his regret that, owing to an accident in the hunting field, he was unable to preside, called upon the secretary (Mr. Newman Goldman) to read the notice conveuing the meeting.

The report having been taken as read,

A RÉSUMÉ.

The CHAIRMAN said: I have been unexpectedly called upon to occupy the position that would have beeu so much better occupied by Lord Godolphin Osborne—therefore, I must ask you to bear with me; but your questions may elicit some information that if I had been prepared would have rendered such questious unnecessary. We present ourselves to-day, having solved some of the difficulties that affected us in the immediate past. We had every reason to believe that Mr. Nance, our late manager, not only efficient, but in every way an honourable man. However, we have found that, although we trusted him from what seemed to be sufficient reasons, our trust has not been justified. He is doubtless a man of considerable ability, but his views and opinions as to the best way of carrying out the works entrusted to him were wrong, and owing to his unfortunate waste of our money we have had to submit to you the necessity of raising additional capital. It was essential that it should be raised if the works were to be properly executed, and the directors and committee of shareholders gave the subject the fullest consideration.

RESULT OF AN APPEAL TO THE SHAREHOLDERS.

Only about 2,000 shares out of the 50,000 preference shares were not taken up. As the report tells you, we have got over the great difficulty of the position in which we were placed by the incompetence of the agent in whose hands the mine was placed for active work. We are now getting on actively with the works, aud within a few months we hope they will be complete.

THE WAY IN WHICH THE VENDORS MET US.

Like many other individuals, veudors are the subjects of all sorts of objurgations when things do not go well. In reference to our vendors, we have been met most generously by them. I was the mouthpiece of the directors, and whatever we have suggested to the vendors they have done. In the first place they paid cash for over 25,000 shares in the company, and they have since sacrificed some 20,000 of their fully-paid shares for the benefit of the company. We hope sincerely every gentleman here is in the position of being the holder of preferential shares. With the exceptiou of about 2,000 shares the whole has been allotted, and we should be very glad if any gentlemau should feel disposed to take more, so that the whole may be placed.

WHO WILL PUT THE MINE ON A SOUND BASIS.

In reply to the question whether this money will be enough to set the mine working, the directors believe the money subscribed will enable us to complete the works, and that at the eud of a few months we shall start hydraulicking, without the necessity for calling for any further capital. I beg to move the adoption of the directors' report and balance-sheet, which has been submitted to you, and which you have in your hands.

Major-Genl. COLLINGWOOD, C.M.G.: I beg to second that.

The CHAIRMAN having invited discussion of the balance-sheet,

CRITICISM.

Mr. PERRY remarked that the items of 4,082*l.* for labour, and 8,851*l.* for machinery and buildings, seemed enormous. Then he could not help thinking that under the circumstances it was hardly right for the directors to draw their fees. He had belonged to companies that were in a very bad plight, but he had never known a case where the directors had drawn their fees so long as no dividends were paid, nor was there a prospect of their being paid.

Col. VENNER asked if enough money had been subscribed to develop the mine, and if all the machinery was erected.

The CHAIRMAN believed it was sufficient to complete all that was necessary to develop the mine.

Mr. BENNETT thought it very reasonable that the directors should meet the shareholders by relinquishing some portion of their fees until the mine was in a better condition. He was sure the shareholders would all be very glad to increase the fees at any future time, if they found the mine prospered. He presumed the 340 shares forfeited were re-issued.

The CHAIRMAN: No, they are ordinary shares.

Mr. BENNETT said those shares were included in the 90,000 shares on the other side of the balance-sheet, and the 195*l.* due on them was very unlikely to be recovered.

The CHAIRMAN replied that the matter was in the hands of the solicitors, but the forfeiture did not release the owners from payment of the calls. The matters referred to by Mr. Perry were very important. No doubt some of the labour represented by the 4,451*l.* was lost. The 8,851*l.* they also had value for in machinery, plant, and pipe-line, aud although he could not exactly say what was wasted, yet it was by no means formidable.

NO SECRETS FROM SHAREHOLDERS.

In the reports sent out to the shareholders nothing had been altered by the directors, and nothing had been kept from the shareholders. They knew practically as much as the directors, except that they did not know the character of Mr. Hamhley whom they had appointed to succeed Mr. Nance; he was the engineer of one of the most successful mines out there, and he had a practical knowledge of the whole district, aud of the character of the works to be carried out. With reference to the remarks respecting the directors' fees, the matter had been fully considered by them, but they had been compelled to devote a great deal more time to the company's affairs than they would have done if the mine had been a successful one; and it was not felt

that at present they were called upon to forego their fees; but if at the end of three months they did not succeed in putting the mine into a condition to make returns, undoubtedly they would consider the question of reducing their fees. The chairman then put the resolution to the meeting, and it was carried.

ROUTINE.

The CHAIRMAN next proposed the re-election of the auditors, Messrs. Theobald, Brothers and Miall.

Mr. ROSS seconded the motion, which was carried unanimously.

The CHAIRMAN then submitted specimens of gold from the alluvial soil, and said he had no doubt, from the excellent specimens resulting from the tributing going on there, that they had a very excellent mine.

Mr. BENNETT then proposed, and Col. VENNER seconded, a vote of thanks to the CHAIRMAN, who, in acknowledging the compliment, said the board would never consider themselves to be separated from the shareholders; their interests were identical, and they would never put any selfish object above those of the company itself.

The proceedings then terminated.

THE DURHAM AND LORD BYRON AMALGAMATED GOLD MINING CO., LIMITED.

CRUSHINGS FOR NINE MONTHS OF 500 TONS YIELD 2 OZS. 12 DWTS.—INITIAL DIFFICULTIES OVERCOME—NEW MANAGERIAL ARRANGEMENTS.

AN ordinary general meeting of the shareholders was held at Winchester House, on Monday, for the following purposes:—To receive the report of the directors and the statement of accounts, as shown by the London books, up to 30th September, 1888, to elect auditors, and to transact the other ordinary business of the company —Archibald Balfour, Esq. (chairman of the company), presided.

Mr. HENRY P. CLINTON (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

WISE PRECAUTION.

The CHAIRMAN: In our report we have endeavoured to lay before you a succinct and chronological account of the company's operations since we entered upon our business down to the present day, and I will now offer a few explanations and remarks upon the report, which I daresay will be of interest to you. In the first place, I should like to remind you that we have had great cause for congratulation in one respect, and that was the precaution we took as to the formation of this company. I allude to the fact that the whole of our transaction with the vendors was made conditional upon the properties of the company being handed over to us with a clear and undisputed title, and at the same time, that we should satisfy ourselves by an independent report as to the value of the plant and machinery, and other goods from the ground, which we were to form part of the purchase. While Mr. Edgar Taylor, who was selected for the purposes, was at the mines, the title of the vendors to the Durham lease (that is to say the most important part of our property) was disputed. An action at law was commenced against them, and they had to face the difficulty either of compromising that claim, or of seeing their transaction with us fall through. Eventually they did compromise it, at very considerable pecuniary loss to themselves, and I should mention that the board do not consider they have any cause of complaint against their vendors in that matter. They acted with good faith in the transaction, and, as far as we can see, no blame whatever attaches to them. The fault appears to have lain entirely with a certain employé of the Government connected with the administration of the mining laws of the country. The vendors had to suffer a very material loss from no fault of their own. The settlement of this disputed claim, however, threw us back six weeks, and the consequent loss was very serious. It was just at the moment when we were completing our arrangements for getting to work and putting our machinery in order. Another serious embarrassment we had to submit at that moment was the fact that in the autumn of 1887 the rainy season in that country came on earlier than usual, just as a certain part of our machinery was in transit between the coast and the mines.

CRUSHING UNDER DIFFICULTIES.

However, we were fortunately able to hire some concentrators from a neighbouring mine pending the arrival and erection of our own, and having succeeded in that, we were enabled, as you will have seen from the report, to get to work crushing in February, 1888. The table, which is included in the report, will have shown you all the results of these crushings. You will see that, excluding a small crushing, which was more or less of a clean-up down to the 28th October,

WE CRUSHED 4,630 TONS, WHICH YIELDED AN AVERAGE OF 2 OZS. 12 DWTS. TO THE TON.

(Cheers.) Gentlemen, I think these figures speak volumes, for they show us in a very incontestable manner the very great value of the property we have acquired. It is perfectly clear to everybody that we have all reason to be greatly disappointed in some other respects, but you cannot get away from that great fact that we worked continuously for nine months crushing on an average 500 tons a month, and we establish the fact that we have a very superior ore to deal with. (Cheers.) I am sure you will all have noticed an expression Mr. Kirby makes use of towards the end of his reports. He says in one place, "Our prospects are splendid," and I do not think anybody can say that Mr. Kirby's voluntary expression of opinion in that respect is at all too strong. The board fully concur in his views. They think the words are fully justified by the facts of the case. But prospects relate too much to the future, and our business to-day is rather to review the past. I alluded just now to our being disappointed, and with great cause, for it is perfectly evident that our operations in Australia have not been carried on with a proper view to economy as regards the commercial aspect of our business, and also that there has been a lack of system and of proper oversight in the way in which our mining operations have been conducted. At the same time I wish to remove an impression formed here, which is that we have no reason whatever to doubt that our late managing director and the staff of the mine had acted with perfect good faith. They have undoubtedly been lacking in discretion and prolix in the way of zeal, but for anything further I do not think we can reproach them. On the contrary, in many respects credit is due to them, for they have very energetically, and in the face of great difficulties, done their best to bring about a good result. They knew they had a valuable mine to deal with, and thought by pushing on with vigour—perhaps indiscreet vigour—they could reap an immediate and a brilliant result. It is the old story of "the more haste, the less speed," for the result of it all is that, although they have crushed such large quantities of ore, and established its value, instead of having any result to show from it, we have, to quote Mr. Kirby's expression, "Patiently to set to work, and repair the errors of the past." I alluded just now to the difficulties that existed, and would remind you now of a few of them.

OBSTACLES.

In the first place, our property is situated in a newly opened up, and thinly-populated country. We are 300 miles from the coast, with only bullock transport, which is both precarious and expensive. Labour is not only scarce in quantity, but speaking generally, doubtful in quality—that is to say, a good deal of care is required to get an efficient staff of workmen. Even the commonest labourer demands 4*l*. a week; then the climate is trying. The heat is very nearly tropical, and at the two great divisions of the year there are alternatives—one almost as unpleasant as the other. For about half the year during the rainy season the rivers are bank high, and all communication is cut off, and during the other half the place is subject to drought, and we have only just lately got through one. During the wet season, and during the drought, we are practically cut off from the rest of the world. Joined to these difficulties, you must recollect that this is the starting of a new enterprise. We have no facilities on the spot, no accommodation for the staff, or offices in which to work. Under these circumstances I think you will admit that we must make a considerable allowance for the shortcomings of some of our staff. Mr. Walpole, the late managing director, soon after taking possession of the property, engaged the services of a gentleman from a neighbouring district, whose special duties were to be those of financial superintendance and accountant. We have every reason to believe that in Mr. Dean we have an efficient and valuable officer. Mr. Kirby in his report has already spoken warmly as to the great usefulness that gentleman has been to the company. He arrived on the mines at the beginning of December, 1887, but from the day he got there, down to the latest advices, he has been so occupied with out of door work, and has had to go all about the country on various missions, that he has had no time to attend, as he properly should do, to his office work and to the books.

NO ACCOUNTS.

That is the great reason why, to our regret, we are unabled to lay before you to-day a proper financial statement as to the position of the company, and to show you the real result of the workings of our business in the way of crushing and mining. In order to repair the position into which we have drifted, we have instructed some of our correspondents at Brisbane to send to the mines a skilled accountant, who is to prepare the accounts in a proper manner from beginning to end. That will be a 15 months' account, and though the expense is heavy, we consider it justified. So soon as the accounts are received we shall lose not a day in communicating them to you. Although, naturally, it is impossible to say what the working account will turn out to be, in the opinion of the board there is very little prospect it will be such as to permit us to propose to you the declaration of a dividend. On the contrary, we consider it is more likely we shall have to call upon you for further contribution. Having full confidence in Mr. Kirby's discretion and technical knowledge, it would clearly be a false position to take not to respond to an appeal for more capital, if he makes it. He has not made it; and we have every reason to believe he will defer to the last moment in making it. But should he do so, we shall have no other course to adopt. Meanwhile the accounts we have received make it quite impossible for us to dissect the capital from the revenue expenditure, but such as they are, if any shareholder would like to inspect them, I can only say the board will be happy to show them, and an appointment can be made with the secretary. I have no doubt you will agree with the view the board adopted, which was—that seeing our accounts were so incomplete, we decided it was better to render you no accounts rather than incomplete ones. With regard to the London accounts—they show all the information that is conveyed by the books. They are only the gross amounts of our remittances to Australia, and will not call for much remark. We have the nucleus of a reserve fund in the shape of 556*l*., which we are enabled to get as premium by the issue of some shares not taken up on the first allotment.

THE DIRECTORS RECEIVE NO REMUNERATION,

according to their own resolution, until they have paid the shareholders 5 per cent. (Cheers.) I think it will be interesting to you to get the very latest information we have had, which is in the shape of a telegram dated December 22nd. It shows that the old main shaft on the Durham Mine is down 237 ft.—that is to say, that it has been sunk 32 ft. since the map was prepared. We have 50 ft. still to go down before that shaft is to the depth of the No. 2 level. The Durham No. 1 north level has been driven from the main shaft 740 ft. The two shafts have been joined. There was a piece in the map unjoined between those two. The No. 2 level under Durham has been driven 660 ft. from the main shaft—that is a decrease of 115 ft. since the map was printed. The stone in the No. 1 level North Durham is encouraging. You will notice in Mr. Kirby's report that he alludes to that stone, and although he says he does not contemplate working it, we gather from this telegram that he has changed his mind, and found it worth his while to get out stone, which he knows to be left there. With regard to the Byron Mine, the main shaft is down 200 ft., or 16 ft. increased. The mill is working splendidly. Water is plentiful. That is the first information we have received that he has set to work crushing. By the last mail advices we were seriously alarmed lest our water would run short. He says the cost of mining and milling has been 7*l*. a ton. The cost of mining and milling he estimates to the improvements he will introduce to be reduced to 4*l*. He concludes by saying,

"THERE'S A BRILLIANT FUTURE FOR THE COMPANY."

The telegram is in cipher, but I have given you a translation. That brings your advices down to the same point as our own. A word

further as to Mr. Kirby. About the middle of this year we were very dissatisfied with the way in which our business was conducted, and after making very considerable inquiries we were so fortunate as to secure the services of Mr. Kirby.

MR. KIRBY'S RECORD.

Not only was he highly recommended to us, but we had the great advantage of his having personally known one of our directors, Mr. Bicknell. (Hear,hear.) He entered upon his duties on the 10th October; therefore, roughly speaking, he has only been two and a half months in the saddle, and it is early yet to form a decided opinion, but such an opinion as we are able to form is of the most satisfactory nature. We have every reason to believe that in Mr. Kirby we have secured the services of a first-rate manager. I think the facts in the report leave very little doubt on anobody's mind that the mine is really good. If, therefore, we have a really good mine and have been fortunate enough to secure a competent manager, I consider we have every justification for looking to the future, not only with hope but with confidence. I now beg to propose "That the report of the directors be received and adopted."

VIEWS OF AN EXPERT.

Mr. Arthur Channing Bicknell, M.I.M.E. (director): I should like to say a word or two with regard to Mr. Kirby. He has been known to me for some years. I met him first some three or four years ago when I was on my way to South America. I was then going to Veneuezela to see some mines in the Caratal and Orinoco districts. I mentioned this to Mr. Kirby, and that I needed help, and he volunteered to go with me and assist me. We went into Central Venezuela, and we travelled about 50 miles a day. Those of you who have tried to do the same in that country will admit that that is not bad travelling. (Hear, hear.) Mr. Kirby struck me as being the man who could stand an immense amount of fatigue. He went through a large amount of work at the mines, and I was very much struck with the way he carried out his portion of the work. No fatigue and trouble were too great for him, and it struck me he understood mining operations work, besides being a very good engineer. He is also well posted up in accounts. He returned to England, and again went out to South America. Once more he happened to turn up in England, at the very time we wanted some one to go out promptly to Australia. He left at once for our mines, and is now there. He has been on the spot a few months, but not long enough to enable him to give any minute description of what we are doing, but

HE HAS DONE HIS BEST IN A SHORT TIME.

I have the greatest faith in him as being a man who will pull a good property round. I believe in the property, and he evidently does the same. I should like to say a word about the machinery. When you are really equipped at mines situated as these are, it is only by the expenditure of an enormous amount of money, and you ought to have a good return if the mine be good. The machinery sent out to your property is about as complete a plant as has ever been despatched from this country. (Cheers.) I was manager of the

SANDYCROFT FOUNDRY COMPANY'S WORKS,

near Chester, for 10 or 12 years, during which time I suppose we made many thousand heads of stamps, and I do not know how many engines. We have at our mine not only winding and pumping engines, but complete amalgamating and concentrating machinery. We have also rock-drills and air compressing machinery. The drills are now at work in the main shaft, and in carrying down the new shaft at the further end of the property, which is 700 or 800 ft. from the main shaft—our object being to get the main shaft down as speedily as possible, so as to get under a large body of ore we have in one of the deeper levels. We are apparently working at the top of a rich body of ore, but it is necessary to drive out No. 3 level before we can deal with the rest of the stone. We are anxious to get the new shaft down and connect the levels, but the rock-drills are at work in both places. We have hundreds of them working in different parts of the world, and there is no reason to suppose that they will not work well in this rock, which is nothing like so hard as that of India, specimens of which I have had the pleasure of seeing. If you can get rock-drills to work, I think you can get out of them from 4 to 6 times the speed of hand labour.

MACHINERY PERFECT AND PAID FOR.

All this plant is on the mine, and paid for. (Cheers.) I think we shall see results from it speedily—in fact, I feel certain of it. The machinery has been most carefully attended to. The working parts of every engine have gone in duplicates, and in some cases in triplicates. (Cheers.)

DISCUSSION.

Mr. Parker: It seems extraordinary that we should not have a dividend after all the ore we have treated, but in place of that the probability of a call. That is a most unsatisfactory statement to me. We have a list of crushings, and find that they are worth 38,180*l*. 6s. 4d.; but where is the gold gone to? Surely we have a right to know what it has realised per ounce. If the chairman can explain anything further I shall be glad. But at present I am not at all satisfied with the state of affairs. There ought to have been more caution used and more enquiry made.

UNIQUE EXPERIENCE.

Mr. Dutton: I agree with the remarks of the last speaker. You can only come to this conclusion, that the experience of this mine is unique. We have a splendid mine and a splendid everything, exceeping as regards the management, and with regard to that I confess my inability to understand the position. It seems to me so extraordinary as not to be capable of any explanation. The control of the company seems to have been out of the hands of the directors. It seems to have been entirely left in the hands of the late managing director, and no supervision at the mines appears to have existed to see the books were properly kept, and the accounts forwarded from time to time to the directors. I should like to know what staff was at the mine, and what arrangements were made as to the bookkeeping. Also what policy the directors contemplate in the future. I think that a certain degree of local supervision is required, provided it be such as we can rely upon. I feel that the whole position of the company, considering the amount of gold we have turned out, is such as almost to baffle criticism.

A Shareholder pointed out that the mine was to be taken over as a going concern from October, 1887, and that the shareholders, in his view, should have had the advantage of previous crushings. He wished for a further explanation as to the premium derived from the issue of shares after the first allotment.

A Shareholder asked if when the board declared a 5 per cent. dividend they would take the whole of their back remuneration.

Mr. Bailey: What is the position of the vendor's shares? Does he still hold them, and can he sell them?

REPLIES.

The Chairman: In reply to Mr. Parker, we give the value of each crushing, and also the value per ounce. This he must have overlooked in the accounts. (Hear, hear.) As to what has become of the money—although the crushings cover nine months, we have had to pay upwards of a year's wages, and heavy current expenses. In wages alone we have spent 16,000*l*., but until we have a proper division of what is to be charged to capital and what to revenue we cannot arrive at anything like an approximate knowledge of what our working cost has been. We have only details of expenditure to the 31st of July. The gold is all handed over to the National Bank of Queensland in Georgetown, and from there it goes to the Mint in Sydney, after which, with more or less delay, the account is sent to us, and we know exactly what the crushing has realised. The gold to the 31st of July realised 20,477*l*. We sent over from London 10,000*l*., and they had spent 30,000*l*. The total expenditure to that date was 34,732*l*. We cannot divide what is revenue from what is capital until we get the proper details. When we took over the mine we had large expenses to incur. The transport has also been very heavy—3,000*l*. to 4,000*l*. We had to pay considerably for concentrators. We have sent the forms and headings and books without end for the accounts, but now we have Mr. Dean to look after them. We have asked for details by almost every mail. In regard to the future, we shall be guided in our arrangements by what Mr. Kirby reports. The present one was written only a bare fortnight after he had arrived at the mines. There was only one crushing prior to the date given in the report; and that was under the supervision of the vendors. It was 1,440*l*., and was equal to the wages expended by the vendors.

PREMIUM ON SHARES.

The premium on shares was the premium we were able to get for our shares, by selling them (8,000) on the open market, through the brokers of the company. The average premium realised was 3-16ths. These shares were left after the first issue. The remuneration of the directors will naturally be paid when 5 per cent. dividend has been declared, and the delay in taking it was purely voluntary on the part of the board. The arrears will be treated exactly like any other liability.

A Shareholder: I do not see any object in reserving them.

The Chairman: Would you rather that we drew them? (Laughter.) As soon as dividends are paid the arrears will be paid, and it is little more than justice that it should be done.

PAY YOUR BOARD.

Mr. Bailey: I certainly hope we shall always pay our directors, especially when, as in a case like this, the company has to be pulled out of a tight place. Unpaid services of this kind are rarely worth having. (Cheers.)

The Chairman: We might have drawn the amount, but we thought it more proper to pass a resolution saying that we would not do so until we had paid you 5 per cent. interest on your money. The vendor's shares were fully-paid, and to the best of our belief they are not on this market.

Mr. Clinton: We have had no transfers of fully-paid shares.

The Chairman: We assume, therefore, they are still held in Melbourne.

VIEW OF AUSTRALIAN SHAREHOLDERS.

A Shareholder: The Australian shareholders consider this such a good mine, that they do not intend to sell their shares.

The Chairman went on to say that the directors had made the fullest enquiries as to Mr. Walpole, with a very satisfactory result. He represented the colony of Victoria as secretary at the Calcutta Exhibition. Mr. Dean was recommended by Mr. Walpole and also by Mr. Edgar Taylor. Mr. Dean's whole services were now devoted to this company. Before an answer could be received to a letter, four months elapsed. Questioned as to another meeting, the chairman said the accounts would be sent out as soon as they were received, and the directors would not fail to call another meeting if they could see any useful service to be rendered thereby.

RESUMPTION OF CRUSHINGS.

Mr. Bailey: When are crushings likely to be resumed?

The Chairman: Mr. Kirby leads us to believe that crushings will re-commence almost immediately, but he warns us that they may be diminished in quantity and value. He expects to crush poorer ore while he is doing deadwork. We must allow four or five months preparatory work before going on with our full 20 heads of stamps.

The report was adopted unanimously.

The Chairman proposed, and Mr. Dutton seconded, the re-election of the auditors, Messrs. Price, Waterhouse, and Co., at a remuneration of 25 guineas, and the motion was carried with one dissentient.

CORDIAL THANKS.

Mr. Dutton: I beg to propose a cordial vote of thanks to the chairman and directors. Although the criticisms have not been of a favourable description, I am afraid that that was owing to the nature of the facts. I hope the chairman and his colleagues will nevertheless feel that the shareholders wish to preserve cordial relations with them. (Cheers.) We hope the next time we meet it will be under more favourable circumstances.

Mr. Bailey, in seconding the motion, said: Although we do not get a dividend, we feel a great deal re-assured by the thoroughly straightforward way in which the chairman has made his statement and replied to questions. (Hear, hear.) I wish the chairman of every mining company was equally as explicit.

Mr. Parker desired also to support the motion, which was carried by acclamation.

The brief reply of the Chairman brought the proceedings to a close.

COLAR CENTRAL GOLD CO., LIMITED.

HOPEFUL OUTLOOK—DIRECTORS SANGUINE AS TO ULTIMATE SUCCESS—DATE OF THE ACCOUNTS.

THE second ordinary general meeting of the shareholders was held at Winchester House on Monday last—Malcolm Low, Esq., M.P., J.P. (chairman of the company), presiding.

The SECRETARY having read the notice convening the meeting, the report of the directors and balance-sheet were taken as read.

CHAIRMAN EXPLAINS THE DELAY IN CALLING THE MEETING.

The CHAIRMAN: Gentlemen,—I wish, first of all, to say just one word as to why we are so late this year in holding the general meeting. We proposed, in the ordinary course, to hold it in August; but at that time I was unfortunately very unwell, and abroad, and my colleagues, out of, I think, excessive courtesy to me, postponed it until my return. Then we intended to hold it in October, but just at that time we were expecting special plans and a report from Mr. Oakley, who had meanwhile returned to India, and from one reason or another, this did not come to hand until the present month. Next year, of course, we shall take very good care to make our arrangements so that the meeting shall be held earlier.

UNPAID CALLS—6,350 SHARES FORFEITED.

Now, before we go into mining matters, I should like to ask your atteution to two items in the accounts. You will see that at the date of the balauce-sheet we were still owed 10,424*l*. on account of calls, and that we had forfeited 320 shares, involving 288*l*. Well, during the present year we have been obliged to forfeit 6,030 of the shares then in arrear, involving the loss of 4,340*l*. The remainder—that is, the difference between the 10,424*l*. and 4,340*l*., or over 6,000*l*.—is most of it realised, and the balance is in course of realisation. So that the matter stands thus, that up to date we have had to forfeit 6,350 shares out of the total capital of the company. You must, however, remember that that is not all loss, for in the first place we have the shares themselves available either for fresh issue or in practical reduction of the capital as the case may be, and also we have the sum of money which we had already received on those shares before we forfeited them, which amounts to the substantial figure of 1,722*l*.

CASH RESOURCES OF THE COMPANY.

Then, exclusive of arrears of calls, the company's resources at the date of the balance-sheet you will see were, investments at cost price, 41,497*l*., and on loan at interest, 4,120*l*. At the present moment I am glad to tell you that the actual cash resources of the company amount to at least 38,000*l*., made up, first of 36,000*l*., being the actual marketable value of the securities which we hold, and secondly, of a sum exceeding 2,500*l*., which are arrears of calls in process of realisation, and which, as a matter of fact, we know will be realis d. As regards the expenditure and receipts acconnt, I do not know that I need detain you on any of the items, which are clearly set out; but of course I shall be glad, on this subject, as well as on any other which may interest you, to answer to the best of my ability auy questions which you may be pleased to ask me.

DIRECTORS' FEES.

There is one item, however, which is always interesting to shareholders, and that is the directors' fees. You will see that they are put down at 1,400*l*., but this is for 14 months, and I may mention that since the death of our lamented colleague, Genl. Agnew, we are taking only at the rate of 1,000*l*., instead of 1,200*l*., to which we are entitled under the articles of association.

MINING OPERATIONS.

Now, as regards our mining—its detailed progress is recorded in the printed reports which we publish fortnightly, and which enable those of us who are interested in mining details to follow the operations step by step. I have here a very good plan and sections sent home by Mr. Oakley—not, I am afraid, on a scale large enough to exhibit to a meeting, but which I hope some of you will be interested enough to examine afterwards, and of course they are available at all times at the office for the inspection of the shareholders. You have to conceive our mining sett as a square block of over half a square mile in extent. It is situated immediately to the south of the Colar section of the Indian Consolidated property, whose neighbours again, going northward, are successively the Mysore, the Ooregum, and the Nundydroog. Then immediately to the south of us is the Mysore Reefs; and all of these properties, from the Nundydroog on the north, to Mysore Reefs on the south, are on the north and south run of what we believe to be the same lodes. Now, the first group of works to which I wish to direct your attention are those in operation in the three shafts which we call Low's, No. 3, and Darlington's. I call them the same group of works, because No. 3 is situated only a very short distance south-west of Low's, and Darlington's again a very short distauce south-west of No. 3, and they are connected together by one level underground, and will be by more as the work proceeds. You can fix the exact spot of these works when I tell you that Low's shaft is about 1,160 ft. distant from the nearest point of the western boundary, and about 1,270 ft. from the nearest point of the northern boundary. The present depths of these shafts are Law's, 200 ft.; No. 3, 65 ft.; and Darlington, 195 ft.

THE LODE INTERSECTED AT LOW'S SHAFT.

Well, neither in Darlington's, nor in No. 3, up to the present moment, have any important bodies of quartz yet been discovered; but at Low's, at the depth of 135 ft., the lode we were looking for was intersected, and at that level we drove out north and south on the course, to the north about 160 ft., and to the south about 100 ft. We had some very good assays at some few places, amounting to as much as 10 dwts. of gold to the ton of quartz, and I may mention also that we stoped out from a rise a considerable quantity of ore; but on that level there was nothing good to last, and accordingly we had nothing for it but to sink lower to try and prove the lode lower down. We put down the shaft 75 ft. more, and are now engaged in cross-cutting on the 200-ft. level both to the east and west. The object of the west cross-cut is of course to catch again, lower down, the same lode that we had above in the 135-ft. level, and when we reach it, as we shall very shortly, and drive out on the course at the 200-ft. level, we hope to discover richer ground. The object of the east cross-cut was at first purely exploratory, but I am glad to tell you we have recently had there

A VERY IMPORTANT DISCOVERY.

When we had driven out from 70 ft. to 80 ft., we passed through a promising band of quartz of about a foot wide, and in his last letter, which was received since we issued our report, I find Mr. Oakley writes as follows—he says:—"In the 200-ft. level east cross-cut 10 ft. 6 ins. have been driven for the fortnight, making the distance from the shaft 90 ft. The quartz met with a few feet behind the present end averages a foot in width, and as soon as we get a little further ahead with our present end we shall start to drive on this quartz"—and I may mention that Mr. Oakley is very highly impressed with the appearance of this quartz. So you see at these works we have

TWO VERY IMPORTANT POINTS

to come off in the immediate future—the first, on the west side of the shaft, to explore the lode that we know we have above in the 135-ft. level, and the second, to follow up this promising band of quartz, which we have just discovered on the east side of the shaft, and it appears likely enough, though, of course, nothing is certain in mining, that both may have an important bearing on the future interests of the company. Then our next important work is at the shaft, which we call the Underlay shaft. This is sunk on a reef appearing at surface about a quarter of a mile south-west of Low's. It is sunk on the underlay of the lode, and is now down 170 ft., and we are at present engaged in driving along the lode south, and also in cross-cutting east. Then the next important work is the east boundary shaft which is half-a-mile east of Low's shaft. Of course, it is the most recent of the works we have undertaken, it having been started only four months ago. It is down, according to the last accounts, 70 ft., and we shall sink another 30 ft. before we drive out on the course. I ought to mention—though perhaps it is very early to judge of it—that Mr. Oakley thinks very highly indeed of this lode. He describes it as defined very clearly the whole way down between the hanging-wall and the footwall, and there are already strings of quartz appearing on the floor. I do not think I need detain you with an account of trial shafts and mere exploratory work. Of course, we have had our disappointments. We, like other companies in the field, have sunk trial shafts on likely looking outcrops, and have found no lode underneath; for the proverb—

"ALL IS NOT GOLD THAT GLITTERS,"

is not more true than this, that every outcrop of quartz is not the cap of a reef. But the three important works which I have described to you are the works which we are deliberately determined to prosecute, and which we think are well worthy of prosecution, and which we firmly hope will lead to success. We believe we have the same lodes precisely as the successful companies to the north of us. Nowhere in the world, of course, are quartz veins rich throughout; the rich runs have to be searched for. It must also be remembered that these successful neighbours of ours have most of them been many years at work. We only broke ground about 20 months ago, and we hope that the experience we have gained will bring success to us sooner than it came to them. All our mining, pumping and hauling machinery, our engine and boiler power are in excellent order, and sufficient for the work we have to face for a long time to come; and also we have two complete sets of elephant stamps already on the ground for trial crushings whenever required.

THE COMPANY WELL OFFICERED.

I wish particularly to thank our consulting engineer, Mr. John Darlington, for his very careful and watchful services. There is no detail, whether of mining or of machinery, that Mr. John Darlington does not study as carefully as if he was going to work them with his own hand. Our connection with Capt. Hosking ceased a little time ago, and I am glad to congratulate the shareholders upon the retention of the services of Mr. Algernon Oakley, our resident director, in whose professional skill and powers of management we have every confidence. I beg, gentlemen, now to propose the adoption of the report and accounts. (Applause.)

Mr. THOS. G. GILLESPIE (director) seconded the motion.

IMPORTANT QUESTIONS AND ANSWERS.

Mr. SCARLETT CAMPBELL: Have the investments, which are entered in the balance-sheet at cost price, kept up their value; and perhaps you could tell us of what these investments consist?

The CHAIRMAN: I will detail them with the greatest pleasure if you wish it, but they are first-class investments, and show a very considerable profit on their cost price.

Mr. SCARLETT CAMPBELL: As these accounts have only been made up to the end of last year, could you give us an idea of what the expenses connected with the whole concern have been for this year? I just want to know approximately what cash balance we have at the present time.

The CHAIRMAN: At the present moment the resources of the company are about 38,000*l*.

A SUGGESTION TO HOLD HALF-YEARLY MEETINGS.

Mr. BROOKS: I should like to make one remark, and it is that I think that to meet on the last day of December, 1888, to receive the accounts up to the end of December, 1887, is far too long a period. (Cheers.) It is perfectly true that certain short extracts from your mining reports are published fortnightly in some of the mining and financial journals, but they contain little information for the general body of shareholders. It is almost impossible for us to retain what they give us in the way of information, and to understand them intelligibly, fortnight by fortnight. My own idea is that you should certainly call the shareholders together every half-year. I do not say that we should require from you every half-year a statement of accounts, but I think it would be far more satisfactory to the shareholders if you were to meet them oftener, and tell us what you know as to our prospects. (Hear, hear.) Not to meet us for 12 months means to leave us entirely in the dark, and we seem to have lost all knowledge of, and interest in, the affair. I must say I cannot think your report altogether a satisfactory one. You have nothing very encouraging to tell us except that we must feed upon the future. Well, I hope our future will be a successful one; certainly we have nothing to feel low in spirit about. We have as much development work done, and perhaps more than we could reasonably have expected. Perhaps our

late manager was a little too sanguine and enthusiastic about his "beautiful lodes" and "beautiful strings of quartz." In Mr. Oakley, however, I hope you have got a very practical man, who will push forward the work with great energy.

A GOOD FINANCIAL POSITION.

Genl. Beresford: I think your mine stands in as good a position financially as any mine that has ever been opened upon the Colar field. You have got a most energetic man now as your manager, and I hope you will give him a free hand to open up the reefs. Have you any rock-drills?

The Chairman: Yes.

Genl. Beresford: Then if you spend a little more money this year than you did last, and show better results, the shareholders will be pleased.

THE CHAIRMAN'S REPLY.

The Chairman: I am sure we are all exceedingly obliged to Mr. Brooks for the admirable suggestions he has made and the kind way in which he has spoken. With regard to the date of the accounts, it is perfectly true that the balance-sheet is now somewhat old, but we must remember that is owing to the meeting being late, and for the cause of the meeting being late I endeavoured to account. We are not allowed by the articles of association to bring the accounts up to a later date than the 31st December before the meeting. With regard to the fortnightly reports, I sympathise very much with Mr. Brooks in the difficulty that may be encountered by gentlemen trying to understand what is necessarily couched in technical language; but I must say that if you choose to come to the office and look at the plans, and with the plans read the reports, the whole thing will then pass out before your view in a very comprehensible manner. With regard to the holding of half-yearly meetings—as I mentioned in my opening speech, our annual meeting will be held in July or August, so that will be practically within six months. We are entirely in the hands of the shareholders in this matter, and will be only too happy to meet you half-yearly if it be felt desirable to incur the little extra expense of 40*l.* or 50*l.*

A COMPLIMENT TO MR. OAKLEY.

With regard to what Gen. Beresford said, I can heartily endorse his remarks respecting Mr. Algernon Oakley. We consider him a man quite of the very first-class in the profession—certainly a good professional man, and a first rate man all round. (Cheers.)

The motion was carried unanimously.

DIRECTORS RE-ELECTED.

Mr. Scarlett Campbell proposed the re-election of Messrs. Low and Gillespie, the retiring directors. He thought the board had done extremely well, and the shareholders should have every confidence in them. Moreover, these two gentlemen were excellent men of business, whose services they could not do better than retain. (Hear, hear.

Mr. Jennings seconded the motion, which was carried.

The Chairman, in reply, said the directors had the interests of this company very deeply at heart, and they would do all that in them lay to make the undertaking the success that he believed it would be.

The auditor, Mr. A. S. Hicks, C.A., was then re-appointed at a remuneration of 25 guineas.

On the motion of Mr. Jennings, a cordial vote of thanks was passed to the chairman and directors.

Mr. A. J. Lambert (director) replied, stating that the interests of the shareholders were the interests of the board, as they were all large shareholders, and that nothing in the world would give them greater pleasure than to see the shares standing at a very much higher figure in the market. No effort would be wanting on the part of the directors to make this company a success. (Cheers.)

The proceedings then closed.

GRESHAM LIFE ASSURANCE SOCIETY.

A SATISFACTORY REPORT—£166,746 ADDED TO THE FUNDS OF THE SOCIETY—5,317 NEW POLICIES ISSUED DURING THE YEAR, ASSURING AN AMOUNT OF £1,759,751—SURPLUS OF £91,000 FOR DIVISION.

An ordinary general meeting of the shareholders was held at the Offices, St. Mildred's House, Poultry, E.C., on Friday, 28th December—W. H. Thornthwaite, Esq. (chairman), presiding.

The Secretary having read the notice convening the meeting,

Mr. Thomas G. Ackland, F.I.A., F.S.S. (actuary and manager), read the

REPORT OF THE DIRECTORS

for the financial year ended 30th June, 1888, which stated that during the year 5,932 proposals were made to the society for assurances, amounting to 2,038,846*l.*, and 5,317 policies were issued, assuring an amount of 1,759,751*l.* The immediate annuities granted during the year were for the yearly payment of 10,654*l.* 9s. 2d. The revenue of the society during the past year, derived from premiums, interest, and rents, amounted to 766,451*l.* 19s., being an increase of 19,316*l.* 4s. 6d. upon the previous year. The new premiums amounted to 63,849*l.* 19s. 4d. The admitted claims on life policies during the year amounted to 339,158*l.* 18s. 6d., of which 8,421*l.* 17s. 11d. had been re-assured. The admitted claims on matured endowments amounted to 83,280*l.* 0s. 7d. Sums amounting to 45,559*l.* 8s. 1d. have been paid on the surrender of policies. As a result of the operations of the past year, an amount of 169,746*l.* 1s. 1d. has been added to the funds of the society. The assets appearing in the balance-sheet had undergone careful scrutiny, and represented estimated realisable values, amounting in the whole to 4,113,848*l.* 18s. Reference was made to the decease of Mr. Joseph Allen, the late secretary of the society, who died on the 18th May last. Mr. Allen was connected with this society for 33 years, during the last five of which he held the appointment of secretary, and for 17 years previously that of assistant secretary.

NEW APPOINTMENTS.

The board of directors had appointed Mr. Thomas G. Ackland, F.I.A., F.S.S., as principal officer of the society, with the title or designation of actuary and manager. Mr. Ackland had been connected with the society for upwards of 20 years, and had held the position of actuary for upwards of five years. Mr. James H. Scott, who had been connected for the last 16 years with the English and Scottish Law Life Assurance Association, had been appointed secretary to the society.

DIFFICULTY WITH THE INCOME-TAX COMMISSIONERS.

The surplus arising during the triennium had upon this occasion been reduced by a heavy charge imposed upon the society in respect of income-tax, the Crown having assessed such tax upon the whole of the annuity payments of the society, British and foreign, amounting over the period 1882-5 (upon which the assessment had been based) to 84,417*l.* 8s. 7d. per annum, of which about four-fifths was in respect of foreign annuitants. This assessment appeared to be based upon the contention that the annuities of the society were paid "out of profits and gains" within the meaning of the Income-tax Acts. The society appealed to the Commissioners for Income-tax against this assessment, which, however, was upheld by them. The Commissioners have, at the request of the society, prepared for the consideration of the High Court of Justice a form of special case which is still under consideration. The result of the decision of the Commissioners is to subject the annuity revenue account to a heavy charge amounting over the triennium to 7,309*l.* 11s. 3d. If it had not been indispensable to provide in account for this disputed claim for income tax, the surplus on the present triennium would have been 100,479*l.* 19s. 11d., instead of 93,170*l.* 5s. 8d. Of this latter sum the directors declared as divisible surplus the amount of 91,000*l.*, which they recommended for division among the policy-holders and shareholders.

SATISFACTORY POSITION OF THE SOCIETY.

The Chairman, in moving the adoption of the report, said that on this occasion it was of double importance, inasmuch as it not only dealt with personal matters, such as the lamented death of their late secretary, and the changes which that event necessitated, but it also divided itself into two important divisions—the progress of the society during the last financial year, and the results of the mathematical and financial investigation of the position of the society as it stood on 30th June last. In both these particulars it would be pleasant to the members to know that they were highly satisfactory, and he congratulated them upon the result, and concluded by recommending the report to their favourable consideration.

ECONOMICAL MANAGEMENT.

Mr. T. H. Devonshire (deputy chairman) seconded the motion, and remarked that the directors and officers had given their very careful attention to the expenditure, with the result that a saving had been effected amounting to no less than 1½ per cent. upon the relative cost of the entire business. (Cheers.) The board had under consideration the prudence and expediency of somewhat contracting, or, at all events, not unduly expanding the business of the society in some of the eastern districts of Europe. In outlying and remote districts the difficulties of transacting business were very considerable, and, necessarily, the expenses incident to the conduct of that business must be very great. It was, therefore, of importance that those who had the conduct and management of these great institutions should see that they directed their energies into channels which would be to the advantage of their societies. (Hear, hear.) Referring to the fact of this being the valuation year, Mr. Devonshire observed that if they looked at the condition of trade and commerce, and business generally throughout the country for the past three or four years, they might well consider that there was

CAUSE FOR CONGRATULATION

on this occasion. The increase that had taken place in the funds or assets of this society was very marked. During the past year there had been an addition approaching to 170,000*l.*, and during the whole of the triennium the addition to the funds had been as much as 471,000*l.* (Applause.) The question of income-tax was referred to in the report, and it was one of grave importance, not only to this society, but to many others; for if the views that had been contended for on the part of the Crown were to prevail, it would make a very serious difference to life assurance institutions in the conduct of their annuity business. They were advised, however, that there was a broad principle involved in this question, which formed a substantial basis for sustaining the appeal which was now pending.

A GOOD BONUS.

With regard to the bonus, or divisible surplus—it could not be considered otherwise than a very good one. The usual apportionment of four-fifths would take place in favour of those policies which were on the participating scale, and one-fifth to the shareholders—the latter would amount to no less than 3*l.* 10s. 11d. per share; exclusive of and after deducting income tax. (Cheers.) Mr. Devonshire then referred to the loss sustained by the society in the decease of Mr. Allen, its late secretary, bearing testimony to his value and usefulness, to the excellent judgment which he almost invariably displayed when his opinion was sought for, to the geniality of his disposition, and to his accessibility and amiability of conduct. He congratulated Mr. Ackland upon his accession to the office of actuary and manager, and especially upon the valuable report he had given, which had been highly appreciated and most warmly approved by some of those gentlemen in the actuarial world who were best qualified to form a sound judgment upon it.

THE NEW SECRETARY.

Mr. Jas. H. Scott, the present secretary, came to them not as an untried man in connection with the business of life assurance, and he thought they might heartily welcome Mr. Scott, and express the hope that he would long continue to be with them to the advantage and satisfaction of himself as well as of the society. (Loud cheers.) Mr. Devonshire then referred in complimentary terms to the valuable services rendered by the other officers and the staff generally, and in conclusion reminded the meeting that this was the fortieth year of the society's existence, that the revenue of the past year was no less than 766,000*l.*, and that they now had an accumulated fund of more than 4,000,000*l.* after paying the bonus. (Applause).

The motion was carried unanimously.

Mr. J. S. Bartrum, J.P., proposed the re-election of the retiring directors—Messrs. H. C. T. Beadnell, Wm. Thoruthwaite, and George Tyler—and after upwards of 40 years' connection with the society, expressed himself highly satisfied with the management, and said he particularly rejoiced to hear that the expenses had been reduced by 1½ per cent.

Mr. TOULMIN seconded the motion, which was carried by acclamation, and

Mr. THORNTHWAITE returned thanks on behalf of his colleagues and himself.

SHAREHOLDERS MAY SLEEP THE SLEEP OF THE JUST.

Mr. F. G. WASHINGTON proposed the re-appointment of the anditors, Mr. Ladhury and Mr. Chambers, remarking that next to the directors there were no more important functionaries than the anditors, and when shareholders and policy-holders saw the names of good men and true on the balance-sheet they might sleep the sleep of the just. (Laughter.)

Mr. W. H. FELL seconded the motion, which was carried unanimously, and both gentlemen replied,

Mr. LADBURY stating that the manner in which the books of the society were kept reflected great credit upon the staff of the accountant's department—a statement which was fully endorsed by Mr. Chambers.

OFFICERS COMPLIMENTED.

Mr. W. C. FOOKS proposed, in complimentary terms, a vote of thanks to the actuary and manager, the secretary and assistant secretary and the staff under their control.

Mr. T. NEVILLE STACK, F.S.S., seconded the motion, which was carried amidst cheers.

A vote of thanks to the chairman terminated the proceedings.

THE MYSORE-WYNAAD CONSOLIDATED GOLD MINING CO., LIMITED.

A SUPERINTENDENT APPOINTED—THE COLAR DISTRICT THE RICHEST IN INDIA.

THE third ordinary meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Monday, the 31st of December, 1888, for the purpose of receiving a report from the directors, and for the transaction of other business of the company—Col. G. B. Malleson, C.S.I. (the chairman of the company), presided, and the notice calling the meeting was read by the SECRETARY (Mr. L. J. Woodman).

MR. HODGSON'S APPOINTMENT.

The CHAIRMAN: Gentlemen,—Copies of the report and accounts have been circulated among all the shareholders, and I presume you have all read them. Therefore, I will ask you to allow them to be taken as read. It now becomes my duty to move that the report and accounts be passed. I am sorry, gentlemen, that the progress made has not been more rapid than it has been, but I can show you that it has been from no want of energy and exertion on the part of your board. In the early part of the year, following the example which had been set by other mining companies on the Colar field, this board determined to appoint a superintendent out in India to watch the proceedings of the mining manager, and to stimulate them as much as possible. We appointed as our superintendent out there a gentleman with whom I have had for many years a personal acquaintance, and who occupies the same position in the Niue Reefs Company, and one or two other companies on the Colar field, and who has lived on the Colar field, or within a reasonable distance of it, all his life. This gentleman is Mr. Percival Hodgson, who is in every way competent to form an opinion on mining property and mining progress. Mr. Hodgson has sent us many letters, and has made very judicious hints with regard to the further development of the property.

LETTER FROM MR. HODGSON.

It is, perhaps, too early to say what is the result of his observation, but in a letter which we received this morning referring to the shaft, which is called the engine shaft, he says :—"Owing to the rains the water in this shaft has increased, so that the Bullock whim cannot keep it, and sinking here cannot be continued till we have rather more pumping or hauling power. The winding engine is, I understand, on its way out, I must frankly state that from the results obtained at the 100-ft. level, I see no indications of a sufficiently encouraging nature to gratify the expenditure of more money in sinking this shaft. I think that the levels north and south might be pushed out to test the reefs, and if ore found of any value is discovered, operations in the depth might be continued. The level is down sufficiently deep to be below the influence of surface disturbances, and if the lode is of any value, indications of it should be discovered in drifting. I shall be happy to have instructions from the board on this subject." As probably all of you know, our property is contiguous to the property of the Mysore West Company, and the same reefs probably run through both properties, so that Mysore West to a certain extent are pioneers of our property; that is to say, as they are down to a greater depth than we are, if they obtain good results the same results will probably be ours. Mr. Walker here, on my left, is the chairman of the Mysore West Company, and he will tell you he has complete confidence in that property. I mention that to show you that we have a guide before us, or rather on one side of us, which will prevent our going to expense if that expense is likely to be unproductive. The Mysore West is working the ground practically to give us a guide and an example. There is nothing more occurs to me to say to you on the subject. We have given you the full report of the mining manager, and I shall be happy to answer any questions that may be put to me. I can only assure you that in Mr. Hodgson, as superintendent, we possess a man who is fully capable to advise us, and to give indications of what I hope may be a profitable future. I beg to move the adoption of the report, and that the accounts be passed.

Mr. ROBERT WALKER (director): I beg to second this resolution. I hardly thought that Col. Malleson would have made any allusion to me as connected with the Mysore West Company, because the meeting of that company was held so recently, and the whole matter as to the present and future of the Mysore West was fully discussed then. I can only repeat, as regards my own opinion in the matter, what I said at that meeting. I said then that I was one of the largest shareholders in the company, and I had been chairman of it since its formation, and during all that time I have never sold a share directly or indirectly. I can give no more proof of my confidence than that I put down my money and am quite willing to abide by the results. I do not think I need say any more. As Col. Malleson says very truly, the result of the Mysore-Wynaad hangs very much upon the result of the Mysore West. We are further down in Mysore West, and I expect we may at any moment come upon a rich reef. Whether the Mysore-Wynaad may, in consequence of the formation of the ground, find the same reef at less depth than the Mysore West—only practical experience can solve that problem.

DIRECTORS' FEES.

Mr. MITTON: This report has only just come to hand, but it appears to me at first sight that the directors' remuneration, 1,000*l*., is too high. It seems to me it is a very extraordinary sum for an unsuccessful company to pay. I put it to the meeting, and ask the shareholders whether they do not consider that 1,000*l*. is an excessive amount.

The CHAIRMAN: I should like to mention that this is not an occasion on which that matter can be gone into, because it is part of the constitution of the company as contained in the articles of association. If the shareholders wish to alter the articles of association, with respect to the directors' fees, it can easily be done, but they must convene a meeting for that special purpose. It cannot be brought forward at this meeting, but it is quite within the competence of the shareholders to move a resolution to that effect at such a meeting. They will have to alter the articles of association, which form the constitution of the company. If the shareholders wish to call a special meeting it certainly should be done.

Mr. MITTON: I certainly appeal to the shareholders whether a special meeting should not be called, because the articles of association are in a form, of which shareholders know nothing at all until they pay their money, and, therefore, I think we ought to call a special meeting.

A SHAREHOLDER said that at any rate the chairman might give an explanation at this meeting.

DIRECTORS WORK HARD.

The CHAIRMAN: I do not think it advisable to enter into any explanation on the point, because the discussion of the matter at this meeting would only be waste of time. I am quite sure I shall be able to bring forward reasons on the proper occasion. But I do think when gentlemen come four or five times a week, and give two or three hours each day, it is only right they should have some compensation. People do not leave their homes and come into the City in all sorts of weather for the purpose of playing at marbles. Therefore, those who conduct to the best of their ability the affairs of a great company like this, giving to it their time and energies, are not to be expected to do it for nothing. You may depend upon it, cheap work is bad work—(hear, hear)—and I, for one, am prepared to give what energies I possess for the shareholders when I think my labour is sufficiently compensated, but, otherwise, I would infinitely rather retire. If the shareholders pass a resolution lowering the fees of the directors, they will have to get someone in my place.

Mr. COCHRANE: In the first report, and also in the present one, you advise a waiting policy in regard to the work of the mine, but I offer a voluntary suggestion that the directors should have a waiting policy also.

THE POLICY OF THE BOARD.

The CHAIRMAN: I am quite sure you would not intentionally misinterpret the reports. We do not advise a waiting policy for the whole of the property, but only the property of the Wynaad. If the gentleman was conversant with India, as I am, he would know that between the Colar Mine, which is in the Colar district in the Mysore territory, and the Wynaad property, which is in the Wynaad district in British territory, there is a distance of several hundreds of miles, and as we believe, and I, personally, most emphatically believe, that the Colar district is the richest district in India, and that every spot on the Colar district is sure, sooner or later, to yield good returns, I advise concentrating all energies at that particular part, and waiting for a little as regards the Wynaad property. You should deal with this property as a general deals on the battlefield—he goes to the decisive point of action, and, in my opinion, the decisive point of our property is the Colar field, and, therefore, we are bound to concentrate all our energies upon it until we are satisfied that it is not possible to do any good.

Mr. COCHRAN: That is a repetition of what you said two years ago. What has been done since then?

The CHAIRMAN: You have to go through hard rock, and gentlemen who talk of two years can have no conception of what it is. We are doing our best. We are sending out the best implements, and doing all we can, by our agents and our superintendent on the spot, to perforate that rock, but when gentlemen complain of our not succeeding in two years he can have little idea what that means.

Mr. WAGSTAFF: Can you give me any idea when we are likely to get at this quartz?

The CHAIRMAN: The first indication we shall have of it will probably be in the success of the Mysore West. They are already 300-ft. down, and Mr. Walker, their chairman, expects very soon to come upon a rich reef. As soon as they do that we shall be able to define our position very much more clearly than we are able to do at the present moment.

Mr. WAGSTAFF: What is our lowest depth?

The CHAIRMAN: 100 ft.

A SHAREHOLDER: What has that cost?

The CHAIRMAN: You see it would not give you a fair indication, because the machinery which was bought for the 100-ft. will be equally available for driving deeper.

WHERE THE QUARTZ WAS OBTAINED FROM.

Mr. WAGSTAFF: At our statutory meeting you showed us some very nice quartz with visible gold. Can you tell me where that quartz came from, because it is a very essential thing to know.

The CHAIRMAN: I think that a very proper question indeed. That quartz was taken from the 150 level of the Mysore West, which is adjoining our property, and the reef of which passed through, but, as the lode went down, I understand from Mr. Walker it was not so productive, but they have come, at the 300-ft. level, upon indications which show that they are near what they expect will be a rich vein.

Mr. WALKER: I recollect perfectly well when these two pieces of quartz were shown. One was taken by the superintendent of the Mysore West, and the other was taken by that gentleman also from the Mysore Mine. It was impossible for anyone to compare these two and define any difference as far as appearance goes. I do not know

whether they were assayed separately, but as far as appearance goes there is no difference between the two, which leads us naturally to imagine we are on the same line of reef. In the Mysore West we are down 300-ft., but the shaft is being sunk vertically, and we are off the reef. We have followed this ground a little to an angle of 20 to 30 degs., and the result is we are off the reef at a distance of about 100 ft. A good miner endeavours to run on for the sake of ventilation to commuuicate with the other shafts—it is necessary for the sake of ventilation, and also for safety. In this country it is penal, and they are not allowed to continue the working of a mine without two shafts, but in India the shafts are separate, in order that in cross-cutting they may come across strings of quartz from veins. Now my idea is that in cross-cutting we will come, in the Mysore West, to some of these veins, which we have got in the other shafts, and I am hopeful the result will be a richer quartz at 100 ft. further down than we have at the depth already made. Mining is entirely a lottery. What you may get, and at what expense, it is impossible to tell. Col. Malleson has well said that the properties are so near together that the one is likely to prove the other.

Mr. WAGSTAFF: Has there been a winze sunk at all?

Mr. WALKER: They do not sink a winze except on the cross-cut. We have not doue so in the present case, because we have not required it.

Mr. WAGSTAFF: I understand you are leaviug the Wynaad at the present, and working entirely at the Colar, and that you feel sanguine upon that point.

THE RICHNESS OF THE COLAR FIELD.

The CHAIRMAN: I spent seven years in India in closc vicinity to the Colar reef, and from my position there I was very intimately acquainted with the natives of India, and it was their opinion that there was not a single spot on the Colar field that was not auriferous, and so far as operations have gone up to the present momcut, that surmise has been correct. You come upon the gold at lower levels or higher levels, and the gold has in every case been found there, and if it is not found on our property it will be an exception, which I am sure my informants in India never anticipated.

Mr. WAGSTAFF: What is your depth in the Colar?

The CHAIRMAN: In the Mysore West we are about 300 ft. In the Nine Reefs we are a little over that, and the lower we go the wider is the vein and the richer the quartz. I cannot help thinking we shall have the same result in this.

A SHAREHOLDER: In the report, when you speak of the Central shaft, I suppose you mean the Colar reef?

The CHAIRMAN: Yes.

Mr. CHARLES: Do we understand then that the whole of page 5 in the report refers to the Colar?

The CHAIRMAN: Yes, there is no work going on iu the Wynaad.

A SHAREHOLDER suggested that the report and accounts should be scnt to the shareholders earlier.

The CHAIRMAN: We should have doue so this time, but we only received the report from the uine on Monday last, and we were obliged to hold this meeting before the close of the year, so that we were obliged to call the meeting for to-day.

Major BROWNJOHN: I suppose we shall open up the property much more quickly now you have the rock-drills at work?

The CHAIRMAN: Yes; we expect to make greater progress.

FUTURE CALLS.

Mr. CHARLES: Can you tell us when the next call will be made?

The CHAIRMAN: I think we shall have to make a call very soon.

The motion was then put to the meeting, and carried unanimously.

Mr. KENSINGTON proposed the re-election of the auditors, Messrs. Price, Waterhouse and Co.

The motion was seconded, and carried unanimously.

A vote of thanks to the chairmau closed the proceedings.

LATEST REPORT.

11th December.—Engine shaft: This has been timbered, and, but for an increase of water, would have been sinkiug below the 100-ft. level. The water has been so much increased that I am afraid we cannot resume the sinking uutil the pumping engine has been set going. 100 north: this heading has been advanced 6 ft. 10 ins., making 22 ft. 4 ins. north of shaft. Much more would have been done had not it been for the great influx of water. The reef in this headiug is without any material change since the report for the general meeting. Machinery: I find this is on the way, and I hope to get the same on the mine soon.—Capt. TREGAY.

THE ARAUCO CO., LIMITED.

THE RAILWAY—EARLY DIVIDENDS—COAL LANDS ACQUIRED—10,000 NEW SHARES.

THE ordinary general meeting of this company took place on Monday at Winchester House, Old Broad Street—Col. North presiding.

The SECRETARY (Mr. B. Depledge) read the notice calling the meeting, and the report was taken as read.

The CHAIRMAN: I propose:—"That the report of the directors, and the accounts for the year ending 30th June, 1888, be received aud adopted."

Mr. J. J. SMITH: I shall have much pleasure in seconding that.

RAILWAY PROGRESS.

The CHAIRMAN: If there are any shareholders who would like to ask auy questions about the accounts we shall have great pleasure in answering them. I may tell you, before we go any further, that, as we told you at the last meeting, we are going on even better than we anticipated. Of course, we have had heavy rains there, which rather retarded our work at the time, but the last account we have had is that the Government have taken over the first section of the line; that is the commencement of the contract to take over the sections as we finish them. I should like to ask Mr. Edmonston, who attends especially to these matters, how many miles are fiuished?

Mr. EDMONSTON: About 16 miles.

The CHAIRMAN: And taken over; but we have more than that; we have a lot done towards the second section.

Mr. EDMONSTON: Very considerable progress has been made with the other sections, aud by the end of February we expect the line will be opened to Lota, and a furtherisection from Lota to Larraquete, and from Larraquete to Coronel we expect to be opened by the 1st of April. (Applause.) Then from Coronel to the extreme southern terminus of the line it will take us some months longer, but anyhow we fully expect it to be duly finished within the time anticipated iu the concession, which is in June, 1890.

DIVIDENDS NOT TO BE LONG DELAYED.

The CHAIRMAN: You understand the southern line is going towards Valparaiso, and that is not the coal-carrying line. The other side, where we have so much finished, and have no bridges, will be the coal-carrying line, and especially as regards our property, which I shall mention later on. The shares are at a good price considering that we are not paying dividends, though I do not think we shall be very long until we shall be able to give you some dividend, and when we do begin I think you will be all satisfied with it. (Applause.)

The resolution on being put to the meeting was then carried unanimously.

The CHAIRMAN: The next resolution will be with regard to the increase of capital.

A SHAREHOLDER suggested that the appointment of Mr. Smith as a director, and the re-election of the auditors, should come next.

The SOLICITOR: I think there was a little misapprehension on the part of the directors with reference to Mr. Smith's election requiring confirmation. The report was sent out before I had an opportunity of seeing it, but I have referred to the articles of association, and it is perfectly clear that the appointment of Mr. Smith lasts for the whole of the time for which the late Mr. Fowler was elected; therefore it is not necessary to pass any formal resolution on the subject. The directors, in writing their report, thought it was necessary, but it is not so. The election is perfectly complete as it is. (Applause.)

Mr. J. SMITHERS: I have much pleasure in proposing, "That Messrs. Price, Waterhouse and Co. be re-elected auditors for the ensuing year."

Mr. DOUGLAS MURRAY seconded the motion, which was agreed to.

A COAL PROPERTY SECURED.

The CHAIRMAN: Gentlemen, that concludes the business of the ordinary meeting, aud we now come to the special meeting. We received from our agents on the West Coast of South America, in Valparaiso, a short time ago by cable the offer of the sale of a very large coal property, which has been working for some considerable time, and they have been getting at the rate of 70,000 tons a year out of it. The price they sent us was 175,000*l*. Why I liked this proposal was, because they said they would put 50,000*l*. in, and the engineer and contractor of the line wanted 10,000*l*. in it, and our manager, Mr. Hicks, said he would like to have 5,000*l*. I thought, therefore, this was a very good thing, and that we could not do better than take it. They said, "We have the refusal of this for 15 days, and another party wants to give them 250,000*l*.;" and the directors thought we should accept the property for the company, and not for themselves or their agents. We are going to recommend that this property shall be purchased on account of the company, and it is a question as to how we shall issue these shares. It appears that, considering the price we are paying for this, that it is about a 20 per cent. dividend-paying concern from now. We have, however, had a law suit going on for a considerable time, and we have been trying to win it, but in buying this property we also buy the law suit, and that, of course, enhances the value of our property to a very great extent, and I am satisfied it is going to make this concern a very big property. At the same time this property is now working, and it will give extra facilities to the Arauco Company. We could even sell it if we liked at a very good profit, but we do not think it right to do so, as we took it on behalf of the Arauco Company. As to the issuing of the shares, there are preference and there are ordiuary shares, or rather ordinary and deferred, but we have agreed to make them all alike, that is if we can do so legally. Therefore, those who hold ordinary or preferred shares will have these shares offered to them. They will have the refusal of the shares. I think we shall issue these shares at about 20. Thus 10,000 shares will bring us 200,000*l*., but we shall only issue half the shares. We have power to issue 50,000*l*. in debentures, and, therefore, we shall only want 100,000*l*. in addition, which makes it all the better. I should like you to ask any questions you wish about the property, and make any suggestions, because we might, perhaps, act on soue suggestions that may be made in preference to any ideas we may have formed. We only received the cable with regard to this property seven or eight days ago.

QUESTIONS.

A SHAREHOLDER asked where the mines proposed to be purchased were situated.

Mr. EDMONSTON: Our line of railway ruus alongside the colliery, and it is almost 16 miles from the sea coast. We are not purchasing the port. The port is a bad one, and can only be used for shipping successfully during the summer months, but in the winter shipping is next to impossible owing to the prevalence of north-westerly winds. It, therefore, became necessary to make our railway to another port where we can have shipping facilities all through the year.

In reply to a shareholder,

Mr. EDMONSTON said: The coal will be shipped at the port on our railway. During the winter months certainly I may say that all the produce of the miues will be carried on our railway to Coronel. During the summer months it is quite possible that a portion of the traffic will stop at Larraquete and be shipped there. We have a tramway down to that port, and for a number of years they have been shipping 60,000 to 70,000 tons a year, and we shall have the same facilities for shipment as they have had. Coal stopping at Larraquete will be decreased in value by the amount that it would cost to take it on to Coronel.

A SHAREHOLDER asked if the company had powers under the articles of association to purchase this property, or would it be necessary to re-construct the company.

The SOLICITOR: Certainly not; because this property is in exactly the same position as the other coal properties owned by the company which now possesses four other coalfields.

Mr. GIBBS suggested that the resolution should be so amended that the new shares were offered to the present shareholders.

NEW SHARE ISSUE.

The CHAIRMAN: I am one of the directors, and one of the largest shareholders of the company, and I am satisfied. At our last meeting it was carried unanimously that every shareholder should have the shares allotted to him pro rata of what he holds. We are not a body of directors who will take advantage of what we can get hold of, or we should have had many of the properties that are now in the hands of the public. We pay our own expenses, and do not receive any fees as directors, and we shall not do so yet. You may take my word for it that you will come in pro rata, and that no man will get one share more than he should do.

A SHAREHOLDER: I think we can safely leave this and other matters in the hands of the directors. (Hear, hear.)

The CHAIRMAN: We have not bought the property yet, and there will have to be negotiations. We have telegraphed that we will buy it, but they have not got the money, but directly we get the property we shall call upon you for the money.

A SHAREHOLDER: Have you fixed the number of shares you are going to issue?

A RESOLUTION.

The CHAIRMAN: No; we have not fixed them yet. We shall settle this in the best way we can. In purchasing this property I do not think we are called upon to pay all the purchase-money down. Therefore, this money will only be called up as it is required. We may pay so much down and so much in six months; therefore we shall only call upon the shareholders as we require the money. I will now propose:

"That the capital of the company be increased by 10,000 ordinary shares of 10*l.* each, to rank pari passu in all respects with the existing ordinary share capital of the company, and that the directors be empowered to issue the whole of such 10,000 ordinary shares, or any part thereof, as they may from time to time think fit, at such price and upon such terms and conditions as they may from time to time consider."

Mr. J. J. SMITH seconded the motion, which was carried unanimously.

A SHAREHOLDER asked what difference there was between the ordinary and the preference shares.

The CHAIRMAN: I think we are going to make them all alike. If you have 10 preference shares, and you are to have five of these new shares, you will get them in preference, and so with the ordinary. This is the way we intend to do it. On the other hand, if you should hold ordinary shares you will get pro rata to your holding.

In reply to a further question,

The CHAIRMAN said: Mr. Edmonston tells me that we have taken the opinion of the Stock Exchange this morning, and they have advised that we are perfectly in order in what we propose to do.

Mr. EDMONSTON: For the information of the shareholders, I may say that the preference shares are entitled to 10 per cent. annually. We expect the dividend will greatly exceed 10 per cent. Anything over 10 per cent. goes to the ordinary shares until they receive 10 per cent., and after all classes of shares have received 10 per cent., whatever is left is divided rateably between them. Then after the preference have received 50 per cent. altogether, the ordinary shares rank on an equality with them.

A vote of thanks to the chairman and directors concluded the proceedings.

CUMBERLAND LEAD MINES, LIMITED.

FUTURE PROSPECTS—ADDITIONAL CAPITAL.

AN encouraging report was placed by the board of directors before the sixth ordinary general meeting of the shareholders of the company, at the Inns of Court Hotel, on Monday, when the chair was occupied by Mr. T. Oatley Bennett, of Bruton, Somerset.

The statement explained that additional capital being necessary, the directors thought it desirable to raise a sum of 3,000*l.* on a second mortgage at 5 per cent. per annum interest, one of the conditions of the loan being that Mr. J. E. H. Martin, and Mr. T. O. Bennett, should be found seats at the board, which was accomplished by the retirement of Mr. M. A. Reed and the Rev. H. Williams. It was hoped, as stated in the report, that the shareholders would assist the directors in making an effort to take or place 3,000 shares to enable them to pay off this second mortgage on an early day, thus saving the company the interest and relieving it of the charge. "At a recent inspection of the mine by the directors and other gentlemen," said the report, "they were not only much gratified by the generally satisfactory condition of the machinery and plant, but after carefully examining the various levels in the mine, they felt satisfied that the hopeful assurances of the agent as to its prospects in the immediate future would, with active and judicious development, be more than realised, and, should the progress at the mine justify it, the shareholders might rest assured that the directors would be only too happy to declare and pay another interim dividend during the next year."

Mr. JAMES P. SYMES, a candidate for a seat on the board of directors, said the statement of accounts was rather disappointing to some of them no doubt, and to him it was rather more so than it was during the previous year. Unfortunately they still continued depositing a little more money in the company, and as their output was larger, if they were to have a dividend at all they would evidently have to cut down their expenses. The capital expenditure for instance contained an item of 1,898*l.* 15s. 11d. for buildings, machinery, plant, &c.; there was some 1,300*l.* paid last year for a similar object, and he wished to know why the amounts were so large.

In reply, the CHAIRMAN said the machinery was of the very best possible description, and it was always kept in first-rate working order, and he believed the outlay had been a judicious one.

Responding to another question by Mr. SYMES,

Capt. J. B. LOBB (the company's agent at the mine) said that with an extra expenditure of some 20*l.* or 25*l.* each upon two new jiggers, they would be able to turn out 200 tons of ore a month, working night and day. He was perfectly satisfied as matters were now going on, but in the past the works had been crippled for want of sufficient capital. They had been working "from hand to mouth" as it were.

Mr. SYMES said that he himself, having visited the mine, was of opinion that they had plenty of good ore, sufficient, with careful management, to pay a fair dividend.

Capt. LOBB said the lower they carried their works the better the lode is expected to be.

Mr. SYMES: The probabilities are then that as we drive the shaft down the ore will turn out very much richer.

Capt. LOBB: Yes, our present workings point to that result.

The report and accounts having been adopted nem. con. upon the motion of the CHAIRMAN, seconded by Mr. SYMES,

The CHAIRMAN said the next business on the agenda paper was for him to describe the state of the mine as he found it upon his visit in July last, and as he had since seen it some two months ago. And he thought the better way would be for him to let the shareholders into the secret as much as he could, for he thought that directors and shareholders should be entirely in accord and have no secrets whatever from each other. That would be so at any rate so long as he had the pleasure of presiding over them. (Applause.) In pursuing the policy he had laid down, he would read to them the report of a gentleman, a perfectly independent mining engineer—Mr. Roberts, who had been strongly recommended to him by a leading mining authority. Capt. Roberts wrote thus, that he was pleased to say that the result of the development of the different levels was quite equal to what he had predicted in his former reports. The levels had been extended about 100 fms. south of the engine shaft, and a great deal of lead ground had been laid open at each of the levels, which was being stoped away in the roofs of the 37, 27 and 17-fm. levels. The ground, generally speaking, was comparatively soft and easy for removing, and of a most congenial character for the production of lead. The stopes were worth on an average from 12*l.* to 14*l.* per fm. for lead. With regard to the ends of the above-named levels, it seemed to him, with the exception of a break here and there, that the lead was so continuous that one could not guess how far the lead might extend. At the present moment, the most important point for operation was the sinking of the engine shaft to the 50-furlong level, for the character of the lode indicated that deeper mining was necessary in order to get at the main body of ore. In all his experience he had never seen a lode of that class fail in depth, and he believed that as each deeper level was reached, it would be found richer for lead, as the 27 and 37 had been so much richer than the 17, and so that by the time they got down to 100 fathoms, provided the value of the lode increased at the same ratio as it had done, they would have a wonderfully rich mine. They must not forget that they had a good course of ore north as well as south, which they had not been able yet to touch on account of the water, for the former workers worked it down to the bottom of the 37, and could not follow it without sinking the engine shaft, which for some reason they did not do. To sink the shaft and drive the cross-course through the lode would require six months' time. Then to reach the lead ground north and south of the shaft would require another six months, and it would cost, to sink the shaft and reach the lode, about 400*l.*, and he thought that they ought to have another 600*l.* allotted for opening the 50 in case they did not reach the lead ground so soon as anticipated, or to meet any contingency. By the time those points were reached he fully expected that their mine would be worth double what it was now, for they would have opened two large sections of lead ground, one on the north and the other on the south of the shaft; and in addition to those they would have extended their upper levels in lead ground. If the Brundley lode, which was being driven in the 37 north of the shaft, was as rich as the Thornthwaite lode the value of the mine would be doubled directly, independently of anything else he had named, for it was a separate and independent lode, running intact the whole length of their grant. He could not help thinking that it would be well worth their while to have the quartz and iron pyrites portion of the lode tested for gold, for he believed that gold had been found in that county, and it was his impression that gold was present in the Thornthwaite lode. The dressing machinery was very efficient, and calculated to return from 80 to 100 tons of lead per month with the amount of blende that might be associated with the lead. The conclusions he had come to were based upon the facts that came under his notice from time to time when inspecting the mine, and were not the result of mere fancy.

The CHAIRMAN said he thought that the foregoing report was a very satisfactory one; it was comprehensive, and it was upon the strength of the statements made in such report that he became a larger shareholder in the concern than he had previously been, and he would advise them to induce their friends to go and do likewise. He thought it would be tantamount to a disgrace if they had not the same faith, the same perseverance, the same enterprise, which had actuated their ancestors, and brought England into its present proud position. (Applause.) There was a good deal of faith required, he said, in searching for riches underground; but they must remember that the present operations were merely a scratching at the surface, and that the lower they got, they were confidently informed by competent authorities, the richer the lode would be. So that it was something better than an ordinary speculation, that mine of theirs. He was present when the rock-drills were first started, and he saw the first blast which was made, and he was sure that had they been present also everyone of them would have been as pleased as he was, for he had never seen richer ore than it revealed. The report encouraged them to persevere in their undertaking, and he said, as he had said before, that if they failed to give them their assistance in sinking the shaft to the 50-fm. level, and refused to do their best to develop the previous levels, then they deserved to lose a fine property, and someone else would reap the benefits. For his own part he was prepared to do all he could in their interest, and he was rather disposed to agree with his friend Mr. Symes when he said that the expenses of London were heavy. He referred more especially to the directors' fees, and he would propose that until they could pay a dividend of 10 per cent. they should be 250*l.* instead of 500*l.* (Applause.) A very satisfactory feature in the events of the past few months was that they had been granted an extension of their lease—which had only 13 years to run—for 21 years from the following day: in other words they would have 21 years to run, and the royalty would be a 16th instead of a 14th. That was one of the most satisfactory things which the directors had to tell them. The correspondence they had had with the captain of the mine showed plainly

enough that the directors and the officials were taking a great deal of tronble to get at something like a definite result aud a dividend. (Applause.)

The following report was then read from Capt. J. B. Lobb :—

Commencing with the north part of the mine, I may observe that nothing dnring the year has been done to develop the Thornthwaite lode in this direction, and consequently it remaius the same. But in calling yonr attention again to this section of the mine, I shall proceed to state that the 17-fm. level north is extended a total distance of 80 fms., the 27, 40 fms., and the 37, 65 fms. The lode in and about the 37 end is large and powerful, exhibiting unmistakable evidence that, if developed, large quantities of lead and blende would be obtained : iudeed, I may go further, and state that a deposit of lead is known to exist, cropping up to surface a few fathoms in advance of where this level is now standing ; and if the lode was developed it would be a source of wealth to the company, beyond question or doubt. The lode stands in whole to surface, with 271-fms. in length, extending northward, along which line there are numerous important junctions. This, then, I submit aud recommend again for your consideration. From the 37 north a cross-cut has been driven a total distance of 138 ft., discovering another lode, which I have named "The Eastern lode" (late Braudley). We have driven 9 ft. south and 30 ft. 6 ins. north npon it, and so far as opened up it presents a most promising appearance for yielding both lead and blende npon being developed. This lode was first discovered at surface in cutting ont foundations, when a quantity of fine lead and blende was broken from it, and our aim is to get in upon it at the 37. This lode also extends the full length of our royalty. Coming to the south section of the mine, the 17-fm. level has been extended a total distance of 102 fms. The end at present is yielding 1 ton of lead and 1 ton of blende per fm., and improving. This level is now being extended. The 27 is extended a total distance of 109 fms., and has entered upon a new deposit. In and about the present end the lode is worth 2 tons lead and 2½ tons blende per fm. One drill is employed. and from what has been ascertained, we can, with much confidence, look forward to a continuation of this deposit for a considerable length. The lode is strong and very wide. The lead from this discovery is equal to auy in the mine, while the blende is superior, commanding as it has done the satisfactory market price of 4*l*. 12s. per ton. The 37 is extended a total distance of 80 fms. The lode is hard, and appears as not having got clear of the influences of the cross-course. There is one important feature which deserves special notice here, viz :—the fact of the 17, the 27 and 37-fm. levels now being extended in entirely new ground, happily proved by the recent discovery in the 27 to be of high value and importance ; and by continuing the 17 and 37-fm. levels, each will soon enter upon this new deposit, and thus secnre its complete development from surface to the 37. The deepening of the shaft is now in progress, in order to lay open new levels at a depth of 50 fms. Two drills are employed. This is admittedly the grandest point in the mine, for it will lay open for stoping those rich deposits of lead and blende going down under foot in our present lowest levels north and south, thereby securing those manifest improvements in valne which iucreased depth confers. The deeper we go the richer we find the lode to be. Hitherto the mine has not been fnlly worked or devcloped, and consequently development is in arrear of extraction. We have, however, raised and sold about 800 tons in lead and blende last year, but with the important points now in progress for opening up the lode, with the aid of the rock-drills, we shall, unless prevented by unforeseen circnmstances, be able to return 200 tons of lead and blende per month toward the end of next year, which can be further increased, for we have only to advance in our general development, guided by our intimate knowledge of this great lode and the influences which regulates its deposits.

As your agent, I beg most respectfully to say, in conclusion, that if the lines of development indicated by me from time to time are followed up, large and increasing returns will result, and in this light I commend it to the candid attention of every shareholder.

Subsequently a vote of thanks was proposed for the agent's able management, to which he responded.

Mr. M. A. Reed was unanimously re-elected on the board of directors, vice Mr. W. Palmer resigned ; and Mr. James P. Symes was elected a director in the room of Mr. J. Grant Fraser.

The meeting closed with the expression of an unanimous opinion as to the stability and future success of the undertaking, the required extra capital being assured, and a hearty vote of thanks to the chairman, who, in responding, said he hoped everyone who was interested in the concern would take a trip to the Lake District in the following summer, and jndge of the property for himself. (Applause.)

DOLCOATH.

DIVIDEND OF £1 10s. PER SHARE—£58,750 IN DIVIDENDS DURING 1888.

THE Rev. W. W. Butlin presided over the 12-weekly meeting of shareholders in Dolcoath, held on the mine on Monday.

The statement of accounts presented showed that dnring the three months labour had cost 12,319*l*. 16s. 6d. ; and the expenditure of 18,982*l*. 1s. 1d. included, besides this amonnt, tribute, 1,348*l*. 10s. 3d. ; merchants' bills, 5,024*l*. 2s. 8d. ; rates, 250*l*. ; Stannary dues, 34*l*. 6s. 8d. ; Cornwall Infirmary, 5*l*. 5s. The mine had sold 489 tons 7 cwt. of tin at the average price of 56*l*. 17s. 6d. per ton, producing less 1-15th dues (1,855*l*. 3s. 9d.) the total of 25,979*l*. 12s. 8d. Minor receipts brought the amount up to 26,079*l*. 18s. 3d., leaving a profit on the three months' working of 7,097*l*. 17s. 2d.

The CHAIRMAN proposed that the report and statement of accounts be adopted, and that a dividend of 30s. per share be declared.

This was seconded by Mr. JOHN MAYNE, and carried unanimously.

Capt. JOSIAH THOMAS, having read the report, added the following supplementary remarks : — We have not been able to do much sinking in the engine shaft this time. The water in the Old Sump shaft has been troublesome, as it has been with most mines lately, but, so far as we have sunk, the lode is somewhat improving. It is not a rich lode yet, nor do we expect it to be until we sink some fathoms further. It is valued to-day at 30*l*. a fm.—a few months ago it was worth scarcely anything at all. The lode is improving, continuing to increase in size, and it is of good appearance, so that we expect, by a little further sinking, it will still more improve. We expected to have holed the Old Sump shaft to the 400 before this, but

THERE HAS BEEN A GREAT INFLUX OF WATER

which has prevented our doing so. It was as much as the men could do to keep the water in barrels without sinking the shaft at all, and we thought we had better suspend the sinking until the 400 comes under it, and then we can rise by boring machine towards it. We shall commence to rise almost immediately, and can open that ground in less than a month by a boring machine. The end is reported as being worth 50*l*. a fathom, but it is only for 6 ft. wide, and the lode is more than 4 fms. wide, so that we do not know whether we are in the best part of the lode or not. Probably not, as the shaft is of better quality than the end. We are opeuing up a large quantity of tin ground eastwards. The 400 east is worth 60*l*. per fm., and this is 50 fms. behind the 388 cast, which has been valued at 100*l*. per fm. That ground we are not taking away—simply opening it. It will come away at some fnture time when the eastern shaft is down. The eastern shaft is being sunk still with very good speed, but not quite so fast as we have been sinking. They have now got down to draw the stuff through 31 fms. by the air winch to the 254, and as they get deeper they will have still further to draw. We are making very good progress, and I should think that in about three or four months that shaft will be holed to the 302-fm. level. The level is only 12 fms. short of that shaft, which, we hope, will be driven in about two or three months. A large quantity of tin grounnd in the 302 has been laid open, but not a ton has been broken. I do not know that there is anything ou the south lode particularly worthy of attention. The 314 east is better than nsual ; it is worth 45*l*. per fm., the rest of the lode being of the same value as usual. We are opening up a large amouut of ground, which is mostly being worked on tribute. The

RETURNS OF TIN ARE A FEW TONS LESS

this time thau last. Christmas week has partly interfered with them, and so has the water at the bottom of the mine. The fact is, that we are doing as well as we can in the way of drawing. We cannot depend on drawing more stuff than we are drawing, because it all has to come up at present through three shafts in the centre of the mine, and all the timber is sent through the same shafts. We are drawing from two o'clock on Monday morning to 10 o'clock on Saturday night, so we cannot do better in that respect. In a few months' time we shall be in a better condition. When the eastern shaft is holed to the 302 we shall be able to draw a good deal more stuff from there, and this will relieve the centre of the miue. Of course, now, when Harriett's shaft is idle, we are drawing by a single skip to old sump. This engine is of a new kind, and has never been seen working in Cornwall so far as I am aware, though I saw one in London. It will be fixed in the 314-fm. level, and will have a working pressure of 1,800 lbs. to the square inch. We shall have a small column of water, 1,800 ft. in height. All the cost of pumping up this stream of water by the engine close by has been gone into, and I have no donbt that the cost of bringing the stuff from Harriett's by that method will be less than 3d. per ton. There was some talk last time about putting back that stuff by electricity, but I found it would cost considerably more. The dividend to-day of 1*l*. 10s. per share will make altogether

12*l*. 10s. PER SHARE DIVIDED DURING THE YEAR,

amounting to 58,750*l*., which is by far the largest we have ever made I am pleased to say that we are opening in the mine a good deal more tin than we are taking away. (Applause.)

In reply to questions from adventurers, he said the nearest point in Dolcoath to Cook's Kitchen Miue was in the 375, which was 50 fms. short of the boundary. The 388 east was about 80 fms. behind the 375. The east shaft was 25 fms. from the boundary.

MERITED THANKS.

Mr. HEARD proposed, and Mr. WICKETT seconded, a resolution recognising the fact that during the past year a larger amount of profit had been divided than in any previous year in the history of the mine, and that tne reserves were in a satisfactory state ; and also thanking Capt. Josiah Thomas and the executive for their labour.

The resolution was carried, and

The CHAIRMAN, with Capt. THOMAS, briefly replied. The latter said he always tried to do the best for the mine. If he did not uow know Dolcoath properly he ought to, for he had been on it 40 years.

This concluded the business.

THE YURUARI CO., LIMITED.

WE are advised by the assistant-secretary that a telegram was received last week from Mr. Aikman, who had arrived at the mines, confirming the acting manager's advices, dated 28th November, and stating that a fnrther improvement had taken place in the east and west bottom levels. The usual telegram advising the amount of gold produced is due early next week.

WORKS.
LEEDS FORGE, Leeds.

PROSPECTUS.

THE objects for which the present Company has been constituted are to purchase and take over as a going concern the well-known works and business of the Leeds Forge Company, Limited, with the works in full activity and a large number of orders in hand for the coming year, so as to comply with the rules of the London Stock Exchange, and obtain an official quotation for its Shares, and to provide additional working capital for the further development of the present Company's business, and for the carrying out of Mr. Samson Fox's last invention, namely, for Patent Pressed Steel Frame Plates for Rolling Stock, recognised by engineers as destined to effect a complete revolution in the manufacture of railway rolling stock, and which cannot fail to be productive of very large profits to this Company. Of these Patents the Company has secured a monopoly.

The situation of the works and property acquired is most advantageous, occupying about 18 acres of freehold land, bounded on one side by the Leeds and Liverpool Canal, and upon the other by the North-Eastern Railway. A siding is about to be constructed, which will bring the works into direct communication with the Midland Railway.

The directors may mention that most of the machinery used in the works, as well as the articles produced, are either patented or are worked under secret processes, thereby ensuring a practical monopoly to this Company of their own specialities, the demand for which has largely increased year after year since the commencement of the business, and by the introduction of water-gas (of which this Company has a monopoly in the United Kingdom for flue welding) a saving in fuel and labour has been effected of some £10,000 per annum.

The present works and buildings cover about nine acres, and the other portion of the site will be immediately utilised for the erection of the new plant, which must be put up to place the Company in a position to execute the orders actually in hand.

The invention of corrugated furnaces by Mr. Samson Fox, which is one of the monopolies secured to this Company, is too well known to need extended reference, but it may be mentioned that about 3,000 steamers, representing an aggregate of 7,192,560 indicated horse-power, have already been fitted with these furnaces, and that scarcely a steamer is now built without being supplied therewith, whether for naval or mercantile purposes. No fewer than 70 vessels of H.M. navy have been fitted with Cox's Patent Corrugated Boiler Furnaces; from careful calculations it is estimated that a saving of coal is being effected from the use of these furnaces now at work of at least 2,250,000 tons per annum. This saving—spread among the steam users who have adopted these Corrugated Furnaces, which, represented by a moderate price for the coal as charged to the various steamers of the commercial marine and navies of the world—cannot be taken at less than £1,500,000 sterling per annum.

With special regard to Mr. Fox's last invention, the following are some particulars:—It has long been felt that some change was necessary in respect to the construction of railway rolling stock in the direction of obtaining for the various specific articles of construction greater strength and durability, and at the same time to diminish, as much as possible, the dead weight to be carried at high speed upon our railways. The difficulties which have hitherto surrounded this question have been practically and adequately solved by the introduction of Fox's Patent Pressed Steel Rolling Stock Frames, with the parts stamped or pressed in the patented hydraulic machinery, instead of being built up by wood and wrought iron parts, bolted or rivetted together, as heretofore, thus producing an economy in first cost, while, in the case of carriages and bogies together, a saving of over 50 per cent. in weight is effected, with greater strength and much extended life, as compared with that of wooden carriages. With regard to trucks, their construction with framework of Fox's Patent Pressed Steel Frame Plates reduces the principal parts from 48 to 17, all being interchangeable. Taking the life of an ordinary wooden waggon at 10 years, that of a waggon constructed on Fox's Patent may be taken at least 25 years, at the end of which time it would still be worth its weight as old steel, as against firewood for the wooden truck.

The following statistics will show how extensive is the field of operations at the command of this Company for the supply of the Pressed Steel Frame Plates, universal adoption of which may be considered practically inevitable, in view of the great saving offered to railway companies by their use, and from the fact that rolling stock constructed with them is so much more durable than when made of wood. According to the last Railway Returns, it appears that the railway rolling stock in the United Kingdom was as follows on the 1st of January, 1887:—Number of locomotives, 15,490; passenger carriages, 34,211; vehicles attached by passenger trains, 12,669; goods and mineral waggons, 468,470; other trucks, 13,261; total in the United Kingdom, 528,011. For the same year the repairs and renewals alone of carriage and waggons for the United Kingdom was represented by a total expenditure of £2,951,283. In fact, for renewals and to accommodate increased traffic, the yearly requirement is so enormous as to afford exclusive employment for a large number of railway waggon and rolling stock works throughout the country, and this Company will be in a position to supply these with the Steel Pressed Plates at such a price as will enable them to effect a considerable increase and economy in their production, whilst at the same time supplying a much superior article.

The directors propose to push the Patent Pressed Steel Frame Plate business most vigorously; and are able to announce that orders are now being executed, not only for some of the leading railways in America and the Continent, but also for some of the principal railway companies in this country.

(*Continued on next page.*)

THE (NEW) LEEDS FORGE CO., LIMITED.—(*Continued from previous page.*)

The customers supplied by the Company include the following Governments and Railway Companies, viz. :—

GOVERNMENTS.

British	Italian	Chinese
German	Danish	Chilian
French	Greek	Japanese
Austro-Hungarian	Spanish	Canadian (Dominion)
Russian	United States	Imperial Ottoman

RAILWAY COMPANIES.

North-Eastern	Great Southern and Western
Lancashire and Yorkshire	Midland G. W.
London, Brighton, and South Coast	London, Tilbury, and Southend
Great Eastern	South-Western
London, Chatham, and Dover	Furness
London and South-Western	Glasgow and South-Western
Manchester, Sheffield, and Lincolnshire	Hull, Barnsley and West Riding
Metropolitan	Great Western
	Caledonian

Also the leading marine engineering firms throughout the world.

It will be seen from the accountant's certificate, that the present earnings alone are sufficient to pay a dividend of 15 per cent. per annum upon the 50,000 ordinary shares now offered for subscription, after providing for interest on the debentures and preference stock now offered to the public, and further providing a sum of £10,000 for depreciation. It is, nevertheless, important to state that the business has been, and still is, a steadily progressive one. Without, therefore, taking into consideration the large income which must necessarily accrue from Mr. Fox's last invention, which has only just been developed, and other new sources of revenue, the earning capacity of this Company places it in an exceptionally favourable and eminently satisfactory position.

The books have been examined and audited by Messrs. J. F. Lovering and Co., Chartered Accountants, 77, Gresham Street, London, E.C., as independent auditors, and verified and confirmed by Mr. John Gordon, jun., Chartered Accountant of Leeds, who report as follows :—

"77, Gresham Street, London, E.C., 1st January, 1889.

"To the Directors of the (New) Leeds Forge Company, Limited.

"Gentlemen,—We have examined the books of the Leeds Forge Company, Limited, and find that the net profit on the working for the year ending December 31st, 1887, was £45,060 8s. 2d., from which, after allowing for interest on debentures, mortgage, &c., and writing off an ample amount for depreciations, a dividend of 10 per cent. was declared.

"We also find that for the year ending December 31st, 1888, the net profits on the working amounted to £69,717 6s., which, after allowing £10,000 for depreciations, leaves £59,717 6s. actual net profits, which would pay as under :—

"On £150,000 Mortgage Five per Cent....	£7,500
On £200,000 Preference Seven per Cent.	14,000
On £250,000 Ordinary Fifteen per Cent.	37,500
	£59,000
"Surplus	£717 6s. 0d.

"We are, Gentlemen, yours faithfully,

"JNO. F. LOVERING and Co., Chartered Accountants."

"1, Bond Street, Leeds, 1st January, 1889.

"Gentlemen,—I have examined the books of the Leeds Forge Company, Limited, and also the Report of Messrs. J. F. Lovering and Co., chartered accountants, London, and certify the same to be correct.

"Yours truly,

"JOHN GORDON, Jr., Chartered Accountant.

"To the Directors of the (New) Leeds Forge Company, Limited."

It is important to note that the business is taken over as a going concern as and from the 31st August last, and the directors are pleased to state that the profits for the four months, September, October, November and December, were approximately :—

£23,709 16s. 8d., or at the rate of £71,109 10s. per annum.

This shows a steady and continuous increase in profits, which will enable the directors not only to declare a dividend equal to that foreshadowed in the prospectus, but to carry forward an amount to the reserve fund, after providing for depreciation and other contingencies.

The directors propose to pay regular interim dividends.

The services of Mr. Samson Fox, C.E., J.P., have been secured for a term of at least five years as managing director, and the whole of the staff of officials remains as heretofore.

The works, plant and machinery have been examined and valued by Mr. Joseph Craven, C.E., senior partner of the well-known firm of Messrs. Smith, Beacock, and Tannett, engineers, Victoria Foundry, Leeds, who values the same at £529,000.

The purchase price, which includes the whole of the freehold property, free from all incumbrances, works, plant, machinery, patents, stock, work in progress, and everything as a going concern, including all costs up to allotment, has been fixed at the sum of £564,000, and the vendors have stipulated to take one-third of each class of shares, being the largest amount of shares permissible by the rules of the London Stock Exchange.

The present issue provides an additional working capital of £36,000. The balance of £150,000 of share capital will be issued and called up as required to meet the cost of erection of new plant and machinery for the Patent Pressed Steel Frame Department, &c.

The following agreements have been entered into :—1st. An agreement, dated the 6th day of December, 1888, and made between the Leeds Forge Company, Limited, of the first part, Samson Fox, of the second part, the Commercial Trust and Agency, Limited (in connection with the issue of the capital and formation of the Company), of the third part, and Bernal Bagshawe, as trustee on behalf of the Company, of the fourth part; and an agreement, dated the 6th day of December, 1888, and made between Samson Fox, of the first part, and the Leeds Forge Company, Limited, of the second part. In addition to the agreements above mentioned, there are numerous trade arrangements and contracts in existence with the Leeds Forge Company, Limited, the benefits and obligations of which are to be taken over by the present Company. It is believed that such arrangements and contracts do not come within the 38th section of the Companies Acts, 1867, but should they do so, all applicants for shares shall be deemed to have waived the insertion of the dates and names of the parties to any such arrangements or contracts, and to accept the above statements as a sufficient compliance with that section, and applications for shares will only be accepted subject to this provision.

Application will be made in due course to the London Stock Exchange for a quotation of the Company's shares and debentures.

If no allotment is made the deposit paid upon application will be returned in full.

Prospectuses and forms of application can be had at the bankers, brokers, solicitors, and at the offices of the Company.

Copies of the memorandum and articles of association, and of the form of debenture, and of the proposed deed of trust for securing the debentures, and copies of the before mentioned agreements, also the accountants' reports and valuer's certificates and valuation may be inspected at the offices of the solicitors.

SECRETARY AND OFFICES (pro tem.)
Mr. C. A. REEVE, 71, GRESHAM HOUSE, LONDON, E.C.

PROSPECTUS.

A SPECIAL feature of this undertaking is the fact that three of the most successful proprietors and directors of the best of the gold mining companies on the Witwatersand fields have conseuted to give the benefit of their experiences to this Company, and will be upon the spot to overlook the working and management of the mines. This the London Board consider to be the best possible guarantee to the shareholders that the facts represented in this prospectus are fully justified.

This Company has been formed for the purpose of acquiring the freehold (subject to a uominal quit rent) of the northern portion of the well-known gold farm of Waterfall on the Witwatersrand goldfields, and to provide capital for developing the property and working the large quartz and banket reefs already opened out and proven.

The property, which is well-known on the fields, consists of 905 morgen, say 1,917 English acres, in which, in addition to other reefs, exists a banket reef, of a width of 11 ft. 6 ins., running nearly the entire length of the property, and a quartz reef, 4 ft. wide, and running nearly parallel with the banket. The property joins J. B. Robinson's syndicate, and Luipersvley Estate and Gold Mining Company, and is in the immediate neighbourhood of the Durban Roodeport, Vogelstrius, Roodepoort, Bantjes, Main Reefs, the Goldfields of South Africa, &c.

The following particulars regarding the property are taken from the reports of Capt. R. A. Thomas, late of Dolcoath, and now Manager of the City and Suburban Gold Mining Company; Mr. J. Maitland Grant, A.M.I.C.E., a well known local authority; and Mr. E. B. J. Knox, A.M.I.C.E., consulting engineer of the Moss Rose; and from information supplied by Mr. S. Hill, who vouches for the correctness of the report :—"There are a large number of reefs upon the property, of which four have been opened up and proved. The principal are the—Quartz reef (traced 1,000 yds.), which is estimated by Capt. Thomas as worth 2 ozs. to the ton, and upon which a shaft 43 ft. has been sunk. Three Banket reefs, 11 ft. 6 ins. wide, traced by outcrop for over 6,000 yds., and worth 15 dwts. to the ton when reported on (these are improving as they are being driven on at a depth of 183 ft.) Four shafts have been sunk at depths of 18 ft. to 48 ft., and two adits have been run into the hill side to the length of 350 ft. and 29 ft., the former being now under the main shaft, thus giving about 100,000 tons of quartz ready to be stoped, directly the Company take over the property. The Sandstone reef has also been traced for 1,250 yds."

Mr. E. B. J. Knox states: "My assays are as follows:—

	ozs.	dwts.	grs.
North portion of reef (near the surface) ...	2	0	20
Centre ditto (44 ft. deep)	1	18	0
South (44 ft. deep)	1	12	16

"The above samples of reef were excavated in my presence and duly comminuted by me.

"All the pannings show gold to be very free and coarse."

Mr. Maitland Grant states :—"The samples were taken by myself and crushed and panned. Sand Reef: Several pannings of this gave each a good uniform show, equal to quite 1 oz. of gold to the ton of ore when milled; every pan contained many specks of heavy, coarse gold, some being the size of ordinary pinheads. South reef No. 2: Samples taken from near surface gave very good results, containing coarse gold."

Capt. R. A. Thomas says :—"From samples taken from the quartz reef, I should estimate it to be worth 2 ozs. to the ton, and think it will prove valuable in depth."

Messrs. Johnson, Matthey and Co.'s assay is as follows:—"We have assayed the samples of mineral marked as under, and find the following to be the result:—Reef No. 1: 1,125 ozs. 15 dwts. of gold, and 224 ozs. silver to the ton of concentrates, or equal to 12 ozs. of gold per ton of 2,240 lbs. quartz. Reef No. 2: 1 oz. 7 dwts. 8 grs. per ton of 2,240 lbs. of ore."

Since the above assays were made by Mr. Kuox, information has been received from him that he had noticed a panning of stuff that had been struck on the farm from the quartz reef, which panned from 60 to 80 ozs. to the ton of quartz, and that since he had made his report much good work had been done in driving the main adit, &c. (This has now been completed, and the reef struck, as advised by cable.)

The ore is easily mined, labour can be obtained at moderate rates, and Mr. Sampson Hill (who has just returned from Johannesburg, and is so well known as the vendor of the celebrated Moss Rose, Salisbury, and other properties), states that the quartz could be got out by contract and delivered at the mill at about 4s. per ton.

There are two large rivers running through the property, the principal that which gives its name to the farm, having a fall between north and south boundaries of 145 ft., and if dammed and carried in flumes to a point near the north, it would drive a turbine with a force effective of 80 h.p. The eastern stream is much more rapid in its course and of great velume, having a fall of 300 ft., and would develop 260 h.p.

The Company will have a great advantage over nearly all the other mines upon the field, as it is estimated that the timber on the estate is equal to 8,000 to 10,000 loads, and as there is more than sufficient water to work all the mills the Company will require, the timber can readily be sold to realise from £4 a load for firewood, to £6 a load for mining timber. The value of the timber at these prices would amount to at least £40,000.

Good solid foundations for batteries can be got almost anywhere along the course of the two streams upon the Company's property, and if thought advisable mill sites could be let to other companies at good rentals.

Twelve claims, which were let long before the property was purchased by Mr. Sampson Hill, the present owner, are still held by a small syndicate who are working them with good results, paying a rent of £12 per month—this rental will become the property of the Company. Rentals for battery sites and sales of timber have been referred to above. It is supposed that there may be extensive seams of coal upon the property, as the gold commissioners for the Witwatersrand District have applied to the owner for permission to allow miners to prospect for same. This, however, has been refused. As the extent of many of the best mines on the Witwatersrand field is only about 30 acres—at least 1,000 acres of the Company's land might, with advantage, be let at a rental or a royalty to other companies or syndicates. There would be no difficulty in obtaining miners to take up the claims at a rent which should alone pay a dividend upon the share capital of this undertaking.

As the property is of such an enormous extent the directors may think fit to dispose of small blocks to subsidiary companies.

With a battery of 100 stamps, which should be at once erected, at the very least the crushing would be 100 tons a day, say, 300 working days to the year, 30,000 tons. The cost of getting out the quartz, delivering at the mill, and crushing, should not exceed 12s. per ton, and taking the quartz as only giving 15 dwts. to the ton, the yearly profit would amount to

£66,375.

and this only calculating the value of the gold at £3 15s. per oz.

The directors, having every confidence from the high character of the well-known experts who have given the reports, as also from the information they have received regarding Mr. Hill, the vendor, have no hesitation in expressing their opinion as to the bona fides of this undertaking as a mining venture. They have considered it better only to calculate upon the erection of a battery with 100 heads of stamps, and have taken the yield of gold on the most moderate basis of 15 dwts. to the ton.

The quantity of quartz ready for stoping is calculated to exceed 100,000 tons, which, even working 200 head of stamps, will be more than sufficient to keep the battery running night and day for the next 15 months, and during this period an unlimited amount of quartz can be got out ready for crushing. In calculating the yield of gold the directors have thought it advisable only to reckon the amount at the rate of 15 dwts. to the ton, notwithstanding the latest assay made by Messrs. Johnson, Matthey and Co., and the news received from Mr. Kuox that some of the pannings are yielding 60 and 80 ozs. to the ton. The facilities for working are unrivalled owing to no pumping being required, and the quartz being obtainable by adits, can be run by gravitation direct to the battery. The vendor, who is the promoter of the Company, sells the property, and undertakes to pay and indemnify the Company against all expenses of the establishment and promotion of the Company (except brokerage and the fees payable to the Government upon the transfer of the property to the Company) for £105,000, payable as to £46,666 in fully paid-up shares (which is the utmost amount he can accept in shares, to allow of a quotation upon the London Stock Exchange), and £58,334 in cash, and thereout the vendor will satisfy his engagements referred to below. This will leave a working capital of £35,000, of which it is not expected more than £20,000 will be required.

The vendor has agreed that his shares shall not be negotiable until a dividend has been declared and paid upon the full amount of the capital issued.

A settlement and quotation upon the London Stock Exchange will be applied for at an early date.

The contracts entered into are next specified.

The memorandum and articles of association, the said deed of sale, and the contracts mentioned above, the plans, maps, reports upon the property, and the assays, &c., can be inspected by applicants for shares, at the offices of the Company's solicitors.

Applications for shares must be sent to the Company's bankers, with a deposit of 5s. per share.

Should no allotment be made, the amount paid upon application will be returned in full, and where the number of shares allotted is less than the number applied for, the surplus will be credited against the amount payable upon allotment.

Prospectuses and forms of application can be obtained from the Company's bankers, the brokers or solicitors, and also at the Company's offices.

London, 18th December, 1888.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

THE MINING MARKET.

CITY, FRIDAY EVENING.

FURTHER RISE IN SOUTH AFRICANS—MARKETS FIRM—CHEAP SHARES RISING—METALS.

THE market has again been eventful mainly from its South African side, and shares have advanced by leaps and bounds. The public are, however, not to any considerable extent being dazzled, though the quotations are sufficient to take away the breath. Persons who sit down calmly to think must know that, assuming the genuineness of the returns from Witwatersrand (upon which some respectable newspapers in South Africa are casting doubts), they can only be made from surface scratchings. It is known that no deep sinking has yet been engaged in, and when this has to be undertaken heavy machinery will have to be brought to the spot, which will absorb, in time and money, an outlay not dreamt of in the philosophy of the Hatton Garden clique, who are making of these concerns the sport of the hour. The public information is too slight, and some of the surrounding circumstances too uncertain, to tempt wise people to enter upon so reckless a gamble. Better than buy the shares that have risen to such enormous prices the public should consider the prospectuses of newer companies whose shares are offered at par, or some already in the field, which may be had at a discount.

The uncertainty of dealing in these shares is illustrated by a request made to the Stock Exchange Committee to settle the dispute as to Spes Bona shares which they have refused to have anything to do with. It is said that a bear acconnt in these shares had to be settled, as usual, by delivery ; but at the time of the contract there was not a sufficient supply of shares in the market. Since then, however, new shares have been created, and the dispute was whether these fresh shares should be considered a good delivery or not. As dealings in this and other South African miuing shares had been conducted outside the rules of the Stock Exchange—no official settlements and no quotation being accorded to the shares—the committee have refused to arbitrate.

The business in diamond shares has been fairly active.

The copper market has been slightly lower. Statistics are agaiu to the fore, and have been hurled indescriminately at the syndicate, which, however, by still holding on its way, furnishes the best refutation its critics can have. It is believed that all scratch supplies have now been exhausted, and that buyers must nolens volens come into the market with strong orders. The heads of the great copper companies, questioned on the subject, appear to have no doubt that the syndicate is quite able to fulfil its engagements.

Copper remains at about 78*l*. We quite agree that too much has already been made of the statistical side of the copper question, and Messrs. Viviau, Younger and Bond in their January circular truly remark "the fact of the stocks being held by probably one of the most powerful combinations ever formed, seems to us to be rather a featurc of strength to the market than if snch stocks were distributed."

There has been a good deal of business in general foreign shares. There have been large dealings in New Emma, Venezuelan-Austin, Yuruari, Tetuan (thought to be going higher), Spitskop, Denver, and Eberhardt. There has been a decided improvemeut in the south drift of the latter mine. The small seam formerly observed has widened out, aud some eight tons of ore of a average value of $65 per ton extracted. Developments are being pressed on at this point as rapidly as possible.

London stocks of tin are showing an increase. The price is about 98*l*. for foreign. Lead, which had shown a weak market down to 12*l*. 5s., has again improved to 13*l*. for soft Spanish, and has a steadier tendency. Home shares have scarcely been mentioned during the week.

AFRICANS.

There has been some very large buying in South African Gold Shares during the week, and in almost every instance prices have again experienced a rise. There is now an inclinatino to purchase shares in the De Kaap district, which has been neglected of late for the more favoured field of Witwatersrand. French Bobs have risen ½ ; Sheba, $\frac{3}{16}$; Johannesburg Waterworks, ⅜ ; Moodies, 10s. paid, ¼ ; Moodies, fully paid, ½ ; Bantjes, ¼ ; City and Suburban, ¾ ; Crown Reef, ¼ ; De Villiers (Robinson), 20s. ; Ferreiras, 6¼ ; Goldfields of South Africa, ⅛ ; Henry Nourse, ½ ; Johannesburg Pioneer, 3¾ ; Morkel, 6s. ; Nabob, ⅛ ; Royals, ¼ ; Salisbnry, 40s. ; Stanhope, ⅝ ; Van Rhyn, ¼ ; Vogelstruis, ⅜ ; Wemmers, ¼ ; while a fall has taken place of 1s. in Bothas, ⅛ Central Langlaagte, $\frac{5}{16}$ Cornucopia, ⅛ Crœsus, 1⅛ Durban Roodepoort, ⅜ Geldenhuis, ¼ Heriot, 20s. Jubilee, 1⅛ Jumpers, $\frac{3}{16}$ Knights, ¼ Mainreef, ¾ Moss Rose, ⅜ Simmer and Jack, ⅛ Star and ⅜ Wolhuters.

The following are the closing quotations :—

Vogelstruis	3¾	—	4
Wemmers	14½	—	15
Wolhuters	3¾	—	4

Diamonds.

A fairly large amount of business has been transacted in diamond shares during the week, and in several instances prices have improved. For example Anglo-African have had a rise of 5s.; Bultfontein New, 2s. 6d.; De Beers, 17s. 6d.; Griqualand West, 5s.; New Jagersfontein, 20s.; Spes Bona Bultfontein, 1s. On the other hand Gordons have fallen, 1s.; New Consolidated and South Africa Pullinger, 6d. each. Other shares remain without change.

The following are the closing prices :—

Diamond Shares.

Anglo African	3⅞	—	4⅛
Bultfontein, new shares—	4⅛	—	4⅜
Central Dorsfontein	8	—	10
De Beers Consolidated	16⅜	—	16⅝
Gordon Diamond	19/	—	21/
Griqualand West	5⅞	—	6
New Consolidated	24/	—	25/
New Jagersfontein	14½	—	14¾
South African (Pullinger)	17/	—	18/
Spes Bona (Bnltfontein)	6/6	—	7/6
United	2⅛	—	2⅜
United Jagersfontein	18/6	—	19/6
London and Orange Free State Explor. ...	4¾	—	5¼
London and Sonth African Exploration ...	17⅜	—17⅝	x rights xd
Read's Drift Land Co.	2⅞	—	3⅛

Australians.

There has not been very mnch business doing in Australian shares, and where it has taken place it has generally been at a somewhat lower quotation than last week. The only changes to notice are a rise of 2s. in Mosman, while Bonnie Dundee, Cumberland, Day Dawn, P.C., and Mount Shamrock are all 6d. lower.

Copper.

There has been very little business doing in copper shares, and prices have fallen considerably since last account, so that some heavy differences will have to be paid by holders for the rise. As an instance, Capes made up at the end of the year at 6⅛, close this evening 5½, 5⅝; Masons made up at 10¼, close 9½, 9⅝; Quebrada made up at 5½, close 4⅞, 5; while Tharsis were 25⅞, and are now 24 5/16, 24 7/16.

Indian shares.

A fair amount of business has been done in this discription of shares during the past week, but prices have not varied very much, the only change to notice being a rise of 1s. 6d. in Colar Central, and a fall of ⅛ in Mysore.

Foreign.

There has been some heavy dealing in several descriptions of low-priced shares during the present week, and in several instances prices exhibit a considerable rise. The principal dealings have been in Balkis, California, Denver, Dickens Custer, Empire, Knynsa, New Emma, New Hoover, Potosi, Spitzkop, Tetuan, Venezuelan-Austin, Victory and Yuruari. The following shares have had a rise—Balkis, 1s.; Barretts, 6d.; Colombians, 1s.; Consolidated Esmeralda, 6d.; Garfield, 6d.; La Trinidad, ⅛; New California, 6d.; New Emma, 1s.; New Hoover, 6d.; New Spitzkop, 9d.; Orita, 1s.; Palmarejo, 1s.; Potosi, 9d.; Tetuan, 6d.; Venezuelan, 9d.; Victory, 6d.; Callao Bis have fallen 2s.; Carlisle, 1s.; Dickens Custer, 1s.; Empire, 4s.; and Richmond, ¼.

The following list shows the principal changes in the mine which have taken place :—

	Last Week.			This Week.

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—The dirccors have sold the gold produced in November to Messrs. Browne and Wingrove for 682*l*. 2s. 8d.

Indian Consolidated.—A telegram from the Colar section of the property announccs that during the month of December 178 tons of quartz were crnshed, which yielded 101 ozs. of gold.

Mysore Harnhalli.—Telegraphic advice from the resident director state that the transfer of the lease of the propcrty to the company has been effected, and that the payment to the Government of Mysore of the 10 per cent. transfer fee has been made in shares of the company, as mentioned in the prospectus. Pumping machinery has gone forward.

Mysore.—The directors have sold through Messrs. Johnson, Matthey, and Co., the gold produced in the month of November, which realized 4,923*l*. 3s. 8d. A telegram, dated 5th January, gives last month's return of gold as follows :—"1,634 tons of quartz produced 1,392 ozs. of gold, also 114 ozs. obtained from tailings."

Nundydroog.—A telegram, dated 5th January, gives last month's return of gold as follows :—"400 tons of quartz produced 685 ozs. of gold." The directors have sold through Messrs. Johnson Matthey, and Co, the gold produced in the month of November, which realised 2,860*l*. 8s. 9d.

Colonial Mines.

Crown Reef.—A cable states that the latest crushings of 1,334 tons produced 1,121 ozs. of gold.

Cumberland.—Telegram :—"No crushing this month. Battery incomplete. Have met ore in paying quantities in shaft." The code word used to express the second sentence is not correct; little doubt exists as to the meaning intended to be expressed.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 5th instant is as follows :—280 tons crushed; yield of gold, 288 ozs.; approximate value, 1,000*l*. Fortnight's expenses, 1,077*l*.; 15 head of stamps only, and holidays.

Day Dawn P.C.—The manager at Charters Towers sends a cable giving the result of crushing for the fortnight ending January 5th, viz. :—"650 tons; 733 ozs." (Estimated value 2,492*l*.) "Lost three days' holidays. Also public mill return 206 tons; 304 ozs." (Estimated value, 1,033*l*.)

LIVINGSTONE.—Mr. Victor William Chemery, of 83, Gracechurch Street, has joined the board of the Livingstone Gold Mining Company, Limited.

MOUNT ALBION.—Telegram from the manager :—"Up to the 29th December, holidays intervening, ore raised, 472 tons, containing 30,000 ozs. silver; ore smelted, 435 tons, producing 80 tons silver-lead bullion, containing 20,000 ozs. silver; shipped, per Quetta, 41 tons silver-lead bullion, containing 9,300 ozs. silver."

MOUNT LEYSHON.—The last shipment of selected heavy ore from the mine has been ascertained to contain 15 ozs. 3 dwts. gold, 14 ozs. silver, and 19 per cent. of copper, to the ton.

FOREIGN MINES.

CARLISLE.—Cablegram from the manager at the mine :—"During December the mill worked 29 days, and the yield was as follows :—Bullion, $15,800 ; concentrates, &c., $700 ; total, $16,500. The working expenses for the month were $14,500."

CHONTALES.—"The cost at the mines for November was 151*l*."

COLOMBIAN HYDRAULIC.—We are reqnested to state that Mr. A. E. Oakes, the superintendent of the Colombian Hydraulic Mining Company, Limited, returned to the mines by the Royal Mail Steamer "Orinoco," on Thursday.

DICKENS CUSTER.—Advices from the agents state that bars 79 to 82 have been sold for $15,080.85. These figures, of course, are subject to the royalty.

EMPIRE.—Cablegram received from the manager at the mine :—"During December the mill worked — days, and the total weight of ore crushed was 1,700 tons. The yield was as follows :—Bullion, $10,000 ; concentrates, $700 ; total, $10,700. The working expenses for the month were $11,500."

OLD LOUT.—Cable from the mine superintendcut :—"Have cut the vein in the tunnel. The hanging-wall is 1,663 ft. from the mouth of tunnel ; very strong. There is no ore in sight ; shall begin immediately to drive in on the vein." Another cable received from Mr. Crawford, the general manager, states :—"Tunnel on the vein. Draining water from all parts of the mine. I consider the prospects most favourable."

OURO PRETO.—A telegram, dated 6th January, gives last month's return of gold as follows :—"2,257 tons of quartz produced 6,715 oits. of gold (774 ozs.)."

PESTARENA.—The gold returns for December were as follows :—Pestarena District : 402 ozs. 19 dwts. 8 grs. from 402 tons of ore, equal to 1 oz. 0 dwts. 1 gr. per ton. Val Toppa : 160 ozs. 12 dwts. 10 grs from 336 tons, equal to 9 dwts. 13 grs. per ton. Total : 563 ozs. 11 dwts. 18 grs., obtained from 738 tons of ore amalgamated, showing an average yield of 14 dwts. 19 grs. to the ton.

PINOS ALTOS.—Telegraphic advice states that the out-turn for the month of December was $46,000.

UNITED MEXICAN.—Telegram :—San Cayetano property : Gross returns week ending January 5th, $10,500 ; net returns week ending December 29th, $2,230. Cubo property : Gross returns week ending January 5th, $2,450 ; loss week ending December 29th, $2,390.

WEST ARGENTINE.—Telegram received from the mines as follows :—"525 tons crushed yield 194 ounces." This is the return for December.

HOME MINES.

NEW KITTY.—It has been decided to suspend operations. It was stated that 2*l*. 9s. 6d. per share had been paid up, and that the mine originally cost 200*l*. An angry discussion (as will be seen) took place.

NORTH LEVANT.—A call of 15s. a share has been made. Capt. Bennett's confidence in the mine is unabated.

SOUTH PHŒNIX.—The debit balance here was 330*l*., and a call of 8s. 6d. per share was made, payable in three instalments.

TREGURTHA DOWNS.—The fire continued burning all day last Friday, and the damage done is roughly estimated at 10,000*l*. The whole of the employés, numbering 300, will be thrown out of work for some time, as it will take several months to rebuild the engine-house and fork the mine. The managers are Messrs. H. R. Lewis & Co., Bartholomew House.

WEST POLBREEN.—A call of 1s. per share was agreed on. 6,000*l* has been paid here in calls. Here also an angry discussion took place.

WEST SETON.—The loss on the four months was 1,200*l*. A call of 5s. was made.

WHEAL BASSET.—The loss on the 16 weeks was 255*l*., but the balance in favour of the mine was 1,434*l*.

REDUCTION IN THE PRICE OF DYNAMITE.—We understand that all the mines north of Carn Brea have made a contract for the supply of dynamite by British Company, at 95*l*. per ton. Hitherto this article has not been obtainable under 115*l*. a ton.

CORNISH DIVIDENDS.—The following dividends have been declared during the last few weeks :—Dolcoath, 30s. per share ; amount, 7,050*l*. ; East Pool, 15s. per share ; amount, 4,800*l*. ; South Condurrow, 10s. per share ; amount, 3,061*l*. ; Levant, 15s. per share ; amount, 1,875*l*. ; Wheal Grenville, 5s. per share ; amount, 1,500*l*. ; Phœnix, 2s. per share ; amount, 1,200*l*.

FOR LATEST PRICES
AND ALL PARTICULARS OF FOREIGN AND HOME MINES.
SEE PAGES 56 AND 57.

LONDON METAL MARKET.

4.30.—Closing official report.—Copper : Chili bars, cash, 78¼, ¾ ; three months, 78, ½ ; best selected, 79½, 80 ; strong sheets, 83, 5 ; English tough, 79, ½ ; G.M. brands, cash, 78¼, ¾ ; three months, 78, ½. Tin : Fine foreign, cash, 99⅜, ⅞ ; three months, 98⅞, 99⅜ ; Australian, 99⅝. 99⅛, ; English ingots, 101, 101½.

METALS.

COPPER has been quiet. There has been some demand for Warrants of G.M.C. for early delivery, and from 77*l*. 17s. 6d. to 78*l*. 10s. paid for same. A fair business done for delivery in three months, at 78*l*., but for four months 77*l*. has been taken. 500 tons of yellow-metal sheets are reported to have been taken for India, at 7d. We quote English tough, 79*l*., 80*l*. ; best selected, 79*l*. 10s., 81*l*. ; strong sheets, 83*l*. ; India sheets, 80*l*. ; yellow metal sheets, 7d., 7¼d. ; ore, regulus, &c., 14s. 6d., 16s. per unit.

TIN has been dull. Straits declined from 99*l*. to 98*l*. 5s. cash, but closed firmer at 98*l*. 10s., 98*l*. 7s. cash, and 99*l*. three months ; Australian commands about 5s. per ton premium. English ingots, 101*l*., 101*l*. 10s.

The Dutch market has been quiet, and we quote Banca, 59fl., 59¼fl. ; Billiton, 58½fl. ; buyers spot. The Trading Company announce their sale for the 31st inst. in Rotterdam, and to consist of 23.500 slabs Banka, of which 3,000 slabs are refiued, and 1,500 slabs Billiton.

TIN PLATES firm. Ordinary coke, Liverpool, 13s. 3d. per box. The stock in all ports are given as 308,461 boxes.

SPELTER quiet. 18*l*. 10s., 18*l*. 12s. 6d. for ordinary brands, ex ship here.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR.—Production to 28th December:—13,707 tons crushed; yielded 1,679 tons rich silver lead ore. Corresponding period last year, 11,927 tons crushed, yielded 1,333 tons. The lode in main adit has produced, during the past week, some good stones of lead, with a promising appearance for further improvement. The lode in Savalan end west is producing a little ore. Altogether the mine is looking better, aud we have some promising points for the new year.

BRATSBERG (31st Dec.)—Owing to the Christmas holidays and the usual measuring days intervening between the old and new year, very little has been done at the mines since last report, therefore there is no change to notice. The dressing machinery is laid up for repairs and new erections, which will be taken in hand at once. The boats are still running on the lakes, and the weather looks favourable for their continuing to do so, hence we feel pretty certain of getting the castings for the new machinery delivered at Bandakslid before navigation is stopped. The Constance is timed to be loaded to-day, and we presume will sail forthwith. We estimate the number of tons, 20 per cent. ore, mined during December to be 170.—J. D. Holman.

CALLAO (31st Dec.)—Mine—Unda shaft: The sinking of this shaft has been carried on, and 6 ft. have been sunk. The small vein of quartz which we are driving on in No. 4 level still continues in the shaft, but does not increase in thickness. It carries a little gold, assaying 3 dwts.; total depth of shaft, 366 ft. In the 350-ft. level we have driven 6½ ft.; total distance from cross-cut 58½ ft. I see no change whatever, the small seams of quartz widen to 8 ins. and 10 ins., and in a few feet drivage lessen to even an inch. We still have two good walls, and in the last few feet seem to be turning eastward from their former course. Soza-y-Mendez: At the east end of the concession we have driven in the cross-cut 17 ft., making 58 ft. from the mouth of tunnel. We have cut through the quartz mentioned in my last. I have made several assays of the quartz and mixed matter in the vein, and find it yields 7 dwts. 20 grs. per ton. This is rather low grade to bring such distance to mill, but being easily mined and near the surface a little improvement would make a trial worth while.—G. W. Eustice.

COLAR CENTRAL (18th Dec.)—Low's engine shaft: 200 east cross-cut has been driven a distance of 17 ft.; total distance from shaft, 107 ft. 200 west cross-cut has been driven 17 ft. 6 ins.; total distance from shaft, 111 ft. There is no change to report in either of these cross-cuts. We shall start to drive during this week on the quartz mentioned in last report in the east cross-cut. Underlay shaft: 171 east drive has been driven 5½ ft. by hand labour, still in hard ground; distance from cross-cut, 38 ft. 6 ins. New trench shaft west: Cross-cut has been driven 36 ft.; distance from shaft, 49 ft. This will now be suspended, as nothing of an encouraging nature has been met with. East boundary shaft: The bullock whim has been erected, and we shall commence timbering the new shaft to-morrow. By the end of the week I hope we shall be able to re-commence sinking. Surface work: There is nothing calling for special notice. The usual work in connection with our mining operations is being carried on, and we are taking advantage of the season to repair our roads. Machinery engines and working gear all in good condition, and doing satisfactory duty.—A. S. B. Oakley.

COLVILLE.—Under date of 1st December the agent writes:—East Kapanga Mines: The tributers, Edwards and party, continue driving and stoping in the workings above adit, principally on the Alpha and Omega reef, but up to the present they have not met with the success they anticipated. However, they have done a deal of work, and they may any day strike a patch of gold that will repay them for their steady perseverance. North Coromandel Mines: Duross, Wilson and party, tributers, are prospecting the surface outcrops, and tracing for the course of a new reef running into our property, but owing to the depth of clay deposit over the bedrock, their progress has been slow.

CONSOLIDATED ESMERALDA. The superintendent reports that he has succeeded in securing other water rights, which the board has been for some time anxious to obtain, and now, after allowing sufficient for the purposes of the Humboldt, this company will have free power estimated to be sufficient to run mills with a crushing capacity of about 400 tons of ore per day. The directors consider this a most important and valuable addition to the company's property. Rapid progress is being made in the lower drifts of the Durand Mine, which shows bunches of high grade ore. Arrangements have been concluded with the Humboldt to make the first installation of electric power to this company's mills.

COROMANDEL (29th Nov.)—Capt. Francis Hodge, in the course of his report, writes:—As we proceed, from all appearances, we shall make regular returns until we gradually and rapidly open up a profitable mine. All works are pushed on, and our expenditure will now soon be all in underground developments, controlled by an economical plant for pumping, winding and stamping, and ample surplus power for permanency.

DENVER.—The directors have received the following letter from their manager (Mr. Alfred Rickard), who reports:—In the breast of the 1,050 east drift is a vein of some 8 ins. wide, of very favourable looking stuff; it is letting out a great deal more water; another good indication. The mill run of 6 tons just cleaned up does not show any great improvement in the grade of the ore.

DEVALA-MOYAR (17th Dec.)—Harewood reef: There is no progress to report in the pyrites winze sinking below the deep tunnel, as the men have been employed in taking up the water and forming a small dam in the tunnel. The west end of the tunnel is not quite so good; it is 5 ft. wide, and will yield 2 tons pyrites to the fm. The east end is looking better; it is 3 ft. wide, and will yield 1½ tons pyrites to the fm.—J. Williams.

EAGLEHAWK CONSOLIDATED.—The secretary sends us the following abstract of reports received from the mine, dated the 17th and 22nd November:—Since my last report we have sunk the engine shaft a further depth of 6 ft.; total from No. 7 plat, 109 ft., and from the surface, 560 ft.; there is no change in the nature of the ground sunk through. The shaft has been timbered up and an opening sett put in. We started to cut the plat to-day on the west side of the shaft. I do not think we shall have to drive far before we strike the reef. The rise in the 450-ft. level north has been continued a further distance of 18 ft.; total from the back of the drive, 54 ft. No payable gold has been met with.

EAST AREVALO MEXICAN (20th Dec.)—The No. 2 level has been driven during the past two weeks 13 ft. 3 ins. in a good-looking lode, yielding rich stones of metal. We have still standing to the north 20 ft. of the lode. Next week we shall proceed to cut into and ascertain its value. One shot put into the main lode yesterday brought down a quantity of arsenical and copper pyrites. We are also getting ready some mineral from this level to send to the reduction works. The No. 3 level has been extended 8 ft. 3 ins. across the lode, which is steadily improving. The richest piece of metal I have yet seen at this level was broken to-day. I expect to have a good lode here shortly. The No. 4 level has been secured, and we are driving to the soft part of the lode at a point further east. It will take us a couple of weeks to open, and ascertain what quantity of metal we have at this level. The Laguna shaft is for the moment brought to a standstill, because of the water coming in on us from the adjoining company's mine; in two or three months this will cease, as this adit tunnel will soon be up, and take away the water from both mines. This will be a great advantage to us, especially in the sinking of our shaft. I may add that the lode in this adit level, which comes into our sett or property, is at present worth from a few to 20 marks of silver per ton—a mark of silver is 8 ozs. Altogether our prospects are splendid, and I have no doubt that we shall open up a rich and permanent mine.—Capt. Prideaux.

ETHERIDGE UNITED.—The mining manager reports for the week ending the 10th November.—Ropewalk: The poppet heads are nearly complete, as soon as finished I shall apply for exemption until the engine arrives. Canadian West: Good progress continues to be made in the 100 and 140-ft. levels, and the reefs keep up their width and character. Canadian Middle: The sinking has just been resumed here. I have let a contract to sink 20 ft. at 4*l*. 10s. per ft., and have no doubt that with the aid of the engine the sinking will be much more speedily carried out. The present depth of the shaft is 59 ft., and the reef is 2 ft. wide. Etheridge Reefs: I have just returned from visiting there, after a tedious journey, a considerable portion of which I performed on foot owing to the weak condition of the horse. The west level in Lord Nelson shaft is now in 45 ft. The reef has pinched in since my last visit, and is now about 12 ins. wide. I think the disturbance is only temporary. The quartz is of good quality. In the east level the driving has been discontinued for the moment, and the men employed in rising in the quartz for an airway. This is a necessary proceeding, and at the same time gives quartz for crushing. The reef in this rise is 4 ft. wide. The tramway between the mouth of the shaft and the mill is now completed, and the delivery of stone to the mill has commenced. An easy gradient exists between the shaft and the mill, which causes the waggon to run of its own accord, the empties being pulled back by a wire rope from the shaft engine. The erection of the additional grinding appliances at the mill is being steadily proceeded with. Regarding the future of the mine, I am strongly in favour of resuming the sinking of the shaft as soon as possible; by so doing the property will be further tested, and reserves of quartz laid open. I am also of opinion that the deepening of the shaft will result in finding a supply of water that will enable crushing to be carried on all the year round, regardless of the seasons. Drought: Since writing last week we have been favoured with two or three light showers, but not sufficient to be of any service. I think, however, the long looked for change is not far off.

FRYERSCREEK.—The directors of this company have received the following advices dated Fryerstown, 29th November: During the past fortnight we have extended the 623-ft. level south 5 ft.; total, 283 ft. from the cross-cut. I have removed the men from this drive for a time. There is no change in the face. The men have not been working more than five days in the drive for the past fortnight. In rising back of the 623-ft. level I discovered that we were rising on the slide, and not on the lode, which is about 30 ft. east of the slide at the 520-ft. level, so we are driving west to connect with the rise at the 520-ft. level. In driving the cross-cut at the 623-ft. level we passed through what I thought to be a cross-head, as you will see mentioned in my report on the 7th March, bearing 16 points west of south. It did not carry any flukan north or south of the cross-cut, so I did not recognise it as the lode. By rising on the flukan, I find it to be on the side. We shall drive north on the lode at the 623-ft. level as soon as we connect the cross-cut with the rise at the 520-ft. level for ventilation, as the air is very light at the 623-ft. level; cross-cut now in 15 ft.; have about 15 ft. further to drive; four men driving the cross-cut. The 260 level: We are making very slow progress with the drives north and south as the ground is very hard; quartz about the same, 2 ft. thick in each of the drives. We have not seen any gold as yet in breaking down the stone; stone changing a little in the north drive; fine-looking stone full of mundic. I should think by the appearance of the stone it should make good gold shortly. We have not done any work to the cross-cut to the last 10 ft. above this level for the past fortnight, as one of the men has been home sick. We have commenced to drive east again this week, and have met with a fine-looking leader making in the slate country east of the sandstone. We have not cut into them as yet. This country is full of quartz, and I should think we shall come on gold-bearing stone before long. We have five men working three faces from the rise. South drive in 58 ft., the north drive in 30 ft. from the rise. The 320-ft. level western shaft: The contractor have extended the level north 20 ft. this past fortnight; country changing very much; slate with small seams of quartz in the footwall, and about 8 ins. of stone on the hanging wall of the lode, but not payable as yet. I tried a prospect to-day, and had a fine colour of gold. All the hard sandstone is cutting out as we go north, and the gold ground coming in the face of the drive; drive now in 129-ft. from the rise.

GARFIELD.—The directors have received the following report from Mr. Hooper, the superintendent at the mines, under date of December 22nd:—The mill has been working regularly and doing good duty. Yesterday a shipment of four bars bullion was made, weighing 498 lbs. (avoir), of the estimated net value $4,560.24, silver at 92c. The produce for this month will fall behind that of the last few months on account of Western ore falling off in value, Lincoln ore also has only averaged about 23 ozs. per ton. Our expenses will be somewhat heavy on account of our laying in our winter supplies, &c., before the snow comes.

The following cablegram has also been received showing results for month of December:—"Production, $10,200; revenue expenditure, $8,400; capital and development expenditure, $2,600; tons crushed, 318; five stamps working 27 days. We have been putting low grade ore through the mill."

GOLD ESTATES (TRANSVAAL).—The mining report from the manager of the Noitgedacht property for the month of November, just received, states the various drives to have been advauced during the month, as follows :—Button's reef : No. 1 drivage 22 ft., and shows 2 ft. of fairly good ore, enclosed iu a soft, whitish state ; average yield, ¾ oz. of gold per ton. No. 2 drivage 23 ft., and has a reef 4 ft. thick ; quartz of a brittle and vitreous character, impregnated with spots of iron pyrites ; average yield, ½ oz. No. 3 drivage 30 ft. ; lode has been disturbed by a fault, but is now making again, and present forebreast shows 3 ft. of good grade ore ; average yield, ¾ oz. No. 4 drivage 25 ft. ; vein continues very regular, having a thickness of 3 ft. ; average yield, ¾ oz. This level is now in on course of lode over 100 ft. New reef : No. 2 drivage 22 ft. ; reef thinned to 1 ft., but is giving signs of opening out again ; average yield, 2 ozs. No. 3 drivage 30 ft., has an excellent lode 3½ ft. thick, enclosed in a dark blue state ; average yield, 1½ ozs. No. 4 drivage 20 ft. ; lode small, and enclosing rock jointy and irregular ; average yield, ½ oz. Until this level reaches line of ore in No. 2 and No. 3 levels do not expect any improvement. The manager further writes : I estimate the ore broken and ready for the mill at 1,000 tons.

GYMPIE GOLDEN CROWN (22nd Nov.)—Since my report of the 8th iust., the main shaft has been sunk a further depth of 17 ft. ; total depth, 1,223 ft. The formation continues the same, namely, purple conglomerate, but is much harder, and not so favourable for breaking. A further depth of 5 ft. will be sufficient for a well hole, which will be completed next week, when sinking will be discontinued, and cross-cutting east at the 1,200-ft. level will be commenced. Cross-eutting west at the 930-ft. level for the March reef will also be commenced as soon as possible. The water continues heavy, especially at the 1,090-ft. level. The contractor for removing and setting the boiler is making fair progress, and will be finished next week. The winding machinery and everything about the mine and the mill is in good order.—T. RAMAGE.

HUMBOLDT ELECTRIC POWER.—By the last mail the board have received the survey of the water site, with particulars of fall and quantity of water, both of which are up to estimate, and the distance from the mines is rather less than auticipated. Negotiations are now in progress for the erection of the necessary machinery ; the first installation of electric power will be made to the present Esmeralda mill. Humboldt Mine : The west cross-cut was out 57 ft. It has been extended 11 ft. ; total, 68 ft. Instead of cutting a station at the east side of the shaft, a drift north has been run for 10 ft., from which point a turn will be made towards the east wall. The formation is all quartz, of a very favourable character. The engines and everything about the hoisting works are now in fine running order. There is a full supply of timber, and timber on the ground for the winter, and the wood will all be delivered in a few days, so that a big snow storm will do us no harm.

INDIAN CONSOLIDATED (17th Dec.)—Phœnix section : We have driven in the midway tunnel 13 ft. 6 ins., making the total distance 143 ft. ; the lode is getting larger, and at the present time it is all the width of the end, 5 ft., but I regret to say, from all the trials made by the washboard, &c., that it is not yet of any value. The ground is favourable for driving, with two good walls and patches of quartz all over the face of the tunnel mixed with a little pyrites. The stope in back of the midway level is locking in the south end of ground very encouraging ; we have a block standing here 10 fms. high ; the lode is small both at the top and bottom, but in centre it is fully 4 ft. wide, of fair quality quartz for the mill, so we have commeneed to drive a tunnel iu the middle to see how far the quartz will exteud in this direction. The stopes are produeing their usual quantities for the mill, and are being worked by much the same force as last week, viz., tramway level, 36, midway, 32, No. 1, 16 ; total 84. Lode in tramway tunnel keeps still up to its size, 14 ft., and we are of opinion that the quality will improve a little ; lode in back of midway is fully 7 ft. wide. Stope in back of No. 1 : The lode is 6 ft. wide. Prospecting is being carried on regularly, but we have not settled yet on any definite spot for a systeiuatic course of mining, as we should like to prospect some of the other known lodes first.—J. WILLIAMS.

(17th Dec.)—Colar section—No. 5 shaft : Owing to a breakdown with our compressor, the rock-drills have been idle nine days. The 360-ft. level north of shaft has advanced 3 ft., or 8 ft. 6 ins. from shaft ; lode small, assaying 3 dwts. 21 grs. The 360-ft. level driving south of shaft has advanced 3 ft., or 13 ft. from shaft ; lode 1 ft. 6 ins. wide, assaying 3 dwts. 21 grs. The 300-ft. level driving south of shaft has advanced 2 ft. 6 ins., or 63 ft. 11 ins. from shaft ; lode at present broken and irregular, producing low grade stone. The stope in the bottom of the 300 ft. south level is producing good milling quartz ; lode 2 ft. wide, assaying 1 oz. 12 dwts. 16 grs. per ton stone. The stope in the back of the 300-ft. level south is producing better quality stone ; lode small, 9 ins. wide, assaying 1 oz. 21 grs. per ton. The 300 north drive has advanced 1 ft. 1 in., or 65 ft. 5 ins. from shaft ; lode 1 ft. wide, assaying 2 dwts. 15 grs. per ton stone. The stope in the bottom of the 300 north drive is improving : lode, 2 ft. wide, assaying 14 dwts. 19 grs. The 230-ft. level, driving north of shaft, has advanced 5 ft. 8 ins., or 86 ft. 8 ins. from shaft ; lode, 3 ft. 6 ins. wide, assaying 8 dwts. 4 grs. per ton stone. The winze sinking below the 230-ft. level has been sunk 2 ft. 6 ins. ; lode large, but poor, assaying 1 dwt. 9 grs. The 230-ft. level, driving south of shaft, has advanced 3 ft., or 49 ft. 2 ins. from shaft ; lode, 2 ft. wide, assaying 10 dwts. per ton stone. The winze sinking below the 156-ft. level has been sunk 4 ft. ; lode large, but poor, assaying 2 dwts. 18 grs. The level driving north of the 156 stope has advanced 1 ft. ; lode 2 ft. 6 ins. wide, assaying 2 dwts. 18 grs. The 156-ft. level driving south of shaft has advanced 4 ft. 1 in., or 79 ft. 6 ins. from shaft. The lode here has also improved iu size and value ; now 3 ft. wide, assaying 8 dwts. 17 grs. The 156-ft. east drive from stope has advanced 3 ft. from face of stope, quartz, 4 ft. wide, assaying 2 dwts. 15 grs. Davey shaft : This shaft has been sunk 8 ft., or 152 ft. 7 ins. from surface ; the lode here is not turning out as I expected a short time since, the quartz bearing part again becomiug very small, and assaying 2 dwts. per ton stone. Trial shaft north of main shaft : The drive north-west of this shaft has been extended 23 ft. 6 ins. ; a little quartz is being met with, but no old workings up to this. Trial shaft south of main : This shaft has been sunk 12 ft., or 69 ft. from surface ; the lode maintains its size between walls 4 ft., but the quartz-bearing part is small, only 6 ins. wide. Trial shaft south of No. 5 : This shaft has been sunk 10 ft. 6 ins., or 44 ft. from surface, not having met any quartz in the lode formation I have suspended it. Battery : This is in good condition, but is only running at intervals. T. R. DAVEY.

MESQUITAL DEL ORO.—Mine captain's report, dated 7th December. In a report of work done in the mine during the week, the manager writes :—I am very pleased to say that we have the water all in fork again at the 256 level, and have commenced operations on the same.

MOSMAN (17th Nov.)—North Australian Mine : Since my last report all work has been carried on about as usual, and nothing new has been met with. The reef in the South Byerley stope has somewhat improved in size, and the quality of the stone is about 2 ozs. ; all other faces of stone are about as last reported. About 400 tons of stone is now lying in the paddoek ready for the battery, 56 tons of which was raised during past fortnight. Eastward Ho ! Mine : This mine is also looking about the same as when last reported on, except that the reef in the 1,000-ft. level stopes improved slightly, and yielded a fair quantity of quartz, of which 120 tons have been raised during fortnight. Crushing is kept going ; 600 tons of stone have already been crushed, and about 200 tons still remain in the paddoek. A retorting took place this week, and 658 ozs. 9 dwts. 12 grs. of gold obtained, which makes a total of 1,151 ozs. 16 dwts. 12 grs. of gold so far. There is about 1,000 ozs. of amalgam now lying ready to retort, and I think the whole should go about 3 ozs. per ton, or over. Columbia Mine : The shaft has been sunk another 12 ft., making a total of 259 ft. from vertical portion. The formation is about 6 ft. wide, between two good walls, and a reef may make any day, as the indications are favourable.—W. HOLLIMAN.

MOUNT SHAMROCK (8th Nov.)—Last night, at about nine o'cloek p.m., I was called to the mine, and to my great surprise found that about two-thirds of the timber from about 35 ft. from the surface to the main tunnel at 102 ft. had beeu carried away. On examining could find no cause, no rock had given way, the timber was not overloaded, as only a small amount of refuse stuff was thrown over to prevent anything dropping through. But here was timber varying in length from 20 ft. to 38 ft., broken and split, thrown in all direetions. This fortunately took plaee when the men were at their meals. All the information I could glean was that there was a heavy clap of thunder, and a cloud of dust came out of the tunnel, and a slight rumbling noise was heard. At the time we had a terrifie thunderstorm, with very little rain, but fierce lightning. In the morning it was plain that lightning had done the misehief. It struek the timber at the foot of surface shoot, and leaving the first two rows of timber from the surface untouched, took its course down the south end of workings, carrying everything before it to the main tunnel at 102 ft. Whether, owing to the steel railroad way or not, no damage was done further, our main roadway is one mass of wreckage. Fortunately we have a good supply of ore at the mill, so that the mill will be kept going.—J. LALONDE.

MOUNT SHAMROCK (19th Nov.)—We on Monday last resumed sinking the block of interim rock mentioned in last. We have sunk through in one place, and are now getting some heavy mineral ore, and also met with a cavity filled with loose mineral. On several trials of this mineral we have obtained very fair prospects for gold. At the 52-ft. level, stoping south, there is no chauge to note. This last rain has given sufficient water to supply battery, so have stopped pumping from permanent water supply. At the mill 20 stampers, two Watson and Denny pulveriser, and one Berdan pan in full work. Will clean-up through the course of the week.—J. LALONDE.

MYSORE GOLD (18th Dec.)—Mining operations : The rock-drills contiuue to do exceedingly good work, and the mine generally is looking very well. The 296-ft. level north of Taylor's shaft has been driven 522 ft. 4 ins., of which 29 ft. were driven in the last fortnight ; was up to a few days ago rich ; it contained a lode 2 ft. wide, assaying 5 ozs. 11 dwts. 1 gr. per ton of rock. The last few blasts, however, have been in barren rock, and at present the forehead is poor. It has been so before, and we hope this will only prove to be of a temporary character, and that I may soon be able to advise you that it is rich again. The 46; ft. north of Taylor's shaft : The cross-cut east was driven 20 ft. 9 ins., making a total of 69 ft. We holed into the Italian stope in the early part of last week ; now the men with one drill are employed in cutting gound to make the level good. After this is driven as far north as to the end of the stope the level will be carried on the course of the lode. In the past fortnight one rock-drill has been employed driving a cross-cut to the west in the 466 ft. It is driven 16 ft., and has passed through quartz ; now the cross-cut is suspended, and the men are put to stope down quartz to the south of it. It is about 3 ft. 6 ins. wide, assaying 9 dwts. 19 grs. per ton. The 400-ft. level north of Taylor's shaft was driven 29 ft. 8 ins. ; total, 465 ft. 4 ins. There is a very good-looking lode in the end 4 ft. wide, worth 3 ozs. 10 dwts. 13 grs. per ton. In driving the level below the 400, 21 ft. 4 ins. were cut, making a total of 32 ft. ; the lode is 4 ft. wide, assaying 1 oz. 10 dwts. 1 gr. Driviug below the 296-ft. level uorth of Taylor's shaft, 26 ft. were cut ; total, 38 ft. 8 ins. ; the lode is 1 ft. 6 ins. wide, assaying 11 dwts. 18 grs. per ton. The 296 south of Plummer's shaft driving north on the west branch 7 ft. 9 ins. were cut ; total, 60 ft. 3 ins. ; the lode is 4 ft. wide, assaying 13 dwts. 1 gr. In the following places there are no changes :—Driving below the 236 north of Taylor's shaft, the 236-ft. south of Plummer's shaft, 6 ft. were cut ; total, 195 ft. 6 ins. The 173-ft. south of Williams' shaft, 5 ft. were cut ; total, 179 ft. The 236-ft. level north of Taylor's shaft was driven 24 ft. 8 ins. ; total 305 ft. 9 ins. It has been holed to the rise put up from the 296-ft. level, and in a few days more we expect the end will get into quartz. There is not much change in Tennant's part of the work. 180 ft. north end was driven 6 ft. 8 ins. ; total, 37 ft. 8 ins. ; the lode is 1 ft. wide, assaying 13 dwts. 1 gr. The south end in the same level was driven 5 ft. ; total, 41 ft. ; the lode is 1 ft. wide, assaying 6 dwts. 12 grs. McTaggart's shaft, driving the 152 ft. south, 17 ft. 6 ins. were driven ; total, 281 ft. 6 ins. ; the lode is 18 ins. wide, assaying 3 dwts. 12 grs. Schaw's shaft : The 220 ft. south end is driven 4 ft. 10 ins. ; total, 37 ft. 4 ins. ; the lode is 2 ft. 6 ins. wide, assaying 3 dwts. 12 grs. per ton. Stoping : We are working one stope in the back of the 400 north of Taylor's shaft, where one rock-drill is employed ; the lode is 4 ft. 6 ins. wide, assaying 1 oz. 21 grs. Stoping in the back of the 400 south of Taylor's shaft : Italians are employed in haud work ; the lode is 5 ft. wide, assaying 11 dwts. 18 grs. per ton. Sinking : Taylor's shaft was sunk 7 ft. ; total, 517 ft. 4 ins. The rock is very hard and barren. Sinking the incline shaft, below the 400 north of Taylor's, 28 ft. were sunk ; total, 163 ft. 8 ins. ; the lode is 3 ft. 6 ins. wide, assayiug 1 oz. 21 grs. This place is now sunk below the 466, and it is for the present suspended. The men with one rock-

drill are put to drive south on the wide lode from the east cross-cut in the 466-ft. level with a view to hold to the incline; the lode is about 4 ft. 6 ins. wide. We have commenced to sink a winze in the bottom of the 296-ft. south of Plummer's shaft, 5 ft. has been sunk; the lode is 3 ft. wide, assaying 18 dwts. 9 grs. Tennant's shaft was sunk 5 ft. 4 ins.; total depth. 195 ft.; the lode is 16 ins. wide, assaying 1 oz. 2 dwts. 20 grs. Schaw's shaft was sunk 7 ft. below the 220, making a total of 239 ft.; the lode is 2 ft. wide, assaying 4 dwts. 14 grs. Since the samples were taken, the lode has shown a more promising appearance, and we think the stuff ought to assay better. I am glad you have decided to send rock-drills and compressors for the development of both Tennant's and Schaw's shafts. Tailings machinery: The engineer is getting on in a satisfactory manner with these erections; the last of the boilers was delivered on the mine last night. Stamping: This work is also progressing very well, and the ore is turning out a little richer, and we are taking up more amalgam than we did at this date last month. Mill samples: 7th December, 2 ozs. 1 dwt. 18 grs.; 14th December, 1 oz. 15 dwts. 22 grs.—B. D. Plummer.

NEW EBERHARDT.—The mine manager reports under date 22nd December as follows:—South cross-cut from surface drivings has been advanced for the two weeks 8 ft.; total length, 24 ft.; these drivings continue in the low-grade quartz. South drift: At this point I am pleased to be able again to report some improvement. During the past week our small seam opened out so as to enable us to take out some 8 tons of ore of an average value of £65 per ton, and at this writing it looks quite promising. I still press on with developments at this point as fast as possible. West drift from north shaft: This drift has been advanced for the two weeks 16 ft.; total length, 22 ft. The material thus far encountered in this drift is hard black lime with some branches of quartz. North shaft No. 2 has been extended down for the two weeks 12 ft.; total depth, 51 ft. The ground in this shaft continues very hard. North shaft No. 3 has been extended down for the two weeks 12 ft.; total depth, 29 ft. The broken ground mentioned in my number 10 still continues. East cross-cut from bottom gore incline has been advanced for the two weeks, 20 ft.; total length 67 ft. Materials passed through broken quartz.

NEW EMMA (22nd Dec.)—My last report was under date of 15th inst., and I now have to report work carried on at the mine for the week ending to-day as below:—Level running east from No. 1 advanced 14 ft.; total, 70 ft. Quite an improvement is noticeable; rock is much softer, showing more iron, also shows manganese. The outlook for striking ore improves. Level running north-westerly from No. 1 advanced 8 ft.; total, 89 ft. This level contiuues in caved ground; progress is therefore slow, as we have to advance carefully and timber closely. Level No. 3 easterly advanced 6 ft.; total 247 ft. No material change; the ground continues seamy, and much mineral stained. Cross-cut from No. 3 advanced 8 ft.; total, 18 ft. The ground, with the exception of being a little harder, is about the same character as in the level. The seam of ore north-westerly from raise from Attwood winze, continues from 4 to 6 ins. wide. We have mined about 1 ton good ore from this point during the week, making about 17 tons ore mined from this drift. Although the seam is narrower the ground on either side is soft, and I am in hopes of its widening again. We continue extracting fillings for next season's run. Snowing very hard, and it is uncertain whether we will have a mail in or out.—H. C. Wallace.

NEW LA PLATA (18th Dec.)—Manager's report: Oro La Plata Mine. Block 4: The lessees have discovered the continuation of a large ore fissure below the 4th level; it is opening out as developed in depth, and though it does not yet yield pay ore, I am convinced from the general appearance of the fissure, that good ore will shortly be discovered (24th Dec.: "Showing a little pay ore.") These lessees are limited to a depth of 50 ft. below the 4th level. 5th level north; Development on the sulphide fissure has been continued with two men. I am pleased to say, that the main ore fissure is again forming in softer ground, and the general outlook for ore, at this point is more promising than I have yet seen it. There is nothing new in the other parts of the mine. The lessees are working steadily. Slag dump; Work begun by the lessees with 10 men on the 22nd December.

NO. 2 QUEEN GOLD.—The following fortnightly report has been received from the mine, dated 16th November:—Mill: Since the battery started again we have kept five heads going constantly on our own stone and 10 crushing for the public. We have just completed a lot of 130 tons for the Dan O'Connell Company, and have about 128 tons going through for the Great Britain, which will be followed by some 500 tons from the Old Identity. Our great difficulty is water, which is rapidly falling; indeed, there is such a general scarcity that the whole district is threatened with a water famine.—A. C. Charleton.

NORTH MEXICAN (21st Dec.)—Enclosed please find labour sheet and cash account for last week. I have continued to work up the shaft until I can make better arrangements for timbering, as without timbering it is impossible to continue sinking. This week I have been timbering the Pulbrook shaft on the Durana. The vein in the San Nicolas has not changed.

NUNDYDROOG (18th Dec.)—Mining operations: Webb's shaft is down 388 ft.; the lode is still split and disordered by the influence of the cross-course. The 370 north end is also under the same influence, but we think the appearance is much more encouraging. The band of quartz, which found the cross-course in the upper levels, ran obliquely to the north and south lode; it was also greatly mixed with mica; now it is running nearly in the same direction of the gold quartz, and it contains much less mica; the stone also gives traces of gold. We hope it will ultimately become a paying lode. It was driven 8 ft. last week; total from shaft, 30 ft. 2 ins. The 300 ft. south of Webb's has been driven 5 ft.; total, 73 ft. 9 ins.; the lode is 2 ft. 6 ins. wide, assaying 1 oz. 10 dwts. 12 grs. The intermediate level contains a good looking lode 2½ ft. wide, assaying 1 oz. 14 dwts. 18 grs. The 230 ft. south end is in a lode 1 ft. 8 ins. wide, assaying 19 dwts. 22 grs. The 166 ft. south of Webb's shaft is getting near the south boundry; it shows a lode 1 ft. 3 ins. wide, assaying 3 dwts. 12 grs. There has been little done in the 300 north of Taylor's shaft; there is no change in the rock, and the bottom of Taylor's, which is now down 311 ft. 2 ins., is still in hard barren rock. The stopes are producing rich quartz, between the 300 and 370 south of Webb's shaft; the lode is 4 ft. wide, assaying 2 ozs. 16 dwts. 6 grs. The rise in the back of the 230 ft. north of Webb's shaft; the reef is 2 ft. wide, assaying 2 ozs. 1 dwt. 6 grs. The middle level between the 166 and the 230 contains a reef which assays 3 ozs. 2 dwts. 6 grs. Stamping: The mill is running very well and so are the pans. On account of stopping to put in the new engine, the stamping did not begin until the 8th. Rock-drills: The compressing engines are doing good duty, and the men are doing better underground with the drills than they did at first—8 ft. were driven last week in the 370 north end, and 5 ft. in the 300 south end. The men employed with one drill in sinking Taylor's shaft are not yet very expert, but will doubtless improve week by week. Assay of weekly sample from the mill: Rough quartz, 2 ozs. 18 dwts. 18 grs.; smalls, 1 oz. 9 dwts. 12 grs. —B. D. Plummer.

OSCAR (5th Jan.)—Owing to the Christmas holidays, our work has been somewhat disturbed, but we are glad to report we are in full activity again. Oscar lode: Shaft and bottom levels no alteration whatever, but there is a slight increase of quartz in the level, which is being driven on No. 3 lode. Daw's lode: Shaft and bottom level north remain unaltered. Bottom level south shows an increase for quartz, but we have not seen any visible gold this week. There is also an increase of quartz in the 170-ft. level north. Other places no alteration to call your attention to. The weather is very mild, almost like summer.—J. Daw, jun.

PERSEVERANCE (17th Dec.)—With regard to the assays, I have been so sick in the last week with a bilious cold that I could not stand the fire, I will try to get these done with a few additional this week. With regard to the mines, all the ends and the stopes show very good stone. The end A, B tunnel, is very much improved after passing through a nip of slate. The concentrators promise to do good work, and as soon as we can finish our furnace and pan, I am sure the returns will be materially increased. Mine measurements: B tunnel, first drive south in lode continued 3 ft. Here we have got through the nip of slate, and the lode seems to be opening out again fast, the quartz being about 3 ft. thick, and containing much more mineral than I have seen elsewhere in any of our drives. The 2nd drive south in lode continues 4½ ft. The 2nd rise in lode continues 7 ft. Drive south in lode, out of 1st rise continues 6 ft. No. 4 level: The drive south south-west in lode from winze, no progress. We had a run of soft ground on the foot-wall, and were obliged to stop for timbering. No. 1 prospecting shaft workings: Drive south in lode continued 8 ft. They were just about to hole 2nd rise B Tunnel when I measured. No. 2 prospecting shaft workings: Drive west on narrow vein, winze level, driven 15 ft. The vein continues very regular and very perpendicular, and some of the ground about it is very promising, but no pockety stuff has been found.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 16th December:—Dunderberg: There is no change to note in any of the pitches during the week, the various pipes of ore remaining small. No shipments have been made owing to the furnaces having been shut down, for the reason mentioned last week. Eagle's tunnel: The upraise from the tunnel has advanced 12 ft. during the week, making 43 ft. in all. The ground has become rather harder again. There are 29 tributers and six contractors at work in the mine.

SHEBA.—The general manager, in his last letter, dated 11th December, writes as follows:—Mine: There is little to report this week. North in No. 1 level the ground is poor and hard. East in Nos. 1, 2, and 3 levels, the shoot stuff still holds, although it varies in quality. So far we have met with no stone of value in No. 5 level, and in No. 4 east and west the ground is poor. In the quarry we have lately met with some valuable stone, and we consider we have from 150 to 200 tons of 4-oz. rock on hand. We have also from 200 to 300 tons on hand, worth from 2 to 3 ozs. per ton on the lower floors at the foot of the hill. Mill: Fair progress is being made, and I think things will be in fairly good order by the end of the year.

TRANSVAAL GOLD EXPLORATION.—The following particulars are from the manager's advices of December 10th:—Brown's Hill Mill: The battery was at work during the week for 61½ hours, and crushed 116 tons of ore from Eta Vein, the usual clean-up of plates yielding 161 ozs. of amalgam. Pans: During the week the pans were at work 122 hours, and treated 33¾ tons of conceutrates, assaying 1 oz. 18 dwts. per ton. Jubilee Hill: The drive from bottom of shaft No. 870, to prove the Delta vein has been extended 26 ft. The continuation of this drive for other 10 ft. or 20 ft. is expected to prove whether the vein goes down. Ophir Hill: Zeta vein: The weight of ore extracted during week was 8 tons; assay value 1 oz. 16 dwts. per ton. Transport of the ore on dump at this place to Brown's Hill Mill had commenced. The ore averages 3 ozs. per ton. Prospecting was proceeding on Ophir Hill, but up to date of writing no defined vein had been cut. It was intended shortly to resume mining operations on the Beta vein at Peach Tree Creek.

VICTORY.—Our superintendent at the mines, writing under date 27th November, says:—From the 13th up to date the shaft has been sunk 11 ft., making a total of 139 ft. from platform. Timbered to bottom. Track guides, &c., for skip fixed. On the 19th we lowered the pump about 13 ft., the water rising 12 ft. in five hours. The appearance of the shaft still continues to look very promising, being mixed with small veins and lumps of quartz.

THE REMINGTON STANDARD TYPE-WRITER.

A speed contest was held at the Banqueting Saloon, St. James's Restaurant, Regent Street, on Wednesday evening. The meeting was arranged under the auspices of Messrs. Wyckoff, Seamans and Benedict, 100, Gracechurch Street, E.C., and was managed by Mr. John Harrison, their London representative. There were about 125 competitors, and an influential committee adjudicated upon the result. Dr. B. W. Richardson, F.R.S., presided, and timed the contestants. The results announced were as follows:—1. Mr. Oliver Wren, 79 words per minute. 2. Mr. E. D. Lane, 77½ words per minute. 3. Miss E. B. Farran, 76 words per minute. 4. Miss Bertha Still, 75 words per minute. 5. Miss Alice E. Maling, 74½ words per minute. 6. Mr. Charles Fry, 73½ words per minute. 7. Mr. Christopher Cook, 72 words per minute. 8. Miss Mabel Steele, 71½ words per minute. 9. Mr. J. L. Harmer, 70½ words per minute. 10. Mr. T. Hulbert, 70 words per minute. The speed of American operators is far greater than this record, and it is to augment it in English work that the competition was instituted. Prizes to the extent of nearly 100*l.* were offered. The proceedings were highly successful, and were watched with the keenest interest by a large body of spectators.

WATER-GAS.

(FROM "THE TIMES."

For many years past attempts have been made at intervals to produce what is known as water-gas—that is, gas resulting from the decomposition of water. Experimentally there have been several successes, but practically and commercially, up to the present time, as far as we are aware, these have been only failures. These failures have mainly arisen from the difficulty experienced in separating the water-gas from the other products. This difficulty has now been overcome, not by one invention, but by the combination of the best features of several inventions having for their object the manufacture of water-gas. What is more, the patented inventions which have been combined in the new process are not those of one inventor or one country, but represent several inventors and several nationalities—namely, England, Germany, America, and Sweden. The amalgamation of these various patents and the beneficial results which have accrued therefrom came about by reason of the exigencies of manufacture of corrugated boiler flues and press-flanged steel frame plates for railway rolling stock at the Leeds Forge Company's Works, Leeds. The metallurgical operations carried out there demanded fuel of a higher calorific intensity than could be obtained from either the geuerator gas of the Siemens producer or ordinary coal gas. Mr. Samson Fox, the managing director, therefore, turned his attention to water-gas, and, having carefully considered the whole question, decided on putting down a water-gas plant at the Leeds Forge. The works were begun on September 29, 1887, and on March 29, 1888, plant capable of producing 40,000 cubic ft. of water-gas per hour was started, and has since been in constant operation with perfect success and without interruption. The gas produced gives every satisfaction, not only for metallurgical but also for lighting purposes, the whole of the works being supplied with it. Water-gas is the result of a chemical reaction which takes place in passing steam through incandescent carbonaceous matter, and may be considered as the practical result on a wholesale scale of the ordinary laboratory experiment of decomposing water by passing steam through a highly-heated iron tube. The process consists of alternately blowing the generator hot and making gas, and a run of gas is made every 15 minutes, during which time the yield from each generator is about 17,500 cubic feet of producer-gas and 5,000 cubic feet of pure water-gas for heating and lighting purposes. The gas is also used most successfully for driving gas engines. The metallurgical purposes to which the water-gas is applied at the Leeds Forge are various. In the first place, it is used in the heating furnaces in the plate mill, where the steel ingots are rolled into plates for the manufacture of Fox's corrugated boiler flues. It is also used in welding these tubes and heating the plates for Mr. Fox's flanged frame-plates for railway rolling stock, and for his flanged boiler-fronts, besides which it is utilized in various other similar operations throughout the works. In the application of water-gas to the manufacture of Siemens steel there is a marked improvement in the quality as well as the quantity of the product. With this gas 30 charges of steel per furnace per week can be turned out, as against 11 charges per furnace per week from furnaces of equal capacity using gas from Siemens producers. Besides being used for metallurgical purposes, the offices and various parts of the works are lighted with water-gas, the burners employed being arranged on the Fahnejelm system. Burnt in the ordinary way, the water-gas gives a blue flame, but by suspending a comb composed of thin magnesia rods in the flame the filaments are quickly heated to a white heat, producing a bright glow light of high illuminating power, but which is neither unpleasant to the eye nor prejudicial to the sight. The heating power of water-gas was very great, as was demonstrated upon our recent visit to the Leeds Forge Works, where we inspected the method of its manufacture as well as that of its use in the various departments. To give one instance only, a piece of copper wire placed in an ordinary coal-gas flame was only made red hot. A similar piece of wire placed in a water-gas flame issuing from a similar burner was quickly and perfectly fused. An important consideration in the adoption of any new system is of course its cost; and in this respect water-gas comes out well. Its production per ton of fuel is about 30,000 cubic ft., and with fuel at 8s. per ton, labour at 3s. 6d. per man per day, and the production going on continuously, it is found that the gas costs slightly less than 4d. per 1,000 cubic feet. The experience of nine months' working at the Leeds Forge has led to the conclusion, based on carefully ascertained data, that the saving effected on the whole works is about 10,000*l* per annum. Looking at the advantages of water-gas for illuminating purposes it is to be observed that, besides giving an agreeable light, it does not develop any noxious fumes, nor does it produce smoke; health and cleanliness being thereby preserved, and paintings, furniture, and decorations remaining uninjured. For lighting mansions this would prove a boon, while the producer-gas can be utilised for heating purposes. Similarly, a mill-owner laying down a water-gas plant for lighting his factory will obtain gaseous fuel for steam-raising purposes practically for nothing. For small towns also, the lighting could be carried out with water-gas, the producer-gas being used for steam-raising and manufacturing purposes generally. Although the installation of this water-gas plant at the Leeds Forge is the first in England, the system is being largely adopted in America and on the Continent, both at steelworks and for illuminating purposes. Constituting as they do a new industry within the past few years, the manufactures at the Leeds Forge are worthy of a passing notice. The works and buildings cover about nine acres, but plans are in progress for the erection of new plant to meet the increasing demands upon present resources. The corrugated boiler furnaces of Mr. Fox form a large item in the out-put, some 3,000 steamers, with an aggregate of about 7,200,000 horse-power, including 70 vessels of the Royal Navy, having been fitted with them. This represents, in the aggregate, an enormous saving in fuel, besides prolonging the life of the furnaces. On the occasion of our visit we were shown a set of 12 flues which were fitted to the boilers of the Pretoria in 1878, and have recently been taken out and replaced by new ones after ten years of constant use. The Pretoria has the distinction of being the first ocean-going steamer fitted with these flues. The second new industry which is attracting the attention of railway engineers and is being adopted on some of the principal railways is also due to Mr. Fox. This is the pressed steel rolling-stock frames which successfully meet a want long felt by locomotive and railway carriage builders. Instead of the frames being built up of wrought iron, and, in the case of carriages and waggons, of iron and wood, they are press-flanged from flat steel plates by powerful hydraulic machinery. The result is a great economy in first cost, a reduction of dead weight to be carried, combined with greater constructive strength and durability, the various parts also being interchangeable. As regards structural strength, we may mention that a pair of bogie trucks, built of pressed steel, each weighing 812 lbs., were tested together with a total load of 130,486 lbs. without producing any sensible deflection.

REVIEWS.

MINING MACHINERY, WITH ILLUSTRATIONS, PRICES, &c. By C. Cornes, Assoc. M.Inst.C.E., M.I.M.E. London: E. and F. N. Spon. Price 2s. 6d.

This interesting catalogue, for reasons which will appear, deserves far more than the attention ordinarily bestowed upon such works. Its author is a member of the well-known engineering firm of Messrs. Calvert, Cornes and Harris, of Walbrook, and he is to be congratulated upon the manner in which his work has been issued from the Press, and also upon the valuable information with which he has studed its pages. A careful perusal of this book would be of much service to the directors of some mining companies we know, and would impart not a little useful information to shareholders whose questions at public meetings often betray their ignorance of mining machinery even more than their silence.

Mr. Cornes indicates the chief systems in use for the getting, reducing, concentrating, and amalgamating gold and silver ores as follows:—"The chief systems in use for the getting, reducing, concentrating, and amalgamating gold and silver ores, together with the most general forms of machinery and plant employed, giving, where practical, the data as to prices, weights, power, and production within a given time, so as to enable intending purchasers, at a distance, to generally understand the nature and construction and method of working of each process or machine, together with its approximate cost, and, to further facilitate this, he has annexed complete estimates for several sizes of mills, with the stores, &c., usual to be furnished with them; and further endeavoured to codify the whole of these price lists, &c., so that, in the event of any machine or parts being required, they can be telegraphed for, and can be supplied with the least possible delay."

The author then proceeds to describe, in language at once accurate and comprehensible, and with as few technicalities as possible, the different systems of amalgamation and chlorination. Assuming a 20-head mill to be ordered, he gives a list of the duplicates, stores and tools which should be dispatched with it. The book is interlarded with illustrations, which add to the force and clearness of the letter-press. The work deals at considerable length with rock-drills, improved air compressors, rock breakers, crushing rolls, sizing screens, plunger jiggers, pumps, winding engines, feeders, amalgamation pans and settlers, and his own patent vanner or concentrator, which, "with its compound motion, will be found to represent the action of vanning or panning more nearly than any other machine yet introduced, and will, therefore, give a more perfect result." He has also something of interest to say about his "continuous ore feeder." He quotes the full text of the article we wrote last October entitled "A Revolution in Quartz Crushing Machinery" in reference to the Huntington Centrifugal Roller Quartz Mill, which we inspected, and which was about to be dispatched to the Essaman Company's property to deal with its quartz. We have no hesitation in saying that this is not a catalogue in the ordinary sense of the term, but a really useful work, which might be placed in the hands of the general public, and particularly in those of mining directors and shareholders. The information it contains is both useful and interesting, and the author is to be congratulated upon his success.

MATHIESONS' HIGHEST AND LOWEST PRICES (1889 Edition). London: Effingham Wilson and Co., Royal Exchange, E.C.

These lists give the highest and lowest prices for 1888, dates on which each occur, and the extreme fluctuation, of every stock quoted on the Stock Exchange; also the monthly highest and lowest prices for 1888, and the yearly highest and lowest prices for previous five years of the principal stocks, with dividends paid for the past six years, and the Bank of England rates of discount for past 20 years. As usual, the tables are carefully prepared, and may be relied upon for accuracy.

SELL'S DICTIONARY OF THE WORLD'S PRESS.

We welcome this volume once more as an interesting addition to office literature. The lists of papers have been brought closely up to date. Some of the more special articles are:—"Practical Hints on the Law relating to Libels in Newspapers," and "The Law of Libel Amendment Bill, 1888"; "The New Journalism," by J. W. Robertson-Scott; "Journalists and the English Language": and 60 photograpic portraits of leading London and provincial editors, &c., &c. It has been the aim of the compiler from year to year to make the "Dictionary of the World's Press" the popular newspaper annual; a book not only of interest to editors, publishers, and business men, but by introducing illustrations, novel and original articles, to make it of interest to the general reader. The work is in its ninth year of issue, and occupies nearly 1,500 pages.

Certificates in the Iquique Silver Co. are now ready, and will be exchanged for allotment letters and bankers' receipt.

The earnings of the Mexican Central Railway Co. for December were $458,887, being a decrease of $74,378 compared with 1887.

THE UNION MORTGAGE, BANKING AND TRUST COMPANY, LIMITED.—This company is formed for the purpose of extending facilities for the safe investment of capital in first-class securities. The prospectus points out that very few eligible securities of this order yielding a return exceeding 3½ or 4 per cent per annum, can now be obtained by investors in Great Britain. The authorised capital of the company is 2,000,000*l*.

THE MINING MARKET.

THE FUTURE—AND SOUTH AFRICAN MINES.

From Mr. Thompson's Mining and Investment Circular.

And what are the prospects of the coming year? Well, a boom, and a big one, too—probably the biggest that has been seen for many decades past, even if it may not be said during the nineteenth century. Money, it is true, is comparatively high just now, but legitimate trading will stand without injury even higher rates yet. And trade is improving. There can be no question about that. Let the reports now coming from all the great centres of commerce be compared with those of a year ago! Let a few moments be given to a perusal of the Railway Traffic Returns, and, perhaps, best of all, let everyone look at his own books and the balances standing to his credit, and then probably there will be swept away all lurking doubt upon the subject.

The business of this circular is, however, not so much with general trade as with Mining and the Stock Markets, though the former is important as bearing upon the sums which may be at the disposal of the public, and which may come into the latter for investment and speculative purposes. Trade may, and doubtless will, improve—there seems not, even in the political world, anything to prevent it for at least some time to come; but it is in connection with mining that the boom is to be looked for—a boom which may make itself felt in every home throughout the kingdom. It is already upon us. Nitrates may be said to have begun the movement, for are they not taken from the soil of South America? Have they not been the means of making one man seven times a millionaire? and have they not made the fortunes of all connected with them? And this was followed by the movement in favour of gold mining in South Africa—a movement which has as yet only commenced, but one which bids fair to cast Nitrates far back into the shade. These remarks may appear at first sight a little "tall." But no one appears able to comprehend the marvellous wealth which seems buried in the goldfields of South Africa. Here we have, not paltry returns of ½ oz. of gold or so per ton—a rate which many regerd as yielding a fortune under good management; but we find quartz running 5 to 10 ozs. to the ton, not in isolated places, but comparatively over whole districts! Here, too, we have, not mining properties of a few hundred feet "run," but vast tracts of country in the hands of single companies—one has nearly two million acres, while many others hold auriferous mining ground to the extent of tens of thousands of acres! Here we have, not thin lodes a few hundred feet in length, but huge fissure veins stretching for countless miles—the one at Witwatersrand is being opened up for 40 miles, and a second, the Black Reef, is said to have been traced for 170 miles.

And the results so far obtained—what of them? Several companies are paying 60 per cent. per annum, and one at the rate of 300 per cent. per annum, and within less than two years of their formation. Nearly all that have stamps erected are doing well, and two companies promise us that 10,000 ozs. of gold per month shall shortly prove within the measure of their returns. The fears which have been raised in the public mind with regard to the "booming" of existing shares, and that the market is being overdone, arise, for the most part, from sheer ignorance. Let the notes on African Mining, which will be found further on, meet with a careful perusal, and it will be seen there is a large degree of justification for the great advance which has so far taken place in quotations. But suppose it be allowed that many mines now command fancy prices, and no longer afford a temptation to the investor! Well, then we have the now established facts that mining in South Africa will pay well, and that there is room in the Transvaal for every one who may choose to go and embark in that pursuit. It is possible, if not probable, South African mining shares may only command fancy prices for a time; but it is evident that under fairly good management nearly all the mines will pay, and that searching for gold is likely within the near future to become reduced to the level of an every day mercantile pursuit rather than remain, as hitherto, a vehicle for more or less wild speculation.

But in other parts of the mining world we may also look for prosperous times. Indian gold mining does not appear to be the great thing it was once taken for. In fact, those who understand mining, have well known from the first that too much store was being set by it. But the monthly reports show that upon the Mysore lode good work is being done, and though there may not be enough in the mines to make us regard them as great successes, there appears sufficient to show that a tide of comparative prosperity is setting in, and that higher prices may be anticipated for the shares in the near future.

Next comes Colombia—the marvellous country, about which so much has been written in these pages! Well, here, too, grand things may be looked for. Colombian Hydraulic is doing well, and while the shares may be regarded as an investment paying a satisfactory dividend, there is a strong probability of a considerable advance in their price. The same remark applies to Orita, but here there is little doubt the share will ere long double the current quotation and go 4*l*. Tetuan—well, this will emulate the others in success. The writer recommended Colombian Hydraulic to his clients at 5s., and Orita at the same price. They are now 700 per cent. above this figure. Tetuans were first recommended at 2s. 6d. They are now 7s., but will catch the others up ere long. In Tetuan shares there is one advantage over the many of the South African mines—the company is registered in England, a matter of importance, as will be found by a reference to the African notes further on; and those who venture in now do so when the shares are practically at their lowest.

In America, we English hold a whole quantity of "rubbish," but some improvement may, nevertheless, be looked for. The success of South Africa and of Colombia will probably cast a glamour over even this quarter, and prices should rise in sympathy with the rest.

The outlook, it will be seen, is good all round. If there be any cloud upon the horizon it will probably be found in copper and copper shares. But even here we may be free from disquiet for some time to come, and should a "smash up" take place it is the Foreign Stock Markets, where these shares are usually dealt in, that will suffer most. The English, however, appear to appreciate the slipperiness of the situation in this quarter, and it is probable when the end comes, if it does come this year, it is not we, but our Gallic friends, who will be found "in the cart."

African Mines.

Notwithstanding the great rise which had taken place before Christmas in the price of these shares, amounting in some cases to 1,500, and even 2,000 or more per cent., the "boom" continues, and many onlookers of the market where such securities are dealt in are tempted to hold up their hands in amazement and cry, "Mad, Africans are all mad!" Be this as it may, the "boom" appears likely to continue for some time to come, and if there be some shares whose quotations may be regarded as having approached apparently extraordinary limits, there are still many others which will assuredly "have their day." The fact is South Africa has at length been discovered to be one of the richest gold mining countries of the world, and bids fair to rival California and Australia in their palmiest days, while it enjoys an advantage over most of the new mining districts, which have yet been brought under public notice in being easily accessible, and having for the most part been exploited by an energetic population of experienced miners who have possessed the requisite knowledge and power of selecting their mines, and of bringing them into active operation in the shortest possible space of time. As evidence of this it may be well to mention that the Langlaagte Estate on the main reef at Johannesberg might have been purchased less than three years ago for 500*l*. sterling. And now! It has been split up into hundreds of mining properties which, within the short space of 12 months have been more or less developed, and which, having stamping mills already in operation, are turning out gold in appreciable quantities, and are, in some cases, paying dividends which we, with our 3 per cent. and 4 per cent. investments, cannot help regarding as simply enormous. Several mines are now paying dividends at the rate of 60 per cent. per annum while one is actually paying at the rate of 300 per cent. per annum. In a word, the estate which only a little while ago could have been bought for 500*l*., now commands a market value (roughly) of from eight to ten millions.

And is such a rapid appreciation of the value of mining property in South Africa likely to continue? Well, Yes! Johannesburg mines have, in many cases, reached extraordinary prices, but, if we may rely on advices almost daily arriving from the Transvaal, it is by no means certain that they are not worth every shilling of current quotations, and that they will not reach yet higher limits. A broker, in writing from Johannesburg, says, we may look for returns of 10,000 ozs. each, monthly, from Langlaagte and Robinson, and that the latter shares may go to 100*l*. A private friend of the writer's, who has no monetary interest whatever in any of the mines (more donkey he!) writes:—

"I have been down most of the Witwatersrand mines, and they must be the most wonderful in the world. Forty miles of reef going 6 oz. to the ton, and not anything like bottom yet! The Langlaagte is getter richer every foot they sink, and this is the deepest mine at present, and no one can form any idea of its wealth. This is by far the most wonderful place in South Africa, and the work done in two years exceeds anything yet accomplished."

Again he says that a few days before writing he had seen several dealers make 60,000*l*. each in one week from their transactions.

Wonderful! Truly wonderful!

From all this it would seem apparent that even the high priced shares are to rise further. If, however, we now feel afraid of these, we may remember that many shares have not even yet commenced to move, while the De Kaap has yet to have its turn, and there are several other districts, at present but little known, but which bid fair to become as rich as any that have yet been discovered. Herein, in fact, lies one of the only dangers of the situation. Gold appears to have been discovered in such large quantities and distributed over such a tremendous area, that there is room for everyone to go mining who may choose to do so. The Witwatersrand district is one instance in point, and the Black Reef, which has already been traced for 70 miles through the Oceana Company's property, and which is now reported to have been found at Noitgedacht, 100 miles still further away may be taken as another. One of the most extraordinary of these (mining) laws—at least to our notions—is one which permits of large increases of capital and the selling of new shares by tender, or even by private agreement, en bloc or otherwise, and, if desirable, at a discount. A very notable case in point will be found in Spes Bona, which rose in price during the early part of December from about 3*l*. to nearly 8*l*. per share. There was no apparent cause for this comparatively huge rise, beyond the fact that it was known the capital of the company, then 30,000*l*., was about to be increased, and many jobbers were consequently tempted into selling "short," believing that the new issue of shares would certainly bring down prices. A meeting was held, and 40,000 new shares of 1*l*. each were issued to one party (of three, the writer believes) for 27,500*l*. net. Hence, the attempts of the poor "bears," who were thus "cornered" to cover their "shorts," combined with the natural efforts of the new allottees to make as good a thing as possible of their bargain, took the quotation up in course of little more than a week to the extent already mentioned. Other companies have largely increased their capitals—Botha by 100,000 shares issued at 8s., Charlton and Meyer by 3,000 shares for which 5*l*. each was accepted, Croesus by 30,000*l*., Heriots by 10,000*l*., May by 15,000*l*., Metropolitan by 12,000*l*., Star by 41,000*l*., Van Rhyn by 40,000*l*., and Wolhuter by 25,000*l*.—and though all may not have done so in a similar fashion to that mentioned, sufficient has been written above to indicate, that unless he have the best and earliest information, a holder of South African shares may find when he awakes one morning that the intrinsic value, at least, of his property, has, during the previous twenty-four hours, suffered a large, and so far as he may be concerned, utterly unavoidable depreciation.

It will be seen from the above, that while the writer is a firm believer in African mining, and in the *large profits* which *may be made* in the future, and indeed, at present *in many of the existing companies*, he does not permit himself to be altogether blinded by the glamour of high and ever rising prices. He would simply point out that care is necessary in buying African mine shares, and he trusts that the notes under this heading which will be found in this and future numbers of this circular, may prove alike interesting and profitable to all those who may care to devote a few moments to their perusal.

Besides the above short article on South Africa, Mr. Thompson publishes particulars of about 160 different mines in addition to more or less lengthy notes upon forty of the same class.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

REDUCTION OF THE BANK RATE.

AFTER a period of three months, the directors of the Bank of England have at length seen fit to concede a reduction of 1 per cent. on the 5 per cent. rate. As discount in the open market has for some time been 2 per cent. less, and the position of the Bank had improved, in respect to the bullion drain a downward movement had been expected, but there is no doubt that the stronger Bank return had great influence on their policy. With a recovery in the proportion of reserve to nearly 40 per cent. of the liabilities, and a reserve of 12,500,000*l.*, compared with only a little over 11,000,000*l.* last week. The position is much better than generally expected, and the money has eased off accordingly, bills being quoted for all dates at about 2⅞ per cent., and money for short loans 2 to 2½ per cent., while the discount houses have again reduced their terms for deposits to 2½ and 2¾ per cent. for money at "call" and "notice" respectively, the banks allowing 2½ per cent. The Bank of France has followed suit, and reduced its rate from 4½ to 4 per cent., and the open market rate there has receded to 2⅝ per cent. The dividends on the Funds have been payable since Monday, but the public deposits show an inerease, and an augmentation of 2,700,000*l.* in the Government Securities would indicate that the Government had borrowed to pay them, hence the non-reduction under the public deposits. As nearly nine millions of loans have been repaid to the Bank, of which five millions has been withdrawn from the private deposits, the balance would represent the amount of dividend money received. Although so much the poorer the market is quit of the liability to the Bank, and, considering that the Sinking Fund has been appropriated, the course of the market is likely to tend higher rather than lower.

There was just sufficient doing in Lombard Street to-day to maintain the open market rates, and short loans have been easily borrowed at 2½ per cent., and bills of three months discounted at 2⅛. It is expected that moderate withdrawals of gold for Brazil will shortly be announced.

At the Bank this afternoon, an influx of 51,000*l.* gold bought was notified, Bar silver was again flat at 42 7/16d., and India Rupee Paper rather lower, the Four-and-a-Half per Cent. at 70½, ¾, aud the Four per Cent. at 66½.

Business at the Stock Exchange during the past week has been quite uninteresting, for though prospects generally pointed to a continuance of cheap money, dealers and others have not evinced any desire to increase their commitments. This feeling may be partly due to the uncertainty of Continental politics. The Servian affair has quieted down, but at present a dark cloud appears in Bulgaria, where affairs have been going on so quietly that the couutry was almost in danger of being forgotten,—which is now disturbed by a conflict between Church and State, but will probably fail in disturbing the authority of Prince Ferdinand. Numerous Royal or Imperial engagements have been announced lately, and now rumour is busy with the names of Princess Alix, granddaughter of our Queen, and the Grand Duke Nicholas, eldest son of the Emperor of Russia. The elections of the County Council are now engrossing considerable attention in London and the country, and when these are completed the assemblage will be second to the Imperial Parliament. The Funds have been conspicuously firm owing to the purchases of the Government Broker, and the New Two-and-Three-quarters per Cents. have risen nearly 1 per cent. Indian Government and Colonial Inscribed Stock were also firmer. Foreign Government Bouds fluetuated in sympathy with the Continental Bourses, but the important movements were limited to a few special descriptions. Russian, 1873, Bonds have at length been forced to over par, and show a rise of over 1 on the week. Greek Bouds were also strong, but Portuguese have shown weakness. Uruguay Bonds in face of the numerous adverse rumours afloat respecting the finances have been well maintained at an advance. In the Home Railway Market attention has been confined to a few special stocks. Chatham Preference and North British were remarkably firm, while Brighton "A" drooped when it was found that the dividend would not be announced this week, but postponed to the next, when it is thought probable that 5¼, as against 5 per cent., will be paid. In the majority of cases an advance of ¼ to ½ is recorded. Similar characteristics have prevailed in the American Railway Market, but the tone there is decidedly firmer, with exceptional advances of $1 to $2 in Milwaukee, Erie Bonds, and Mexican Central Bonds. Grand Trunk issues were nominally unchanged, but a determined "bear" raid was made upon Mexican Railway Stoeks, which have fallen 3 to 3½ per cent. Rumours were current that a further reduction of 25 per cent. would be made in freight rates, owing to the competition. Miscellaneous securities, on the whole, were firmer, but the alterations were not important.

The effect of the near approach of the fortnightly settlement has been seen in the general disinclination of dealers and others to increase their commitments until at least that has been satisfaetorily concluded, and the tendency has been to lower prices a point or so, while the prospect of a plentiful supply of capital tended to counteract that movement, but not to any appreciable extent. The break in the Funds caused by the Government Broker having ceased his daily purchases, had an unfavourable effect, causing many other sound investment securities to follow suit. Foreign Government Bonds were supported by the Continental Bourses, Greek, Russian, and Portuguese being chiefly affected, and ¼ to rather over ½ higher on the day. Other descriptions show but slight variations, but the majority were favourable. The gold premium at Buenos Ayres has declined from 49.10 to 48.75 per cent. The declaration of the Metropolitan Railway dividend at the rate of 2¾ per cent. with 21,000*l.* carried forward, had an unfavourable effect upon Home Railway Securities, and the whole list gave way ¼ to ½ per cent., with an exceptional drop of 2 in Metropolitan. The dividend is at the same rate as last year, but an increase of ¼ per cent. had been generally anticipated, hence the disappointment and serious fall noted above. American Railways were steady and rather firmer, owing to the proposal to form an Inter-State Railway Association, which it is proposed should have full authority to fix rates, so that all railroads could be governed by equitable laws as now prevail amongst the Trunk lines. It was resolved at a meeting yesterday by the Presidents to restore the full rates west of Chicago, and to adhere to the Inter-State Commerce Law. Grand Trunk Stocks were firmer, and Mexican recovered ¾ to 1 per cent. of yesterday's fall. Anglo-American Cable Stocks were in brisk demand, but Western and Brazilian fell heavily on a rumour of a competing cable. Miscellaneous Securities were comparatively steady.

Annexed are the final quotations to-day:—Consols Account, 98⅞, 99; Egyptian Preference, 102⅜; 102⅝; Egyptian Unified, 83 3/16, 83 11/16; French Four-and-a-Half per Cents., 103¼, 103¾; Hungarian, 84 3/16, 84 5/16; Italian, 94 5/16, 94 11/16; Mexican, 91, 91½; Peru Five per Cents., 14 15/16, 15 1/16; Peru Six per Cents., 16 1/16, 16 1/8; Russian, 1873, 101⅛, 101⅜; Portuguese, 63⅜, 63⅝; Spanish, 72⅜, 72½; Turkish, 1871, 83¾, 84¼; Turkish Defence, 95¾, 96¼; Caledonian, 117½, 117¾; Great Eastern, 68 1/8, 68 1/16; Great Western, 151, 151¼; Brighton "A" 132⅛, 132⅜; North-Western, 174¼, 174½; Metropolitan, 74¾, 75¼; Metropolitan District, 32½, 33; Midland, 137⅛, 137⅜; North British, 57¾, 58; North-Eastern, 162¾, 163; South-Eastern "A," 108¼, 108½; Hull and Barnsley, 33, 33¼; Grand Trunk, 10¼, 10⅜; Ditto First Preference, 66, 66¼; Ditto Second, 45⅜, 45⅞; Ditto Third, 25⅜, 25⅝; Canadian Pacific, 53¼, 53½; Denver, 17, 17¼; Erie, 28¼, 28⅜; Milwaukee, 65¼, 65½; Lake Shore, 106¾, 107; Louisville, 58¾, 58⅝; Atlantic First, 34½, 34¾; Ontario, 15¼, 15½; Ohio, 22, 22¼; Norfolk and Western, 52, 52¼; Reading, 24⅝, 24⅞; Reading Bonds, 93½, 94; Union Pacific, 65⅞, 66⅛; Wabash Preference, 25¼, 25½; Ottoman Bank, 11¼, 11⅜; Anglo-Telegraph "B" 81¾, 82¼; United Telephone, 14¼ 14½; Hudson's Bay, 18¾, 19¼; Suez Canal, 86¾, 87¼; Guinness, 31⅛, 31⅜; Allsopp's 8, 8¼; Bryant and May, 12⅞, 13⅛; Nitrate Railways, 28⅛, 28⅜; Bell's Asbestos, 17⅝, 17⅞.

DICKENS CUSTER CO.

THE directors have issued their financial scheme, which is that the capital of the company be reduced from 420,000*l.*, divided into 420,000 shares of 1*l.* each, to 105,000*l.*, divided into 420,000 shares of 5*s.* each, and that such reduction be effected by cancelling paid-up capital to the extent of 15*s.* per share upon each of the 400,118 shares of 1*l.* each (fully-paid), which have been issued and are now outstanding, and by reducing the nominal amount of all the shares in the Company's capital from 1*l.* to 5*s.* per share. A meeting to consider this scheme is called for Monday, January 21st.

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year: — Increases: — Caledonian, 4,580*l.*; Eastern and Midlands, 164*l.*; Great Northern, 3,285*l.*; Hull and Barnsley, 400*l.*; London and North-Western, 1,063*l.*; London and South-Western, 1,689*l.*; London, Chatham and Dover, 572*l.*; Metropolitan, 324*l.*; North British, 7,524*l.*; and North-Eastern, 742*l.* Decreases: Great Western, 440*l.*; Manchester and Sheffield, 671*l.*; Midland, 5,661*l.*; and North Staffordshire, 762*l.*

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Decreases: Southwark and Deptford, 85*l*; West Metropolitan, 72*l.*; North London, 62*l.*; North Staffordshire, 2*l.*; Stockton and Darlington, 12*l.*; Calais, 22*l.*; London Street, 119*l.*; South London, 151*l.*; London Southern, 59*l.*; and Southampton, 27*l.*; but the North Metropolitan shows an increase of 24*l.*; Provincial, 488*l.*; Belfast, 125*l.*; Woolwich and South-East London, 21*l.*; Imperial, 8*l.*; Sunderland, 34*l.*; Swansea, 35*l.*; Edinburgh, 169*l.*; Hull, 29*l.*; Germany, 109*l.*; Bordeaux, 43*l.*; and Calcutta, 102*l.* The receipts of the Lombardy Road Railways for December amounted to 1,094*l.*, against 1,093*l.* in 1887.

The Brighton Railway traffic return for the week ended 5th January exhibits an increase of 1,697*l.*, and the South-Eastern an increase of 145*l.*

DRAKEWALLS MINE.—In 100,000 shares of 1*l.* each, with 18s. 6d. per share paid, are now to be had at the absurdly low price of about 6s. 6d. to 7s. 6d. per share! The shareholders surely cannot realise the importance of the great discoveries of minerals now being revealed in this mine, and at the deepest point touched, or they would never part with their shares at such a sacrifice as 12s. 6d. per share discount! Instead of being now at about 7s. per share, we do not hesitate to say they are intrinsically worth at least 20s., if not 30s. per share. If this mine continues to open out such enormous discoveries of mineral wealth in the next year or two as it has done in the past six or eight months (and it is bordering almost on a certainty that it will) the shares may become intrinsically worth 2*l.* or 3*l.* per share, if not a great deal more. We may be considered bold in giving it as our candid opinion that this will come to pass. We know what we are saying for our intimate knowledge of the property is great, we and our family having been connected with it as shareholders for something like 30 years (and for many years with the management). We have always urged the sinking of the shafts where the present great discoveries of mineral have been made. No such discovery of mineral, in our opinion, has been made in Cornwall or Devon for many years as that which is now taking place at Drakewalls Mine. We not only now tell all our friends who are shareholders upon no account to part with a share, but to *immediately* do what we are doing, purchase all the shares obtainable. We shall have more to say in our next monthly issue, not only as to the great value of the lodes, but also as to profits and commencement of dividends. — From Messrs. Peter Watson and Co.'s "British and Foreign Monthly Mining News."

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

Mining World & Engineering Record.

ESTABLISHED 1871.

Shareholders desiring FULL REPORTS of the MEETINGS of the Companies in which they are interested should Subscribe to and Read the MINING WORLD—6d. weekly. One Guinea per annum, post free.

Half-year, 10/6; Quarter, 5/6. All subscriptions payable in advance. Subscriptions for the Continent, £1 3s. 6d.

Orders to be sent to

W. Dunbar Quinlan,

234, 235 & 236, Gresham House, Old Broad Stree London, E.C.

CONTINENTAL AGENCY,

at which the MINING WORLD may be purchased every Saturday

PARIS - - - 224, RUE DE RIVOLI.
NICE - - - 15, QUAI MASSENA.

Subscriptions will also be received at the same addresses.

TO READERS AND CORRESPONDENTS.

S. M. R.—Do not sell your shares at present.

Race (L. S.)—It is a question of want of confidence in the management.

M. A. P.—There was a rise in them at the beginning of the week, but the price was not maintained. See Mining Market for closing quotations.

C. A. R.—No. 1 should be sold; 2, 3 and 4, good to hold for better prices. No. 6: A dividend of 2s. has just been declared, and the shares are a good purchase.

J. L. M.—No, thanks.

A. J. G. (Essex).—We propose to refer to the company you mention very shortly.

Inquirer (Helensburgh).—You are mistaken. We have a high opinion of the company, and also of the management both at home and abroad.

P. L. R.—We cannot find the name in the Directory for the last four years. Furnish more particulars.

R. J. Wills.—The capital was 180,000*l.*, but we do not believe that anything like that amount was obtpined.

Jas. Olde.—Unsuited to our columns.

We are obliged again to hold over some articles, one with reference to Sheba Gold Company's affairs.

The Mining World.

LONDON: SATURDAY, 12TH JANUARY, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE BOARD OF TRADE RETURNS.

THE Customs returns for the past month are not so favourable as of late, but the result for the year is satisfactory. There has been some contraction during December, possibly because of the high and uncertain value of money. Home exports were valued at 18,814,000*l.*, or 7¾ per cent less than for the corresponding period, while the imports were 37,940,000*l.*, or 11 per cent. better, the re-shipments being 1¾ per cent. worse, at 5,138,000*l.* For the 12 months the exports show an increase of 5½ per cent., the imports 6½ per cent., and the re-shipments 8¾ per cent. Dealing with the month, we find a further and greater reduction in the shipments of yarns and textile goods. Metals also show a considerable falling off, together with articles of apparel, &c., chemicals, and food products, but raw materials and machinery a considerable improvement. The reduction in shipments of cotton, yarn, and goods has been chiefly to Bombay, Japan, and China. An increase, as regards lead, is an exception in metals. Both coal and wool exhibit increased exports. With respect to imports, the results for the month show an increase in all classes, except chemicals and miscellaneous, for a mere fractional decline in metals is not worth mention, except as indicating no expansion. The imports of raw materials has developed most, followed by those for sundry manufactures, and manufactured articles. Articles of food, &c., dutiable and free, have both arrived largely, and tobacco also shows augmentation. The summary of the year's exports shows an increase throughout, and in the imports a decline only in dutiable articles.

OOREGUM.

REMARKABLE FACTS.

ANYONE understanding mining, and reading the report of the Ooregum meeting, would put his finger upon the statement made by Mr. John Taylor, that of 21 points now being worked the average yield is 2 ozs. 3 dwts. to the ton. It is impossible, in the face of a fact like this, to doubt the value of such a mine. If one or two points had been worth, say 6 or 7 ozs. to the ton, and the remainder had been a similar or lesser number of dwts., one might have regarded Ooregum as a good mine, but with a somewhat uncertain future; but when we have 21 points working with such an average as that stated, there is ground for describing Ooregum as perhaps the best mine in the field. It is certainly the richest according to present appearances. The first crushing, last May, gave 169 ozs., and that of December, 754 ozs. It is expected that soon the crushing capacity will equal 800 tons a month.

INDIAN GOLD MINING—ITS PAST AND FUTURE.

BY ONE WHO HAS STUDIED IT.

A STUDY of the annexed table should give anyone who has an interest, or is desirous of acquiring one, in the above industry a fairly accurate statement of what has to the present time been accomplished at the mines at work in the Colar field of Mysore. It is not my intention here to allude to the Wynaad field further than to state that there are four or five gold mining companies at work there also. Hitherto, however, their efforts have not been crowned with any particular success, but, if perseverance will do anything for them, they should succeed at last. From the above alluded to table, and those tables published in the MINING WORLD of July 28th, October 13th, and November 24th, 1888, gold mining was carried on in a profitless manner it will be observed, after which the Mysore Company began to make returns of gold, and, thanks to this, and their former pluck, in persevering in the manner they did, the whole aspect of Colar gold mining changed, for in 1886 the Colar Mining Companies that had, since 1883, up to that time, either suspended working or gone into liquidation, with the intended object of self-effacement, sprang into life again, and other companies were formed for working in the district. Nearly all these companies —I think I may say all—have since then called to their aid first-class mining staffs, captains, miners, machinery, &c., and with the result that five other companies, in addition to the Mysore Company, are now making substantial monthly returns. Two of these companies (Nundydroog and Ooregum) are making such excellent returns that before many months it is quite possible they will be announcing dividends nearly, if not quite, as good as those the Mysore Company are at present doing; but very probably not so large as those to be very shortly declared by that company. Whereas the Mysore Company has for the last six months been restricting its monthly output to about 1,350 tons, with the result of about 1 oz. to the ton, we are

informed by Capt. Plummer's report, now to hand for the meeting of the Mysore Company, to be held on 15th January, 1889, "that this would only be a temporary measure;" and he goes on to state "that we are working extensively with rock-drills, that good speed is made, and that this will soon put the mine in such a position as to enable us to increase the returns again;" and he further adds that "large reserves of ore are now (November 27th, 1888), being opened out, and I think, in from six weeks to two months more, we shall return to *a greatly increased output.*"

Towards the conclusion of his report he says, "Though at present the assays are, taken all together, lower than usual, fluctuations have before occurred, and there is little doubt the character of the ore will shortly improve again;" and he finally concludes, "I consider the aspect of the mine exceedingly good." The foregoing statements, it will be seen, are confirmatory of a former one he made to the directors in a letter dated October 23rd, 1888, in which he says, "It will be observed in this report that we are carrying on very large explorations, and the whole of the rock-drills are employed either in sinking shaft or driving levels; the consequences are, we are obtaining a much less quantity of quartz than we did some months ago; after, however, a few months more we shall work in what appears to be richer quartz, and very much larger quantities will be obtained." I am firmly of the opinion, from the foregoing statements of Capt. Plummer, and also from the fact, "that the quality of the ore in several places is improving very greatly, for in the 296 level north of Taylor's shaft on November 27th last it was assaying as high as 10 ozs. and over, and at this point there is a large quantity of ore standing to be stoped away," that the returns to be announced in February and March next, and for many months, if not years, afterwards will far exceed any return that we have yet had from the mines, and will probably run to between 3,000 and 4,000 ozs. Should this occur, it cannot but have a very stimulating effect to gold mining in the Colar district, and put the shares of the Mysore Company up to about 20*l.* a piece, if, indeed, we can judge from analogy, as the capital of the De Villiers (Robinson) Company (in the Witwatersraud district), which made a return of about 4,000 ozs. last month, is now selling for about two and a-half millions sterling in the market. Some of the best South African mines appear to be making rather sensational returns at present, but how long this is to last is very problematical, as the banket, or soft earth, from which they are extracting the rich gold may soon be worked out, and underneath it is possible they may come upon gold quartz-bearing rock, which may be comparatively profitless to work until it has been sunk upon for about 200 or 300 ft.—the mines in that case would, after that date, be where most of the Colar Mines were in 1885, and have, so to speak, to re-commence afresh, or come to an untimely end. In the former case there would be a terrible fall from their, at present, excessively inflated prices; and in the latter they would become perfectly valueless. Look at the other picture (in India): all of the Colar mines have now, with one exception, (the Mysore-Wynaad) after two or three years more or less drudgery, got down upon the gold-bearing rock at a depth of between 200 and 300 ft., and at about which depth the three—what we may term pioneer mines—the Mysore, Ooregum and Nundydroog are getting out such rich gold from *true fissure* veins, and which veins, in the opinion of the highest mining authorities, and from the experience of mining companies in Australia and other parts, are found to hold down to depths of thousands of feet, and to increase more or less in wealth the deeper they go.

Thus the prospects for Colar gold mining appear to be highly encouraging for a great many years to come, with increasingly good results as year succeeds year. Possibly many shareholders in the Nine Reefs, Colar Central and Indian Consolidated Companies are feeling disappointed at not having had better returns; but then in most mining companies the impatient shareholders predominate very soon if the expectations they form, on becoming shareholders, are not quickly realised; and I believe most of those who secured an interest in Indian Mines in 1886, and who saw their shares run up so high in the market, if they are still holders, perhaps may feel very much disposed to part with their shares at the present time, but if they should be in this mood, I should strongly counsel them to hold at least for a few months longer. To me it does not appear to be now the right time to part with them when the returns from the quartz from these mines may any day spring from a few pennyweights to ounces of gold to the ton. The Ooregum Company was not nearly so early in getting results as these companies have been, as, until a few months ago, it was hardly getting *in assays* more than grains of gold to the ton, now it is getting about 2 ozs. of gold *in actual yield*—so after this happy event "Nil desperandum" should be the motto of Indian gold mining shareholders generally, as the turn for shareholders in the other companies for ounces of gold to the ton may very shortly arrive; and I think a better moment could not present itself for obtaining or increasing an interest in Colar gold mining shares, as none of the company's shares are standing high in the market value, and most of them exceptionally low. The Mysore West Company, which has gone into liquidation, not by any matter of means for the purpose of self-effacement, but for the purpose of making itself financially sound, which there is no doubt it will succeed in doing, is at the moment valued only at about 9,000*l.* in the market, although, when the liquidation is carried through, it will have the call of over 30,000*l.*, besides an asset of about 16,000 shares in the Mysore-Wynaad property; and a mining property in this favoured district, which at two different levels has proved itself to have a lode assaying in one case ½ oz. and in the other ¾ oz. of gold to the ton; it is now engaged in striking out from its shaft at 280 ft. deep another level to intersect this lode, and which any day we may hear by telegram is assaying ounces of gold to the ton, when the shares, which are now at the ridiculous price of 1s. 6d., may probably rise to as many shillings in value. I certainly think all the low-priced Colar shares should be bought up now, as I believe there is a great and immediate future for Colar gold mining. Look at the facts for a moment; whereas in 1886 there was only one mine in the Colar district producing gold, in the latter part of 1887 there were five doing so, and these have been supplemented by two more in 1888, probably to be further supplemented by nearly all the remainder in 1889; but whether this is so or not, the output of 58,217*l.* odd in 1887, which has been more than doubled in 1888, is in 1889 likely to be much more largely increased, and which I should not be surprised to see amount to a *quarter of a million* sterling or more. If the Goldfields of Mysore Company should dispose of several of their blocks; if the Indian Consolidated disposed of one of their blocks (at present lying idle); and the new shafts in the Mysore Company's block open up productively, this larger return might speedily be turned into one of *millions a year* sterling.

TABLE.

Showing the amount of gold produced by the mining companies in the Colar Field of Mysore, India, for the years ending 1887 and 1888; together with the grand total amount produced since mining operations were commenced in the Field, and comparison of market value, at stated times, of the capital embarked in the industry.

N.B.—The value of the various crushings of the Nine Reefs and Indian Consolidated Companies is estimated at 3⅞*l.* per oz., but the crushings of the other four companies are official, with the exception of those for October, November and December, 1888, which, in the absence of official information, are estimated at 3⅞*l.* per oz.

A NITRATE PROPERTY OF PROMISE.

JULIA NITRATE COMPANY.

In considering the prospectus of the Julia Nitrate Company, the feature which most strikes us is the large extent of the territory acquired and the smallness of the share capital which can be dealt with on the market. The property acquired embraces 5,000 English acres with certain rights to 1,500 others. It is situate on the line of the Taltal Railway, and within moderate distance of the port of that name, the excellent shipping facilities of which are well-known. Compared with the prospectuses of some other concerns quite recently floated, the Julia Company emerges from the ordeal with flying colours. The highly respectable character of the directors is a further evidence of the bonâ-fide character of the concern, and the circumstance that the names appear upon the prospectus of Messrs. Francis and Johnson, of Austin Friars, as solicitors, and those of Messrs. Arthur Anderson and Co., as brokers, are additional guarantees of the influential and promising auspices under which the company is starting. But, after all, the crux of the whole matter is the property itself, the proximity of which to the sea we have already noted. It is, in every sense of the word, a going concern. The present oficina (works) comprises all that is necessary for producing 220,000 quintals of nitrate per annum, or equal to about 10,000 tons, The working capital will be devoted to the provision of machinery, so that this output may be exactly trebled. The facilities for working are exceptional, and the nitrate grounds are practically untouched. The former proprietors appear mostly to have turned their attention to the erection of the works, and not to the utilisation of their grounds, so that of both the company will have practically the full benefit. Even as it is the caliche has been about 40 per cent., but allowing a far smaller average, the company, it is estimated, will be able to manufacture nitrate as cheaply as the Tarapaca establishments. The property has been reported upon by Mr. Alfred Quaet-faslem, who is recognised to be one of those best entitled to speak upon the subject of nitrate production, and whose testimony may be accepted as independent, seeing that he has no connection with the property in question. Other experts have also been called in, and their reports may in a word be said to endorse those of the gentleman we have already referred to. The directors have wisely based their calculations upon figures much lower than those which the actual facts would justify, and conclude that the annual profit should be 70,000*l.*, with nitrate at 9*l.* 10s. per ton ; whereas at the present time it is round about 11*l.*

They quote the following remarkable prices taken from the Stock Exchange list, which they infer may be reached also by this company :—

				Present Price.
Primitiva Nitrate... ...	5*l.*	shares	(fully paid)	37¼*l.* to 38*l.*
London Nitrate	10*l.*	„	„	30⅜*l.* „ 30⅝*l.*
Colorada Nitrate	5*l.*	„	„	11½*l.* „ 12*l.*
Liverpool Nitrate... ...	5*l.*	„	„	30⅜*l.* „ 30⅝*l.*
San Pablo	5*l.*	„	„	15*l.* „ 15½*l.*
Taltal	5*l.*	„	„	6¼*l.* „ 6½*l.*
San Luisa (Taltal) ...	10*l.*	„		16½*l.* „ 17*l.*
San Jorge	5*l.*	„	(4*l.* paid)	13¼*l.* „ 13¾*l.*

The vendor, who provides all the preliminary expenses, is to receive in payment for the property 125,000*l.*, of which 40,000*l.* is to be in fully paid shares. but he will have nothing until his titles have been made clear, and the property has been duly transferred to the company. We do not see why the shares of the Julia Company should not be quoted at a much more substantial premium than they have already reached, or why the dividends it pays should not equal those of any of its contemporaries. We understand at the time of writing (Friday night) that the shares have been applied for five times over.

A UNIQUE COMPANY.

THE CORTEZ MINES, LIMITED.

We report the meeting held yesterday of the Cortez Mines, Limited, the history of which has been somewhat remarkable. The vendor is Mr. Simeon Wenban, who was taken as a child to the United States, and was one of the first explorers of the mining district (Eureka County, Nevada), where this property is situated. He worked it for 20 years, and realised a large fortune from it. The only reason he has converted it into a limited company is that having no sons to carry on the business after his death, and he being now 64 or 65 years of age, he is anxious to get rid of the responsibility. He was also anxious that it should be managed by his own countrymen, and largely for the benefit, amongst others, of his wife and daughters, who will inherit his interest. He, therefore, in a manner of which memory fails to recall a similar instance, handed over the entire property as a going concern to the present company without taking a single sixpence in payment, but on the contrary, defraying out of his own private means the expense of its formation. This may seem strange to the ordinary readers of mining prospectuses, but the fact can be vouched for by the directors of the company. The produce of the mine is principally silver, with a small proportion of gold. During the 12 weeks dealt with at the meeting, without any access for half that period to the rich ore known to exist, 1,936 tons of ore were treated at the mill, which gave a yield of $72 per ton. The total production, adding bi-products for this period, was $156,783. The latest telegram from the property states that the prospects are most favourable. The property has been for the last two years, and is now said to be producing bullion of the value of $60,000 per month, and the expenses are under $12,000 per month, showing a net profit of $48,000 per month, or about 115,000*l.* per annum.

THE VICTORY HILL CONSOLIDATED GOLD MINING CO., LIMITED.

The South African Gold Trust and Agency Company, Limited, are prepared to receive applications for the 30,000 shares offered by this concern which is formed for the purpose of acquiring and working conjointly certain gold mines in the De Kaap Gold Fields, South Africa, situate on the north side of the Sheba Range, in close proximity to the Kaap River, and locally known as the Victory Hill. Six adjacent properties are comprised in this amalgamation. The properties have been inspected and reported on by Mr. A. H. Halder, C.E., Claim Inspector of the De Kaap district for the Transvaal Government, Mr. T. C. Verey, M. and C.E., Barberton, and Mr. R. A. Michell, manager of the Sheba Gold Mining Company. These reports are very encouraging, particularly that by Mr. Halder. They show that about 2,000 ft. of shafts, drives, &c., have been carried out on the various properties, "proving the lodes, as far as developed, to be permanent, and they are found to increase in width as greater depth is obtained." The returns of crushings in bulk give an average of over 1 oz. 13 dwts. per ton, from 329 tons, whilst Mr. Halder estimates that in the Eureka mine alone, besides the ore at grass ready for crushing, there are 66,500 tons of ore in sight. A 10-stamp Frazer and Chalmers' battery, with Frue vanners, and a 30-h.p. turbine, are included in the purchase. The calculation of profits based on what looks like fair premises, is over 40 per cent. upon the entire capital of the company. The vendors receive the whole of the purchase money (78,000*l.*) entirely in fully paid-up shares. The total capital of the company is 125,000*l.*; 30,000 shares of 1*l.* each are offered to the public, and 17,000 shares are held in reserve.

THE FIRST NETHERLANDS TRANSVAAL GOLD MINING CO., LIMITED.

This company stands in the unique position of being the first gold mining company brought out in Amsterdam, and the property which it proposes to acquire is said to be one of the most extensive mining concerns in the Witwatersrand district. For the last fifteen months it has been prospected and opened up by a private syndicate, known as the Oakley Gold Mining Company, Limited, but further capital is now required for development. Mr. W. H. Penning, F.G.S., late of Her Majesty's Geological Survey, of England, has inspected the property, and reports that No. 1 (the main reef) is very large indeed and of a high average, and is in his opinion "second to none in the Witwatersrand district." The company also acquire valuable water-rights, and it is said that an ample supply, sufficient to meet the requirements of large mills, may be relied upon. The capital is 150,000*l.*, in shares of 1*l.* each, and the purchase-money has been fixed at 120,000*l.* (payable, 25,000*l.* in cash, and 95,000*l.* in cash or fully paid-up shares, at the option of the company. The working capital will be 15,000*l.*, with a reserve of a like amount, and this is considered ample for the erection of the new machinery and development of the mine. The directors look forward to there being a large market for the shares in Holland.

A NEW COPPER INVESTMENT.

We understand that next week, under the highly influential auspices of Messrs. Redfern and Alexander, a new copper enterprise will be offered to the public of an exceptionally promising character. The property is known by the generic title of the Beja Copper Mines, situate in Portugal, and is said to consist of 43 concessions, covering between 5,000 and 6,000 acres, and to be equal to the production of 9,000 tons of that metal per annum. It has been most favourably and exhaustively reported upon by the well-known firm of Bambridge, Seymour and Rathbone, who were specially engaged to do so by Messrs. Redfern and Alexander. In the first instance, it is intended to commence on the most promising of the group, and to sell the remaining concessions to other individuals, syndicates, or companies as circumstances and the exigencies of the copper market may dictate. Near to the sea, the cost of delivering the ore from such a property at Swansea must be very small. Based upon a low estimate, the profits are calculated by the influential and experienced directors who have endorsed the prospectus with their names at over 30 per cent., or 10 per cent. if copper were to fall to 40*l.*—a fate that even the weeping Jeremiahs of this metal do not profess to see within measurable distance. Of one thing the public may rest assured, and it is this :—That the directors will not go to allotment unless the whole of the capital offered is subscribed for on a fair cash basis. We understand that Sir Henry C. Isaacs is chairman of the company, and he has associated with him gentlemen who are thoroughly con-

versant with the nature of the business they have undertaken, including Mr. F. C. Barker, of the Bratsburg, to whose services in connection with that company we have had a previous occasion of referring.

THE FORBES REEF GOLD MINING CO., LIMITED.

THIS company has been formed with a capital of 400,000*l*., 330,000 of which will be issued as fully-paid in payment of the purchase-money. The remaining 70,000 shares are now offered for subscription. This company has been formed to take over from a company having the same name, the concession of 52,260 acres, or 81¾ square miles, situate in the north-west corner of Swaziland, and adjoining the Transvaal boundary line. The property has been surveyed by the old company, who have carried on successful mining operation during the past 2½ years. The Forbes Reef is stated to have already produced 17,049 ozs. of gold, of a gross value of 63,421*l*., all of which, with the exception of 321 ozs. has been forwarded to London through the Standard Bank of South Africa. The quartz averages about 1 oz. to the ton. This reef is connected by tramways with the mills through a main tunnel over 550 ft. long at the 100-ft. level. Facilities for working of an exceptional kind exist on the estate, and the prospectus embodies many statements which go to show the value and extent of the property. The estimated output and profit per annum, with 200 stamps when in full working order, is 180,000*l*., which would give a dividend of 45 per cent. on the total capital of the company.

THE NITRATES PROVISION SUPPLY CO., LIMITED (TARAPACA).

THE idea of this company is exceedingly good. It is intended to act as a sort of co-operative store, or "universal provider," to those engaged in the vast nitrate industry, of which Col. North has been justly styled the "King," and to which he is giving his great ability as a man of business, and his immense resources as a man of fortune. It is anticipated that, from the advantages it will be able to offer, this company will command the entire custom of the best known nitrate Oficinas in the Tarapaca District, amongst which may be mentioned those comprised in the following nitrate companies, viz., Primitiva, Liverpool, Colorado, London, San Pablo, San Jorge, San Donata, as also the Oficinas Jas Pampa, Paccha, &c., &c. It is further anticipated that the Nitrates Railways Company and the Tarapaca Water Company will also become customers of this company. The "plan of campaign," if we may be allowed to use the expression in the Pickwickian sense, shows that the directors, who are mostly connected with the nitrate industry, understand the business they have taken in hand, and properly managed we entertain no doubt that it will be as successful as its promoters can reasonably desire. The capital is 200,000*l*. in 5*l*. shares. The lists opened to-day and close on Monday.

MR. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

THE January issue of Mr. Thos. Thompson's "Mining and Investment Circular" conveys a large amount of useful information which cannot fail to be of interest to the public. Well arranged, and written in readable style, it is difficult, once the perusal is commenced, to set it down until the last page has been reached. Mr. Thompson takes a hopeful view of the present year, which he justly states has opened in a prosperous fashion. He is able to point triumphantly to his recommendations in the latter part of last year, and to the substantial rise shown upon many of them at the present time. He believes that this will be a booming year in all descriptions of mining speculations, and he is not without reasons for the faith that is in him. Of course, he believes principally in the mines of Colombia, which, to a large extent, he has been the means of introducing to public notice—notably the Orita Company, the shares of which have (vide his list) risen from 27*s*. 6d. last January to 41*s*. at the present time, thus fulfilling not the least remarkable of his earlier predictions. He speaks very highly of Tetuan, in which, without doubt, there has been an enormous business, and market opinion points to a still further rise in a future that is neither dim nor distant. He gives a great deal of information respecting the somewhat mysterious mines of South Africa, and an excellent list for reference. He is not unmindful of the claims of other companies, and has much to say respecting promising concerns, such as New Emma, Eberhardt, Denver, and several Venezuelan mines. The special article on "The United States of Colombia" is well worthy of perusal, and the whole production, as we have said, will both interest and instruct the investor.

THE WALBROOK GROUP.—Mr. Dictator J. B. Reynolds occasionally lets the cat out of the bag (says the *Financial News*) at his happy little cost-book mine meetings in Walbrook. At the meeting to celebrate the failure of the New Kitty Mine to answer Mr. Reynolds' expectations, a shareholder remarked of the arrangement made for continuing the company: "Then you will have the thing just as you like." To which Mr. Reynolds, in a spasm of candour, replied: "Oh, I think you can trust us for that!" No doubt Mr. Reynolds did not quite mean what he said; but the one thing his fellow-"adventurers" can trust him to do is to have things as he likes.

SOUTH AFRICAN MINES.

(LATEST BY CABLE.)

FORBES REEF.—Yield for December, 777 ozs.

ESSAMAN.—The directors have received advice of a further despatch of 130 ozs. gold.

KIMBERLEY CENTRAL DIAMOND.—The directors have declared an interim dividend of 5 per cent.

CONSORT.—A cablegram received from Barberton states that the Consort Mine, De Kaap Fields, has declared a 10 per cent. dividend.

WEMMER.—Messrs. Robert Whyte and Co. advise the receipt of one box of native gold ex Pembroke Castle ss. at Cape, containing 104 ozs., on account of this company.

SALISBURY.—The London agent of the company has received a cablegram, stating that the December crushings yielded 2,026 ozs. A dividend has been delared of 32½ per cent.

GREAT SHEBA.—A second batch of letters of allotment has been posted. Mr. Heller, director of the Oriental Gold Mining Company and resident director of the Great Sheba Gold Mine, is expected to arrive in London this week.

JUMPERS.—A cablegram has just been received from Johannesberg advising that a dividend of 10 per cent. has been declared by the Jumpers Company, Limited. The transfer books will therefore be closed from the 9th to the 16th inst., both dates inclusive.

HILL'S WATERFALL.—We are informed that, owing to the large number of applications for shares in Hill's Waterfall Estate and Gold Mining Company, Limited, some few days will elapse before the letters of allotment and regret can be posted.

SOUTH AFRICAN.—The following particulars of work relate to the week ending December 8th, 1888. Blue ground hauled, 3,635 loads; blue ground washed, 4,990 loads; diamonds obtained, 1,615 carats; estimated value, 1,480*l*.; reef hauled, 475 loads.

JOHANNESBURG WATERWORKS, ESTATE AND EXPLORATION.—Messrs. Davis and Soper, the London secretaries, have received a cablegram from the company:—"Directors have to-day declared a dividend of 7½ per cent.; 25,000 in hand; close transfer register from February 1st to 8th."

NOTICE OF EXCLUSION.—Whereas many speculators and others seeking concessions of land and mining rights have entered Matebeleland lately, against the express wishes of the Chief and people, notice is hereby given that all the mining rights in Matebeleland, Mashonaland, and adjoining territories of the Matebele Chief have been already disposed of, and all concession seekers and speculators are hereby warned that their presence in Matebeleland is obnoxious to the Chief and people, and that those who persist in entering the country hereafter do so at their own risk, and the assistance of all neighbouring Chiefs and States, and of all well-disposed persons, is solicited in excluding such persons from Matebele territory.

(Signed) LOBENGULA, Chief of the Matabele.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

STERLING GOLD OF MONTANA.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—In your issue of the 5th inst. you report the general meeting of the "Sterling Gold Mine (Montana), Limited," and give a report of a few remarks made by me. The head-line of these remarks conveys an entirely wrong impression of the intention of my remarks, which are themselves incorrectly reported, and I feel that in justice to the auditors I must ask you to insert this letter in this week's issue of your paper. I did not in any way charge the auditors with attempting to wreck the company, nor could my words convey any such impression as the head-line implies.—I am, &c.,

ERNEST H. HINDLEY.

TREGURTHA DOWNS FIRE.

SIR,—Referring to the occurrence of a fire on the 5th inst., at Tregurtha Downs Mine, Marazion, near Penzance, we beg to say that the damage caused by the fire is not nearly as serious as some public notices of the accident stated or implied. The property is fully insured, and it is expected that work there will be resumed within a fortnight.—I am, &c.,

H. R. LEWIS and Co., Managers.

Bartholomew House, Bank, London, E.C.
11th January, 1889.

WE notice that the two steamers, Jumna and Chyebassa, now loading, are taking forward additional Globe Mill plant for Queensland goldfields.

REPORTS OF MEETINGS.

THE CORTEZ MINES, LIMITED.

REMARKABLE RESULTS IN A SHORT TIME—A COMPANY UNIQUE IN ITS RELATIONS WITH ITS VENDORS.

The first general meeting was held yesterday, at the Offices of the company, Suffolk House, Laurence Pountney Hill, London, E.C., in order to comply with the provisions of the Companies' Acts—Thomas Bewick, Esq., C.E., F.GS. (chairman of the company), presided.

Mr. Alfred L. Penny (secretary) read the notice calling the meeting.

MUCH WORK IN LITTLE TIME.

The Chairman said: Looking at the fact that the company has only existed four months, and that we have not before us a quarter's work, there is little to submit to you. Yet I will communicate a few historical and other facts, leaving you to form your own conclusions. The company was registered on 14th September, 1888, exactly 17 weeks to-day. The capital offered to the public was, on very short notice, over subscribed. Operations on behalf of the company date from 1st October, 1888. Mr. Wenban, the sole vendor, paid all the expenses of the formation of the company, including legal and other professional charges, advertising, &c., and the company were not called upon to bear any cost whatever under this head. In this respect the company may, I fancy, be looked upon as unique—no money whatever having been paid to the vendor or for promotion, or by way of commission. The 10,000*l.* offered to and subscribed by the public was retained in this country. 8,000*l.* is placed on deposit account with the company's bankers, and 2,211*l.* 6s. 6d. has been invested in Preference Railway Stock. The London expenses are being paid out of the amount held in this country, and remittances on revenue account are shortly expected from the mines. Included in the purchase price of the property from Mr. Wenban, the company, according to detailed inventories and valuations, acquired 57,339*l.* 14s. 10d. worth of ore, stores, live stock, &c., an amount in excess of what was anticipated at the time the arrangement was entered into.

GOOD NEWS FROM THE MINE.

On Mr. Wenban's return from this country to the mines on 1st November, 1888, he cabled that the "mine had improved," and that the "mill was working splendidly." Since the operations on our account were commenced, that is the 1st October last, we have received regular weekly reports from Mr. Welsh, the mine superintendent, and of these, 12 have came to hand. These reports show that the workings are being carried on with regularity, and that the value of the ore-bearing grouud is maintained, if not exceeded. The following are extracts from the reports bearing on the most important working, namely, what is known as Big Porphyry working on the North-West Upraise.

EXTRACTS FROM REPORTS.

Extracts from the superintendent's weekly reports having reference to the Big Porphyry, also called North-West Upraise.

7th October, 1888.—Big Porphyry or N.W. upraise: Five men were employed in stopiug 52 tons of ore extracted. The ore contains 160 ozs. of silver per ton, and $4.00 to the ton in gold. The stope is here 150 ft. in length, and the ore body of an average thickness of 6 ft. The N.E. end is quite as strong and rich an ore body as any part of the 150 ft. which has been broken into. Nine men are now stripping porphyry along the side of ore, and have stripped the porphyry from off the ore 35 ft. in length by 20 ft. in height.

15th October.—No change iu ore body. One hundred and forty cars or 80 tons of ore were stoped from breast of an average value of $150.00 per ton. One huudred and six days' labour were done in this upraise.

21st October.—None of the ore was stoped from the vein, all work at this point having been applied in cleaning off porphyry. Sixty-five ft. in length by 8 ft. in height along the side of the ore body stripped during the week. The vein continues as strong and rich as heretofore.

28th October.—Porphyry stripped from off the ore body east and west for distance of 60 ft. by 8 ft. in height. Did not stope any ore. In stripping the ore vein it is apparent that the thickness of the vein has increased from 5 ft. to 15 ft. The quality of the ore remains unchanged.

4th November.—The work of stripping porphyry has been carried on steadily. A strip of ground 8 ft. high by 48 ft. in length has been opened, showing the vein of ore to be as strong and rich as heretofore. No ore stoped from this body during the past week.

11th November.—Stripping the porphyry has been continued. No ore extracted.

17th November.—No stoping done on ore body. The ledge continues unchanged in quality and size.

26th November.—The work of stripping the ledge is now nearly completed. Stoping ore will commence during the next week, which will increase the output of ore at least three times the present output.

2nd December.—The stripping of ledge is now completed. Three men were employed stoping ore. Forty-five tons of ore were stoped, of an average value of $125.00 per ton.

8th December.—One hundred and ten tons of ore of an average value of $150 per ton extracted during the week.

16th December.—Extracted 103 tons of ore of an average value of 150 ozs. silver per ton.

23rd December.—Ground continues unchanged. Extracted 78 tons of ore of an average value of $150 per ton.

LATEST NEWS THE BEST.

There are not, of course, any accounts to be submitted to you on this occasion, but I may mention that during the 12 weeks, over which returns have come to hand, there were 1,936 tons of ore treated at the mill, which, according to assay, averaged in silver a fraction over $72 per ton; the total amount of that metal being estimated at $139,583, to which is to be added the gold value, say $1,200, and the matte and sulphide ores estimated at nearly $16,000, the total being $156,783. This gross amount is somewhat less than the estimate on which the company was formed, and the deficiency seems to have arisen principally from the fact that for about six out of the 12 weeks, of which we have returns, no ore was raised from the rich ground in the north-west upraise before referred to. There is not, however, any reason to doubt that on the further development of the mine, the result will be quite up to the anticipations. Of the costs of working we are as yet without full details except the month of October, and they are somewhat incomplete owing, no doubt, to the fact that the book-keeper had scarcely realised the change from private ownership to that of a public company. Very full instructions have been sent to the mine as regards the keeping of accounts. The latest telegraphic advices go to show that the mine is being developed and worked to advantage and that the produce is being increased. Mr. Wenban, on 7th inst., advised us by cable as follows: "I consider the prospects most favourable." I shall be most happy to answer any questions that may be addressed to me. (Hear, hear.)

QUESTIONS.

Genl. Lloyd: What did you say was the average value of the ore per ton?

The Chairman: $72 per ton is the average for the whole period.

Genl. Lloyd: That is not according to the first estimate.

The Chairman: No; $100 was stated in the prospectus, but you must consider that during half the period we had no access to the rich ore. (Hear, hear.)

Mr. Samuel Green: In the one case the chairman was speaking of a certain portion of the ore, and showing its value, but in the other he was speaking of the average of the whole crushing, where you have to take the poor ore with the rich.

The Chairman: The figure I gave is the average for the whole 12 weeks, for which we have the returns, and during half that period, as I have said, we have had no access to the rich ore.

Mr. Pontifex (director): The average of the whole of the ore raised was not so rich as we were led to expect. It was $72, where we were led to expect $100, but the chairman has explained that the deficiency is due to the fact that for six weeks they were not working the richest stopes.

The Chairman wished only to add that a large amount of development work had been done in the mine.

Genl. Lloyd said he desired, before the meeting concluded, to propose a cordial vote of thanks to Mr. Bewick for the manner in which he had presided, and for the very clear statement he had made of the position and prospects of the company.

The motion was carried unanimously.

The Chairman assured the shareholders that no effort would be spared on the part of the directors to promote the prosperity of a company, in the successful future of which they all believed.

The meeting was then brought to a close.

LATEST REPORT FROM THE MINES.

Mr. Welsh, the superintendent, writes on 23rd December:—During the past week the work done on the mines was as follows:—The Boss' drift advanced 30 ft., and is now in 333 ft. A vein of porphyry in conjunction with a small vein of quartz was cut. Main tunnel, east drift:—Cross-cut' foot-wall, low-grade quartz and b'ack spar were encountered. West drift advanced 2 ft. No change in ground since last notation. Middle tunnel, west drift: Upraised on quartz vein, 8 ft.; extracted 7 tons of low-grade ore. This vein is the same as is being worked in upper tunnel, and has improved steadily since work was begun on it. The same vein has been found to exist in main tunuel, west drift, and I shall have some work done on it during the coming week. The vein shows itself to be stronger and larger in main than in either middle or upper drifts. Upper tunnel: Sunk 8 ft., extracted 25 tons of ore, containing 55 ozs. per ton in silver; the vein has improved during the week, and there is no room for doubt as to the permanency of the vein. Caps. Breast continues unchanged; extracted 33 tons of orc of an average value of $40.00 per ton. The work of stopiug has been somewhat impeded on account of extending the incline, as work on stope and incline cannot be carried on at the same time. North-east upraise: The ore-body here has improved somewhat during the week. Extracted 57 tons of ore of an average value of $90.00 per ton. North-west upraise: Ground continues unchanged; extracted 78 tons of ore of an average value of $150.00 per ton; ore hauled to mill 141 tons. Ore treated at mill 160 tons of an average value of $70.00 per ton. No bullion shipped. but have on hand, 1,550 av. of silver which is of an average fineness of $\frac{600}{1000}$.

NEW KITTY.

SUSPENSION OF OPERATIONS—UNPLEASANT PROCEEDINGS.

An ordinary general meeting of shareholders in New Kitty Mine Company was held yesterday at 37, Walbrook, London, under the presidency of Mr. J. B. Reynolds.

The statement of accounts showed that sales of copper orc to Messrs. Pascoe, Grenfell and Sons, realised 67*l.* 1s. 10d.; labour costs amounted to 409*l.* 11s. 9d.; thc balance of assets over liabilities is 16*l.* 10s. 7d.

Capt. Vivian, the agent, reported that he found the ground in the western portion of the mine had been taken away by the former workers, and he did not advise any outlay there. In the eastern part of the mine they had intersected the cross-course, but found the lode poor. This end was about 32 fms. from the eastern boundary, and had been driven 130 fms. on the course of the lode. Under the present circumstances he could not advise them to continue the working of the mine for the present.

BLIGHTED HOPES.

The Chairman, in addressing the meeting, said that no doubt some of them would be prepared for this bad report. They could not congratulate themselves upon the present condition of the mine. There was no doubt that the points of operation, however promising they might have been at one time, had not turned out as expected. It might be that some persons were inclined to blame themselves for having embarked in this enterprise at all; but if they would look at the list of shareholders and see the very large number of local proprietors on the list, they would see for themselves that the opinions

which were encouraged by some of them were more than shared by others who knew more about the mine than anybody else in the room, with the exception, perhaps, of Capt. Vivian. When he was at St. Agnes not long ago, one of the shrewdest men there said to him he believed there was a great future before New Kitty. Of course he bore in mind the relation of New Kitty to West Kitty; but he (the chairman) eandidly confessed that for the last year or two his doubts about New Kitty had been very grave, and if he had hesitated to let it be known it must be attributed to the circumstances mentioned; and the same if he had spoken with great carefulness on the subjeet. He could not for the life of him speak well of a mine or a piece of ground if he had lost confidence in it; he never had done so, and hoped he never should. With regard to the future, his own feeling was that

HE WOULD NOT BE JUSTIFIED IN PAYING ANY MORE CALLS

on the development of the ground upon which they had lost their money. (Hear, hear.) On the other hand he had been informed by Capt. Vivian that one point in West Kitty was being driven towards New Kitty, and if that point in West Kitty turned out rich, then there would be a very different state of affairs in New Kitty itself, for probably a mine of very considerable importance would be discovered for the New Kitty shareholders by the West Kitty proprietors. Taking that into eonsideration, he did not feel justified in recommending the shareholders to close the company, but he did think it was their duty to suspend the present operatious of the mine, and await the result of West Kitty operations. He thought the shareholders would think with him in this matter, and, therefore, to some extent he had anticipated their decisiou by asking the lords whether they would permit them to suspend operations, and whether they would also forego their minimum rents. He had also praetically induced all the officials to forego all their salaries, so that no expenditure would be incurred by the company during the suspension of operations. That was the most he could possibly do. The lords very kindly consented to give them leave to stop and to forego all their minimum reuts, and the offieers were quite willing to forego all payments of salaries from the end of the January month.

Capt. VIVIAN explained that the operations were going on as in the past, inasmuch as no alterations could be made until the meeting was held.

The CHAIRMAN, continuing, said the committee had resolved to advise the shareholders to adopt the course he had indicated. Under ordinary eircumstances they would call in an independent agent to eonfirm (or otherwise) the opinion of Capt. Vivian and the committee, but if they did they would have to continue the pumping of the water and keep the engine going, which would involve expense; and the question therefore arose whether it would not be as well to

CALL IN AN INDEPENDENT INSPECTOR,

when, if ever, they finally resolved to abandon the mine. He need hardly say how very sorry he was to have to present this statement. but he was pledged to eonceal nothing from the shareholders, and knowing that the chances were all against them he believed it right they should be aequainted with the faets. He moved that the statemcnt of aecounts and manager's report be received and adopted.

Mr. PAYNE seconded.

Mr. LENNOX elicited that 2*l*. 9s. 6d. had been paid up per share.

The CHAIRMAN stated that the original amount paid for the mine was about 200*l*. It was bought from the liquidators of another company.

Mr. J. B. BOOTH asked whether West Kitty Mine did not run under New Kitty, and whether it was legal except on payment of a royalty.

Capt. VIVIAN said it was a flat lode, and that West Kitty did not actually go under New Kitty.

The CHAIRMAN said the company was formed exactly on the same lines as West Kitty Co.

MR. REYNOLDS AND MR. COUZENS.

Mr. LENNOX said that when he came into the company Mr. Reynolds and Mr. Couzens owned half the mine between them.

The CHAIRMAN: Supposing that were so, have not two proprietors a perfect right to ask others to join them?

Mr. LENNOX remarked that he paid 25*l*. for his shares six years ago.

THE GRAIN OF SALT TAKEN TOO LATE.

Mr. BOOTH said he had often thought the shareholders were too sanguine in accepting all that was said about this mine. He had been told in that office that New Kitty was a mine of the past, and if he had been a little more alert he would have sold out. He had intended to take 100 West Kitty shares, but Mr. Reynolds advised him to take New Kitty shares. He did not wish to incriminate anybody, as at that time probably Mr. Reynolds thought it would be more desirable to take the course he recommended. He thought that Capt. Vivian had been rather too sanguine, and that it would have been better if he had exhibited less confidence. They were told they must have patience, and that things were the same at West Kitty. Recently there had been some talk about the divining rod for discovering metals, and it might have been as well to have tried it as making a rabbit warren of the mine.

AN IMPORTANT QUESTION.

Mr. GART said that one of the strong points urged in favour of this miue was that Wheal Kitty Mine left off rich at the boundary of New Kitty as well as West Kitty. He thought it ought to be distinetly stated whether or not there was really authority for that statement.

Capt. VIVIAN replied that he had no knowledge of it whatever.

Mr. LENNOX thoroughly approved of the course recommended by Capt. Vivian.

Capt. VIVIAN said he saw nothing more to be done at the mine without waste of money. The shaft was sunk almost as deep as they could go on the course of the lode, and for his own part he should not spend another penny until they saw the result of the operations in West Kitty.

Mr. BUDD said he had lost 500*l*. over the mine. He came into it more out of fraternal feeling to these already associated with it than anything else.

The resolution was carried.

The CHAIRMAN said they owed 160*l*. eost, payable next week. After that they would have to pay another 100*l*. to finish up. There was tin stuff whieh would yield 100*l*., and he moved a sixpenny call in order to raise the remainder.

Mr. BUDD seconded, and the motion was carried.

DECISION TO SUSPEND OPERATIONS.

It was also resolved to suspend operations at the mine pending a discovery in the eastern part of West Kitty, which would justify further expenditure. Capt. Vivian was appointed manager of the mine, at a remuneration of 2*l*. 2s. a month.

A decision was arrived at that no independent agent should at present be employed to inspect the mine.

The usual complimentary resolusions ended the meeting.

LEVANT MINE.

DIVIDEND OF 15s. PER SHARE.

A SIXTEEN WEEKS' MEETING of the shareholders in Levant Mine, St. Just, was held on the mine on Wednesday—Mr. R. White, the purser, in the chair.

The accounts showed the labour costs to have been 7,406*l*.; merchants' bills, 1,477*l*.; coals, 459*l*.; whieh, with sundries, made a total debit of of 9,568*l*. On the other side 129 tons have been sold for 7,508*l*. 16s., ; 474 tons of copper have been sold for 4,925*l*. 18s.; arsenic sales have realised 164*l*.; and after deducting dues, the total credits were 12,084*l*., leaving a profit on the 16 week's working of 2,516*l*. There was a balance in favour of the adventurers at the last account of 2,416*l*. 16s., which, with the profit, was increased to 4,933*l*.

The CHAIRMAN said they had made a profit sufficient to pay 1*l*. a share, but, considering the work they had in hand, they thought it advisable not to divide more than 15s.

Capt. F. OATS proposed that the aecounts be adopted, and that a dividend of 15s. a share be declared. He said they had several coutracts in hand, and had also engaged in considerable expense in the erection of a new "dry," so that it was thought better not to reeommend more than a 15s. dividend.

Mr. QUICK seconded. and the motion was carried.

The CHAIRMAN: The report is a better one than we have had for several meetings—better than the last three, I should think.

The meeting then concluded.

SOUTH PHŒNIX.

DEBIT OF £340.

A FOUR-MONTHLY MEETING of the shareholders was held on Thursday on the mine—Mr. W. Nettle (Mayor of Liskeard) in the ehair.

Mr. W. H. Rule, the purser, presented the balance-sheet, which showed an adverse balance of 346*l*. A discussion followed upon the number of relinquished shares, but no resolution was passed.

A report was also read from Capt. Joseph Hosking, who had inspected the mine on behalf of the chairman, which spoke very favourably of the miue, more especially the Wheal Prosper portion of the sett.

WEST SETON.

CALL OF 6s. A SHARE.

A SIXTEEN WEEKS' MEETING of West Seton adventurers was held on the mine on Thursday—the Purser Mr. T. Pryor, presiding. The areounts showed labour eosts, 4,107*l*.; merchants' bill, 1,860*l*. 10s.; rates, 24*l*.; total, 5,992*l*. The credits were:—Tin sold (64¾ tons), 3,871*l*.; copper (78 tons), 320*l*.; arsenie, 574*l*.; total, 4,791*l*. 17s. This left a loss on the four mouths' working of 1,200*l*., and a balance against the mine of 1,936*l*.

The PURSER said the costs were a little heavier than at the last meeting, caused mainly by the use of boring maehinery, which it had been decided to employ some time ago, and had cost up to the present something like 620*l*.

The accounts and report were passed, and a call of 6s. per share resolved upon.

WHEAL BASSET.

LOSS OF £254.

A SIXTEEN WEEKS' MEETING of adventurers in Wheal Basset was held on the mine on Thursday—Mr. W. MeKeand presiding.

The accounts read by the PURSER (Mr. J. H. Reynolds) showed the labour cost to have been 3,986*l*. 17s.; stamps' contract, 66*l*. 11s. 8d.; dues, 91*l*. 3s. 10d.; merchants' bills, 1,798*l*. 6s.; making a total debit of 6,262*l*. 18s. On the other side—99 tons 1 cwt. of tin has been sold for 5,930*l*., and the total credits were 6,008*l*., showing a loss on the 16 weeks' working of about 254*l*., and reducing the balance in favour of the mine to 1,434*l*. 11s. 1d.

The accounts haviug been passed,

Capt. F. OATS moved that the purser (Mr. Reynolds) be paid a bonus of 50 guineas on his retirement from the mine. (Hear, hear.)

Mr. WILLIAMS seconded, and the motiou was carried unanimously.

NOTES ON INVESTMENTS.—Messrs. F. W. Mansell and Co. have issued a eircular whieh embodies a very useful finaucial retrospect for 1888. It should be preserved for reference, for it embodies the main events of the year and the financial consequences which followed. Messrs. Mansell eonclude by predicting for the curreut year "one of gradual widening national prosperity, in excess of that of 1888." They have some pertinent remarks on the subject of mines, and mention with favour Santa Barbara, East Grassington, and Frontino and Bolivia. The shares of these eoncerns, in their opiniou, will during 1889 have a rise.

THE MYSORE GOLD MINING CO., LIMITED.

REPORT OF THE DIRECTORS.

In accordanee with the wish of the shareholders that half-yearly meetings should be held, the directors have called the present meeting in order that the general affairs of the company may be discussed. No accounts will be presented, and no reports submitted which would require to be adopted by a formal resolution. It had been the intention of the directors to hold this meeting somewhat earlier, but as Capt. Plummer after his visit to England did not reach the mines until the end of September, it was deemed advisable to postpone the holding of the meeting until he should have had ample time to make a thorough examination of the mines and property, and thus enable the directors to place before the shareholders the fullest and latest information regarding the company's operations in India, and the prospects afforded for the future. The directors have now much pleasure in handing you annexed, Capt. Plummer's detailed report, which they consider is of a most interesting and encouraging character. It will be evident that an immense amount of exploratory work is being carried on, and that Capt. Plummer looks upon the prospects of the mine as exceedingly good. An abundance of quartz is being laid open; but it was explained by Capt. Plummer, at the last annual general meeting, that it was desirable to limit the production from the mine for a time. Although the returns have never been restricted to such an extent as was anticipated, it is a matter of great satisfaction to the directors to be in a position to inform the shareholders that the development has been so rapid, and so much stoping ground laid open, that in a very short time a much larger output from the mine may be expected. The rock-drills are now working in a most satisfactory manner, and have contributed largely to the good progress which has been made with the development in Taylor's and Plummer's part of the mine. Hitherto the drills have only been employed in the above workings, but now they are doing such good duty that Capt. Plummer is most anxious to have the necessary plant to enable him to apply the drills at the other points which are presenting such a promising outlook for the future, and which should be developed more rapidly than can possibly be done with hand labour, and the directors have taken steps to supply it. In a letter received from Capt. Plummer, dated 4th December, he stated that none of the drills were then employed in stoping, but immediately the development is advanced sufficiently to admit of it some of them will be set to work in the stopes. It will be remembered that at the last general meeting Capt. Plummer suggested that a much larger quantity of machinery for treating the tailings should be sent out, and this course was adopted by the directors; and they are now in a position to state that nearly all the machinery necessary for the working of 20 pans has been delivered on the mines, and that the erection of the same is going on very well. When these 20 pans are in full working order Capt. Plummer expects the production will be equal to 375 ozs. of gold per month, which represents a value of about 1,500*l*. It is calculated that 25 per cent. of the produce will pay the cost of extraction, and thus, it is hoped, that a profit of about 13,500*l*. per annum will result from the working of this machinery. Since the last general meeting a large quantity of machinery of various kinds has been forwarded to India, in order that the developments at the different shafts on the property may be pushed on without delay, and the working of the mines continued in the most vigorous manner. There remain 811 of the new shares still unissued, and the directors propose to take the sense of the meeting as to the manner in which they shall be dealt with. It is with deep regret that the directors have to report the sudden death, on the 27th of December, of Mr. W. G. Williams, who has acted as secretary of the company from its formation. He discharged the arduous duties of that office most ably, and by his kindly manner and never-failing courtesy endeared himself to all with whom he was brought in contact. The directors feel assured that the shareholders will join with them in expressing their sorrow at his loss, and their sincere sympathy with Mrs. Williams and her family in their bereavement.—J. Taylor and Sons, Managers.

Capt. Plummer's half-yearly report, which follows, is a synopsis of those we have already published. He makes some very important remarks:—"At the last general meeting it was agreed by the shareholders that the output of the mine should be restricted to 1,000 ozs. per month, to enable us to sink shafts, drive levels, &c., and open ground for stoping. This was not done during my absence, but on my arrival here at the end of September, on examining the mine, I found that the extraction greatly exceeded the development, and that the gold quartz was costing more to take out than it would have done if development had kept pace with the extraction, and I found it absolutely necessary to restrict the output. This will only be a temporary measure; we are working extensively with rock-drills, good speed is made, and this will soon put the mine in such a position as will enable us to increase the returns again. Of the 748 fms. put to the mill in the six months, 632 fms. were broken from stopes, and only 116 fms. from explorations. Now it is quite the reverse; there are nine rock-drills employed sinking two shafts, driving four levels, and putting up two rises, while only one is employed in stoping. Large reserves of ore are now being opened out, and I think, in from six weeks to two months more, we shall return to a greatly increased output."

THE MYSORE GOLD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that a MEETING of the Shareholders of this Company will be held at the Cannon Street Hotel, in the City of London, on TUESDAY, the Fifteenth day of January instant, at Twelve o'clock at noon.

By Order of the Board,
JOHN TAYLOR AND SONS,
Managers.

GERARD VAN DE LINDE (Gérard Van de Linde and Son), 12, LAWRENCE POUNTNEY LANE, CANNON STREET, LONDON.

AMSTERDAM OFFICE.

K. SPYKMAN, 124, PRINS HENDRIK KADE, AMSTERDAM.

THIS Company has been formed to acquire the gold mines and surface rights of the property, known as Oakley, formerly as Prinsloo's Mynpacht, contaiuing about 140 claims, and which originally formed part of the farm called Rietvlei, in the Witwatersrand district of the South African Goldfields, and is one of the most extensive mining properties in those goldfields.

The property is situate in the Witwatersrand District of the Transvaal, and is about 14 miles from the large mining town of Johannesburg, and 40 miles from the capital town of Pretoria, and was originally selected by Mr. Donald Fraser (who now joins the board) when he visited the Rand. It was purchased, and for the last 15 months has been prospected and opened up by a private syndicate called the Oakley Gold Mining Company, Limited, and the further capital is now required for development.

The property has been inspected and reported upon most favourably by Mr. W. H. Penning, F.G.S., late of Her Majesty's Geological Survey of England, and a copy of his report accompanies the prospectus.

It will be seen from Mr. Penning's report that No. 1 (the main reef) is very large indeed and of a high average, and is in his opinion "second to none in the Witwatersrand district."

Mr. Penning in his report finally says :—"I have no hesitation whatever in recommending this Mynpacht as an extremely valuable gold mining property," and the followiug is another extract from his report :—

"With reference to the recent discovery of a very rich reef on Luipard's Vlei, the farm which adjoins Rietvlei on the north, an extract from a cablegram received by the directors, and dated from Johannesburg, 14th December, 1888, may be quoted here :—'New discovery, Luipard's Vlei must enter Oakley west.' This statement, if correct, as there seems no reason to doubt, must very greatly enhance the value of the property."

Mr. Edward Jones has also written reporting as to the expense of stamps, machinery, aud the probable result of working as under :—

"4, Tokenhouse Yard, London, E.C.
"Jauuary 7th, 1889.

"Messrs. Van Der Weyden and Sons, Amsterdam.

"Dear Sirs,

"I herewith enclose a statement of the probable cost of mining and milling on the Oakley property, Witwatersand Goldfield, South Africa.

"Assuming 80 tons crushed per day for 300 working days, this would give an annual output of 24,000 tons, and taking a yield of 1 oz. of gold per ton of ore would, at £3 10s. per oz., yield £84,000, less cost of mining and milling, at £1 per ton, would give an annual profit of £60,000, or equal to 40 per cent. on your proposed capital of £150,000.

"From my perusal of Mr. W. H. Penning's report, and from my knowledge of this and adjoining properties, I am of opinion that, with economical and careful management, this will turn out an excellent property, and an average yield of 1 oz. of gold per ton of ore will be realised, and the above figures verified.

"Yours faithfully,
(Signed) "EDWARD JONES, M.E."

The Company also aequire valuable water-rights, and an ample supply, sufficient to meet the requirements of large mills, may be relied upon.

There is a new Sandicroft 20 stamp battery, with Marshall 20 h.-p. engine and boiler, hauling gear, pumps, &c., on the property, which are iucluded in the purchase.

The manager's report for December, 1888, gives details, and shows that if the Owners' reef opens at 2½ ft., and ½ oz. at the second level, he can easily keep the 20 stamp battery goiug from this piece alone.

Additional machinery up to 60 stamps will be erected as required, and its purchase is justified by the prospects shown by the developmeut up to date.

The working capital will be £15,000, with a reserve of a like amount, and this is considered ample for the erectiou of the new machinery and development of the mine.

The directors have been fortunate to secure the service of Mr. Ed. Jones, C.E. and M.E., late of the De Beers Miue, Kimberley, as consulting engineer, who is starting at once for the Transvaal, and immediately upon his arrival will superintend the erection of the battery and mills, aud at the same time direct the mining operations on the reefs.

After having been further developed the property could be sub-divided and parts sold to subsidiary companies, and by these means the shareholders would have a considerable part of the money subscribed refunded to them.

Excelleut coal can be obtained on the Witwatersrand district, as stated in Mr. Peuuing's report, and from a Reuter's telegram to the "Cape Argus," dated Johannesburg, December 5th, President Kruger, in a speech made at Johannesburg on December 3rd, is reported to have stated as follows :—"It was their intention to take over as much coal as would give a cheap supply to the district, and that the tramways and coal mines would beloug to the Government, and be worked solely for the benefit of the gold mines. He hoped to supply Johannesburg with coal at 2s. or 3s. a bag." From this fact the directors confidently hope that the Company will be able to obtain coal at the mine at about 20s. to 30s. per ton.

As is well known, the shares of most of the companies working in the Witwatersrand Goldfields are much in demand, and stand at a large premium.

The following list shows the present price of the £1 shares in the various companies uow working ou the Rand :—

	£ s. d.	£. s. d.

The vendor, Mr. Klaas Spykman, has fixed the purchase money at £120,000, which is payable £25,000 in cash, and £95,000 in cash or fully paid-up shares, at the option of the Company. This purchase money includes the surface value, also the valuable water-rights, and all the mining plant, machinery, and effects which are now upon the property.

The vendor, who is the promoter, will bear all the expenses up to the allotment, including the usual brokerage, and reserves to himself the right to contract with third parties for this purpose, and the shareholders will be deemed to have waived further particulars of any such contracts.

Applications for shares should be made on the form accompanying the prospectus, and should be forwarded to the London bankers of the Company, together with the amount of the deposit. If no allotment is made, the amount received on deposit will be returned in full.

Prospectuses and forms of application can be obtained of the secretary at the offices of the Company, at the bankers and solicitors.

Attention is particularly directed to the plans accompanying the prospectus one showingthe sections of the reefs ou the property, and the other the position of the property in the South African Goldfields.

The original reports on the property, with plans, can be seen at the offiees of the Company in London and Amsterdam.

ABRIDGED PROSPECTUS.

THIS Company is formed for the purpose of extending facilities for the safe investment of capital in first-class securities.

This Company proposes in the first instance to lend money only on first mortgages of improved agricultural property in the United States at not more than 40 per cent. of its marketable value.

It proposes to receive money from investors at a fair rate of interest in exchange for its debentures, which will form a charge on all its mortgage investments, reserve fund, uncalled capital and other assets, and to invest the same at a higher rate of interest in small amounts, thus acquiring a guarantee for safety afforded by the law of average.

The Corbin Banking Company of New York, in undertaking the agency of this Company, brings to the latter the benefit of its vast experience in making investments, and in realising profits similar to those of the Companies and private clients which have dealt with it or its members for the last 35 years.

The Corbin Banking Company is widely known in Great Britain, and through it more than £2,500,000 of British capital has been invested within the last 12 years.

The following are the last dividends declared by the principal American Mortgage Companies.

	Registered.	Dividends paid.	Reserve.	Percentage of Reserve to paid-up Capital.	Percentage per annum.	Aggregate Dividend and Reserve percentage.	Present Price of Shares.
Scottish American Mortgage Company	1874	12½	£ 119,000	41	3	15½	£ 162
Colonial and United States Mortgage Company	1880	10	33,000	70	7	17	240
British and American Mortgage Company ...	1878	10	31,000	16	1¾	11¼	112½
Dundee Mortgage and Trust Company	1873	10	127,000	37	3	13	143
American Freehold Land Mortgage Company ...	1879	10	30,000	37½	4	14	108
New England Mortgage Security Company ...	1875	12	30,000	15	1¼	13¼	100
General average		10 1-2	61,166	42¾	3⅜	14	124

Within the past 20 years the insurance companies and savings banks of the Eastern United States have, with Government approval, gradually transferred their investments to Western and Southern Farm Mortgages. The aggregate amount is known to have exceeded £24,000,000.

This Company therefore proposes to deal only with legitimate business of high character. Its shareholders may anticipate dividends of not less than 6 per cent. on the first year's business, and 10 per cent. thereafter.

The only contracts entered into are:—Between the Company and Emmet H. Ross, dated 15th June and 12th December, 1888, and between William C. Prescott, trustee, on behalf of the Company, aud the Corbin Banking Company, dated 17th October, 1888, appointing the latter this Company's sole agents. These contracts can be seen at the offices of the solicitors.

Applications for prospectuses, &c., can be made to the bankers, brokers, or secretary of the Company.

WILLIAM C. PRESCOTT,
Managing Trustee.
GEORGE H. BULLOCK,
Secretary.

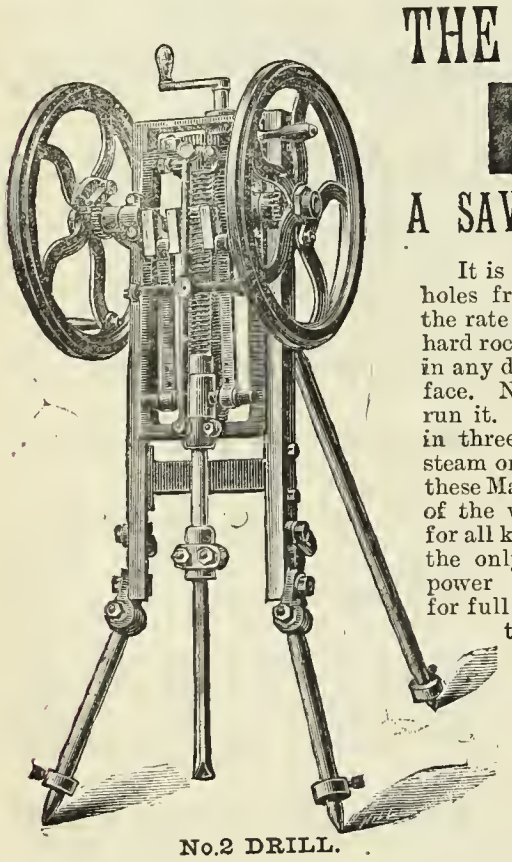
THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.



No.2 DRILL.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to

REPORTS OF MEETINGS.

OOREGUM GOLD MINING CO. OF INDIA, LIMITED.

TWENTY-ONE POINTS WORKING, AVERAGING OVER 2 OZS. TO THE TON—THREE SEPARATE MINES—OOREGUM THE BEST ON THE COLAR FIELD.

THE half-yearly meeting of this company took place on Tuesday, at the City Terminus Hotel—Malcolm Low, Esq., M.P., J.P. (chairman of the company), presiding.

The notice calling the meeting was read by Mr. JOHN GARLAND, the secretary.

The CHAIRMAN: Gentlemen,—This, as you know, is what has been called an intermediate meeting—one intended to be held at a point of time equi-distant between the annual general meetings of 1888 and 1889. We have no accounts to render or resolutions to submit, and I hope that my own remarks on this occasion will not take up any very large portion of your time. We are doing so well that some of our shareholders, I daresay naturally enough, have aleady begun to excogitate schemes for the immediate extinction of the debenture debt. Of course, that subject has engaged the attention of the directors, but I venture to deprecate its discussion to-day. We think that its probable discussion at the present moment would be rather premature; and if you will trust us in the matter in the present as you have always done in the past, we would ask you to let this matter stand over until the general annual meeting, when I hope we shall have something satisfactory to propose to you, and that you will approve of. We are very pleased to meet you to-day, and we hope that you were as gratified as we were with Capt. Martin's report. That and the monthly returns, I think, speak a good deal for themselves, but Mr. John Taylor is here, and we shall have, I hope, from him some observations in detail of the progress of our miniug work. We are working, as you know, from three great centres, or three principal shafts. I call them

THREE SEPARATE MINES,

but Low's and Probyn's will, in course of time, be connected underground. At all three of these points the lodes are being developed, and showing richness, and it is not too much to say (I am speaking moderately when I say that) that the whole of the undertaking is developing in an entirely satisfactory manner, whether you look to the number or the lengths of the run of ore ground, to the richness, or to the proportion which the reserves in sight bear to the ground already stoped. Take just as an example, without trenching on Mr. Taylor's department, the runs of ore which we have at the end of the cross-cut west on the 250 level main shaft; we have already got there a run of 180 ft. of rich ground which we are continuing to drive at both ends, and at present there is no sign of the rich ore giving out either at the north or the south end. The only fault we have to find with our lodes is that they are not too wide, but that is a matter which will very likely mend in depth. For instaunce, at one of our deepest points (I am speaking of the 300-ft. level we are about to drive at Probyn's shaft), it is reported by the latest advices that the lode is 4 ft. wide, and assaying 3 ozs. to the ton. (Cheers.) I ought, perhaps, at this point to read a telegram which has just arrived from Capt. Martin, I suppose for the purposes of this meeting. Capt. Martin wished the shareholders to know the latest news from the mine :—

LATEST TELEGRAM.

"Probyn's shaft, 11 points of working; average width of the vein, 3 ft. 4 ins.; the average assays for last week were 2 ozs. 4 dwts. Low's shaft, eight points; average width, 1 ft. 6 ins.; the average assays for last week were 2 ozs. 8 dwts. Main shaft, two points; average width, 2 ft. (that is rather broader than before); average assay for last week, 1 oz. 1 dwt."

Knowing, as I do, this property personally I never was able to yield to despondency at a time when our hopes were still deferred, and now, when we are entering upon a career of prosperity, I try not to allow myself to be too jubilant, but my fixed belief is that we have in Ooregum—I will not say one of the richest—but certainly

ONE OF THE RICH GOLD MINES OF THE WORLD.

It seems strange to think that not so very long ago we were battling for dear life in the law courts against the testimony of so-called experts, who by evidence—personal evidence, professional evidence—geologically demonstrated, to their own entire satisfaction, that there was not, and never could possibly be, such a thing as gold found in the Ooregum property at all. It is pleasing to reflect that since we did begin to return gold our returns have been progressive. I hope this progress will continue. I hope we shall continue to be progressive, but not unduly so, up to the point when steady monthly returns at a really high figure will be the order of the day—or I should say of the month. We began, you may remember, with

169 OZS. IN MAY, AND WE GAVE YOU 754 OZS. FOR DECEMBER.

That was with 15 heads ofstamps, but now, of course, with our additional rock-drilling plant, we shall very soon be able—in fact, I may say, we are already running 20 heads a day, and then I have no doubt whatever, with the character of ore we have, we will get a monthly crushing capacity of at least 800 tons. Not only that, but as the condition of the reserves indicates, I have no doubt we shall be able to erect more stamps—not that I want to force production; on the contrary, the shareholders are to be congratulated, and we ourselves are willing to take the principal portion of the credit on this point, that the mines are being developed in a workmanlike and prudent way; but still, bearing that in mind, I adhere to the hope that in a future, which I trust is neither distant nor dim, 30 heads of stamps will be a sight to be seen, and a sound to be heard, at the Ooregum mills.

FAITHFUL SERVICE.

Before calling on Mr. John Taylor, perhaps you will allow me to assure you of the continued faithful services of our local agents, Capt. Martin and Mr. Robert Collins. Both have served us for a long time with great efficiency and fidelity, and if you will receive that remark with favour I feel sure it will be an encouragement and a source of gratification to both of them. (Cheers.) Of course the board continue to be satisfied with the services of Mr. John Garland, our secretary, but I think he is too well and too favourably known to most of you to need any praise from me. (Cheers.) I shall now call upon Mr. John Taylor to address the meeting, and then any gentleman who may be desirous of asking questions will have the opportunity of doing so. (Cheers.)

AN IMPORTANT AND GRATIFYING CHANGE.

Mr. JOHN TAYLOR, who was heartily received, said: Gentlemen, a very material change has taken place in the mines of the Ooregum Compauy since I last had the honour of addressing you, about six months ago. I should, perhaps, say that that change has taken place rather in one portion of your property—I allude to the southern working at the main shaft. Your chairman has ventured to speak of these workings as three mines. Now, I do not know how he was inspired with that idea, but I was going to tell you the same thing. We are not working one mine, but three mines—three very considerable mines. I told you on the 10th of July that the cross-cut had been driven from the main shaft a long distance, and that we were encouraged to hope for something better very soon, because a branch, or small vein, had been intercepted. Capt. Martin telegraphed on that occasion that a branch had been intercepted, and a sample from it assayed about 4 dwts. I went on to say at that meeting that I could not look upon this at all as the champion reef of the Colar goldfields—the reef that we are working so successfully in the Mysore Mine 2 or 3 miles further to the south—that it was not evidently the main part of that reef. Therefore, it was evident to us that Capt. Martin was doing the right thiug in not making any effort to work on this branch, but to drive further to the west. He did that, and soon after our meeting intersected two other small veins, or branches, which have lode matter (there is a distance of 10 or 12 ft.) between them—evidently, to his mind, the champion reef, and I think there can be very little doubt about it, because, if you look at the plan of the whole of the goldfield, it is exactly at the point where we ought, and where we expected to meet it. We had strong reason to hope for good things there, because in the 80 level, 170 ft. above we had opened out a considerable distance through old workings, and in them we found quartz containing gold left by the former workers, which showed that they had had a very good deal of rich ground to take away. We argued from that (and we are now able to tell you that we argued rightly) that when we opened upon the same portion of the reef below we should find rich ground. The cross-cut is about 300 ft. to these veins, and from the end of the cross-cut (it is not shown here, because it comes from the shaft at an angle, and therefore is hidden) the northern level, driven 70 ft.; we have driven this distance in a vein from 10 to 18 ins. wide—not very wide, but still wide enough to be of good service if we find it as productive as hitherto.

POINTS OF GREAT VALUE.

That vein has never yielded less than 1½ ozs., and again and again we have had assays of 5 ozs., and now Capt. Martin gives the average of 2½ ozs. to the whole distance. The same level (the 250) has been driven south. The vein has varied. From time to time it has only been 10 ins., but has been as much as 3 ft., 2 ft. 6 ins., and 2 ft. 9 ins. wide, and worth from an ounce up to considerably over 5 ozs., and the whole average of that driving Capt. Martin gives us as 4½ ozs. Perhaps he is putting that a little too high, but still it is unquestionably a very good vein indeed. We are opening up rapidly a considerable extent of stoping ground which has not yet contributed to the returns. The returns of the mine have been made entirely from Low's and Probyn's shafts, but we are opening out rapidly good

stoping ground, and you will understand, as far as we are aware it is all virgin ground for 170 ft. up to the old workings in the 80-ft. level.

WHAT HAS HAPPENED SINCE JULY.

I am very pleased to speak of that, because all that I have been describing to you has occurred since the 10th of July last. (Cheers.) Low's shaft was sunk on an eastern branch, as I described at the last meetiug, to the 270-ft. level. Capt. Plummer's advice was taken on this matter, and he recommended us, and our agents quite agreed, that we should drive a cross-cut to the west. We drove a cross-cut to the west and cut the main part of the vein, and are now driving upon the rich part, which we have every reason to believe is the same as we have iu the southern workings. The 270-ft. level south has given quartz about 10 ins. wide. It is a narrow vein, but very rich iu places—from 1 oz. to as much as 10 ozs. to the ton. The lode is narrow, but we expect it will widen, because of the knowledge we have of it in the level above. A rise is being put up from the 200 to the 250. In the rise above the 270 we have a lode a foot wide, worth over 2 ozs., and in the winze coming down below the 200, which has now been sunk 50 ft., we have a lode 1 ft. wide, worth 15 dwts. The whole ground has been proved to be productive aud rich in gold. The 270-ft. level has beeu driven north 85 ft. We did not expect to meet with much here, because we had poor ground in the level above. There is a cross-course, a piece of disturbing ground, which has had a bad effect on the vein, and just at this point we had no grouud of value, but with 20 or 30 ft. more driving Capt. Martin expects to enter into the productive ground. In a winze sinking below the 250 level we have a lode worth 1 oz. The 200 has been driven a long distance north on the course of the vein—253 ft. from the shaft. That end is also in a cross-course, and is not productive, but the rock appears to be changiug iu character, according to the last report, and we expect to come soon into the productive ground that we know is ahead of us. For almost the whole distance there are important old workings, and we look upon it as very unlikely that they will go down to any such depth as 200-ft. level where we are now driving. Above the 200-ft. level they put up a rise at some rich ground, and came into the old workings. We found portions of the rock left there, which I must say I am surprised the old workers did leave, because that rock has been rich enough for us to take away. It has averaged nearly 2 ozs. to the ton. We have put a winze down from the intermediate level above to the 200-ft. level, aud all the grouud above will be very easily takeu away by stoping.

IMPORTANT DEVELOPMENTS.

There are two winzes below the 200, under the stoping ground that we have taken away, where we have also a very rich piece of rock indeed. The winze has gone down, according to the last report, only about 24 ft.; the lode is from 1 to 18 ins. wide, and the last assay was 4 ozs. 18 dwts. Taking the southern working from Low's shaft, the 200-ft. level has been driven a long distance—100 ft. or more; the lode has been 18 ins. wide, and worth 1½ ozs. The intermediate level above the 200 has been communicated with the old workings at the Battery shaft. Great advantage has been gained by that, because of the improved ventilation, and they are now widening this level to make a road through. The quartz has been worth ¾ oz., and it appears that we are here below the old workiugs, and ought, therefore, to have a very valuable piece of ground ahead of us, because of all those old workings you see indicated on the plan. In the north battery shaft, near the surface, there were considerable old workings, and we hope for a long piece of rich ground below these places. Even at this shallow depth we have a nice piece of ground close to the old battery shaft.

RICHES AT SHALLOW DEPTHS.

The 100-ft. level is being driven in a lode 2 ft. wide, worth about 1 oz., which I think is about the best place at so shallow a depth from surface that has yet been found on the Colar goldfields. Then we come to the "pick of the basket." There is no doubt what the chairman has referred to as Probyn's Mine—though small, is at the present time the best on the Colar goldfield, and it is

OPENING OUT IN THE MOST BRILLIANT MANNER.

(Cheers.) The shaft is suuk on the course of the vein, and is now down 68 ft. below the 230-ft. level. The lode in the bottom of the shaft is 4 ft. wide, and reported to be worth over 3 ozs. to the ton. By this time I have no doubt that the new levels (300 ft.) have been commenced, both north and south. We shall at once continue the sinking of that shaft, and we are very much encouraged by the size of the lode. Your chairman has commented upon the narrow lode that we had in many places, but I do not attach much importance to that. I do not think it matters much so long as it is sufficiently rich. The lode in the deepest place in the mine (about 300 ft.) is 4 ft. wide, containing this very rich 3 oz. rock. We shall continue sinking, and in addition to the confidence with which we are inspired by this ground, we have the evidence of the lode in the Nundydroog Mine, which is very near to our bouudary. Nundydroog is within a short distance—not much further to the north of the boundary than our workings at Probyn's shaft are to the south. The 230 ft. north, the deepest we have driven at present, went through a splendid lode. That is the point where, you will recollect, we have had

AN ASSAY NEARLY AS HIGH AS 15 OZS.,

14 ozs., and some dwts. The 230-ft. level south has been driven 69 ft. The lode has been from 2 to 3 ft. wide, and worth pretty much 5 ozs. all the way. (Cheers.) Here we are opening out a very rich piece of stoping ground. A winze has been sunk at a point to the south under the 230, which is now down 15 ft. in a lode 2 ft. wide, worth 3½ ozs. In the level above we have a splendid lode all the way. This level has been driven about 170 ft.—south of the shaft, and some 40 or 50 ft. north, and rich all the way. The lode in the end is 5 ft. wide, and is worth from 1 oz. up to 5 ozs. (Cheers.) In a winze below the 166 we have come down about 10 ft., and the lode is 4 ft. wide, worth 2½ ozs. There are other workings in the mine. Your chairman has mentioned the total number, and it must be evident to you how richly this brilliant mine is opening out. Your chairman has read a telegram, but perhaps it will convey its purport more clearly if I give the average of the whole of the points mentioned.

IMPORTANT STATEMENT.

There are 21 points in the mine, showing an average width of lode almost 2½ ft., and an average assay value of 2 ozs. 3 dwts. 8 grs. of gold to the ton. (Cheers.) Now, gentlemen, these facts and figures convey more to you than any words of mine can do. (Cheers.) It must be perfectly clear that these three mines are opening out extraordinarily well, and each month's development I consider tends to place the company on a sounder and more satisfactory footing in every way. (Loud cheers.)

VIEWS OF SHAREHOLDERS.

Sir FREDERICK HAINES: Mr. Taylor's statement is really very powerful, and as clear as it possibly can be. I think the prospects of the mine are first-rate, but there are one or two questions I should like to put about the width of the lodes and their value. I understand that you may take 6 cubic ft. of quartz to the ton. I wish to know what the value is of a lode 1 ft. wide, assaying 3 ozs. to the ton, seeing the amount of unprofitable quartz, which has to be handled, gaining 6 cubic ft. of quartz. I think the value of the narrow lodes greatly depends on that. The development has been pushed to a great exteut in what has been justly called three mines, but they have not yet come to the stage when we might expect something in the form of dividends to the shareholders—in other words, when we might expect something to come natural to the revenue side of the account. I should wish to know what amount of plant is supposed to be necessary to work these three mines, the number of stamps, and what we actually have at work at the mine, because it seems to me that we ought to have a large amount of machinery to meet the eventual output of these three mines. I am a preference shareholder, and I wish to know the position I hold in the face of the law, and in the face of the expectations of the ordinary shareholders. There seems to be a doubt whether we are absolutely in a legal position as regards the payment that has been made on these shares. As regards our interests with reference to those of the ordinary shareholders, I think we ought to be informed the market value of the ordinary shares when the prefereuce was established or discussed. We may some day find ourselves ou a very false footing, and there is no use blinking the question, and hiding our heads like the ostrich. That is a foolish proceeding, and I think that we ought to be enlightened on the subject. I think the shareholders will agree with me in saying, in regard to the working of the mine, that everything is of a most satisfactory nature, and I am very glad to be able to congratulate the directors on the success of their mauagement. (Hear, hear.)

The CHAIRMAN: Mr. Taylor will reply to the mining points.

DO NOT FORCE PRODUCTION.

Mr. TAYLOR: With regard to the lode—supposing it to be 1 ft. wide, of solid quartz, the whole containing an average of 3 ozs. to the ton, I calculate it would yield about 36*l*. to the fm. of ground. The questiou of the larger extraction is very serious, and I would warn you not to put forward statements at this meeting, which would lead your agents to attempt any such thing. You may depend upon it they are doing all they can with regard to increasing the extraction, but do not let us get into difficulties by endeavouring to put money into our pockets too quickly. (Hear, hear.) The capacity of the mill the chairman has already mentioned. It is now treating 400 tons a month, and you have stamping power equal to about 800 tons a month at least. Some of us think we may get more. I feel perfectly assured myself that Capt. Martin and Mr. Collins are doiug their utmost to get the mine into a condition to return 800 tons, and I strongly warn you, from previous bitter experience, not to put forward any such ideas as would lead your agents to imagine that they are not going fast enough in the direction of extraction. I realise the position Sir Frederick Haines takes up that we should come to a dividend point. I am a shareholder myself, and I look at the matter from a shareholder's point of view; but I know, as your manager, that everything is being done, as regards extraction, that is right and proper.

The CHAIRMAN: I fancy Sir Frederick Haines was not here when I rather insisted upon the point that we were opening this mine in a workmanlike and prudent way, and I said that the

OUTPUT SHOULD HAVE A DUE PROPORTION TO THE RESERVES IN SIGHT.

(Hear, hear.) With regard to the preference shareholders, it will be in the recollection of many that at the last meeting Mr. Probyn took up that position and thoroughly explained it. The position is this, that there is a Bill in the House of Lords which is intended to remove the extremely remote liability that is supposed to rest upon us, and I think, when it comes down from that House with the imprimatur of such men as Lord Blackburn and Lord Fitzgerald, there will be no opposition to it. The price of the ordinary shares when the preference shares were issued was 2s.

Sir F. HAINES: The preference shares advance the ordinary shares.

The CHAIRMAN: Yes, it rescued them from ruin, and the company from liquidation.

WORKING AT A PROFIT.

Col. LONG: Has the sum realised upon the working of the last three months covered expenses? If so, how much profit has it left?

The CHAIRMAN: I have uo hesitation in saying that the returns for the last three months have undoubtedly done more than paid expenses. We have not done anything whatever in the way of separation of capital account from reveuue account. We charge everything to revenue, and I think that is a very good plan for the present. New machiuery, &c., would in the ordinary way go to capital account, but at the present time we have not attempted a separation. We make the mine as it goes along pay for everything bought, aud still within the last few months there has been a profit. (Cheers.)

A SHAREHOLDER: What has been the amount of the debenture issue?

The CHAIRMAN: 20,000*l*., and the service of interest is 2,000*l*. a year.

A SHAREHOLDER: Is there any reason to suppose that the lode which has been discovered iu the South-East Mysore passes through our property?

Mr. TAYLOR: I have no knowledge of the South East Mysore beyond what I read in the papers, but it is a long distance from our properties.

The CHAIRMAN: There is no impact with us.

Mr. TAYLOR: I think it must be 2 miles away. We cannot, I think, attach any importance to that.

Sir F. HAINES: What is the dip of the lode from Probyn's shaft?
The CHAIRMAN: The dips are all west.
Mr. TAYLOR: It is dipping at right angles to the Nundydroog boundary.

THANKS.

Col. LONG: I beg to propose a cordial vote of thanks to the chairman and directors for the way they have brought the mine to a successful issue.

Mr. BEAUMONT: I second the motion, and in doing so might say, in addition to the lucid explanation of the chairman and Mr. Taylor—perhaps the most satisfactory feature of all is that of 21 points working, the lode averages over 2 ft. wide, and more than 2 ozs. to the ton. That would have been satisfactory had it referred to a far less number of points than 21. (Cheers.)

The motion was carried by acclamation.

The CHAIRMAN: We heartily thank you for your kindness. So long as we remain at the helm in Ooregum we will coutinue to do our best. We have had a rough time in the past, but now we are cutering upon a career of prosperity. (Cheers.)

The proceediugs then closed.

SALE OF GOLD.

The Ooregum Compauy has sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the mouth of November, which realised 2,341*l*. 14s. 3d.

THE ANGLO-SAXON GOLD MINING SYNDICATE, LIMITED.

A LODE YIELDING 6 OZS. TO THE TON—REMARKABLE RESULTS IN DIVIDENDS, AND OTHERWISE.

THE ordinary general meeting of this syndicate was held at Cannon Street Hotel, on Monday, for the transaction of the ordinary business—Charles C. Colley, Esq., chairman of the eompany, presided.

Mr. E. A. REEVES (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, since the report was issued we have received further intelligence abont the mine, in the shape of a report from the new manager, who has been appointed. He writes only an interim report, and states that he will send a fuller one later on. I am sure it will be of interest to the shareholders.

LATEST FROM THE NEW MANAGER.

Mr. REEVES here read the following report:—

6th November.—I have the honour to forward my first report on your mine and plant. I arrived here on the 22th ult., and have siuce given my attention to the study of your mine, the surrounding country, and your reducing plant. From the short time that has elapsed since my arrival I am unable to present a full report, but hope at an early date—probably by this day fortnight—to be able to forward full details of the mine and machinery, together with a plan of the leases held by you, and working drawings of the mine. At the same time I hope to be able to offer suggestions for the further development of your property. The only work of importance which I have commenced as yet is the prospecting of the lode to the north-east. I have gone about 10 ft. in this direction at the tunnel level, and find the lode about 3 ft. thiek, improving in appearance, and showing a fair amount of gold. I find that this has been an exeeptionally dry season here, we are short of water for crushing purposes, and one team of horses has been sent down country to recruit, the total absence of green food for so long a time being deleterions to health. The battery for this crushing commenced work on the 12th October, and worked full time for eight days; during the fortnight commencing 22nd October aud ending 3rd November the battery only worked (from the above mentioned causes) 176 hours. The amount of stone crushed from the 12th October to 3rd November is 203 tons, which has yielded 1,208 ozs. 5 dwts. of amalgam, exclusive of that eontained in the stamper boxes, which ean only be obtained at the final eleaning up. As far as I can judge, this will give about the average yield per ton, say 5 ozs. As we can only crush short time until the rain comes, I propose to clean up next Monday, and again on the Saturday before Christmas. With regard to your property, I can only say at this stage that it appears to be an exceptionally valuable one; the lode is a fair size and the yield of gold per ton very large; and if the expenses are high, this must be attributed to the distance from a centre of population, to the mountainous nature of the country, to the tropical climate, and to the somewhat crude arrangements for working. The best mode of redncing the expenditure will, I think, be found in the adoption of labour-saving appliances wherever practicable, and it will be my endeavour, when making a full report of the mine, to point out where these can be introdueed with advantage. In conclusion, I beg to assure you that it will be my earnest endeavour to work your mine to the best advantage, aud also to keep you fully informed of the progress in the development of your valuable property, and of the prospects of the same.—G. S. HARTRICK, Manager.

NEW MANAGER'S CREDENTIALS.

The CHAIRMAN: I must supplement that by a little information about Mr. Hartrick, who was seleeted, at the request of Mr. Madden, by a relative of my own, Mr. Simpson, a member of the Legislative Council of Vietoria. He says that Mr. Hartrick was, until his appointment with us, registrar of the School of Mines at Sandhurst, and considered one of the best qualified miners in that country. No doubt the holding of that post is a proof, to a very great extent, of his ability. He says that, besides being considered eminently fitted to conduct mining work, Mr. Hartrick enjoys, privately, a character for the strictest integrity and honour, and that we are extremely fortunate in being able to get sueh a man to look after our property. I may remind you that Mr. Hodgkinson sent us a very lengthened report during the year, which was circulated, and that, with the present report, gives the shareholders all the information that is in the possession of the directors as to the position of the mine. I may say that one of the paragraphs in that report speaks of the new mine in very encouraging terms, and that is where the writer talks of having extended the drive towards the No. 1 east (the claim which we purchased), and finding the lode 3 ft. thick, and looking extremely well. In that direction the larger part of our property lies, and is unworked. We received a remittance from the mine on Saturday, which enabled us to declare a

DIVIDEND OF 2s. PER SHARE.

(Cheers.) This has been declared this morning, and will be payable next Saturday to those whose names stand on the register at this date. Mr. Harbord is here now. He was going away by the steamer that leaves to-morrow, but we have had a telegram from Mr. Madden stating that the new manager has forwarded a report containing suggestions as to the machinery that should be purchased and put on the mine, and it has been thought by us all that Mr. Harbord should wait the arrival of that in order that we may have the benefit of his advice in adopting those suggestions, or otherwise.

Mr. DAWSON: What are the particulars of what they require?

The CHAIRMAN: We have not received them. We have a telegram saying they are on the way, and may be expected on the 17th of this month, so we thought it advisable that Mr. Harbord should wait. He is ready to afford any information to shareholders who may ask for it. There is one other thing I should like to allude to, and that is that during the year the directors applied to you for sanction to purchase No. 1 east for 6,000*l*.—at least, that is what the purchase was eompleted for, out of the proceeds of the gold. It has since then been thought desirable that that amount should not have been paid out of profits, but that it might be fairly and properly made the subject of the issue of a certain amount of new capital in order to cover it. Although I am precluded from putting this formally to you now (there will have to be two meetings, of which notice will be given), I thought it well to ask your opinion as to what we mean to do, namely, to issue 6,800 new shares—that being the proportion of one to five of our capital, and we propose to

ISSUE THEM AT A PREMIUM OF 1*l*.

That is, 6,800 shares will be issued at 2*l*. to our shareholders in proportion to their holding—one to five. Before moving the resolution I shall be pleased to answer any questions. The reason for the issue of these extra shares is, that we shall require the money for the purchase of the new plant recommended to us.

Mr. PAYNE: Have you quite given up the idea of securing the other piece of land we thought of purchasing? On the 11th of July you told us you had some property larger in extent than you anticipated, and that you had bought it for 2,000*l*. less than you expeeted.

The CHAIRMAN: My memory tells me that you are quite correct. We were then speaking from information furnished by telegram, which is neeessarily rather curt, being extremely expensive, and we were misled as to the faet that the whole of these properties had been purchased. We thought that both Nos. 1 and 2 east had been purchased.

Mr. PAYNE: We congratulated you on getting the property 2,000*l*. eheaper than you expected.

The CHAIRMAN: Mr. Harbord will tell you that the No. 2 east people would not sell for the money we proposed to give, and I think we have explained that in the report.

MARKET FOR THE SHARES.

Mr. PAYNE: You thought when Mr. Harbord was in this country there might be a re-organisation of the company, giving 10 shares instead of one, so that they might be freely dealt with here. I find it very difficult to sell my shares on this side, and I thiuk that for a property like this we ought to get the best value we can. Here are the South African Mines, with not half the success we have had, at a very high priee, and I find it very difficult to sell shares at anything like what I eonsider their market value.

A SHAREHOLDER: I should be pleased to deal with your shares very quickly if you put them in my hands.

The CHAIRMAN: The directors are open to receive suggestions to make the shares more saleable.

TRULY REMARKABLE.

Mr. PAYNE: A company producing 29,000*l*. in gold for a year, with a capital of only 34,000*l*., is remarkable.

A SHAREHOLDER: I see that in the first statements you made there were only 320 or 340 tons mentioned, and you could not give the number of tons that yielded about 1,900 ozs. In the second report you gave the yield at 4,400 ozs., and you mentioned the tons at 560. The balance would give 140 tons, or 2,000 ozs.

The CHAIRMAN: The explanation is this, that there was a large quantity of ore put through the mill on the first occasion. It is the custom to clean up as they go along the copper plates coated with quicksilver. The manager cleans the gold from the plates, but never touches the boxes, and from them, in the last clean up, a large amount of gold is obtained, which, of course, increases the average, but it has been accumulating during the whole of the crushing. There is a

CONSIDERABLE DIVERGENCE OF OPINION

on the subject of dividing the capital. We wrote to Madden, as the largest shareholder, practically representing, with other colonial holders, one third of the company, and put before him our views as to the multiplication of the shares—turning 1 into 10. We have a telegram in reply this week, in which he expresses a deeidedly adverse opinion. We believe it to be desirable, but must get a pretty general concensus of opinion to carry it.

A SHAREHOLDER: I heard the shares in the colony were selling at 7*l*. 10s., but here they are selling at 5*l*. I have no desire to sell my shares, but eircumstanees might occur to make me do so, and it is awkward not to be able to find a market except as a favour.

The CHAIRMAN: It is not such a practicable thing as you seem to think. We want special resolutions in the first place, and the majority of the shareholders with us in the second. A number of shareholders are very much averse to the alteration. I am desirous of having a Stock Exchange quotation, but we must find the proper way to get it. If we were to multiply these shares by 10 do you think they would be at anything like their par value. I do not know that we want to emulate the South African mines.

OBJECT OF THE BOARD.

The object of the directors is to get the money out of the gold mine and not out of the pockets of the public. We are bound to respect the feelings of our shareholders, and we have found a large number of them object to the alteration, including Mr. Madden. He wrote to

me, and proposed that we should so re-organise the company that it should represent the capital of 60,000*l.* upon which he thought the mines would pay good dividends.

Mr. SCOBELL: They have had all the market on the other side.

The CHAIRMAN: We are quite prepared to accept any remedy that any shareholders will put before us, and that can be carried through.

A SHAREHOLDER: Has Mr. Madden expressed any opinion as to the issue of the 6,800 shares?

The CHAIRMAN: Yes; he approves of it.

Mr. SCOBELL: Will you make the proposition to-day?

The CHAIRMAN: We cannot. It requires special notice and special meetings. I move the adoption of the report.

Mr. HARBORD here offered to answer any question as regards the working of the mine.

MR. HARBORD QUESTIONED.

Mr. DAWSON: Has the stone been picked out of the reef?

Mr. HARBORD: It has been taken just as it came, and sent to the battery. 40 tons were picked stone, but that is some I got from the original shareholders.

Mr. JOHN MCFARLANE: With reference to the supply of machinery your mill is placed one mile from the mines for the purpose of being close to the water. but I suppose you first entered into a calculation as to whether you could not bring the water more cheaply to the mine than carry the ore to the water.

Mr. HARBORD: We did, but if we had waited we could not have been crushing by the time we did. I wanted to crush as soon as posible, to allow the shareholders to know what was in the mine.

Mr. MCFARLANE: By putting a line of pipes, would that not be a much cheaper way of getting a water supply than carrying your ore to the mill?

Mr. HARBORD: There is no doubt that laying a line of pipes and pumping the water from the dam and removing the battery would be preferable to carting the quartz, and I have had that under my consideration, but at the same time I think we will get sufficient water in the mine to enable us to supply the battery. Until I really know whether I can get sufficient water from the mine, I would not like to go to the expense of putting the pipes down.

Mr. MCFARLANE: If you find water sufficient in the mine, I apprehend you will erect another mill.

Mr. HARBORD: We shall remove the mill to it and avoid carting.

Mr. MACFARLANE: If you do not get sufficient water, would it not be well to lay down pipes?

Mr. HARBORD: We shall have to consider whether a wire tramway or pipes will be cheapest. I think we will get eventually sufficient water in the mine. On the Palmer goldfield there has been sufficient water at a depth. We have a fair supply of timber within a radius of 2 or 3 miles that will last for two years or more.

MR. COLLEY RE-ELECTED AND CONGRATULATED.

Mr. CONNOLLY: I beg to propose the re-election as a director of Mr. Charles C. Colley. He was instrumental in bringing this company out, and largely so in bringing it to its present satisfactory position.

IT IS REALLY A WONDERFUL COMPANY.

I believe if we were in the fever of South African unhealthy speculation, the shares would have been nearer 50*l.* than 5*l.* to-day, because, as a matter of fact, from the time we have been at work we have crushed only 1,319 tons. That is equal to scarcely four months work, supposing the battery has sufficient water to keep it fully employed. In those four months we have had a dividend of 40 per cent. We have expended money in the purchase of property adjoining which is equal to 20 per cent., and this makes 60 per cent. practically in not quite four months' working. I do not think any South African property can show results like these, but it is a fact that we are out of the swim, and, therefore, have not these enormous prices. A suggestion has been made as to the division of shares, but I doubt whether the present time is the best in the interests of the company to carry out the arrangement. We have had a drought, which has lasted 10 months, and now we have rain, and it is fair to assume, for the next three or four months, we may be crushing our full power of 320 tons per month. We must have tremendous dividends from that, judging from the past history of the company, and, if we re-float it hereafter, I venture to say there will come a better time than the present. We want a security that is negotiable. As long as you cannot sell freely it keeps the prices down. Whilst Mr. Colley is at the head of this concern we shall have our best interests thoroughly protected, and if any gentleman will do me the favour of corroborating my view by seconding the motion I shall be pleased.

Mr. DAWSON, in seconding the motion, congratulated Mr. Colley upon the very great success which has attended this enterprise.

The motion was carried unanimously.

Mr. SCOBELL proposed the re-election of Mr. Charles Gill, who has been associated with the company from its commencement.

Mr. PERKINS seconded the motion, which was carried, and both the directors returned thanks.

DIRECTORS PAID.

Mr. MACFARLANE said the next business was to consider the past and present remuneration of the directors. It did not require any words from him to tell how very well the company had been managed by the directors, who had hitherto done their work without any remuneration. He thought they ought to be remunerated for both past and present services. There were six directors, and he proposed they should have 1,200*l.* per annum from the date when they commenced the company, which would be a fair allowance to them—say 200*l.* each director.

Mr. DALY seconded the motion, and said he was very pleased at the results which had been attained. He did not think the directors would have been at all overpaid.

LATEST BY CABLE.

The CHAIRMAN referred to the great services of Mr. Madden, who recently made a journey to the mine, and reported by telegram that it was looking well, and that there were large reserves of stone in sight.

The motion was carried unanimously, and suitably acknowledged.

The CHAIRMAN said the accounts would be made up to the 31st of March which would give the result of 12 months' working. It would be convenient that the annual general meeting should take place in July.

A SHAREHOLDER said that the shares had been dealt in to-day at 5*l.*

It was decided to leave the sub-division of shares in the hands of the board.

The CHAIRMAN said that any resolution passed to-day on the subject of the sub-division of the shares could only be an expression of opinion.

Mr. MACFARLANE: We want a Stock Exchange quotation, and I will propose, as an expression of opinion, "That it is the opinion of this meeting that the directors should take steps at their earliest convenience to convene a special general meeting for the purpose of bringing this matter before the shareholders, namely, the multiplication of the shares into a larger capital, with the object of getting a quotation on the Stock Exchange.

Mr. LAMB (solicitor): That could only be obtained by a sub-division of the present capital. I doubt if we could get a quotation in that way. We must inevitably go to the public if we wish to get a quotation.

Mr. PAYNE seconded the motion, which was carried.

The CHAIRMAN, in reply to a question, said that this would not interfere with the issue of the 6,800 shares already spoken about.

Mr. HARBORD, in reply to a question, stated that No. 2 east had been sold for 2,500*l.* He had offered as much as 2,100*l.*, but it was refused.

Mr. MAYNARD (director) said that the next meeting would be held on the first Monday in July, when special resolutions would be submitted, in accordance with the expression of opinion of this meeting.

A resolution to this effect—that is, fixing the meeting for the first Monday in July—was carried.

Mr. CONNOLLY proposed a hearty vote of thanks to Mr. Madden and Mr. Harbord. Mr. Madden was largely interested in the company, and had taken an unusual amount of trouble on its behalf, and so also had Mr. Harbord.

Mr. ROBERTS seconded the motion, which was carried.

LOCAL DIRECTORS THE LARGEST SHAREHOLDERS.

Mr. HARBORD returned thanks, and said that he, with Mr. Madden, were the largest shareholders in the company, and this fact would give the meeting confidence, especially as they were local directors. While at Cook Town he could have sold every share he had at 7*l.* 10s., and next to Mr. Madden he was the largest holder.

THE COMPANY'S "MOTTO."

Mr. MACFARLANE, in proposing a vote of thanks to the chairman, said that that gentleman had given the meeting a great deal of useful and satisfactory information.

The motion was seconded and unanimously carried.

Mr. DAWSON said the motto of this company was "Honesty and Uprightness," and he had been highly pleased with what he had heard that day.

The CHAIRMAN returned thanks, and the proceedings were brought to a close,

WEST POLBREEN.

UNPLEASANT FOR MR. J. B. REYNOLDS—37, WALBROOK "VERY SENSITIVE"—IS MR. REYNOLDS ON THE SAME BASIS AS THE OTHER SHAREHOLDERS?—A STORMY MEETING.

AN ordinary general meeting of shareholders was held at 37, Walbrook, London, on Wednesday, under the presidency of Mr. J. B. Reynolds.

There was an unusually large attendance of shareholders.

PROSPECTS MORE ENCOURAGING.

The statement of accounts, from September 12th, 1888, to January, 8th, 1889, showed that the receipts amounted to 556*l.* 2s. 11d., the sales of black tin (1 ton 16 cwt. 1 qr. 14 lbs.) realising 109*l.* 8s. 7d. Labour costs absorbed 392*l.* 1s. 8d.; there is a balance of cash due to the bankers of 102*l.* 13s. 4d., but the balance of assets over liabilities is set down at 6*l.* 16s. 8d., there being 109*l.* 10s. outstanding as arrears of call at the time of the preparation of the accounts. These calls have since been paid.

Capt. VIVIAN reported that since the meeting of September 12th, 1888, they had driven the 22-fm. level east and west about 14 fms., the lode varying in size from 1 to 2 ft. wide, and all producing tin. A rise was now being put up in the back of the 22-fm. level, and he hoped to hole this rise to the 15-fm. level in about a month. The tin was of good quality, the price realised on 27th December being 60*l.* per ton. He considered their prospects were more encouraging than for some time past.

NO ARREARS.

The CHAIRMAN, in moving the adoption of the accounts and report, said he had nothing particular to say about the figures. There were no calls in arrear, and, as far as he could recollect, it was without precedent in the history of mining that a company had carried on its business so long as this had done without ever having had occasion to show any arrears of call in the statement of account. This was the more remarkable considering the discouragement shareholders had had from outside, but it indicated their firm determination to test the value of the speculation, and the determination of every individual thoroughly to see that all persons have their share of the risk. There were no liabilities unpaid, and here again the conduct of the mine was, he thought, unprecedented; so that they saw, after all, the system upon which the business of the company was carried on, and which was called the "no credit" system, had very evident advantages inasmuch as any shareholder could feel he was carrying on his business without any risk to himself other than that to which he was a party. With regard to the mine itself, they would observe that Capt. Vivian had been conducting operations on the lode which he discovered some time ago, and this lode seemed to give better promise than the other lodes which he formerly met with. It was fair and right to say that so far as they had been able to gather, at present they had met with no tin in the bottom level. The tin which had been sold had been raised from the 15-fm. level, or about there. The hope was that tin would be met with at the bottom of the 22, the reason for that hope being that the lode had been

improving in size and quality very much of late. The chances were, therefore, in favour of tin being met with at that level. It was possible that during the next four months the mine might pay its own expenses, but of course they could not see through the ground, and could not be certain of such a result, so that as usual, that day they would have to make an

ARRANGEMENT TO MEET ANY LOSS

they might sustain during the next four months. Their effort had been to thoroughly test this property, and he thought that the time was very near at hand when they would be able to see whether they were successful or likely to be so. As far as he was personally concerned he absolutely declined to pay any calls on any shares in any company unless the probabilities were all in favour of success. He had less hesitation in speaking in this way because

HE GAINED PERSONALLY NOT A SINGLE PENNY ADVANTAGE

out of the company, and he never had done so, but he was on a par with the other gentlemen who were shareholders. Allusion had been made to the price they obtained for their produce. Of course that was peculiar to the district, and if they met with a good deposit of tin going west he thought they would find that tin from this lode would fetch as high a price as the tin from West Kitty. He would like Capt. Vivian to give them an idea of the cost of production in West Polbreen, supposing they met with a deposit.

MR. REYNOLDS' DISINTERESTEDNESS QUESTIONED.

Mr. LENNOX said he should not like the chairman's statement as to his interest in the mine to go out uncorrected. Mr. Reynolds promoted the mine to his own benefit; nobody shared the profit with him. (Hear.) He now held 52 shares, and that was the measure of his liability as compared with other shareholders. The shareholders had spent 6,000*l.* in calls, and he thoroughly believed that all that money had been honestly spent.

A TOUCHY CAPTAIN.

Capt. VIVIAN remarked that it seemed to him Mr. Lennox was talking about Kitty Mine and not Polbreen. (Cries of "No.") He generally found that the people who had the smallest number of shares were the most troublesome. Mr. Lennox had only 15 shares. He had been connected with mining for 40 years, and he repeated that he had always found the people with two or three, or perhaps five, shares the most troublesome and unkind.

Mr. LENNOX: Allow me, Mr. Chairman. Is what I said true or false?

Capt. VIVIAN: You let me have my say, and you shall have yours. The working of the mine is my business, and if the shareholders do not like to subscribe the money they can shut it up, or they can get somebody else to manage the property, and I will thank them and leave. Continuing, Mr. Vivian said they had not raised so much tin as he had hoped. It had come from the 14-fm. level, close up to the old workings; it was going down now, and they were following the former workings. They could not stope the bottom of the level because of the water.

Mr. BUDD expressed the opinion that

MR. REYNOLDS'S WAS A VERY SENSITIVE OFFICE.

What was the use of their meeting together if they could not express what their views were? He did not think that Mr. Lennox had said anything that should have called forth the remarks of Capt. Vivian —(hear)—and he wished that that gentleman would not so soon take offence at any remark made on the subject of the general management. He did not like to hear people talking about their disinterestedness in this matter. (Hear.) Personally he should not take any shares in a mine if he had no expectation of profit, and they could not shut their eyes to the fact that Mr. Reynolds must have had a considerable interest in the mine. He certainly did not think that Mr. Reynolds was of such a benevolent turn of mind—and Mr. Reynolds was an old friend of his—as to bring out mines for the public benefit and without any interest or profit to himself.

VOICE OF AN OFFICIAL.

Mr. HARVEY protested against the speech just made (a VOICE: "You're an official!"). There had been no veto placed upon any person who desired to speak at a committee meeting; certainly not by the chairman.

Mr. BUDD: Nobody said there had been.

Mr. HARVEY said the remarks of Mr. Budd were to that effect.

Mr. BUDD: Nothing of the kind.

Mr. LENNOX observed that he merely said that 6,000*l.* had been paid in calls. When Mr. Reynolds said he had gained nothing by the company he (Mr. Lennox) replied that that could not be the case, because Mr. Reynolds promoted the mine, and made whatever profit was to be made out of it. He was only on the footing of the ordinary shareholders to the extent of 52 shares.

The CHAIRMAN said he scarcely understood Mr. Lennox. He talked about the promotion of the mine and the profit made out of it. Mr. Harvey was the secretary of this mine: he asked him whether there was any promotion money paid.

CHAIRMAN'S POSITION.

Mr. HARVEY: I do not remember any.

Mr. LENNOX: You know better than to talk like that. Mr. Lennox added that the shareholders paid for their shares at the rate of 1*l.* and 1*l.* 10s., and Mr. Reynolds knew that. It seemed to him that the chairman wanted to take them by a fluke.

The CHAIRMAN said that Mr. Lennox had now explained; he had said he did not mean promotion money in the ordinary sense of the term, but the profit which was got by individuals out of the sale and purchase of shares. He must ask Mr. Lennox to consider for a day or two—(Mr. HARVEY: "Withdraw.")—and after calm reflection he would say that to bring personal transactions in shares before the company like this was not exactly in order, and that they had nothing to do, as individuals, with personal dealings in shares of the company. They had all had opportunities to deal with shares in the company in any way they thought proper. (Mr. LENNOX: "I am talking of promotion in the first instance.") Mr. Lennox would forgive him if he reminded him that he was one of the original holders in the mine.

Mr. LENNOX: I was, and paid for my shares like any other.

Mr. REYNOLDS: I did exactly the same.

Mr. LENNOX: Oh!

WHAT MR. ROBINSON DID.

The Rev. Mr. ROBINSON said he had paid down 1,000*l.* over this mine.

Mr. LENNOX: And you paid that 1,000*l.* to Mr. Reynolds?

Mr. ROBINSON: Yes.

The CHAIRMAN moved a call of 1s. per share.

Mr. POYNE seconded.

The CHAIRMAN expressed the hope that this call would thoroughly test the mine.

Mr. ROBINSON said that Mr. Reynolds had assured him that there would not be another call to pay in regard to this mine, and that the mine was to be wound up.

The CHAIRMAN said it did not apply to Polbreen Mine.

After the resolution had been carried, together with other formal motions, the meeting ended.

WEST BASSET.

CALL OF 2s. 6d. PER SHARE.

A SIXTEEN-WEEKLY MEETING of the shareholders in West Basset was held on the mine on Monday week under the presidency of Mr. J. C. Daubuz.

The accounts, which were read by the CHAIRMAN, proved that the total expenditure for the four months had been 6,531*l.* 1s. 9d. This sum included labour costs, 4,945*l.* 11s.; merchants' bills, 1,494*l.* 3s. 9d.; and rates, with Stannary assessment, 91*l.* 7s. Tin had been sold to the amount of 101 tons 17 cwt. for 5,680*l.* 16s. 4d., and there were other minor receipts. The loss on the 16 weeks' working was 792*l.* 14s. 8d.; but there was money remaining from last time, which reduced the balance against the mine to 66*l.*

The CHAIRMAN said the loss, of course, was extremely unsatisfactory, but the agents had done the best in their power. In consequence of the low produce of the stuff raised from the mine, they had been unable to return more than 101 tons of tin, as compared with 104 at the last meeting—a falling off of about 3 tons.

Capt. RICH said they had no great courses of tin during the four months, but were doing the best with what they had got. They started the 16 weeks fairly well, their produce then being 34 pounds of tin to a ton of stuff; it was 37 the next month, but during the last month it went down to 29—a large drop.

THEY HAD STAMPED 7,100 TONS OF STUFF

for the tin shown in the statement, but they had been tackling the mine over a large area from east to west, not without the hope of getting a good bit of ground, especially in the eastern part. He regretted the loss of 600*l.*, but that might be reduced if they stopped exploration in sinking shafts and did not add new machinery. He concluded by expressing the opinion that they must pay attention to the bottom of the mine. He proposed the adoption of the accounts.

Mr. T. BOLITHO seconded, and the motion was carried.

A call of 2s. 6d. per share to meet the deficiency was made on the proposition of Mr. BOLITHO, seconded by Mr. WICKET.

This concluded the business.

THE MONTE DEL ORO MINING CO., LIMITED.

A FAVOURABLE REPORT—3 OZS. TO THE TON.

THE fortnightly report of Capt. John Roberts, dated December 27th, 1888, says:—Taylor's engine shaft: The ground in the 186-ft. level north of the cross-cut has during the fortnight been very favourable for driving, 16 ft. being driven, making the total length of the level from the cross-cut now 130 ft. The average width of the lode is about 1½ ft., and it is composed of quartz and slate intermixed. The total length of the 186-ft. level south of the cross-cut is 112½ ft., of which 18 ft. were driven in the past fortnight, so that here good progress has also been made. For the greater part of this drivage the lode has been small, and has carried but very little quartz, but I am pleased to report that the present end appears to be getting into a big body of quartz. The lode is already 3½ ft. wide, and contains a solid branch of quartz 2 ft. in width towards the hanging-wall, the eastern, or footwall, part of it being composed of slate intermixed with quartz. Shaft No. 5: As yet the speed made with the cleaning up of this shaft is slow, but a depth of 92 ft. has now been reached. Natives are employed on this work, they knowing very little of mining, and still less of timbering, and as the ground is so badly crushed, the timberman has to watch them very carefully in order to get them to do as well as they are doing. Shaft No. 6: The depth of this shaft is 159 ft., and I think we are near to its bottom, because the ground is now very much crushed, and will require close timbering, but owing to the heavy rains we have recently experienced there are 5 or 6 ft. of water in the present bottom, just preventing the timberman from commencing this work. However, with a few days fine weather I expect the water will drain off, and then the necessary timber could be put in, and the cleaning up of the shaft be proceeded with. Winze No. 1; Notwithstanding there is still some water to contend with, the men have made good progress in sinking this winze during the fortnight. Its depth below the 76-ft. level is now 90 ft., 19 ft. being sunk since the last report. The width of the lode in the bottom is about 2½ ft., and it carries a leader of quartz 1½ ft. wide.

The following are the results, received 2nd January, of assays made in London of eight samples taken from different parts of the mine, viz.:—No. 1, from the 186-ft. level north, assayed 19 dwts. 15 grs. gold per ton. No. 2, from the 186-ft. level south, assayed 6 dwts. 13 grs. gold per ton. No. 3, from No. 1 winze 5 ft. lode, assayed no gold. No. 4, from pile of quartz from the 80-ft. levels of underlie shaft, lode No. 3, assayed 4 dwts. gold per ton. No. 5, from stuff from winze No. 6, assayed 2 dwts. 14 grs. gold per ton. No. 6, from stones of quartz coming out of shaft No. 6, assayed 3 ozs. 5 dwts. 8 grs. gold per ton. No. 7, from 186-ft. level north, assayed 5 dwts. 5 grs. gold per ton. No. 8, from winze No. 1, assayed 1 dwt. 7 grs. gold per ton.

Messrs. Morton, Rose and Co. notify the numbers of the bonds of the Argentine Government Six per Cent. Sterling Loan of 1882 drawn for repayment on February 1st.

THE PAHANG CORPORATION, LIMITED, LONDON.

GRATIFYING REPORT FROM THE LOCAL DIRECTOR.

IN accordance with a promise made in my regular communications to the board, and now that I have got the accounts off my hands, I beg to submit to you the following general statement regarding our work, which will be interpreted as being mainly supplementary to what Capt. Teague has already reported to you :—

MINING CONTRACTS.

The first observation I would make is upon the mining contracts. I think you will agree with me that those have been most satisfactorily arranged. The cost is as low as can be found in any part of the mining world, and I cannot see how other tin mining companies, who pay about as much per foot for levels, cross-cuts, winzes, and rises, as we pay per fathom, apart from the enormous outlay they have to make in pumping and raising their ore to the surface—I fail to see how such enterprises can fairly compete against us when we once get into full swing. Capt. Teague has given you the actual figures, both for cost and return, and those are made not merely at random, but as the actual result of the present mode of working.

CHINESE PREJUDICES.

I need scarcely allude to the prejudices we had to overcome before we got this department of our work put into its present shape ; the Chinese miners are exceedingly superstitious, and we found some of them in April last who would not even allow us to walk upon the backs of the lodes with our boots on "in case we should terrify and expel the 'spirit' which so kindly kept them supplied with the ore for the time being," but now such absurd prejudices have become gradually uprooted, and the Chinese have learned that we have some other means of appeasing the anger of their "demon." This supernatural belief is a very prevalent one in mining districts, and you can readily understand, from the manner in which the natives worked, how the idea should have so strong a hold upon them. When they met a lode of tin, they worked upon it downwards in uncertain directions, following the ore wherever they could find it, and when the bamboo pumps, described by Capt. Skewis in his report, failed to keep the mine dry enough, they abandoned it in despair, stating that the "spirit" was displeased. They then searched for another strong outcrop, probably on the same lode, although they usually believe each working was on a separate lode, and when they found it they offered sacrifices to their "spirit," and continued mining operations in the same old manner until they were again expelled by the wrath of the same demon. After giving details of the proposed mode of working the deposits, Jeram Batang and Kabang, Mr. Fraser adds that—The quantity of ore thus tapped may be judged from the fact that the length of lode at either place, both east and west, measures nearly half-a-mile each way. This, multiplied by 500 ft., the average height of backs, and again by 9 ft., the average width of the lodes at those places, will convince anybody of the enormous quantity of ore which can be obtained from these stopes.

WATER-RACE.

In the construction of the water-race we have had about 420 new men daily at work. We have been carefully watching those men individually, with a view to distributing them, after the completion of the race, upon the work to which they are most adapted. There are at least 100 of them who will make admirable miners on the stopes, and many of the others can be advantageously placed in the mines, where they will very soon learn to perform all that will be required of them.

NEW MINERS AND ORE RESERVES.

Our system has been, whenever we found a man with a better practical insight into tunnelling than the average Coolie, to place him on a point of operation along with two or more recruits, and the latter gradually become sufficiently expert to be able to train others. In this way we have not, since the contract system has been inaugurated, experienced any difficulty in finding suitable miners for any new work, and I do not anticipate any, because the amount of ground which is being opened up now is, as Capt. Teague has reported, much greater than we can deal with until we have very largely increased our stamping machinery, and enormous reserves will be the direct outcome. Still this is very much better than leaving the lodes untouched, because when we have got the stopes ready in this manner we know exactly both the quantity and the quality of ore which is ready for treatment at any point, and in ordering machinery for its treatment, the capacity of such machinery and reducing plant can be very accurately determined. Further, in having those stopes ready, we eliminate from the mine in which they are situated that element of risk, anxiety, and speculation which is so common a feature of mining enterprise.

CHOICE OF WORKING SYSTEM.

I consider that my policy in thus pushing ahead the development of the tin lodes at Upper Kuantau, so as to ensure not only steady and rapid, but practically unlimited, returns of tin in the near future, is a more judicious one than that of re-enforcing the staff of tin steamers on the larger plat. It would be unfair to us to estimate the expenditure incurred this year as that for working a mine or a group of mines capable of supplying a 30-stamp mill, inasmuch as the outlay in other directions has been all carefully incurred, with a view to the erection at the various mines of suitable plant for the treatment of the ore, and a constant supply of ore as soon as such plant has been erected. The 30 heads of stamps partly erected at Jeram Lumpong are wholly inadequate for the treatment of the ore from the mines in the neighbourhood, which will be supplied from Teague's, Pollock's, Campbell's, Bell's, and Nicholson's lodes. One hundred heads of stamps could readily be kept continually crushing the ore from those mines. What should be done, therefore, next year, is to get another 14 ft. by 10 ft. water-wheel erected beside the present water-wheel at Jeram Lumpong, having the stamps on its western side, instead of the eastern, as the present wheel has got. The object in placing the wheel in that position would be not only to have it in a more convenient situation for the fall of the water from the end of the ditch, but also to afford plenty of space for the buddles and dressing floors, which in such mills assumes somewhat formidable dimensions. The ground is admirably adapted for the erection of such a mill as I have referred to, which should consist of 35 heads of stamps, and the capacity of the water-race for supplying the requisite motor is ample.

SAWMILL.

In the erection of stamping mills and buildings of all kinds in future none of the delay we have hitherto encountered from the want of sawn timber will be experienced, owing to the presence of the sawmill. This will supply a great want, and will very considerably expedite our progress. I could now undertake the erection of 100 heads of stamps at any of the mines in less time than our present 10 heads have taken, and the manner in which we are opening up the mines everywhere, by clearing the jungle and making inexpensive roads, will in future very materially assist us.

WATER POWER.

In calculations made of the capacity of the water-race and the power of the water, it has been estimated that it is amply sufficient to drive two wheels, each 14 by 10 ft., giving a h.-p. of 60 for each wheel. In conducting this body of water by the back of the mill, through a short, wide tunnel, and thereafter in a north-north-east direction by a ditch of a little more than a mile in length, the same h.-p. will be obtained at Jeram Batang for driving a mill there, for the treatment of the ore from the mines in that neighbourhood, and this will greatly economise the initial outlay incurred in the construction of the water-race and dam.

LIGHT RAILWAY.

On the embankment, on the outside of the race, there is a level road about 6 ft. in breadth, which will eventually be laid with light rails throughout its entire length. This road should be continued along the river bank to a point three-quarters of a mile below Jeram Batang, where it should leave the river and take a shorter course towards the east, when it would come near the Kabang or Smyth Mines, and eventually be continued in an almost direct line to tap a deep point on the main river. Instead of making this a large cart road, I believe it would not only be more expeditious and satisfactory, but also economical, to cut this road 6 ft. wide, and as nearly level as possible, and lay it with a light portable railway from Jeram Lumpong to a point on the main river, somewhere above Batu Sawer. A cart road would be perfectly useless unless metalled, because to meet our transport requirements, a great many carts would have to pass and re-pass daily ; and, in the wet season, an unmetalled road would get so dreadfully cut up as to be quite impassable. The cost of metalling a road of such dimensions is too serious a question for us to entertain for a moment, considering that the employment of bullock carts would in any case be only a temporary one. The advantage to the Corporation in having a light railway would be very great, ever if animal power be utilised.

TRANSPORT.

It is quite obvious that the transport by boats is only a temporary resort until we get more settled with our other work. Not only is the rate of transport—about $10 per ton—from Sungei Lumbing to Batu Sawer too expensive, but it is, further, tedious and inadequate. So far it has served our purpose very well, and you can see from the accounts, which I posted to you a few days ago, what our boatage has cost us during the past few months ; but with the amount of tin we shall shortly be producing daily, we must either augment our number of boats, and continue the present system, or find another means of transport. The number of boats at our disposal would be sufficient, I think, for the transport of stores for the use of the miners and coolies, and also of the tin produced by the 10 heads of stamps. At present they take four days to perform a round trip—two days up the river, one day down, and one day idle. Supposing the 10 stamps will produce 2½ tons of black tin daily, or 1¾ tons of metal, about 9 tons of metal would await the boats on their return, and that would load the same number of boats. To this extent we can manage with our present boats, and, perhaps, also to the extent of 2 to 3 tons more, but we shall have plenty to do. I expect we shall also be able to reduce our rates of transport by having sufficient cargo for the boats for the double journey, and this will be, so far, good ; but it is evident that, with the run of mines in our possession, and in working them as we intend to do, we must look to some other quarter for an adequate means of transport. With the railway I have mentioned, bullocks could convey 12 times the quantity they could in carts, and the number of bullocks required would be insignificant. The rapidity also with which the metal could be brought to market would be considerable, and the facilities for moving about would be greatly increased, Singapore would then be 48 hours distant from the mines either way, instead of four days from Singapore to Upper Kuantan, and three days vice versa as now. I cannot too strongly impress upon you the importance of this scheme, and would beg of you to keep it in view for execution as soon as the Corporation can afford to do so. Both the river and the route for this road are now being surveyed, and a plan will be forwarded to you as soon as practicable. Until the survey is completed, I cannot give reliable data as to the distances, but I reckon that the following may be taken as approximately correct :—From Pontifex lode at Sumpit Ikam to the dam at Prong, 3 miles ; from the dam to the mill at Jeram Lumpong, 3 miles ; from the mill at Jeram Lumpong to the proposed mill at Jeram Bataug, 1¼ mile ; from that mill to the point where the road would branch off to the Kabang mines, 2 miles ; thence to Nadak, 2 miles ; thence to Bachang, 4 miles ; thence another mile ; total, 16¼ miles. Of this, the first 3 miles would not be constructed at present. The 3 miles next it are well nigh completed, and, being the focus upon which the branch lines into the several mines on its eastern side converge, will shortly be covered with the rails sent out from England ; and the remainder amounts to 10¼ miles, to be constructed in the way I have just alluded to. From Jeram Lumpong to the branch line at Kabang, a distance of 3¼ miles, must be traversed by a railway to correspond with that above Jeram Lumpong, for the simple reason that that is still a part of the roads necessary for the development of the mines, and that being the case, only 7 miles are left, which it would be most desirable to construct in the manner I have indicated, so far as to form an important accessory to our mining

work. A small store would require to be erected at the terminus of the road for the temporary storage of all goods in course of transit; but this would not cost above 100*l*. Our store at the mouth of the river would, however, require to be of a different style, and a substantial structure. Large quantities of provisions and supplies of all sorts, as well as of metal, would be stored there; but protection from possible aggressors would be given by the establishment of a police force in the neighbourhood. Mr. Rodger, the present resident of Pahang, having expressed to me his desire to erect a police-station on a site adjoining that of our proposed store at the Kuala. Before a steam launch could ply on the river, a careful examination should be made in the dry weather in March, so as to ensure the clearance of all snags and submerged logs, as otherwise one trip of the launch might ruin her for ever. This appeared to me to be the greatest obstruction when the Government launch brought Mr. Rodger and myself up recently, and on which occasion the launch was very badly damaged. The advantage of having our central store at the mouth of the river would be that steamers from Singapore could quickly call there, load, and then return to Singapore instead of losing, as they often do now, two days' time in having to go up the river—a delay for which they are careful to charge us.

SMELTING WORKS.

This now brings me to the important question of central smelting works, a question I have fully discussed with Capt. Teague. After taking into consideration the different features of the several places which suggested themselves to us as being in a way suitable, we eventually came to the conclusion that the smelting works ought to be erected at the mouth of the river, near the site of the general store. The chief objection to having them near any of the proposed stamping mill was that, first of all, the washed ore from the mines situated further to the eastward would require to be carried some distance westward to the smelting works and the metal then re-conveyed back over the same route on its way to the store. In this way there would be a double carriage, which should be avoided as far as possible; and instead of placing the site of the works at the proposed terminus of the main railway, we came to the conclusion that it would be much more economical to have them at the Kuala. That would be a more convenient site in every way: it would be cheaper to obtain fire-bricks, provisions, or any necessaries there than elsewhere in the district, and the tin could be placed on board any casual steamer passing the mouth of the river, when it could not if the works were situated in the interior. Further, we can have the advantage of getting the European, who will be in charge of the smelting work, to take charge of our store also, which is a very considerable advantage; and if it is decided to use coal instead of charcoal, on the alleged ground that more metal is extracted from the ore by means of the former than the latter, we can always more readily land it on that site than we could elsewhere in the district. As for the transport of the ore, I should recommend it being put into bags made from buffalo hide, which can be had in the district as cheaply as anywhere in the world. Not only would they be most durable, but they would also secure us against any loss arising from the tearing or cutting of ordinary bags. The ore when put into such bags, would be as easily and readily transported as the metal itself would be, and the cost of conveyance of the additional 30 per cent.—the margin between the ore and its metal—would be more than counterbalanced by the convenience of the station at the mouth of the river. All smelting in the meantime can be effected by means of the furnaces used by the Chinese miners, each of which is capable of producing about 15 cwt. of metallic tin daily. I question if the number at present in existence will be sufficient for our requirements, but in that case we shall build a few more. My chief objection to those furnaces is that they are so extravagant in labour, each one taking three or four men to supply the blast during smelting operations. This could of course be avoided by the construction of fans, to be driven by water-wheels, but in that case again all the furnaces would require to be localised in one spot instead of being at the different mines, as they are now. This brings me to the question of the calciner. Regarding the position of this, there cannot be any room for doubt or speculation. There is one calciner, with a limited capacity for the calcination of the ore stamped by the mill at Jeram Lumpong. The calcined ore has to be re-washed, under the supervision of the tin-dresser, and when it has been so manipulated it passes on to the tin-smelter. The calciner, therefore, will be erected as near the present stamping mill at Jeram Lumpong as circumstances will permit, and when its capacity has been fully taxed we shall just have to erect additional calciners in the neighbourhood of the other mills, wherever they may be required.

ADDITIONAL MACHINERY.

I cannot too strongly impress upon you the necessity, as soon as you see your way to do so, of providing additional machinery for the treatment of the vast quantities of ore which Capt. Teague's report must convince you lies ready for reduction. In this you should bear in mind that a very slight addition indeed would be necessary to our staff to attend to another 200 heads of stamps. The mines are now going ahead, and only a few men on the stopes, who could readily be supplied from the gangs at work on the water race, would be required, in addition to a few coolies for miscellaneous work, and two or three Europeans. Further, I am opening out the various districts in which the adjoining mines are situated by means of roads, and the preparation of sites to facilitate and expedite the erection of machinery when it does arrive. With the sawmill we can prepare the requisite timber in a few days, instead of as many weeks formerly, and when it has been so prepared it can be transported along the railway to whatever site it may be desired to erect it at. The first mill I should advise to be erected is the Jeram Batang mill, which in the first instance should be a 30-stamp mill, as at Jeram Lumpong, driven by a 14 ft. by 10 ft. water-wheel. My reasons for recommending the erection of this mill first are—(1) its proximity to the Jeram Lumpong mill, and the consequent ability of Capt. Teague to superintend the work there without serious interference to his other work; (2) the facility and cheapness, as well as the rapidity, with which a mill driven by water-power can be erected. After that, or even simultaneously with it, a 50-stamp mill should be erected at Semiliang, in the valley below Fraser's lodes, and a 40-stamp mill at Kabang, in the valley below Smyth's lodes. In both places suitable sites have been selected, but both mills would require to be driven by steam power. A supply of water sufficient for dressing purposes would be obtained from the streams in each valley. Boilers should be transported in sections, and rivetted on the ground by suitable men from Singapore. Putting the question of cost of machinery aside, I am perfectly sure that 9*l*. a day would cover the additional expense to the Corporation for the supervision and working of those three additional mills, because we have got the requisite number of coolies at the present moment on our water-race, which would then be completed, and the additional return would not be less than 15 tons of metallic tin per diem. For this reason, I cannot see how the board can, as soon as they are in a position to do so, fail to execute this additional work. Until it is carried out the Corporation cannot have that justice done to it which it deserves, and the production of gigantic returns, like those to which I have alluded, tends to stimulate the staff to greater efforts.

STREAM TIN.

I now take up the subject of alluvial deposits of tin. I have seriously considered this subject for some time, and I have come to a very decided conclusion that the best thing the Corporation can do is to sub-lease them. My reasons I shall state. They are (1) that we have got as much as ever we can do to direct and superintend the work at Upper Kuantan; (2) that the Chinese can work the alluvial deposits in a way which Europeans can never do, owing to the cheapness of their supervising staff. I should strongly advise the thorough prospecting of Blat and Gambang, and the cutting up of the stanniferous tracts into setts of (say) 100 acres each. I believe there would be no trouble in obtaining people who would work them on their own account, and who would pay as a royalty on the tin produced, in addition to the royalty payable to the Sultan. With the formal extension of British protection over Pahang, and the popularity of the present Resident, the Chinese towkays, who mine so extensively in Perak and Selangore, have recently been making inquiries for mining lands, and it is very probable that we shall receive offers very similar to that which has been already forwarded to the board from Mr. Lim Ah Sam. Wherever the intended operations of such pioneers would not clash with the interests of the Corporation, I should advise the board to grant suitable applicants such blocks as they can reasonably work, because the population of the Kuantan district in this way would not only increase our revenue, but would also cheapen our labour by familiarising the district among those portions of China whence our supplies of coolies are derived. You may possibly not be aware that Sinkehs have a strong prejudice against districts with which they and their friends are unacquainted, and we would have felt this difficulty more severely than we did were it not for the manner in which I obtained the Sinkehs through men who had influence in their own native districts.

DROUGHT.

While on the subject of alluvial deposits of tin, I should mention that large quantities of karang or stanniferous earth and gravel lie in the Kongsees at Blat and Nadak, which were excavated from the mines during the dry season. A daily record has been kept at Kuantan of the weather and temperature since October of last year, and this will very materially assist us in judging of our work in the future, and in making the necessary arrangements. During the past summer, and up to about the 10th of September, the weather was excessively dry, the result being not only that the tin earth in the Kongsees at Nadak and Blat could not be washed in time to permit of the metal being exported this year, but that the boats employed in taking machinery, stores and implements up the river, had to make the journey up river with only two-thirds of the cargo they could otherwise have taken.

MACHINERY.

I am, therefore, very glad that all the machinery connected with the additional 20 heads of stamps, together with the calciner and rails, has arrived safely at Batu Sawer before the close of the river, because we can get it up while the river is high not only at one-third less the expense, but also in one-third less time, and the latter is the greater consideration to us at present. There are plenty of boats and men ready to perform the work, and I fully expect we shall be sending down to Batu Sawer for shipment, as soon as the river opens again, regular consignments of tin.

MINE BLACKSMITH AND CARPENTER.

With the magnitude that our mining work is likely to assume, and the amount of machinery that must be erected during the next three years, we require two mine mechanics, a blacksmith, and a carpenter, and we can always give them plenty to do. Further, they can always give us a hand if anything goes wrong about the mills, which it would be difficult for other men to do, and in a place like Kuantan that is consideration of very great importance. At the outset various difficulties have to be overcome. I was sorely disappointed on my arrival at the mines in April at finding only a few of the buildings, which I expected to have found ready for occupation, finished. The difficulty in finding sawn timber and many other necessaries, and the consequent delay, were at the outset insuperable. These we have now overcome, and the presence of the sawmill among us augurs well for the expedition, as well as economical execution of similar work in future, together with the provision of the various kinds of timber required in the erection of the stamping mills.

WORKMEN AND STAFF.

As I write this report on board the steamer which is to bring it back to Singapore, the last for the season, I am consequently unable to refer to the books at the mines in order to give details of the numbers of men at work, still, from my notes and other documents in my possession, I am able to give you the following details, which will no doubt be of interest to you. The number of men at work in and about the mines in May was 302, and since then a few have died, and if I mistake not 33 men have been added, making altogether about 330 men at work in the Gee Sin, Wau Hin, Hin Lee, On Thai Chee, Lee, En Lee, Hap Sheen, Chong Lee, Kim Sin, Chin, Chon, Siok, Foon, and Sin Wan Chong Kongsee. We have not been so fortunate with the health of our Chinese Sinkehs as I had anticipated. Up to September, we imported 477, and during October 51 more. We also obtained 47 excellent men from Billiton who will be of great value to us presently. Our death rate has reached about 150 among the Sinkehs, and there is constantly a large number sick in the hospital. This has very seriously retarded our work. There have also been a few runaways, but I am

glad to say that those men were of a stamp that would never have suited the Corporation, and would continually be in the midst of mischief. I should point out that the Sinkehs imported direct from China have withstood sickness very much better than those obtained at Singapore, being men of better physique, and altogether superior to the Singapore Sinkehs. They also have been much cheaper than the latter, and in future we should never obtain Singapore Sinkehs when they can procure them, as we do, from China direct. We also imported 75 Javanese and Malays, and there are about 60 boatmen continually at work. Our carpenters at present number 28, and blacksmiths four ; there are two policemen, five Eurasians, an apothecary, aud seven Europeans.

SICKNESS.

I have already, in a communication to the board, alluded to what I consider the cause of the illness among our Sinkehs. It ought to be noticed that it has been almost wholly confined to the fresh emigrants. The chief reason I assign is the malaria, due to the clearing of jungle and turning up of soil, which has remained untouched by human hand, or uninflnenced by atmospheric or climatic agency for gencrations. Those men who have been resident for some time in the district have become, so to speak, acclimatised, and the malaria seldom has any effect upon them. Still, whatever we can do to avert this misfortune we are doing, bnt we shall not be clear of this evil until we have removed larger portions of the jungle, which we are now rapidly clearing, and reorganised the coolie lines. The latter we can readily effect when we get the sawmill at work. We must place the Kongsees in larger and more commodions buildings, which should be perfectly isolated, instead of adjacent to each other, as the old ones are, and we must enclose each in a large compound, having the piggery at one end. The Chinaman must have his pigs, and we must arrange this for a time in the best way we can. I believe that with such coolie lines, floored with planks in part, and having a fresh supply of water running through the compound to carry away all refuse into the main river, our rate of sickness would rapidly decrease to a normal figure. Onr chief consolation at present is that the men who do work make ample compensation for the loss sustained through death and sickness.

MANAGERS.

I cannot close this report without allnding to the great service rendered to the Corporation by Mr. Bell, who resided at Sungei Lumbing, when it was impossible for me to leave Singapore. Now that he has left, you will be able to learn from him personally such details of the mines and the works as may have escaped my notice. Still, between Capt. Teague's report and the present remarks I do not think there is much to add. I mnst also refer to the valuable service rendered to the Corporation by Capt. Teague. He is a most diligent, active, carefnl and sober man, with the Corporation's interests closely at heart day and night, and I consider that the choice made by the board has been most fortunate for the Corporation. I could not desire a better man for his post.—W. Fraser, Local Director.

THE YURUARI CO., LIMITED.

PROFIT OF 20 PER CENT. BEING EARNED ON PRESENT PAID UP CAPITAL.

The assistant secretary advises receipt of the usual mail from the mines, dated Chile, 12th December. In it Mr. Aikman, who had arrived about a week before, states that immediately upon his arrival at the mines he went down, accompanied by Capt. Rogers and Dr. Palacio, the snrveyor. He reports :—The lode in the eastern part of the mine has become poorer since August last. Since then Capt. Rogers unfortnnately has not continued opening up the stoping ground between Nos. 9 and 10 levels east, and consequently the lode found lower down has not been opened up, but I trust the winze will be through by the middle of the month. Capt. Rogers has put a winze through from Nos. 9 to 10 west, but has not yet cut the payshoot he expected to find here. I have instructed him to commence a rise 140 ft. on in the level, where the lode has a good appearance. By so doing I hope to open up some good stoping ground, but especially to hole Potosi No. 1 shaft (now, as you are aware, our property), which is only 60 ft. from the bottom of No. 8 level. The quartz already extracted from this part shows free gold, and I may say that this is now the most promising part of the mine. We started the mill on the morning of the 3rd inst. with 40 stamps, but the yield has been less than I anticipated. We have not yet cleaned up, but I estimate the produce till to-day (12th inst.) will not exceed 300 ozs. I must express my disappointment with the work done since I left, and it is therefore a source of deep regret to me that our medical officer's report necessitated my leaving the mines before the new officials had had sufficient time fully to grasp the situation. I am dispatching a quantity of tailiugs to your care for treatment, and may state that in the event of a satisfactory process being found there is almost no limit to the qnantity of tailings available for treatment. The whole of the machinery at the water shaft is now ready for work. The agents at Bolivar, under date 20th December, state that they have learned from the mines that some good rock is now in sight, but in order to reach it poorer quartz had to be worked in the meantime, pendiug further development. This is confirmed by the cablegram recently received from the manager stating that the miue was improving. The usual monthly report is appended.

MINE REPORT.

December 11th.—Since I last wrote I have, in accordance with your wishes, stopped working No. 8 stope west. During the month of November the stope was advanced 9 ft. 6 ins.; a thickness of 5 ft. 6 ins. only being taken out on the footwall. I commenced opening a stope at the back of the level 140 ft. further west, where the lode is 3 ft. thick, and is composed of good quartz, showing colonr. By rising up from here 59 ft. we shall connect with one of the old Potosi shafts. The rock here looks promising, and I think that we are likely to open up a good piece of ground. Winze No. 9 west : Progress made dnring November 32 ft. This winze holed through iuto No. 10 drift on November 29th. The total depth of the winze is 105 ft. It has gone down the whole way through a big lode of quartz with the exception of the last few feet, where the quartz has been much mixed up with bluestone. Drift No. 10 west : Progress during November, 12 ft. The lode here, when I first started driving, was very much mixed up with bluestone, but became better defined in the course of a few feet. At present there is a lode 2 ft. thick of solid quartz, with well-defined quartz in the back of the level. I consider that it would be well worth while to continue driving this drift. Drift No. 9 east : Progress made during the month of November 14 ft. The lode in this drift has varied in thickness from 2 ft. to 4 ft. The quartz here carries a good deal of pyrites, and looks like fair milling rock. The present face of the drift is now somewhat mixed up with bluestone. Winze No. 9 east : Progress during November, 27 ft. The lode at the bottom of the winze is now about 4 ft. wide. Although I can see no colour in it, the quarry looks fairly good, and is improving in quality as we continue to sink through it. I hope to hole through into the rise from No. 10 drift in abont a week. Rise from No. 10 drift east : Progress during November, 9 ft. The thickness of the lode varies from 2 to 6 ft. The quality of the rock here seems better than in the winze above. No. 11 stope east : Progress made during November, 6 ft. The lode in this stope varies from 4 to 6 ft. in thickness. The quality of the rock is fairly good, especially at the east end of the stope, where the lode is dislocated. The lode appears to have been thrown in a northerly direction, and I think that a cross-cut driven north from No. 11 drift would meet with the lode. Stope No. 12 east : Progress during November 11 ft. This stope was only worked towards the top part, where the lode is widest. At present I am working the whole stope. The width of the lode varies from 3 ft. at the top to 18 ins. at the lower end. From indications at the upper end of the stope, I think that the lode will probably become wider as the stope advances. W. Rogers.

RAILWAY COMMUNICATION WITH THE YURUARI.

We learn from a Demerara source that there is a prospect of the inhabitants of that colony taking up the question of a railway connecting the Mazaruni with the Cuyuni rivers, the terminus proposed meantime being the junction of the Cuyuni and the Yuruari. There being communication by water to the proposed point on the Mazaruni, this would practically connect Georgetown with the rich pastural and mining districts which lie between the rivers in question, and at the same time bring railway communication within 20 to 30 miles of the British mines, situated in the Caratal district. Our readers are probably aware that a railway is now in course of construction from the Orinoco to Guacipati, the chief town of the territory. There is no donbt that railway communication is the one missing link necessary to render available the rich gold-bearing districts of the respective Guianas. Looking at the prodnce obtained by nearly all the British companies mining in these districts, we think we are entitled to add that, had a railway to the coast been taken in hand, and carried out 10 years ago, nearly every one of the British companies engaged in mining operations in these districts would long ere this have been successful in their operations, with all the advantages which an influx of capital and population would have brought towards the development of the vast regions of auriferous country found in these territories.

LATEST RETURN AND CASH RESULT.

The directors have received a telegram from the mines, advising for December, 600 ozs., about 15 days work, average 30 stamps.

We are informed by the secretary that the produce from the mines, after payment of working expenses, leaves a profit of over 20 per cent. for the first six months upon the paid up capital of the company.

THE MORGAN GOLD MINING CO., LIMITED.

January 5th.—The crushing cleaned up on the 31st inst. resulted as follows :—759 tons crushed for a yield of 333 ozs. 12 dwts., of the value approximately of 1,150*l*.—C. Pakeman, Secretary.

The manager's half-yearly report states that from June 23rd until December 31st the number of tons crushed was 2,444, prodncing 4,375 ozs. 7 dwts. of gold, being an average of 1 oz. 15 dwts. 19 grs. per ton. The cost of mining the above ore has been 1,121*l*. 10s., being an average of 12s. 9d. per ton. The mine is now opened up so that we conld keep many more stamps at work than we now have, but I do not advise the erection of a large mill for the present, as I think we should more fully open up the lower level of the Chidlaw lode, which we struck on the 18th of December. On that evening we eut into the footwall, and have continued driving with one air-drill, with a view of cutting through the lode to the hanging-wall.

MONTANA CO., LIMITED.

MONTHLY RETURN.

The secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resideut director at the mine :—Dnring December the total weight of the ore crushed was 7,015 tons; the total gross yield from all three mills was $93,600 ; the working expenses for the month were $50,000. The managing director telegraphs that the new hoisting machinery at the No. 1 shaft was started on the 1st iustant.

Mr. J. Durie Patullo, secretary of the No. 2 Queen and other well-known mining companies, has recently been elected a Fellow of the Royal Statistical Society.

Holloway's Pills and Ointment.—Soldiers and Sailors.—These well-known and easily used remedies are especially serviceable and convenient for those who, like soldiers and sailors, are exposed to great changes of climate, and the hardships inseparable from their calling. Many of the diseases eugendered in the system from these and other untoward causes can be checked and controlled by attention at their onset, and in Holloway's remedies will be found a ready means of relief, without hindrance from duty. Many a man is invalided and rendered more or less a burden to himself and friends from neglect of the early symptoms of his complaint, which calamity might be averted by timely resort to the use of Holloway's Pills and Oiutment.

MINING CIRCULAR ISSUED BY

JAMES V. TURNER & COMPANY,

5, COPTHALL BUILDINGS, LONDON, E.C.

Telegraphic Address:—"EQUANIMITY, LONDON." Bankers:—LONDON AND SOUTH WESTERN BANK, LIMITED.

BUSINESS TRANSACTED IN ALL DESCRIPTIONS OF STOCKS AND SHARES. Having made Mining Shares a special study J. V. TURNER & CO. are prepared to advise intending Operators what Shares to Buy and what to avoid.

MORUYA GOLD & SILVER MINING Company, Limited. £1 Shares, Fully-Paid.

In recommending the purchase of shares in the above Company, we would first draw attention to the advice contained in our last circular, in which we strongly suggested an investment in Luipaards Vleis. The latter could have then been bought at 22s. 6d. per share, the quotation now being 45s. to 50s. Our information regarding Moruyas is, if possible, more reliable, and our readers will admit that the undermentioned official particulars are sufficient without any further animadversions on our part.

In the first place, the capital of the company is only £85,000, an amount considerably lower than that of the majority of Australian mining companies.

Further, the extent of the property is so great (being 80 acres, held direct from the Crown), that there is room for the formation of many subsidiary companies, which should mean a return to the existing shareholders of the Moruya of four or five times at least or the amount they have subscribed.

In addition, the expenses of the existing Company are reduced to a minimum, inasmuch as the property is plentifully supplied with timber and permaneut water; at the same time, the sea port town of Moruya (co. Dampier, N.S.W.) is only 4 miles distant, therefore the cartage of the silver ores is reduced to the smallest possible sum.

We would mention that the estate has been exceedingly favourably reported on by Mr. Lamont Young, geologist to the New South Wales Government, whose assays from over 100 tons of ore show au average of 5 ozs. of gold per ton. A further assay made at the Government Mint at Sidney yielded 4 ozs. 3 dwts. per ton.

We must not forget to point out that the report of Mr. Young was made *solely for the guidance of the New South Wales Government.*

The eminent mining engineer, Mr. T. Collingwood Kitto has also surveyed the property, fully corroborating the statements of the Government Surveyor.

The Company possesses a thoroughly good working. Directorate (the guinea-pig tribeibeing conspicuously absent) men, who are all well experienced in the management of mining companies; and the board in Australia is composed of leading local men, Mr. R. D. Adams, of Messrs. Ford, Adams and Co., the well-known Colonial firm, being the chairman.

The latest advices from the property amply confirm the reports of Mr. Young and Mr. Kitto, and every efforts are being used to develop the existing openings as quickly as possible. Besides the 500 tons of ore at grass, the reef at 70 ft. in No. 2 shaft is 5 ft. broad, and immense quantities of ore are available.

A 10-stamp battery with a 25 h.-p. engine is at the miue, and it is intended to increase the number of stamps as soon as possible.

Pending the crushing of the gold ores, the shipment of the crude silver ores (which have yielded very remunerative prices) to Messrs. Vivian and Sons, of Swansea, will be continued.

The prospects of the Moruya Company have been favourably mentioned by all the leading financial papers during the past mouth, and we strongly advise all our clients to have an interest.

There not many shares on the market, therefore purchases should be made at once, as we anticipate a very substantial rise very shortly. The price for the moment is 13s. 6d., 14s. 6d. An immediate wire would be advisable.

Call options expire 28th January.

Options can be renewed for successive accounts at half the original cost.

Shares sold for one, two, or three months forward delivery on receipt of usual deposit of 20 per cent.

We can with confidence say that we offer more facilities for dealing in mines and miscellaneous securities than any other brokers or dealers in London.

We invite correspondence from shareholders in any Company (whether business is done through us or not), and we are at all times happy to afford the fullest information in our power on matters connected with stocks and shares.

For the accommodation of holders of unquoted, or stocks or shares that are not easily marketable, a short time back we opened a special register, the success of which has been proved beyond our expectations, as by its means buyers and sellers are brought together, and a vast amount of trouble and expense saved to both parties.

We shall be pleased to receive particulars of any stocks or shares to be placed on this register, for which no charge is made, except a small commission when business is effected.

We are at all times prepared to buy or sell mining shares for cash, account, or one, two, or three months forward delivery on the usual deposit of 20 per cent.

OPTION dealing has lately come into vogue, and we can recommend the system, as by its means an operator knows the exact amount which he has at stake, and very often large profits are made which could not otherwise have been obtained without risking large sums.

It is, of course, the small operator who benefits by the Option system, as he is on exactly the same footing as the man who buys and pays for his shares.

For the benefit of those who do not understand this method of dealing, we offer the following short explanation.

We will first deal with a "Call Option."—An operator wishes to buy or have a call of certain shares, we will say Almada's, the present price of which for argument sake is 3s. to 3s. 3d. He cannot afford to buy 100, 200 or 300 shares, as the case may be, but he gives 3d. a share for the right of buying them in a fortnight's time at 3s. 3d. If the market goes to 5s. to 5s. 3d. he sells the shares and takes the difference, which would be, on 100 shares, £7 10s. Should, however, the information on which he acted turn out contrary to what he expected, aud the market falls to 2s., the whole amount at stake would be only £1 5s., which cannot, under any circumstances, be exceeded.

The "Put option" is just the reverse, and is useful when an operator has reason to think a certain share is going to fall.

The "Double Option" gives the right to either buy or sell at a given price in a fortnight's or a month's time, as the case may be.

For numerous and obvious reasons, therefore, the above system must find favour with those who only wish to risk a certain amount and get as many shares as possible with the money.

For the capitalist who can afford to buy his shares and pay for them the above is seldom used, as by taking up his shares off the market he helps to lessen the floating supply, and necessarily keeps the market firm.

We are prepared to sell shares outright for cash or delivery in, say, one month, on deposit of cover with us (as security against loss), and at the end of that perrod to deliver the shares on receipt of balance less the deposit.

We transact business in every description of stocks and shares, whether for speculation or investment, and all enquiries for information will receive our utmost attention, although sometimes from the nature of the questions asked it is not possible to reply by return of post, but enquirers may rest assured their communications are being attended to, and they will receive a reply in course.

In the event of business (we send wires immediately when necessary), the same is effected free.

We charge no commission on mines, all bargains being done at nett prices as we are dealers.

JAMES V. TURNER AND COMPANY,

MINING AND MISCELLANEOUS SHARE DEALERS.

5, COPTHALL BUILDINGS, LONDON, E.C.

Telegraphic Address—"Equanimity, London."

Bankers—London and South Western Bank, Limited.

EXTRACT FROM CIRCULAR ISSUED BY

GEORGE GREGORY & COMPANY,

STOCK AND SHARE DEALERS,

1, CHURCH COURT, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

JANUARY 15, 1889.

BANKERS: LONDON AND SOUTH WESTERN BANK, LIMITED. TELEGRAMS: "GRAMMARIAN," LONDON.

DEAR SIR,—We have again the gratification to refer to the very handsome profits attendaut upon our 'proguostigations for the benefit of speculators and investors in stocks and shares, as conveyed in our weekly circular and column advertisements, dated 8th inst., just oue week ago. These have been continued daily in *The Financial News*, as well as in the principal weekly financial and society journals of Saturday, 12th, and Sunday, 13th inst., in London and the provinces. They can thus be readily obtained for the purpose of ordinary information, or to confirm the correctness of our views npon the Stock aud Share markets, and the various influences bearing chiefly upon them. If, however, difficulty may be experienced in otherwise obtaining them, or any previous weekly circulars, we shall have much pleasure in furnishing them gratis and post free on being applied to.

The sonndness of our views from week to week—although not agreeing with the majority of then curreut opinion—is not quoted as an idle boast. It can be verified to the very fullest extent by the perusal of the published documents referred to, and the reader, past or present, will not fail to be struck with the certain aud important gain placed within his easy reach, week by week, through following our advice and nnder the security of a small temporary advance in the form of one per cent. cover upon the speculative operations undertaken by him.

At foot of this column will be found the scale of cover applicable to stocks. The variations in nominal and real value of shares is at present so wide that wheu it is desired to speculate in these, clients or intending operators should apply to us specially, as to the amount of cover required per share upon those in which they elect to be interested.

THE MONEY MARKET has continued to reflect the opinions so unhesitatingly advanced by us in onr circulars and column advertisements for many weeks past.

THE STOCK MARKETS.—Under the heading of "Dividends on Home Securities" we, on 8th iust., see column advertisement in The Financial News then and in the interval, stated that the entire list should be bonght in the event of the Bank Rate being reduced on Thursday. Of this event, which occurred, we were amongst the first to give a lucid iudication. The result now to every operator who followed onr advice fully justifies us in having put it forth. As we are still strongly impressed with the belief in a much higher range of prices for the securities recommended, it will not be ont of place to here note for comparison the quotations curreut on November 28th, when we afforded figures in support of our predictions now realised, as also those referred to by us on 8th inst., showing the extreme advanee in the iuterval to date, viz.:

	Nov. 28. 1888.	Jan. 8. 1889.	Jan. 15. 1889.	Extreme Advance.
GOSCHENS	96⅝	98½	99 1/16	2 7/16

BUENOS AYRES & ENSENADA	155½	—	164	8½

This table exhibits a splendid aggregate of profits, and it will be remembered that we have persistently counselled buying, even in the face of dear money and the possibility of having to pay "contango" charges during one or two fortuightly accounts. Our having so long and persistently advised purchase of Home and American Stocks to the exclusion of Foreigners will now be appreciated, the latter not having in the interval varied to an extent to admit of profit to the operator.

DIVIDENDS ON HOME RAILS, as far as announced, are the—

METROPOLITAN and

BRIGHTON.

The former, although at the same rate as for the corresponding period of last year, is really 27,700*l.* better, the large amount now carried forward being itself equal to an extra 1 per cent. for the half-year.

The latter has paid 5¼ on the A Stock, against 5 per cent. at the corresponding period last year; but the amount carried forward is sufficient to admit of a further distribution of ¼ per cent., or 5½ in all. These figures add weight to ours put forward at the date above indicated, and clearly warrant us in still recommending purchase of the railways just mentioned, aud other Home Stocks enumerated in the above list of profits.

AMERICAN RAILROADS,

We might almost claim to be pardoued if we quoted our last week's remarks, nnder this heading, in extenso. The space presently at our disposal does not, however, admit of doing so. We still direct chief attention to the non-dividend lines, and to those which, being dividend-payers, are of the more speculative class, say

DENVER ORDINARY,
DENVER PREFERRED,
ERIE ORDINARY,

RIPANJI QUICKSILVER,

HINTS TO SPECULATORS AND INVESTORS IN STOCKS AND SHARES.—The fifth and latest edition of this work—so indispensable to every operator desirous to follow the method most certain to ensure profit while reducing the chance of loss to a minimum—is rapidly assuming form, although still in the hands of the printer. In addition to affording particulars aud copious examples sufficient to enable one to act upon his own unaided judgment, it embraces instructive and exhaustive details of the origin and history of the Stock Exchange in a thoroughly readable form. This, at least, is the opinion expressed in regard to it by able critics who have had the proof-sheets nnder review. The fourth edition, consisting of many thousands of copies, is now almost exhausted, having been distributed GRATIS and post free to every applicant. The Fifth will present the appearance of a handsomely-bound volume, and clients or general readers desirous of obtaining it should favour us with their wishes, without delay, as past applications have been very numerous, and in distributing copies we must act npon the principle conveyed by the old saying, "First come, first served." To every applicant it will be furnished, like its predecessors, GRATIS and post-free.

IN CONCLUSION

We desire readers of this Circular to carefully note that the information and advice contained in it remain in force for only one week from its date forward, when our succeeding issue will appear.

WITH THE COMMENCEMENT OF 1889 we have added to our previous business facilities by largely extending our premises, and thus being in a position to accord even more prompt attention than heretofore to the interests of Clients and General Correspondents.

UPON every stock which we recommend we have carefully compiled "reasons why," and our aim is to afford such information in its entirety to all enquirers.

WE continue to direct constant attention to every class of investment or speculative business, including "Options," which are becoming a favourite medium.

COVER in protection of clients' operations may be deposited either in the form of cash or any marketable security.

THE fullest information cheerfully and promptly given in response to all enquiries.

GEORGE GREGORY & CO.

WRITE for our Work, entitled "HINTS TO SPECULATORS" (45 pages), giving a mass of information, and containing highest and lowest Prices of all Stocks, together with Dividends paid for the past Nine Years. POST FREE.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

THE MINING MARKET.

CITY, FRIDAY EVENING.

SOUTH AFRICANS STILL ON THE UPWARD MOVE—NEW VENTURES—ATTITUDE OF THE PUBLIC—THE MYSORE MEETING ADVANCES INDIAN SHARES—COPPER SHARES—CHEAP SHARES IN DEMAND—HOME SHARES NEGLECTED.

The South African Market has been agitated to a degree, and prices have again advanced—in some cases pounds per share. The flow of new companies continues, and the public are naturally asking themselves whether they would not do better to buy shares in new companies at par rather than shares in old companies at a big premium. They seem afraid to touch the older concerns, and in standing by they perhaps shew a discretion which is the better part of valour. It is possible that these shares may rise still further, but the loss will be very heavy should the re-action come which is so confidently predicted—particularly by those who wish to divert the public into other departments of mining.

The drawback to these ventures is the difficulty of dealing in the shares, and the Stock Exchange is being lustily called upon to take cognisance of them, and the companies themselves are being urged at once to appoint London agents, and have London offices. The next step to this will be to have London meetings, and a few of these held at the present juncture would impart to the public a good deal of information in the concrete, which at present they only have in the abstract. Great difficulties have been met with in dealing with blocks of shares—the holders finding that they could not be split up without being sent to Africa. Below we give details showing the remarkable fluctuations that have taken place.

At the Sheba meeting to-day Mr. Trench was unanimously asked to retain his position as a director of the company, and he has consented to do so. The names of the new board and all particulars will be found in our verbatim report of the meeting.

The Indian Market was made firmer by the Mysore meeting, and shares all round advanced. Though temporarily obscured by South African ventures, there is no doubt that Indian mines are coming to the front in a most remarkable way, and a good deal more will be heard of them ere long.

Copper shares have been rather weak on the assumption that the syndicate was becoming unsteady. The backbone that has been assumed to be wanting is, however, to be furnished by English capitalists, who are coming to their aid under circumstances shadowed forth in the leader we publish on the subject. This leader, in an impartial spirit, endeavours to set forth facts as they actually stand at the present time. The changes in the shares have not been very pronounced either way.

There has been a better tone in the Queensland market, and in one or two instances, such as Bonnie Dundee, Mount Morgan Extended, and Mosman, an improvement is registered. In the cheap share market the demand has principally been for Carlisle, Empire, Kapanga, Eberhardt, New Emma (which are quoted up to 6s.), and a few other descriptions. There has been a vigorous demand for Yuruari shares, which close to-night at 2s., and have every prospect of going higher. We publish a map of the property, and an article setting forth the facts as at present known. This market, like that of India, suffers from the overshadowing strength of South Africans.

Home shares have been quite neglected. Tin is being quoted at about 97*l.* 10s., and copper is roundly quoted at 78*l.*—English lead being slightly firmer at 13*l.* Next week will, according to all appearances, be a busy one upon the mining share market.

AFRICAN.

This has been another exciting week in African shares. Dealers experience the greatest difficulty in quoting current prices, seeing that changes take place every few minutes; indeed, it is simply impossible to wire dealing prices, as there may be a 10s. or 15s. rise or fall on receipt of reply. Investors must be careful to deal only with responsible parties. A rise has taken place in the following:—Balkis, 9d.; Imperials, ⅛; Orientals, ⅛; Thomas, ¼; Johannesburg Waterworks, 1/16; Bankets, ⅛; Bantjes, ¼; Blackreef, ⅛; Bothas, 1s.; Central Langlaagte, ⅛; City and Suburban, 2; Cornucopia, ⅛; Durban Roodepoort, 3½; Evelyns, ½; Geldenhuys, ⅝; Goldfields of South Africa, ½; Golden Kopje, ⅜; King Solomons, ½; Knights, ½; Langlaagtes, ⅛; Mainreef, ½; Mainreef United Roodepoort, 1¾; Mays, 5½; Moss Rose, 1⅜; Nabob, ⅛; Royals, ¼; Simmer and Jack, 4; Spes Bona, ½; Stanhope, ¼; Van Ryn, 1/16; Vogelstruis, ⅝; and Wolhuters, ¾; the other changes being a fall of 20s. in Crown Reef; ⅛ Crœsus; ¼ Dornkop; 40s. Ferrieras; ⅝ Henry Nourse; 1¼ Johannesburg Pioneer; 1s. Modderfontein; ⅜ Star; and 20s. Wemmers.

The following are the closing quotations :—

DE KAAP DISTRICT.

Indians.

There has been more business done in Indian shares this week than for the last three months, and the settlement showed that the buying had been of the investment, and not of the speculative, elass, aud many, geuerally well-informed, people have taken up large amounts of stoek. We would not be surprised to see priees, at an early date, eonsiderably in exeess of present quotations. It is rumoured that Ooregums and Goldfields of Mysore will shortly see mueh better figures.

A rise has taken plaee in Balaghat. 1s.; Devala Moyar, 1s.; Goldfields of Mysore, 3/16; Indian Consolidated, 1s.; Mysore Gold. ⅝; Mysore Reefs, 1s. 6d.; Mysore West. 1/16; Mysore Wynaad, 1/16; Nine Reefs, 1s.; Nundydroog, ¼; Ooregum Ordinary, ¼; Ditto Preferenee, 5/16; and South-East Mysore, 6d.

Diamonds.

The week opened firmer for diamond shares, and the ehief feature has been the business in De Beers, Griqualaud, West and New Jagersfontein. De Beers have certainly been the favourites, marking a eonsiderable rise on the week. An improvemeut has taken plaee of ½ in Anglo-African; ½ Bultfontein; 1⅜ De Beers; ¾ Griqualand West; 1s. New Consolidated; aud St. Augustine's, 3s. 6d. The ouly fall has been in Read's Drift, of ⅛.

The following are the elosing prices:—

Diamond Shares.

Anglo Afriean	4 7/16 —	4 9/16
Bultfontein. new shares—	4¾ —	4⅞
Central Dorsfontein	8 —	10
De Beers Consolidated	17¾ —	18
Gordon Diamond	19/ —	21/
Griqualand West	6⅝ —	6¾
New Consolidated	25/ —	26/
New Jagersfontein	14½ —	15
South Afriean (Pullinger)	17/ —	18/
Spes Bona (Bultfontein)	6/6 —	7/6
United	2⅛ —	2⅜
Uuited Jagersfonteiu	18/6 —	19/6
London and Orange Free State Explor. ...	4¾ —	5¼
London and South Afriean Exploration ...	17⅛—17⅜	x rights xd
Read's Drift Land Co.	2¾ —	3

Copper.

There has been little or nothing doing in eopper shares during the past week, and where business has taken plaee it has been mostly at lower priees.

A fall is shown in Libiola of ½; Mason and Barry, ⅛; Namaqua, ½; Panuleillo. ¼; Rio Tinto, ½; and Tharsis, ⅜. The only rise has been ⅛ iu Cape Copper.

Foreign.

A rise is recorded in the following:—Callao Bis, 1s.; Empire, 6d.; Gold Hill, 9d.; La Trinidad, ⅜; Montana, 1/10; New Emma, 6d.; New Russell. 9d.; Orita, 1s.; Palmarejo, 6d.; Scottish Australian, ⅛; Sierra Buttes, ⅛; Plumas Eureka, 3/16; Tetuan, 6d.; Venezuelan-Austin, 1s.; Vietory, 6d.; Viso, 4s.; and Yuruari, 9d. The other changes are a fall of 1/16 in Don Pedro; Liuares, ¼; New Spitzkop, 9d.; and West Argentine, 1s.

Australian.

The market for Australians has been steady, but few alterations having takeu place. A rise is shown in Bonnie Dundee of 1s. 6d., British Broken Hill, ¼; and Mosman, 1s.; whilst a fall has taken plaee of 1s. 6d. in Gympie Great Eastern.

The following list shows the prineipal ehanges in the mine which have taken plaee:—

	This Week.		Last Week.	
Carn Brea	11¼	11¾ ...	11¾	12
Cook's Kitehen	11	11½ ...	10¾	11

LATEST FROM THE MINES.

Indian Mines.

Indian Consolidated.—The direetors have sold, through Messrs. Pixley and Abell, the following gold, the result of the November erushings:—113¾ ozs., from the Phœnix seetion, whieh realised the sum of 454*l.* 13s. 5d. net; 119¾ ozs. from the Colar section, whieh realised the sum of 367*l.* 6s. 11d. net.

South-East Mysore.—The seeretary notifies that the two first shipments of gold sent home by this eompany have been sold to Messrs. Rosehild and Company.

Colonial Mines.

Gympie Golden Crown.—Cablegram:—"Ought to reaeh the reef in drive eastward in about 35 weeks. Ought to reaeh the reef in drive westward in about 16 weeks."

Livingstone.—The following eablegram, dated 11th Jauuary, has been received from Messrs. E. D. Miles and Co., Charters Towers, who have reeently been appointed miue ageuts:—"Have examined the mine. Have struek quartz at the bottom of the shaft; the quartz being very white."

African Mines.

Forbes Reef.—The list of applieations for shares in this eompany elosed at noon on Tuesday, the amount of issue having been applied for several times over.

Silver Wolverine.—A eable from the superintendent states:—"Building finished. Mining eommeneed."

South African.—Partieulars of work relating to the week ending Deeember 15th:—Blue ground hauled, 4,270 loads; blue

ground washed, 4,921 loads; diamonds obtained, 1,528 carats; estimated value, 1,425*l.*; reef hauled, 1,085 loads.

Transvaal Gold Exploration and Land.—Cablegram:—"The battery has been at work 12 full days, and crushed 390 tons, yielding 200 ozs. The yield of gold from treatment of tailings in the pans was 70 ozs. Total for December, 270 ozs. We have extracted from new vein at Ophir Hill since last report 60 tons, assaying 4 ozs. 5 dwts. per ton."

Foreign Mines.

Frontino and Bolivia.—The directors have received advices for the month of November, 1888, viz.:—Produce, 999 ozs. gold, value, 2,310*l.* 6s.; cost, 2,538*l.* 1s. 3d.; estimated excess of expenditure, 227*l.* 15s. 3d. The manager reports that the severe drought still continues. He confirms the news of the cutting of the lode at the 285 Silencio, and encloses an assay of the rock broken, which shows, gold 7 ozs. 0 dwts. 11 grs.; silver, 4 ozs. 1 dwt. 6 grs. to the ton."

La Luz.—The secretary informs us that a cablegram to the directors from the company's solicitor in Guadalajara, Senor don Camarena, dated 15th inst., states that the mines had been that day duly transferred to the compauy by the vendor.

Mesquital Del Oro.—Cablegram from the mine:—"December: 15 stamps ran 660 hours; quantity of ore crushed was 440 tons; bullion produced at clean-up, 355 ozs."

Ouro Preto.—The directors have sold through Messrs. Johnson, Matthey & Co., the gold obtained in the month of November which realized £3,439 8s. 7d.

Pahang.—We are iuformed that the Pahang Corporation have already received three offers from highly influential persons for portions of its immense and most valuable territory, with a view to the promotion of subsidiary companies with ample capital to develop the property to be acquired. We believe that the company has been offered a large price in cash and shares for the tracts of land in question which are situated a long distance from the mines which the corporation are themselves working.

Palmerston Copper.—Cablegram from Port Darwin:—"600 tons tin ore, yielding 15 per cent., have been raised from the Mouut Shoobridge Mines, and 400 tons 20 per cent. copper ore from the Wheal Danks Mine."

Rocky Bar Wide West.—Cablegram: "Partial clean up first two weeks January: Tons mined, 250; tons milled, 250; yielding 135 ozs. bar gold; 15 stamps running 15 days."

Santa Barbara.—A cable message from Rio de Janeiro advises the amount of produce obtained for the month of December as being 3,744 oits. of gold. The value of this produce would amount, at 8s. 6d. per oit., to 1,591*l.* 4s. sterling. The cablegram adds that the attendance of the force had been irregular, owing to the holidays.

Stafford.—The manager (Mr. H. B. Tilden) telegraphs under date 18th January, that the clean up for the first fortuight of this month was as follows:—"Crushed 110 tons, which yielded 46 ozs. of gold."

Home Mines.

West Frances.—At the meeting a dividcud of 2s. 6d. was declared.

Interest due February 1st next on the Philadelphia and Reading Railroad Company's Preference Income Bonds will be paid, at the exchange of 49d. to the dollar, at the office of the European Agency, Dashwood House, New Broad Street.

Dividend warrants for the half-year's interest ending December 31st, due on the debenture and preference stock of the Wiltshire Brewery Co., have been posted.

Letters of allotment in the Union Mortgage Banking and Trust Company, Limited, were posted on 18th January.

Tetuan Shares.—There has been an active market in these shares this week, and a rise may be expected within the next few days. A few days ago Mr. J. G. Green wired "Mine better than expected"—and the detailed information he sends has given great encouragement to the home officials.

Moruya Gold Mine.—There is a movement on in Moruya Gold Mine shares, which are a New South Wales security. This is rather a change from South Africans, and possibly those who have had enough of the latter will welcome it. The fully-paid shares are now about 12s. The latest report from the mine is regarded as satisfactory.—*Financial News*, January 18th.

BRITISH MINING INTELLIGENCE.

EAST BLUE HILLS.—The 30-fms. level west on the "Baldhu" lode is reported to have improved. In the Blue Hills Mine adjoining there is an important improvement on this lode, which at the 66fms. level is worth 30*l.* per fathom. This may be of importance to East Blue Hills. In the last few days the shares have been quietly picked up for parties in the neighbourhood of the mine.

GREAT FORTUNE.—The report this week is more interesting, showing improvements, and that the operations generally are opening up good tin ground, particularly the winze referred to last week, from which point alone the agents think the returns will be increased. Seeing that these several branches increase in value as depth is attained, there is every inducement for following them down, which can easily be accomplished at a comparatively small expense by dropping a lift of pumps in the old engine shaft.

PRINCE OF WALES.—The shaft is being continued a little deeper in order to put a cross-cut through the flat lode. In the course of next week there will be more particulars given about this junction, which is of great importance. The lode in the bottom levels is opening out tin ground of the same value as last reported. The productiveness of the stopes and pitches continue, and in the 90-fm. level east there is an improvement in the lode for copper, which promises to give some valuable ground, the ore being of a very rich quality. The building of the new calciner has been commenced, and all the dressing works are approaching completion.

SOUTH CONDURROW (16th Jan.)—We are driving a short cross-cut south in the 66 west, so as to get under the perpendicular of Pendarve's shaft preparatory to rising towards the same. We have put down tramway in the 108-fm. level west of Marshall's, and intend to rise in the back of this level to prove the lode and to better the ventilation. The end will be driven at the same time; there is a strong kindly lode in this end, yielding low quality tinstone. The sinking of Marshall's shaft below the 108-fm. level is being urged on. The lode in the 50 end east of King's is improving; there is no other alteration in the underground operations to notice.—W. Rich, W. Williams, H. King.

TREGEMBO (15th Jan.)—Pennick's shaft is 12 fms. 3 ft. below the 30-fm. level. The 42 east end is worth 5*l.* per fm. The 42 west is not to value; we expect an improvement here soon. The 30 east produces low price tinstone. Two stopes in the back of said level are worth together 11*l.* per fm. No other changes; the tribute pitches are turning out much as usual.—T. Hodge.

WEST CARSIZE.—The engine shaft is now within 4 fms. of the 40-fm. level, where the agents expect to find a good lode. The 30-fm. level cross-cut towards the old Carsize lode is in very promising ground, the constituents of which indicate that the lode is near.

WEST GODOLPHIN (16th Jan.)—During the past week we have sunk the engine shaft 2 ft. 6 ins. No change in the ground. The lode in the 107 west on Bellingham's is looking more promising; it produces occasional rich stones of tin. The 70 west on Pink looks more promising, but no tin to value. No other changes.—T. Hodge.

WEST WHEAL GRENVILLE (15th Jan.)—The plunger lift at the 70-fm. level in engine shaft has been started, and working satisfactorily. The shaftmen have since been securing shaft at the 60-fm. level and below, and have also dropped forking lift 9 ft., or to 4½ fms. below the 70-fm. level.—T. Hodge, J. Skeat.

WHEAL GRENVILLE (17th Jan.)—I have nothing new to report in the bargains. Our two bottom levels are under water, however, we are forkiug slowly, and I hope the worst is over. The machinery is working very well.—T. Hodge.

WHEAL METAL AND FLOW.—The Metal lode in the 35-fm. level east is improving, being now about 1 ft. wide, and yielding in places good tin, in fact it is looking better than the agents have hitherto seen it. A bunch of tin here would cause excitement.

FOREIGN MINING INTELLIGENCE.

DENVER (5th Jan.)—I have no change to report since my last week's letter, the drifts at the 1,050 level having advanced in much the same sort of ground without meeting with any ore of value. The west drift has been extended a distance of 10 ft. during the week, and the one east 7 ft.—A. Rickard.

DICKENS CUSTER.—Letter from Mr. Stanton (superintendent) to Mr. John Treweek:—"Without exaggeration the Anna must be a bonanza. The face of drift all in fine ore. Assay from sample to-day from Anna: silver, $101.69; gold, $401.86; total, $503 55. I also send you assays of two samples of ore from the Lucky Boy Mine, No. 3 winze, as follows:—74.8 ozs. silver, 2 ozs. gold; equal $107.32; and from the Anna Mine, west drift, 82.7 ozs. silver, 14 ozs. gold: equal $355.89. The winze bottom all in fine ore. The Lucky Boy and Anna to-day are worth a half million. All is working smooth.—W. A. Stanton." The secretary adds that bars 83 to 87 have been sold in America for $15,384.78, which amount has been, as hitherto, retained by Mr. Treweek to meet the company's current expenses.

GARFIELD (29th Dec.)—The mill was shut down to-day to make some repairs and to replace the old stems, which are worn out, with new ones. Will start up in two or three days again. We are having very encouraging reports from the Lapanta Mine, and they are sinking on the body of ore which is improving in value.

NEW EMMA (29th Dec.)—My last report was under date of 22nd inst., and I now have to report work carried on at the mine for the week ending to-day as follows:—Level running east from No. 1 advanced 10 ft.; total, 80 ft.: Not any change of much importance to report, save the rock a trifle harder, but heavily mineral stained. We have cut a seam of from 2 to 4 ins. wide, filled with iron and manganese, carrying a very little silver, but no lead. Prospects for ore continue very encouraging. Level running north-westerly from No. 1, advanced 10 ft.; total, 99 ft.: Continues in caved ground. We are getting some good fillings and low-grade ore for the mill in this level. Level No. 3 easterly, advanced 7 ft.; total, 254 ft.: Not any change to report. The ground continues seamy, and carrying oxidised iron. Cross-cut towards footwall from No. 3 advanced 7 ft.; total 25 ft.: No change to report; rock is the same character as in No. 3 level, from which this cross-cut is being run. The seam of ore running north-westerly from raise from Attwood winze continues; although not looking so well, the seam remains from 4 to 6 ins. wide, but carries more iron and less ore. We have advanced 10 ft., and mined about 1 ton good ore, making now about 18 tons ore mined from this point, besides some low grade ore for the mill. The ground on either side of this seam continues favourable for its opening out again. We are besides carrying on the foregoing work, extracting fillings and low grade ore for next season's run, which we are getting north-westerly from uprise from winze, and between levels No. 3 and 4 old workings.—H. C. Wallace.

OSCAR (12th Jan.)—Oscar lode: No alteration to note in shaft or bottom level west. The eastern level shows an improvement—more quartz, and better impregnated with pyrites. The same remark also applies to the No. 3 lode. Daw's lode: Shaft no alteration, but there is an improvement in the bottom level south. We have several inches of quartz intermixed with decomposed slate, &c., which we think will mill 6 dwts. All other places the same as when last reported on.—J. Daw, jun.

PERSEVERANCE (23rd Dec.)—Assay report: Koorumber rise in B: 6 dwts. 12 grs. per ton. Fore rise in B: 1 oz. 12 dwts. 6 grs. per ton. Fore sink in B: 13 dwts. per ton. Kalo, No. 4 going into Big Hill, 3 ozs. 15 dwts. 3 grs. per ton. Ditto: 212 ozs. per ton. No. 7 prospect shaft No. 2: 3 ozs. 15 dwts. 3 grs. per ton. Concentrate, hand wash: 4 ozs. 18 dwts. per ton. Concentrate, No. 6 machine wash: 5 ozs. 14 dwts. 8 grs. per ton waste sand. Ditto: 8 ozs. 19 dwts. 16 grs. per ton concentrate for furnace. Concentrate, No. 2 hand wash: 8 ozs. 19 dwts. 16 grs. per ton. Battery, week ending November 10th: 8 ozs. 19 dwts. 16 grs. per ton. Battery, week ending November 17th: 8 ozs. 19 dwts. 16 grs. These buttons were beautiful. As soon as we get the pan to work, I do not see why pay should not be made.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 23rd December.—Dunderberg: No change has taken place in this mine during the week, and no shipments of ore have been made, owing to all the furnaces being shut down for the present. Eagle's tunnel: The upraise from the Eagle's drift has advanced 9 ft. during the week; the ground has become much harder, and timbering is no longer necessary. There are 27 tributers and six contractors at work in the mine.

SICILIAN UNITED.—Capt. Phillips reports that the progress of the mine is very encouraging. On the Fontana Mine the ore in the adit to the west of the main gallery is looking well, and the vein retaining its width and value. No. 2 gallery cannot be properly examined until it has been cleared of waste and put into working order. Carbona Mine: The vein here looks well, and no doubt will prove stronger and richer on opening at a lower level. Pumia Mine: Work is commenced on this very promising mine, the vein showing 8 ft. to 10 ft. in width, containing very fine copper ore, and good results may be looked for when the vein is struck in the lower gallery. Fondachello Mine: Preparations are making to commence when gallery here is higher up than present workings, from which the mine can be worked to greater advantage, All the indicatious point to speedy and valuable returns from the mines on their being fully opened out and placed in proper working order.

VOGELSTRUIS (20th Dec.)—No. 2 shaft: The lodgment for water below the 66-ft. level has been completed. Cross-cuts are now being driven north and south. In the south cross-cut a reef has been intercepted, which we believe to be the south reef. It is about 16 ins. wide, well defined, and prospects fairly well. The cross-cut will be extended on a little further, after which we drive east and west on the reef referred to. No. 5 winze: The cross-cut from No. 5 wiuze is now out towards the south reef about 120 ft., a further 25 ft. or more may have to be driven. Being desirous of finding some indication of the reef we trenched on the surface, and found the outcrop which pans fairly for gold. The important trial, however, is the cross-cut, which undermines the outcrop, with adit drainage, 44 ft. below surface. Should the ventilation permit it, the drainage cross-cut will be persevered with till interception of reef. We purpose then putting down a large winze on the face of the cross-cut for exploration and development purposes. Maddock's winze: A shaft has been started to explore the south reef at greater depth immediately below the point in Maddock's winze which gave the 4 oz. assay. Main reef: There is not much change to report on this reef. We are somewhat short of skilled miners, and are pressing on the more urgent work. To give free water way along 50 fms. of the main level a 6-in. by 6-in. wood-piping has been laid down and planked over preparatory to extracting ore at an early date. Battery: The erection of the mill is being rapidly executed. The boiler and building girders are not yet to hand. We shall early be requiring these to carry on the work, but I do not anticipate much delay on this account as the rains are keeping off, and roads up to date are in fair condition to permit heavy weights to pass over them. The boiler has been a month on the road from Ladysmith, and may thus be expected daily. Water supply: The absence of heavy rains is affecting the water supply of the district. We are not yet requiring water for milling purposes, consequently the dry weather is no disadvantage to us. Many of the other companies, however, are affected. The weather is somewhat thundery, with occasional showers, but there is not yet the heavy volume of rainfall so necessary to replenish the springs to give a constant water supply.—C. Rowe.

Festivities.—The gentlemen in the employment of Mr. J. Y. Watson, 5, Copthall Buildings, held their First Annual Dinner in the Talbot, London Wall, on Thursday night. In the absence of Mr. Watson, Mr. Nassau took the chair, and Mr. A. L. Harris acted as vice-chairman. After dinner, and the usual toasts had been disposed of, the chairman proposed the health of Mr. Watson. he said:—"I think this toast is worthy of a good reception. He is rapidly becoming, if he is not already, the largest dealer in the Stock Exchange. (Hear, hear.) May next year bring forth even greater success than the past year." The health of Mr. Harris being toasted, that gentleman, in replying, said he had done his best to make this gathering a success. He was sorry Mr. Watson was not here, he would have been pleased to have been present had he not had an important engagement. The health of Mr. Garret was proposed, and that gentleman made a suitable response. The health of the chairman was also proposed. He said he thanked them all for the honour they had conferred on him. He dwelt eloquently on the happy relationships that subsisted between all in the office, and predicted their continuance. During the evening songs and recitations were given by the following gentlemen:—Mr. Garret, Mr. Davis, Mr. Chandler, Mr. Colville, Mr. Charles Smith, Mr. Chancellor, Mr. Harris, Mr. Geo. Smith, Mr. Attwater, Mr. Williams, and Mr. Valentine. The company broke up after spending an enjoyable evening.

REPORTS OF MEETINGS.

SHEBA GOLD MINING CO., LIMITED.

NEW DIRECTORS—MR. TRENCH URGED TO REMAIN ON THE BOARD —AT LAST CONSENTS—REFORMS EFFECTED BY THE RETIRING DIRECTORS.

THE adjourned ordinary general meeting was held yesterday at Winchester House, Old Broad Street. The business to be completed included the election of auditors and fixing their remuneration. The notice of meeting stated that the chairman would make a statement as to the constitution of the new board.—Benjamin Bloomfield Trench, Esq., chairman of the company, presided.

FORMAL BUSINESS.

The CHAIRMAN: Ladies and Gentlemen, this is an adjourned meeting. The only formal business which is before us now is the election of auditors. That was left undone at the former meeting, and as soon as that has been completed, the meeting, so far as formalities are concerned, will be at an end; but I will then ask permission to address you as to the formation of the new board. You have all heard from the circulars that Mr. Ross, Mr. McFarlan, and myself are about to retire from the board. We hope, with your approval, to be able to appoint our successor to conduct your affairs with more skill, and more to your satisfaction. (No, no.) If we can succeed in that we think we shall have done our duty to the company. The election of the auditors rests with shareholders, and perhaps some of you will propose Messrs. Deloitte, Dever and Co. These gentlemen have been our auditors, and are familiar with the books, which they have audited to the satisfaction of the directors.

Mr. FREEMAN: I have much pleasure in proposing that Messrs. Deloitte, Dever, Griffiths and Co. continue to be auditors of this company.

Mr. FELDHEIM: I have every satisfaction in seconding that proposal.

The motion was put to the meetiug and carried unauimonsly.

THE REAL BUSINESS.

The CHAIRMAN: Now, gentlemen, as regards the constitntion of the new board. Some of the newspapers have not inaptly described the present position of this company as being in the throes of a revolution. I sincerely hope that that revolution may be a peaceful one. (Cheers.) So far as your retiring directors are concerned, they will do everything in their power to make it so. They wish most earnestly to fall in with the views of the shareholders, and to nominate snch men as their snccessors as shall have your entire confidence. A private meeting was held a week ago, at which we asked all the large shareholders to attend, in order that we might ascertain from them whom they wished to succeed us. We did not ask the entire body of shareholders because these large shareholders have the controlling vote. We asked all those to be present who held 1,000 shares aud upwards, and I was surprised to find there were only 83 shareholders who had this qnalificatiou, and they represent an enormous preponderance of the voting power. In fact, I may say that under 30 shareholders can control this company, even if it is fully represented by all the other shareholders on the register. That I do not think is a desirable state of affairs. However, it cannot be helped. It exists. It is under the articles of association. Every share carries a vote with it, and that gives such a preponderance of voting power to the large shareholders, that the fact is, as I have stated, that

UNDER 30 SHAREHOLDERS, IF ALL THE SHARES IN THE COMPANY BE REPRESENTED, CAN OUTVOTE THE REST.

You have to deal with that fact, and we dealt with it when we asked the shareholders, 83 in number, to tell us whom they wished to be our snccessors. The first question we put to them was, whether we should nominate our successors, as we had the powers under the articles of association to do, and then call a general meeting for their election formally by the shareholders, or any others they wished. We thought that the first course must be inevitably more expeditious. That former meeting could not be called in less than a fortnight, and it would probably take three weeks before the notices could go out. Therefore there was the advantage in allowing us to nominate our successors, of carrying this resolution through more quickly. At that private meeting there were nominated Mr. Atkins and Mr. Francis, both men who were exceptionally well qualified to fill the offices now to become vacant, but those gentlemen have since declined to act, I am sorry to say. Mr. Francis has written a letter declining, and Mr. Atkins throngh his friends has intimated that he does not wish to be a director. I think we may, therefore, take it that both these gentlemen have withdrawn.

HISTORY OF THE BOARD'S ACTION.

Perhaps you will allow me on this occasion—it is the last opportunity of addressing yon, and I want you to allow me to enter on the subject at a little length—perhaps you will allow me to detain you somewhat out of consideration for the services which I have devoted to your interests, before I go away, so as to let you know what has been done not only by myself, bnt my colleagues. After all, my appearance before you is the merest accident. I will not enter into it how it happened, but it is the merest accident that I had anything to do with the company in the capacity of a director.

THE ORIGINAL BOARD.

I wish to relate what has been done not only by myself, but my colleagues. In the first place, in the formation of this board I was actively instrumental, and if blame attaches to anyone in connection with the matter, I confess it attaches to me, and I am ready to bear it. I will tell you how the board was elected. We thought we had secured men who truly represented the interests of the company. We had originally by far the largest shareholder in the company, and to him was given a seat. We had another man who, for commercial knowledge and experience, is unsurpassed by anyone in the whole register of shareholders in this company. We had others who, for their experience in mining, have also been fairly described in one of the papers (the MINING WORLD) as unsurpassed in the whole list of mining directors for ability and honourable conduct. (Cheers.) I thonght that in getting such men to serve yonr interests I was fortunate.

I WISH TO THANK MY COLLEAGUES

in snpporting me in the endeavours I have made to carry on the company satisfactorily. They have never been absent from the board meetings; they have worked hard, and done their utmost to serve yon—(cheers)—and I wish to thank them before I retire. It so happens that others had made np their mind to have a representative on this board. Well, gentlemen, we have to treat matters as we find them. I have told you who had the voting power. And now, gentlemen, with your consent, I should like to review what has been done by the directors and why more has not been done. When we came into office we fonnd yonr company financially embarrassed.

A TRANSFORMATION EFFECTED.

We fonnd that they were in debt to the extent of 17,000*l*., notwithstanding that a very short time previously (two months) they had issued 1,000 shares, and sold them for over 30,000*l*. Still this company had this debt of 17,000*l*., but yon have now, as compared with that position, a balance of npwards of 50,000*l*. at your bankers, which is a very comfortable position for this company or any other to find itself in. (Cheers.) Another thing done is that in remitting money, the prodnce of the mines has to be sent here before it can be realised, In realising that money under the old system, it cost npwards of 3 per cent., in order that we might get the money from the other side, bnt that charge has now been reduced to ½ per cent., and fixed for a period of 12 months, which will effect a very considerable saving. We found the office in a sad state. The books were in a position of chaos, and the whole of the business was conducted by means of a cash book. There were no means of checking the cost of the different items, and, consequently, things were not organised as they are at present. Now, full information can be obtained as to the exact cost of every item of expenditure. That I think must be a sonrce of great satisfaction to the shareholders.

SHARES EASILY DEALT IN.

Then as regards the facilities for dealing in your shares:—Formerly there have been blank transfers sent in endorsed at the back, but now matters are in order, and the stamp duty has been compounded, by which the shareholders have been saved last year alone 3,000*l*. at least. There is no difficulty in dealing with your shares; whereas, formerly, if you wanted to buy them you could not, and if yon wanted to sell them you could not. We have also added to your office a set of maps which gives you a complete illustration of the position of the mine. You can see all the plans and sections with the operations carried on and the position of all the different companies—the different spots that you have to take up yourselves as, for example the various battery sites and waterraces. That is of vast importance to the directors, but there were none of these when we came into office. There were no plans or sections on any part of the mine at the company's office when the original board was appointed. These have all been furnished and are very complete, and our new directors will find them very valuable, and enabling them to see what is being done at the Sheba Mine. (Hear, hear.) As regards the mine itself, we believe that by stopping the mills in August last we have placed that mine now in the position of being ready for development, so that a vast amount of rich ore can be taken out at any moment when it is desirable to do so. We have not thought it desirable to do so at present for the reasons stated in the report at page 6, presented at the last meeting, where we say that one part of our policy will be—"To mill the high and low-grade quartz in close relation to their respective quantities and values." That is the policy which your out-going directors have thought it wise to adopt. They have felt there was a ruinous expense in milling your rich ore. You have it, and there is not the slightest difficulty in getting out part of it and putting it into dividends, but there has been a waste in doing it, and that was a policy yonr ont-goiug board did not approve of. Therefore they wished, as stated in that paragraph, that the mine should be developed so that it could be one of continuous and growing prosperity—not that there should be brilliant flashes at one time, with a great crushing and a low crushing at the next time—bnt that the milling should present somethiug like uniformity. In addition to that, while I was ont in Sonth Africa a system of working the mine was, after considerable tronble, devised, by which

FOUR-FIFTHS OF THE PRESENT COST OF PRODUCTION CAN BE SAVED.

We hope that that will be the case, and that the incoming board will be able to carry through that system, or in any other way save you four-fifths of the present cost of production. When we took office we found also that there were only between 500 or 600 shareholders on the register—there are now upwards of 1,700, and that is a source of great financial strength to the company. It is not only a source of financial strength, but it indicates that the shareholders, as a body, were not so dissatisfied with the board of directors, as some people intended it to be supposed they were. (Loud cheers.) Having said that much, we asked ourselves what were the obstacles which prevented under these circumstances a much more rapid development of the property than has taken place.

THE DEATH OF MR. HOLMAN.

They were twofold, and they each embrace a period of six months. The first was the lamentable death of our able manager, Mr. Holman, who died suddenly of heart disease. That was a great loss to the company, and retarded the development of the mine for six months. His successor could not be appointed until June. Then came my visit, and then came

THE NOTORIOUS OPPOSITION OF THE PRETORIA CLIQUE.

That retarded us again another six months. I believe most of the objects of that clique have now been obtained. They have got what they wanted, which was really money to develop the Oriental claim, and which they hoped to get from the Sheba. Now they have got that I hope that no more difficulty will arise, and that this company's operations will advance with the progress which none of you desire more earnestly than your out-going directors. As regards that clique, I may state that until August there was no admission as to where the opposition came from. It was in the back-

grounnd. You have a report presented to the Oriental shareholders, which has. I think, been circulated amongst the Sheba shareholders, in which great blame is attached to me.

BENEATH CRITICISM.

If you wish me to do so (it will delay you a little), or if you attach any weight to the remarks made in that report, I will go into the whole matter of the conduct of your affairs, but I may state here that I am prepared to answer every charge made. (Cheers.) It would delay you to do so, but it would not be uninteresting to me, and if of interest to you I will go through it. (No.) Otherwise I will pass it by—(cheers)—and shall only say that I hope nothing will be said at this meeting which will prevent its harmony. We all desire in changing front as we are doing, or in swapping horses, as a shareholder expressed it at last meeting, that the incoming directors should have very facility for carrying on the business of the company, and I think that unless we have unity at home, it will be absolutely impossible for us to fight our battles in the Transvaal. No doubt the Pretorian clique are laughing at the mischief they have caused. and at me ; but individually I do not care for their laughter, but I hope their action may not have a permanently injurious effect upon the company. I want unity, and deprecate one note of discord being uttered in the election of the new men who are to succeed us. I am convinced that that is the best policy for us all.

THE NEW DIRECTORS.

The names which have been submitted to you, and which the board intend to propose (anybody else can propose any other name) are as follows :—The first one is Mr. Archibald Parker, of Parker, Wood and Co., a man I am delighted to see accepting this office, and a man I urged to fill the place now occupied by me when I was not on the board. I shall be glad to see him fill that place now. Another name is that of Mr. Soper, of Messrs. Davis and Soper. I do not know him personally, but I believe from what I have heard that he will be found an excellent director. Another is Mr. Town, and the board will have much pleasure in nominating all these gentlemen if it meets with the approval of the shareholders here. Perhaps you would like to make some observation before I propose them for election, but whatever is done let it be done with harmony. (Cheers.)

MR. TRENCH ASKED TO RETAIN HIS SEAT.

Mr. Haldinstein : Will you keep your seat on the board, Mr. Chairman. if you are elected by the shareholders here to-day ?

The Chairman : It is my desire to retire from the board. I feel I ought to after what was said at the last meeting. I do it very reluctantly. having laboured hard for this company, but I hope you will not add to my reluctance in leaving it by asking me to retain my seat. I believe I have the good wishes of many of the shareholders. (Cheers. and A Voice : "All.")

Mr. Haldinstein : But can we not induce you to retain your seat ? You have been out to the property, you have seen the value of the mine and know what a good property it is, and I maintain, sir, that you are the man to stop where you are. (Loud cheers.) I was not present at the last meeting but I read the report, and have come to-day on purpose to express my opinion upon this matter and I hope, sir, you will keep your place. (Cheers.)

A GENEROUS OFFER.

The Chairman : If I felt that the company would lose anything by my withdrawal I should be very glad to accede to your request ; but I do not think it will, because I am perfectly prepared to give any time. knowledge. or service I can to the interests of the company. (Cheers.) Mr. Chambers will tell you that I have done so in the past to his knowledge, and I am perfectly prepared to do so unofficially, but I would rather not be asked to retain my seat. Unofficially, however, I will give you my time, the very best advice in my power, and anything you choose to ask me. (Loud cheers.)

Mr. Haldinstein : If you retain your seat you will have less trouble. You have done a lot of good, and we don't want you to go. (Cheers.) Gentlemen, I beg to propose that Mr. Trench retains his seat on the board. (Lond cheers.)

A Shareholder : I second that.

Mr. Haldinstein put the motion, which was carried amidst loud cheers. three shareholders voting against it.

The Chairman : There are three gentlemen I understand who have been good enough to oppose me. I tender you, gentlemen, my best thanks. It has not been unanimous.

A Voice : They are only units.

The Chairman : No, they are not units, they are multiples ; they have got the votes.

Mr. Lewis : I have every desire. and would gladly vote that you should retain your seat, but I wish to ask one or two questions with reference to a paper that has been printed and circulated. I do not know Mr. Lockwood, and to my knowledge have never seen him, but there are such positive assertions made here, that one is inclined to ask whether they can be proved.

A Gentleman : I represent the firm of Messrs. Lockwood, and am perfectly prepared to justify every statement made in that circular.

A Voice : A speculative outside broker. Nothing less. ("Order," and cheers.)

The Chairman : To Mr. Lewis I may state that they have all been embraced in Mr. Lippert's statement at a recent public meeting. If the meeting wished me to say anything about it I will do so. I really think it is almost treating the circular with a little more respect than perhaps it deserves. (Cheers.)

A Shareholder : It is not worth a moment's consideration.

Mr. Lewis : I will just ask you one question. You say there are 50,000*l.* to the credit of this company ?

The Chairman : Upwards of 50,000*l.*

Mr. Lewis : Is that sum of money lying idle or bearing interest ?

The Chairman : Bearing interest.

A LIVELY SCENE.

Mr. Lockwood : Mr. chairman, if you will allow me, I should like to make a few remarks. ("No, no," and interruption.) I insist upon being heard.

A Voice : He is not a shareholder.

Mr. Lockwood : I am duly empowered, Mr. Chairman, from the shareholders themselves. (Interruption).

The Chairman : Your name does not appear on the register, Mr. Lockwood, and I think we shall be carrying out the wishes of the meeting in not hearing you. (Loud cheers.)

Mr. Lockwood : It is certainly a most extraordinary thing to me——. (A Voice : "Shut up ;" and loud expressions of dissent.)

Mr. Lawrance : Is this meeting open to persons who are not shareholders ? If not, I beg to move that the non-shareholders be asked to retire. (Cheers.)

Mr. Hesselrick : I beg to second that.

Mr. Lockwood was making a further attempt to speak, but the meeting would not give him a hearing. Mr. Lawrance's motion was put and carried unanimously, whereupon Mr. Lockwood left the meeting amidst the hisses of the shareholders.

THE NEW DIRECTORS.

The Chairman : Gentlemen, I now beg to inform you that the directors have nominated Mr. Archibald Parker as a director of this company. He has signified his willingness to take a seat on the board. Mr. MacFarlan will therefore withdraw, and the seat will be occupied by Mr. Parker. Mr. Soper has also signified his intention to act, and the directors have much pleasure in nominating him also ; for they are both men of very high position, and I am only too delighted to see the destinies of the Sheba Company falling into such good hands. Mr. H. Town has also been nominated——

A Shareholder : What is he ? Is he a broker ?

The Chairman : No, he is a Cape merchant, I believe. He has been connected with the diamond mines, and had some claims in the Bultfontein mine. I shall be very glad to see him elected.

A Shareholder : Is he an existing shareholder ?

The Chairman : He can be nominated, whether he is an existing shareholder or not ; but, as a matter of fact, he holds over 2,000 shares.

Mr. Haldinstein : How about yourself remaining, Mr. Chairman ?

The Chairman : Do not press me.

Mr. Haldinstein : Just go on for another year. (Cheers.)

Mr. Lamb : I had the pleasure of calling upon Mr. Treuch just after the last meeting, and I told him then that there was no feeling of opposition on the part of the shareholders that I knew of against him, and I asked him to allow his name to be proposed, but he then declined. I hope now he will be of a very different opinion. As far as I am concerned, I should like to see him remain. Reference has been made to a clique at Pretoria, but I beg to say that I belong to no clique.

A PASSAGE AT ARMS.

A Shareholder : You sowed dissension throughout the whole company. (Cheers, and cries of "Order.") You say the board of directors have not perhaps given all the satisfaction that some members may have expected ; but still good work has evidently been done. I say the property should not be left in the hands of some 30 shareholders, who appoint what directors they please, and it would be well to elect one or two of the old board to meet the incoming directors ; and as you, Mr. Chairman, have been to the Transvaal, and know the property well, I think you would be only acting in accordance with the wish of the large majority of shareholders if you retain that position. (Hear, hear.) You have shown such a desire to work unanimously and harmoniously with everybody here that I certainly think those gentlemen could have no bonâ fide reason for objecting to work with you. The 30 shareholders surely have sufficient guarantee that the work will be done by their nominees in accordance to their wishes, and I think the remainder of the shareholders have a right to claim that their views should be studied, and that any opposition to your remaining in your present position should be waived. (Cheers.)

A Shareholder : Mr. Trench has kindly said he will give us every assistance if he is not on the board, but I think it very desirable that we should have him in the position of a director.

THE CHAIRMAN CONSENTS TO RETAIN HIS SEAT.

The Chairman : I beg to thank you, gentlemen, for the honour you have conferred upon me by asking me to remain on the board. I should have preferred, however, that you had not done so. Still, as it has been moved and seconded and carried unanimously, with the exception of three gentlemen—I do not know who they are, where they come from, or anything about them—I will go off if they hold a large number of votes ; if they do not I will be prepared, subject to the unanimous vote of those gentlemen who have been elected on the board, to retain my seat. (Loud and prolonged cheering.)

Mr. Lamb : I sowed no dissension. What I have done has been justified.

The Shareholder : You did nothing but upset, or endeavour to upset, everyone in the room. (Cheers.)

Mr. Lamb : What I did has been justified by public opinion.

The Shareholder : Not at all. (Cheers and order.)

Mr. Lamb : Look at the price of the shares.

The Shareholder : Listen to the acclamations of the room.

Mr. Tallerman : It was not my intention when I came to this meeting to address it, especially as I had the pleasure of being here on the last occasion ; but since I came here, I feel, though only a small shareholder, that there are some statements which have fallen from you which should set us shareholders thinking before we appoint the directors whom you have, in a summary and unusual manner, put before us.

CHAIRMAN CONSENTS CONDITIONALLY TO REMAIN.

The Chairman : I am prepared to retain my seat subject to the unanimous wish of my colleagues, but I withdraw if there is the slightest dissent ; but, at the same time, the company can command at any time the experience and knowledge I have gained during the time I have served it. The board as now constituted is as follows :—Mr. Hayes, Mr. Brown (resident director), Mr. Parker, Mr. Soper, Mr. Town, Mr. Chambers, and, subject to the unanimous wish of my colleagues, I remain. (Loud cheers.) That concludes the business of the meeting.

A Shareholder : I was about to ask this : inasmuch as you have been gracious and good enough to listen to the unanimous appeal made to you in this room—would it be out of order to ask this question, whether your co-directors would not also withdraw their resignation and remain with you on the board.

The Chairman : I may say that I am quite certain my co-directors would not withdraw their resignation. I am quite certain I would would not have done so myself in the qualified manner I have if it

had not been for the very cordial support you all have given me. It might otherwise be said that I have done that which was an injury to the company. I should have preferred to have gone off and given you my assistance unofficially, but I am certain my colleagues will not withdraw their resignation. We have discussed the matter, and for myself I had no intention of remaining ; but you have spoken in such kiud terms to-day, and expressed your feelings so strongly, that I feel perhaps I ought to change my opinion. (Cheers.)

Mr. HALDINSTEIN : I see by the report you have 16,000*l*. profit in hand.

The CHAIRMAN : We cannot go into these accounts. They have been adopted and passed, but I shall be happy to explain anything to you at the office.

THANKS.

Mr. HALDINSTEIN : Then I propose a vote of thanks to the chairman.

Mr. LAWRANCE : I see the company's solicitor here, and I want to call his attention to the fact that 98 per cent. of the company are at the merey of 2 per cent. That arises from the way the articles of association have been drawn, every share carrying one vote. Can we, by special resolution, alter the articles so as to equalise the vote ?

Mr. CRISP (Ashurst, Morris and Crisp) : No ; it will not be competent. That is one of the articles that cannot be altered by special resolution.

Mr. CHAMBERS (director) : On behalf of the other directors and myself, I beg to returu thanks for our re-election, not only to those present, but to those who have supported us with their proxies. We are fully alive to our responsibilities. We know there is a tremendous amount of hard work before us. And I hope that, when next we come before you, we shall have such a report and balance-sheet as will be acceptable to you, and that, in the language of one of the shareholders, we shall have "frequent and abundant dividends" to distribute amongst you. (Cheers.)

The vote of thanks to the chairman having been carried, the meeting was at once brought to a close with Mr. Trench's brief reply.

The general manager, in his letter dated 18th December last, states :— During the next few months the gold return will consist only of such gold as may be extracted during the trial of certain small experiments, and will therefore not be reported except by letter. As soon as the mill is ready the new plates will be set with as little delay as possible, and then an experimental run for a month on the low grade ore from the various levels throughout the mine will be carried through. It will, I trust, be seen that this experiment is necessary, for until we are absolutely certain what this low grade stuff is worth, it is impossible to arrive at a valuation of the mine. At the present time we have over 1,000 ft. open at the various points on the course of the lode, and the sooner we arrive at a knowledge of what can be extracted from this class of mineral, the better. The higher class mineral, i.e., the shoot, will always yield a good return, and the stone, not being refractory, will be easily worked. The shoot still continues in Nos. 1, 2, and 3 levels east. We have commenced to drive on the course of the lode on the northern leader of the shoot in No. 1 level ; this portion is also opening out well. So far, the discovery of the shoot leader north in No. 1 level stands alone, but we trust before many months are past, to strike the same leader in the drives now being made north at the lower horizons, viz., 2, 3, 4, and 5 levels. In the new drift west from the eastern boundary of the property nothing of any value has, so far, been struck. The drift is, however, in lode-stuff, and carries a few colours, together with a fair portion of pyrites. The mill is now completed, and the reduction officer is busy fixing plates and preparing round catch pits for concentrates.

THE ILEX GOLD MINING CO., LIMITED.

THE COMMITTEE'S REPORT—MR. COURTICE ACCEPTS THE INEVITABLE, AND RESIGNS—ARRANGEMENT WITH THE ILEX SYNDICATE —BETTER PROSPECTS OF SUCCESS.

THE adjourned second ordinary geueral meeting of the shareholders was held at the Terminus Hotel, Cannon Street, on Friday last—the Count De Torre Diaz presided.

Mr. DANIEL WILLINK (the secretary) read the notice calling the meeting.

The CHAIRMAN said that, as the shareholders were aware, this was an adjourned meeting from December 21st last, when it was resolved that a committee of shareholders should be appointed to meet the board and go into the position of the company's affairs. They held their first meeting on December 22nd instant, the day after the ordinary meeting, and on the 24th they met again, and at both meetings they were mainly occupied in going thoroughly into Mr. Curtice's reports and assays, the result of which investigation was that they called upon

MR. CURTICE TO RESIGN,

and his agreement with the board was consequently cancelled. The committee had held three other meetings, one on December 31st, another on Jauuary 8th, and another on January 15th, at which meetings they considered fully the question of the position of the company at the present time, and what steps should be taken to prove the mine, if such a course was deemed advisable. The result of the meetings of the committee was embodied in their report, which he would now ask the secretary to read to the meeting.

THE COMMITTEE'S REPORT.

Mr. WILLIN then read the joint report of the board of the Ilex Gold Mining Company, Limited, and the Committee of Shareholders.

The CHAIRMAN said that he did not know that this report called for much in the way of amplification. The question of Mr. Courtice and his dismissal was explained in it, and in respect to the arrangement arrived at with the syndicate that would be brought before the shareholders at the subsequent extraordinary general meeting. The whole of the money that had been received by the syndicate had been expended on the property, floating the company aud taking shares in it, and no one had received any individual benefit therefrom. In respect to future work, they had been in communication with Mr. Petre, and the result arrived at was that they would sink upon the main shaft after the shareholders at the extraordinary general meeting had put them in possession of funds.

NO EXAGGERATED HOPES.

As the shareholders were aware, Mr. Johns had no exaggerated hopes, but it had been found beyond doubt that a certain amount of gold existed. They hoped that as they went on they would find something better turn up. (Hear, hear.) He would be happy to answer any questions.

Mr. TUCKER supposed that the directors would be in receipt of news from the mine from time to time.

The CHAIRMAN stated that the work would be carried on by Mr. Petre under Mr. Johns' advice, and the course of action would be regulated by what discoveries were made. The board would be in constant communication. He might state that they received advices every week. He then put the resolution adjourned from the last meeting, for the adoption of the report and accounts to the meeting.

Sir S. CONNING seconded the resolution.

WHY DID COURTICE GO ?

Mr. CARNSEW asked for particulars as to the reasons that led to the dismissal of Mr. Courtice.

The CHAIRMAN said he would ask Mr. Norris, one of the members of the committee, to reply to that.

Mr. J. D. A. NORRIS said he thought that the shareholders were to be congratulated that the committee had succeeded in coming to an amicable settlement with Mr. Courtice. (Hear, hear.) There was no doubt that Mr. Courtice had been deceived himself. The report of the committee gave the result that they arrived at after much discussion of various points with Mr. Courtice, and they had felt that the only course was to cancel that gentleman's agreement with them as manager.

REPORT ADOPTED.

The motion for the adoption of the report was then put and carried unanimously.

The auditor was re-elected.

The adjourned meeting then closed.

EXTRAORDINARY MEETING.

An extraordinary meeting was then held. The SECRETARY read the notice.

The CHAIRMAN formally proposed the following resolusions, viz. :— "That although all the patents have not yet been granted in respect of the properties purchased by the company under the agreement of the 21st of April, 1887, the directors be, and they are hereby authorised to pay to the Ilex Gold Syndicate, Limited, the sum of 3,464*l*. (being the balance of the purchase-money payable under such agreement, and still unpaid) by the payment to it of 464*l*. in cash, and by the issue to it or its nominees, of debentures for 3,000*l*., carrying no interest up to the 1st day of August, 1889, and interest after that date at the rate of 5 per cent. per annum, the principal of such debentures to be payable on the 1st of February, 1894, but to be redeemable at par at any time on three month's notice, at the option of the company, and such debentures to be issued subject to conditions preventing the institution of any proceedings for the recovery of the principal or interest secured by the debentures, until a dividend of at least 5 per cent. has been paid on the preferred shares of the company, or until an order has been made, or an effective resolution passed for winding up the company, the debentures to be otherwise subject to such conditions, and to be in such form as the directors may think fit, and the issue to be without prejudice to the right of the company, or its directors, to issue debentures, rankiug pari passu, with this issue, and making a total issue of 30,000*l*."

Mr. BENSON (a member of the committee) seconded the motion, which was carried nem dis.

THANKS TO THE COMMITTEE.

The CHAIRMAN expressed the thanks of the board at the services rendered by the committee, and expressed the hope that the future of the company would be satisfactory.

On the motion of Col. BURGESS, seconded by a SHAREHOLDER, a vote of thanks and confidence in the board was passed, and the meeting separated.

WEST FRANCES.

DIVIDEND OF 2s. 6d. PER SHARE.

A SIXTEEN-WEEKLY MEETING of adventurers in West Wheal Frances was held on the mine on Thursday, the purser, Mr. Walter Pike, presiding.

There was a large attendance.

The statement of accounts, read by the CHAIRMAN, showed that the labour costs from last account up to the 5th inst. had been 4,277*l*. 8s. 1d. ; merchants' bills, 1,724*l*. 9s. 9d. ; rates, 57*l*. 5s. 8d. Tin sold amounted to 124 tons 15 cwt., producing 7,222*l*. 17s. 2d. ; lord's dues at a twenty-fourth made 300*l*. 9s. 1d., and after deducting this sum and addiug discount on merchants' bills, with extra carriage, the total credits were 6,987*l*. 16s. 8d. The profit on the 16 weeks' working was therefore 928*l*. 13s. 2d., and the balance in favour of the mine 1,959*l*. 12s. 1d.

Mr. PIKE said the last time they met they had to show a loss of 283*l*., but now they had a profit of 928*l*. He recommended them to declare a dividend of 2s. 6d. per share, which would absorb 750*l*., and they would then be able to restore nearly 180*l*. of the money they took from the balance last time. That would put them in a sound financial position, and give the dividend generally expected. (Hear, hear.) He proposed the adoption of the report and accounts, and the declaration of a half-crown dividend.

This was seconded by Mr. JOHN VIVIAN (Hayle), and carried.

The meeting then concluded.

PIGG'S PEAK (SOUTH AFRICA).

INCREASE OF CAPITAL.

AT a recent meeting of this company the CHAIRMAN, in moving the adoption of the report, said that at the present moment all the shafts aud shoots were in working order, and the tramway was

finished, so that in a day or two he hoped to hear work had commenced. They were indebted to the amount of 30,000*l*., consequent on various delays and unforeseen expenses for which there was no help. They had received a cablegram from England from Mr. P. Whitehead, a late director, offering to advance 60,000*l*. in exchange for debentures at 90, at 10 per cent. per annum for five years, at the option of the debenture-holders taking shares in the company at any time at par as payment of the debentures. They considered these favourable terms. They could thus pay off their indebtedness, and use the surplus in the declaration of dividend, or for other purpose if it seemed desirable. Mr. Davis, an eminent expert, had told them Pigg's Peak and the adjoining property was one of the most valuable in South Africa, and no doubt they would shortly be in a fine financial position.

Mr. H. Whitehead proposed, "That the directors be authorised to take the necessary steps to issue debentures, or increase shares to a sum of money not exceeding 60,000*l*., to complete terms with Mr. Whitehead.

Mr. Poynton seconded, and it was resolved.

Mr. Poynton proposed "That the money obtained from the issue of such debentures be forthwith applied to clear off the present indebtedness of the company, and the erection of 60 additional stamps on the property."

Mr. Pickering seconded, and it was carried,

The Chairman remarking that if 40,000*l*. only was required, no more would be issued.

THE PORTUGUESE CONSOLIDATED COPPER.

REDUCTION IN THE PURCHASE-MONEY AND ALSO THE ROYALTIES —HOPEFUL PROSPECTS.

The statutory meeting of the Portuguese Consolidated Copper Company, Limited, was held yesterday at the Cannon Street Hotel—Lord Inchiquin in the chair.

Mr. Robert Rushworthy (the secretary) having read the notice convening the meeting,

The Chairman said: Gentlemen, I think the first business to-day is for me to make a short statement as to the present position of the company, and in the first place I would like to say that this meeting has been called much earlier than was legally required in order that the directors might come

FACE TO FACE WITH THE SHAREHOLDERS

as soon as they can, and explain the position as far as they can to them.

LEGALITIES.

In the first place I have to say that the legal formalities which are required to be complied with in Portugal for establishing the company under Portuguese law are being completed, and will shortly be executed.

THE CHAIRMAN EXPECTS REPORT.

Then I must tell you that the directors requested one of their number, Capt. Skewis, who has had great experience in mining matters, to visit, and to report in reference to the property it was proposed to purchase. You have the report, and he is here to answer any questions as to his opinion as to the value of the property. I may say this, that his report confirms the opinion of the directors in reference to the value of the property, and also confirms the estimate of the property which was made by Messrs. Taylor and Co., who sent out specially to examine and report fully on the mine.

THE PRICE OF THE PROPERTY.

Then, gentlemen, we have to inform the shareholders of the satisfactory arrangement which has been made in reference to a reduction of the price of the property, whereby the vendors have consented to take 45,000*l*., in lieu of 50,000*l*., in consideration of a sum of 8,000*l*. being paid to them in cash, and have further agreed, if required to do so at the end of 18 months, to provide 5,000*l*. additional capital should the directors think it necessary. That in the opinion of the directors is a satisfactory arrangement, and it is in process of being carried out.

THE CAPITAL.

With reference to the capital of the company, after payment of the above-mentioned 8,000*l*. in cash, there will remain ample capital for the requirements and working of the mines, providing machinery, &c., which expenses has been estimated at between 6,000*l*. and 8,000*l*. for the 12 months. Capt. Skewis reports also that this expenditure will be fully covered, if not exceeded, by the return from the mines within that period.

CONTRACT WITH THE FRENCH COMPANY.

I may also mention we have entered into a contract with the French company for two years, with an option to them to continue the contract for a further 12 years. Negotiations are proceeding for the purchase of machinery on favourable terms, and the working the mines will be shortly commenced. I need not say the working cannot be carried on without money, and the sooner the shareholders pay up the amount due on their shares the sooner will the directors be able to commence work at the mine.

ROYALTIES.

With reference to another matter, I may mention that the royalty which was payable to the Portuguese Government has been reduced from 5*s*. to 3*s*. on the Maltrada, and from 5 to 2½ on the Sciccira. That is the position at the present moment. I do not think I need add anything further, excepting that if any shareholder has any question to ask, the directors will be glad to answer it as far as they can.

Capt. Skewis said he had been engaged to visit and report upon the Pahang, whose shares were now 5*l*. He must say that when he went to Portugal he was as much surprised to find the lodes undeveloped as he had been in others.

ULTIMATE SUCCESS.

He was confident that the company would ultimately be a success.

THE LODES.

They could commence to work on four lodes right away, which varied from 4 to 12 and 14 ft. wide. They would raise a large amount of ore by the time the machinery was erected, and by that time they would be able to keep the machinery running regularly. He believed all the capital they raised for the next 12 months would be fully returned by these lodes, and from that time they would work at a very handsome profit.

Mr. Lake: Is it inteuded to ask for a quotation on the Stock Eqchange?

The Chairman: Yes, as soon as we are able.

A vote of thanks to the chairman and directors then terminated the proceedings.

SOUTH AFRICAN NOTES.

The exports of gold from South Africa are not yet sensationally large. In November last there was exported from Natal gold to the amount of 34,466*l*., and from Cape Colony 54,824*l*. For the nine months the total exports from Natal and Cape Colony together amounted to 462,212*l*.; but had the rate of exports for November been maintained throughout the exports would have been over a million sterling. It is, however, apparent from these figures that a tendency of exports from South Africa towards the end of the year was towards increase.

Unity appeared to be the order of the day at Witwatersrand. The managers have the wisdom to see that the success of the whole district is a great factor in the success of individual mines, and that working together in unity and accord is the more advantageous as well as the pleasanter policy. Each one can still try to outdo the other, and healthy rivalry is not incompatible with the absence of jealousy. It is estimated that on the present level enough ore is in sight to keep the Robinson Company going for eight years at its present output. As the reef is widening as they go down we can fairly ask the question "Where will it end?" A meeting of the Tueker Syndicate was held lately, when a favourable report was submitted. Developing work is nearly completed, and a cash balance is on hand. This syndicate has about 60 claims at Elandsfontein, and the whole will shortly be floated into a company. This last assay gives about 2 ozs. to the ton.

The Stock Exchange Settlement concluded on Wednesday (says the *Times*) has proved to be heavier than was expected, but it has been completed without any difficulty, except in the department for South African Gold Mining shares. This market, which is probably destined to be a very important one in a year or two, has started into prominence during the last three months, and it is still in a very disorganised condition. To begin with, very few of the securities dealt in are quoted in the Official List, as the great majority of the companies are domiciled in the Transvaal or Cape Colony, and their shares have been brought over here by people connected with the Cape Diamond Mines and other Cape industries. The Stock Exchange Committee has so far refused to take any cognizance of dealings in them, on the ground that they have never been officially brought before it in any way. This refusal is, no doubt, justified by the letter of the law, but it seems to us that it would be well if the committee could see their way to taking a broader view of their duties. The want of proper organisation in this market is all the more felt as very few of the companies have offices even for the registration of shares in London. To-day there was a good deal of trouble in many cases, owing to brokers have sold amounts of 500, 400, 250, &c., shares to dealers, who have resold them in amounts of 20, 30 and 50 (to other brokers or dealers). When the shares came to be delivered to-day in scrip the dealers could not get the shares split up, the various companies having no offices registered in this country. The greatest difficulty was with Knight's. Many dealers having scrip certificates for 500 shares delivered them, whereas they had sold five lots of 100, and consequently were unable to re-deliver them.

A well-informed writer thus expresses himself:—"Upon the whole, therefore, the aspect of affairs as regards the future of gold-mining upon Witwatersrand is by no means unsatisfactory, and there can be no little doubt entertained now as to the value and comparative permanence of the auriferous deposits upon those fields. A goldfield that is capable of returning during the first 11 months of this year, when everything was new and undeveloped, 204,487 ozs. of gold of the value of at least 715,000*l*., must necessarily deserve public attention and claim the confidence of the investing public. It will, however, be well if very great care be exercised in selecting stocks for investment, and to bear in mind the fact that those shares which are most fashionable are by no means the safest in which to invest money."

Royal: The crushing of the above company for November totalled 476 ozs. Last month it was 463 ozs. Oosthuisen: The yield of the above company's crushing for November, was 465 ozs. of retorted gold. Golden Kopje: A dividend of 5 per cent. for the month of November, has been declared. Cradock Gold Mining Company: The property of the above company, on the farm Leeuwpoort, near Boksburg, has been disposed of to a London company. Teutonia: The above company, which commenced crushing last month, put through its five-stamp mill 224 tons, which gave 203 ozs. Moss Rose extension: For the 20 days in November that the above company's battery has been running, the yield was 392 ozs. with a five-stamp mill. Langlaagte Estate: The yield of the above company for November was 950 ozs. of retorted gold. And this with only 10 stamps. With the 60-stamp mill, 6,000 ozs. per month is confidently expected. Grahamstown: The proposal for purchase of the above company's property has been accepted by the shareholders. The purchasers are London capitalists, and the purchase price 65,000*l*., equal to 72*s*. 6*d*. per share—hardly satisfactory to shareholders, we should think with the shares now selling at 5*l*. The 10 per cent. dividend declared at the meeting in November will be payable on and after December 30th. Knights: The proceeds of the crushing of the above company for 27 days of last month, 50 stamps only being run, was nearly 800 ozs. of retorted gold. It was exhibited yesterday during the visit of his Honour, the President, in two large lumps, one of which, the largest, the President amused the bystanders by lifting and handling with one hand with the greatest ease, a feat which many present in vain attempted to accomplish. Only 50 stamps have been running, as new mortar boxes, tapits and cams are being put in to the 50 stamps.

New Issue.—We understand that the prospectus of the Edwin Bray Gold Mining Company will be issued next week. The property is situated in the De Kaap Goldfields, and lies between the celebrated Sheba and Oriental properties. The shares, it is said, are already quoted at 50 per cent. to 70 per cent premium.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market, although easier, has been better supported than last week, partly due to the export of 100,000*l.* in gold to the Cape and 100,000*l.* to Rio, calls to the amount of 1¾ millions falling due, and the occurrence of the Stock Exchange settlement, all of which have contributed to check at least the decline. Discount rates for bills are quoted 2¾ per cent., competition from the Continent having ceased, and some bills having even been sent over here for discount from Paris because the quotation is lower than it is there. Money for short loans has been plentiful, but the demand improved the rate 2¾, 3 per cent., although it has since relapsed to 2, 2½ per cent. At the Stock Exchange loans for the account ending the 30th inst., were granted at 3¾, 4 per cent. in the morning, but money was afterwards offering at 3½, ¾ per cent. The discount houses have made no further change in their rates for deposits, although there is no profit on the employment of the money, but it is generally expected that the market must soon improve, if only in consequence of the revenue payments. The exchanges, owing to the low value of money, have continued unfavourable. The Bank return shows further improvement. With a reflux of coin and notes from circulation, the reserve has increased 682,000*l.*, to 13,173,000*l.*, or 41¾ per cent. of the liabilities, against 39 per cent. last week. Treasury repayments have reduced the public deposits by over a million, and the Government Securities by rather under a million. The private securities have run off, while the private deposits have increased. No striking change occurred in the money market to-day, business all round being quiet, but so easy were the rates that short loans could be obtained at 1½ to 2 per cent.; and three months' bills were rarely objected to when proffered for discount at 2⅝. No further action was taken by the discount houses in respect to deposits, and the gold question was confined to rumour, as nothing transpired at the Bank.

Bar silver has further advanced to 42 11/16d. per oz., and Rupee Paper remained strong at recent levels. The demand for transfers on India was unabated, and the Council has specially allotted 10,000*l.* on Calcutta at 1s. 4 23/32d.

During the past week the attention of dealers and others at the Stock Exchange has been engrossed with the arrangement of one of the heaviest accounts on record, and it was found impossible to complete the settlement in the "orthodox" three days. The rates for "carrying over" speculative bargains were decidedly easier, more especially on Monday afternoon than on the previous occasion, and ranged from 3 to 5 per cent. on Foreign Stocks, and from 4 to 5 per cent. on American Railway Securities. The elections for the County Council have been in full force, otherwise political affairs at home and abroad are practically in a state of abeyance. Good news and also bad news have been received from the Dark Continent, the former being represented by the receipt of a letter from Stanley giving full accounts of his advance, &c., and the latter by the report of the massacre of some missionaries and the imminent danger of other stations. The Funds at first were very good on purchases by the Government broker, and the revenue returns show that three million must be invested on account of the Sinking Fund before the end of the financial year, the upward movement, however, was checked by the public supplying more stock that the Government broker took up. Foreign Government Bonds were good, with special advances in Greek, Spanish, and Turkish Bonds. The announcement of the Brighton Railway Company's dividend at the rate of 5¼ as against 5 per cent. on the Deferred was regarded as satisfactory, but that of the South-Eastern Company was very unsatisfactory, ½ per cent. more having been anticipated, the distribution on the Ordinary being at the rate of 6¼ as against 7, and 3¼ as against 4 per cent. on the Deferred issue. The Great Eastern Company's dividend was announced at the same rate as last year. The only conspicuous changes were a rise of over 2¼ on Brighton "A," and a fall of over ½ on South Eastern. Not much business was reported in the American Railway Market, but an average advance of ½ to 1 is recorded nearly throughout the list. Grand Trunk Stocks were good, and Mexican were ½ to 1 per cent. better. Banks were enquired for at enhanced values, but the chief favourites in the Miscellaneous market were Anglo-American Cable Stocks, in which a splendid advance has been recorded.

Business at the Stock Exchange to-day has not been particularly brisk, but the upward tendency has made further progress. The Funds, together with Indian Government and Colonial Subscribed Stocks, have remained almost stationary. Foreign Government Bonds were fairly steady, but apart from a rise of 1 per cent. in Urugnay Bonds, and ½ in one or two of the South American Loans, the changes do not exceed ¼ per cent., and were almost equally divided. English Railway Securities opened dull, and after showing some irregularity, finally closed good. The declarations of the Sheffield Company's dividend at the rate of 3½, as against 2½ per cent. last year, had a strengthening influence upon the market. The Ordinary Stock left off 2, and the Deferred 1 per cent. better. The Southern Lines also came in for a share of attention, and with the majority of the rest, closed ¼ to ½ higher. American Railway Securities suffered through the absence of business, but the tone was firm without important alterations, apart from a relapse of 1½ in Virginia Bonds, on reports of an adverse decision as to the coupons being receivable for taxes. Grand Trunk Stocks were a shade firmer, but the Mexican issues closed rather easier. Miscellaneous Securities were hardly so well supported and Cable Stocks, Nitrate issues, Lambardo-Venetian, and Varna Railway Shares closed with a small reduction. The Anglo-American Telegraph Company announce a distribution at the rate of 3 per cent. upon the Preferred, and 1½ per cent. on the Ordinary making 1⅝ and 3¼ per cent. on the Ordinary and Preferred Stocks respectively for the past year. Bell's Asbestos Company announce a dividend of 15*s.* per share, and the quotation has risen ⅜ in consequence.

Annexed are the final quotations to-day:—Consols Account, 100 100¼; Egyptian Preference, 102⅜, 102⅞; Egyptian Unified, 83 15/16, 84 1/16; French Four-and-a-Half per Cents., 103¼, 103¾; Hungarian Rentes, 84⅛, 84⅜; Italian, 94 13/16, 95 1/16; Mexican Scrip, 91½, 91¾; Peru Five per Cents., 14¾, 14⅞; Peru Six per Cents., 16¾, 16⅞; Russian, 1873, 102 3/16, 102 5/16; Portuguese, 64 1/16, 64 3/16; Spanish, 73 7/16, 73 9/16; Turkish, 1871, 84½, 85; Turkish Defeuce, 96¼, 97¼; Caledonian, 117¾, 118; Great Eastern, 69, 69¼; Great Western, 151¼, 152; Brighton "A", 134⅞, 135⅛; North-Western, 174¾, 175; Metropolitan, 74¾, 75¼; Metropolitan District, 33½, 33¾; Midland, 137⅞, 138⅛; North British, 58, 58¼; North-Eastern, 163⅝, 163⅞; South-Eastern "A," 108⅛, 108⅜; Hull and Barnsley, 33⅜, 33⅝; Grand Trunk, 10 13/16, 10 15/16; Ditto First Preference, 67¾, 68; Ditto Second, 47½, 47¾; Ditto Third, 26¾, 27; Canadian Pacific, 53⅜, 53⅝; Denver, 17⅛, 17⅜; Erie, 29½, 29⅝; Milwaukee, 66½, 66¾; Lake Shore, 104⅞, 105⅛; Louisville, 58¾, 59; Atlantic First, 35¼, 35½; Ontario, 15 9/16, 15 11/16; Ohio, 22¼, 22¾; Norfolk and Western, 53⅛, 53⅜; Reading, 24¾, 25; Reading Four per Cent. Bonds, 92, 92½; Union Pacific, 65⅜, 65⅝; Wabash Preference, 26, 26¼; Ottoman Bank, 11 5/16, 11 7/16; Anglo-Telegraph, 51½, 52; United Telephone, 14⅜, 14½; Hudson's Bay, 19, 19¼; Suez Canal, 88, 88½; Guinness, 31⅛, 31⅜; Allsopp's 8⅛, 8⅜; Bryant and May, 13⅜, 13⅝; Nitrate Railways, 26¾, 27xd; Bell's Asbestos, 18½, 18¾.

MORE ABOUT THE LA PLATA SLAG DUMP.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Enclosed I have the pleasure to hand you extracts from the reports of Mr. Philip Argall, manager to the New La Plata Mining and Smelting Company, Limited, and Mr. J. H. Sutter, the manager to this company, at Leadville, Colorado, and which I think will be of interest to some of your readers.—I am, &c.,

G. E. WREN, Secretary.

The Colorado Gold, Silver and Lead Recovery Syndicate, Limited.
17th January, 1889.

Mr. Philip Argall, manager of the New La Plata Mining and Smelting Company, Limited, writes that "on the 22nd December, 1888, he put on 10 men to work on the dump, and that the first day's work resulted in a profit, and considering the extra labour to get at the slag, it was a very good return for the first day's work. Mr. Sutter has this moment arrived. He tells me he has been very ill with typhoid."

Under date of December 29th the manager to the Colorado Gold, Silver, and Lead Recovery Syndicate, Limited, reports:—"I left London November 18th, arrived New York November 29th. I had a severe attack of typhoid fever, as you know from the cable I sent you on the 8th inst. I am not entirely over it yet, and come here much sooner than I would have done had it not been for the business interest of the company, which was urging me on. Mr. Argall had 10 men employed on the slag who were working on the second shifts work. They are now at work, and we are nearly paying expenses from the matte and bullion we got out of the slag by having only picks, shovels, hammers and wheelbarrows to handle the material with. I have been here only a few days, but from observations and actual working the slag, I am sure that the syndicate will realise $100 per day profit—*low estimate*—after the necessary machinery is erected to concentrate 240 tons per 24 hours. I had an offer for *50 per cent.* on the slag dump from parties here, if the syndicate will put up a plant not to exceed $5,000. This speaks for itself, as they are practical men who make this proposition.

"As near as I can make it out there are *at least 500,000 tons* in the dump, which will average $4 per ton after the matte has been taken out, and *this matte will go from $45 to $75 per ton.* The slag turned over should be concentrated, which will not cost more than 60c. per ton to get the slag to the concentrators, and put the same through the machinery. I wish it was *spring*, and *no frost* in the ground! as this would help us out very much. I will give full details as soon as I have returns from the slag sent to the concentrators, and will then let you know what is best to do.

"I am very sorry to see that your directors and shareholders should have seen anything that may have been published as to the results from the slag dump, as none of the parties who have written to the Colorado Journals have given it an impartial test, and this Mr. Argall knows!"

THE QUEENSLAND GOLDFIELDS.—BRISBANE, 14TH JANUARY.—The yield of gold from the Colony of Queensland for the year 1888 amounted to 426,000 ozs., being an increase of 29,000 ozs. over the yield for 1887.—*Reuter.*

SALE OF COPPER MINES.—A despatch has been received at the Foreign Office from Mr. Kennedy, her Majesty's Chargé d'Affaires at Rome, reporting that on January 22nd, 1889, at 11 a.m., in the office of the "Intendenza di Fianza of Belluno," the copper mines of Agordo (Valle Imperina) will be sold by public auction. The sale is to include the lands, woods, movables, ore, and supplies specified in the official notice of the sale. The price at which bidding is to commence is fixed at It. Lire 430,184.51, viz.: It. Lire 410,627.20 for the mines, building, and land, and It. Lire 19,557.31 for the movables and other sundry articles, not including the value of the produce and saleable material and implements, which will have to be paid for separately. The whole will be allotted even if there be only one bidder. A copy of the said notice, giving a description of the mines, buildings, &c., and the conditions of the sale, as well as a copy of the articles of agreement, have been deposited at her Majesty's Consulate at Rome.

The directors of the Crown Reef Gold Mining Company have declared a dividend for the past three months of 6 per cent., payable on the 31st instant. It is intimated that the directors of the London Knysna Gold Prospecting Association, Limited, have declared a stock dividend equal to 60 per cent., in addition to the cash dividend of 15 per cent. declared on 13th December last.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

TO READERS AND CORRESPONDENTS.

England.—Before answering you in these columns we must have correct name and address (not for publication); or on receipt of stamped envelope we will write to you per return.

Standard (Liverpool).—The shares are far too high. The company has not even possession of the property, and yet the shares have been selling at 200 per cent. premium. Sell.

A. J. Pearce (Bath).—An immediate purchase will no doubt prove profitable.

G. Byron.—Send further particulars. We do not understand what you want us to do.

Contract (J. P.)—You will certainly have to stand to your bargains. Prices were in order.

P. Wills.—The market has improved, and it would be impossible to purchase at the prices you offer.

R. S. Grain (Exeter).—Have nothing to do with the firm mentioned.

C. A. M.—Write to the effect, that unless you receive your shares at once, proceedings will be taken.

The Mining World.

LONDON: SATURDAY, 19TH JANUARY, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE POSITION OF COPPER.

FOR the last two or three weeks, rumours, more or less ill-founded, have been industriously circulated with regard to the suggested reconstruction of the Société des Metaux, and the formation of a metal bank in this country, to take over some of the obligations of the French combination. The attacks which have been made upon those who initiated the movement, and who have so far carried it through successfully, have been renewed with increased vigour, and the critics, who have for more than 15 months past foretold the immediate downfall of what they were pleased to term the "syndicate," are once more in the prophetic mood. They are confident that the Société des Metaux is tottering, and they do not disguise the fact that its collapse would give them unbounded pleasure. It would, at any rate, enable them to say:—We told you how it would end all along, and that would be a sufficient counterbalance to many an unfulfilled prophecy. The fact of the matter we believe to be this, that the Société, finding that the arrangements they have made with the copper-producing companies require a larger amount of capital than they at present command, have intimated their willingness to hand over a portion of their contracts to a metal bank, and we understand that Messrs. Matheson will shortly issue the prospectus of such an undertaking, with a capital of 3,000,000*l.*, to take over a portion of the stock of copper, now held by the Société des Metaux, and to conduct the future operations with some of the producers. It is not to be denied that the stocks of copper have grown considerably, owing to a variety of causes, not the least powerful being the inactivity of American trade last year, and the consequent large shipments of copper to Europe; but it is well known that a large proportion of the copper held by the Société cost it little, if anything, over 40*l.* a ton, and that even upon the metal, which stands it in at the highest figure of about 70*l.* a ton, there is a fair margin between the purchasing and the selling price. The Messrs. Matheson have taken a prominent part in the rehabilitation of copper, and few doubt their ability to float such a bank, or trust, as we have described, if they see it to be in the interest of the industry to do so. Indeed, those who know the firm best are most confident that they would not introduce any enterprise which did not on its merits appeal to the public for support.

Our readers are aware that from the time when the large producing companies were asked to join with the Société des Metaux in putting copper upon a fair basis, we have stood almost alone in supporting the combination, and we have done so from an earnest desire to benefit the mining industry, in which our readers are interested. What are the facts? In brief, they are these. When the French operators took the metal in hand it had for a considerable period fluctuated at about 40*l.* per ton, sometimes dropping to below 39*l.*, at others, rising to about 41*l.*, only to fall back again to under 40*l.* The result of such a course of prices was that the copper mines of Cornwall and Devonshire, once—and that not many years ago—among the staple industries of the kingdom, became wholly unprofitable, and, in consequence, they were abandoned one by one, so that even with the incentive of higher prices for the last 15 months there has been little resuscitation of copper mines, and at the present time not a single mine in the United Kingdom is paying a dividend out of copper. Indeed, if it were not for the fact that Cornwall is so rich in tin, the mining industry there would be a thing of the past, and thousands of intelligent, hard working and well-conducted miners would have been cast adrift to find employment in other lands, where they had youth and vigour on their side, or to augment the already enormous total of the pauper population, where the period of the "sere and yellow leaf" had been reached.

Apart from this, the depression in the copper market had meant the absolute unproductiveness of many millions of British capital invested in foreign copper mining companies, for it was only in such fortunately circumstanced companies as Cape Copper and Rio Tinto, and, to a lesser degree, Mason and Barry, that operations could be conducted at a profit at all, and it was not at all certain that even the poor dividends paid by Rio Tinto and Mason and Barry for 1886, and the greater part of 1887, would have been maintained, if there had not been a rise beyond the prices quoted in the autumn of the latter year. As it is, the present quotation, though considerably higher than the level of the last few years, is greatly below the average if the record be taken back a little further. Nor do we believe that any industry in the kingdom is suffering so much from the advance in the price of copper as the investors in the shares of companies producing that metal suffered while the low range of prices existed.

And yet those who have brought about the improvement in the

price of copper are continually denounced, as if the movement, which they initiated, was both illegal and immoral. To us it seems that the Société des Metaux and its allies are worthy of support rather than of censure, and in the interest of this great industry, which went through a period of adversity that would have proved fatal to many an enterprise, we would urge all who have a stake in any of the copper-producing undertakings, to encourage and assist those who are maintaining the stability of the market for that metal against very heavy odds.

ANOTHER VIEW OF THE COPPER SYNDICATE.

There seems to be no sign of the copper syndicate in any way relaxing its hold on the copper market. Indeed, they are very much in the position of a man who is holding on to a mad bull by its tail and cannot leave go. According to the best authenticated accounts, they have contracted to receive about 340,000 tons of copper for delivery over 1889 and 1890, at an average price of 65*l*. Looking at the question from the most unfavourable point for the syndicate, they may fail to sell, and will have to stock, say, 140,000 tons. But on the remaining 200,000 they will, if they continue to support the market, realise at present prices about 12*l*. per ton profit, or, say, 2,400,000*l*. On the other hand, if they were to collapse at this stage, they would probably make a loss of 5,000,000*l*. on these 200,000 tons. Irrespective, therefore, of any other considerations, there is a difference to them of nearly 7½ millions as to whether they let the bull go now, or hold on until the end of 1890. It is simply a question of financial strength, and of this the syndicate appears to have no lack. They never can be in a worse position than they are now. They probably hold over 100,000 tons stock to-day, and have 340,000 tons still to be delivered to them, or, say, a total of 440,000 tons. It is manifestly to their advantage to keep up the market, which they can most easily do, and so get rid of 200,000 tons of this quantity at a profit, leaving then 240,000 tons at the end of 1890. No one estimates that the stock two years hence will exceed this quantity. In the meantime they may succeed in making some arrangements with the copper mines for the reduction of the production, or consumption may increase, and so ease their position. At any rate, it is clearly more easy to deal with 240,000 tons than 440,000 tons.

However, at the end of 1890 it certainly looks as though the smash must come. But it should be borne in mind that "it is the unexpected which always happens." No one can very safely say what will be the position of the copper market two years hence. The syndicate are perhaps the best judges, and they do not take the public into their confidence. It seems, however, only reasonable to suppose that if at the end of 1890 the syndicate were to say to the mines: "We now hold a year's consumption of copper in our hands. We have no longer any copper to take from you. *Sauve qui peut.* We shall just sell out at the market price from day to day. The consequence will be that copper may go to even below 40*l*. We shall lose 25*l*. per ton on our stocks, or, say, 6,000,000*l*., less the profits made during our three years' campaign, which go a long way to make up this loss on our stocks. But it will be ruin to your copper companies. You will lose not only 6,000,000*l*., but 6,000,000*l*. every year until the copper market rights itself. Would it not be better for you to reduce your output to 200,000 tons, and thus enable a price of, say, 60*l*. to be maintained? It is better to make a profit of 20*l*. per ton on 200,000 tons than to produce 250,000 or 300,000 at a loss."

The instinct of self-preservation would force the copper companies to come to some arrangement, and this doubtless will be the upshot of the copper ring. In the meantime the copper companies have no such inducement. All they have to do is to turn out as much copper as they can produce and deliver it to the syndicate, who gaily pay them about double its cost. Whether this is not following the short-sighted policy of "killing the goose with the golden eggs" is open to discussion. The practical difficulty to-day is to make the copper companies see it in this light. At the end of 1890 argument will be superfluous. Each company will then have the alternative of coming into a combination, such as has already been sketched out in the MINING WORLD, or of being crushed out of existence. The inevitable law of the survival of the fittest will then rule.

In the meantime it is an undoubted fact that the action of the syndicate has tremendously strengthened the position of all the copper mines. But for the syndicate copper could hardly have been over 50*l*., whereas during the three years 1888, 1889, 1890, the mines will have sold over 700,000 tons, at an average of 70*l*. Whether the public or the syndicate will ultimately pay for this difference in value matters not to the mines, who thus come in for a windfall of over 14 millions sterling, over and above what they could have hoped to get for their copper, or of 21 millions, if the prices of the years 1888, 1889, 1890, ar compared with the three preceding years.

Therefore, at the end of 1890 we shall have, on the one hand, the strongest syndicate that has ever been formed, and, on the other hand, all the copper mines of the world in comparatively few hands, backed up with enormous accumulated profits. Both parties will be equally interested in coming to some arrangement, and the resources of civilisation must be exhausted if they fail to hold their own. Whether such a state of affairs is for the general interest of the trade of the world is beside the question. Investors in copper companies will certainly decline to look at the matter from an academical and philanthropic point of view.

"TO WHAT BASE USES MAY WE NOT COME, HORATIO."

THE denomination of mining shares bids fair very shortly to have as its par price the coin that has been made so popular by the penny omnibuses. St. John del Rey in its palmy days had as its par price 100*l*., and called its shares stock. 25*l*. was not at all uncommon for a mining share, and at the time of the original Emma Company the issue was in shares of 20*l*. each. Later on we saw a fall to 10*l*., and then there was a rapid descent to 5*l*., and thus matters remained for some little time. With the advent of Indian mines, shares of the denomination of 1*l*. became the fashion, and so popular did they become that few companies have since been started with a higher denomination. Indeed, the contagion of cheap shares has spread to such a degree that big companies, like Cape Copper, have come down from their high altitude to 2*l*., and other companies have descended even lower, including St. John del Rey, which is now constituted in 1*l*. shares. Some re-constructed companies have made a still further descent, and own 5s., or even 2s. 6d., as their par value.

The "deeper depth," on this side of the water at least, was reached this week by the Sonora Company, which is now in the throes of re-construction, and which calls upon its shareholders for no more than 1s. 6d. per share. The first call will be 2d., and Mr. Doyle assures anxious shareholders that the prospect of their being called upon to pay more than 1½d. of that sum is remote, because more will not be spent. A 6d. call was once thought to be the lowest which could decently be made, but Denver has set the example of the 3d. piece—a coin too much to the fore when the clergy want a liberal response to their touching appeals. Perhaps the cheapest shares ever offered were those of the Jonkin Silver Mining Company, whose affairs have recently figured in the Sydney law-courts. 10,000 shares were bought at ½d., and 3,108 at ¼d. each. The purchase was made from a stockbroker during a lunch—oh those stockbrokers! The purchaser bought his holding for about 25*l*., and discovered shortly after he had overcome the effects of his lunch, that he had landed himself in a liability, in the shape of calls, of 6,000*l*. We have not come to farthing shares on this side, though how far we are from it this deponent knoweth not.

THE MYSORE MEETING.

THE key-note of the Mysore meeting was struck by Sir Charles Tennant when he said "the report of Capt. Plummer justifies all that has ever been said about the future of the mine," and when he described it as "one of the queen gold mines of the world." Capt. Plummer writes now in a more confident tone than he has hitherto felt justified in adopting, and the shareholders have not been slow to mark the change. His telegram, read at the meeting, was the most encouraging that has ever yet emanated from him. Two points at least elicited the applause of the shareholders, namely, the 296 level north, where there is a lode 4 ft. wide, assaying 4 ozs. 18 dwts. to the ton, and the 236 north, where the lode is 3 ft. wide, of the same value of ore. Other points are good, and all of them are yielding gold. The workings are being carried on at three distinct points in the shaft, to which the directors and the managers have given baptismal names. At the shaft named after Capt. McTaggart, the deputy chairman, and Mr. Schaw, his late colleague, the ground is promising. At Schaw's shaft there has been rich quartz, but so far it has not been of a lasting character, but the depth attained so far is shallow, and the hope is entertained that better results will be found lower down. At McTaggart's shaft, discoveries are daily expected, and they will likely be of an important character. Tennant's shaft is gradually improving, and along with the shafts already named are in a small degree contributing to the monthly crushings.

It is at Taylor's shaft that the main workings are being carried on, where, to use the language of Mr. Taylor, "the developments of quartz have been remarkable." At the meeting last May, Mr. Taylor, like a mining Elisha, assumed the prophetic mantle and took up his parable. It is not often he does so, but in this case it may be said that wisdom is justified of her children. Mr. Taylor was pretty confident of what he was predicting, for, as he remarked, almost from the very moment he made the statement, the 296-ft. level north commenced to pass through rich quartz, and instead of a small lode yielding a few dwts., there is a wide lode which at times has been worth nearly 6 ozs. to the ton, and at the present time is worth almost 5 ozs. The 400-ft. level, the deepest point in the mine, below is also in rich quartz, with a lode 4 ft. wide, and the end worth 4 ozs. to the ton. There seem to be two parallel veins within, from 20 to 40 ft. of each other. Important works to utilise these known resources are in progress, but none of them excel in interest the sinking of the new shaft in ground, the valuable character of which is positively known. The machinery is being augmented, and in three months it is expected that a larger number of stamps will be working, and that the rate of progress will be such as would have rejoiced the heart of poor William Abbott had he been amongst us to have known it.

The necessity for restricting the output—as to which Mr. Taylor remarked that many heads shook and, he might have added, many tongues wagged—exists no more, and the output for this and succeeding

months may confideutly be relied upon to inerease. When the new shaft is dowu to the gold-bearing quartz the returns will be still further augmented, as indeed, they must also be when the 28 rock-drills—16 are now working—are fully employed. From the point when Mr. Taylor resumed his seat, the meeting resolved itself iuto one of self-gratulation. Compliments were freely exchanged all round, and votes of thanks were passed, whieh were unstinted alike in their unanimity and eordiality. The one solitary drawbaek to the general exhilaration was the untimely death of the shareholders' good friend, and the Messrs. Taylors' faithful servant, Mr. W. G. Williams. The verbal expressions of regret from the direetorial side of the table found an echo from that on whieh the shareholders sat; but the tangible outcome of that sympathy was so small that it rejoices us to know it is to be supplemented by the private donations of the deeeased gentleman's friends.

MOUNT SHAMROCK LITERATURE.

MOUNT SHAMROCK LITERATURE is simply overwhelming. We have before us no fewer than four eireulars, three of them dated within the last few days, issued by the various eontestants, with eopious appendiees in eaeh case. Life is too short for the perusal of doeuments like these. In conneetion with the reeent meetiug the whole matter was thrashed out, and the one faet brought clearly into prominenee by the numerous speeehes that were delivered, notably by the address of Mr. Charles Clark, one of the directors, was that the interests of the shareholders are totally distinet and different from those of Mr. Stanlake Lee. The best interests of the eompany are consulted by shareholders leaving undone those things which Mr. Lee tells them to do, and by doing those things he tells them they should leave undone. This divergenee of interest is a point that the shareholders should keep distinetly in view, no matter how often Mr. Lee may arm himself with a fresh quill, or how lavish his orders may be to his printers. Mr. Lee has a battle to fight but that battle is peculiarly his own. It only eoneerns shareholders to this extent that the attention of their direetors is diverted from the maiu businesss in hand, that of developiug the property, and that the value of the shares is depreciated in the market. If the shareholders support the directors as they are doing, and as they deserve to be supported, Mount Shamroek may survive the trouble it has had in finding the correet method of treatment for its ore—a far more serious oue than the buzzing noise with which Mr. Lee seeks to disturb their equanimity. The circulars have been sent to us obviously with a view to publication, and on a rough calculatiou we judge that they should oeeupy 12 columns of our spaee if we printed them in extenso. We have no intention of doing anything of the kind. We frankly own that we cannot spare the spaee, and even if we could our readers would not thank us for so oecupying it.

THE YURUARI CO., LIMITED.

DURING the past week a very large business has again been done in the shares of the Yuruari Company. We have for several months past ealled attention to the opportunity presented of taking up these shares at the nominal value at whieh they have stood. With regard to the iutrinsic merits of the property we do not think that anyone conversant with the faets will fail to agree with us; and the only question about whieh we have been exereised is how, while this eompany is doing better than its predeeessors, and, we may add, better than most of its neighbours. the shares should be standing at a liquidation priee, when the shares of the old eompany have ranged from 7s. 6d. to 15s? The only reason we ean assign is the circumstauce that the direetors eonsidered it desirable to make the capital of the company the exaet amount to be paid by the shareholders of the former eompany who eame into the new arrangement. The course they then pursued was, no doubt, wise, in view of the conflieting deeisions given by different judges, with refereuee to the issue of shares, the eonsideration of property, assets, and other teehnieal points upon whieh we need not enter. There is no reason, however, why a property which has produeed nearly a million sterliug of gold should stand at little more than the par value of its stoek, for this would mean that a property upon whieh several hûudred thousaud pounds have been expended, and from which sueh results have been obtained, is praetieally of no value. The mine is now earniug a profit. The seeretary has issued a notiee to the effeet that it is now earning at the rate of 40 per cent per annum profit on the paid-up eapital. It is also as aeeurately known as is possible in eonnection with any mining company that rieh veins intersect the property, and that they have yielded in the higher levels 2 ozs. to 3 ozs. per tou. As in the case of the riehest mines iu the world, these lodes with depth beeame temporarily poor, but are again showing inereased riehness, and at any momeut may beeome as valuable as in the higher levels. This being the ease, and having regard to the great eeonomies in working whieh have been effeeted by the present management, a return of one-half of the produee of the previous eompany will show a substantial profit, and we have the assurance of the managers aud mine eaptains, both past and present, that they have no doubt whatever that this eompany owns the riehest property in Venezuela.

It would seem to us, therefore, that an opportunity rarely to be met with is offered to investors to pick up Yuruari shares at a few shillings, with a reasonable probability that within a eomparatively short period those shares will be probably selling at as many pounds as they now stand at shillings. In response to inquiries, which we have made, we are informed that the direetors desire the market price to depend entirely upon the returns obtaiued from the mine. They have, therefore, refrained from interfering with the question of market value; but they feel at the same time convineed, from the reports reeeived from the manager, that the aetual returns will effeet an improvement in the priee commensurate with what they thiuk to be the value of the property. This feeling is strengthened by the present lively state of the mining market. We have before pointed out the extent of the eompany's property, and this week publish a map so that our readers may form an opinion for themselves, and in order that they uay preserve it for future referenee. Railway eommunieation is eontemplated, whieh will benefit all the Venezuelan Mines, aud partieularly Yuruari, whieh is now the most aetively worked property on this goldfield. Cheap transit will do mueh to reduce the heavy eosts of Venezuelan mining, though important steps in this direetion have already been taken. The transit eharges to and from the mines are not more than one-fourth of what they were some five years ago, and though other eosts have not been reduced in like proportion, yet substantial economies have been effeeted. These enable the board roundly to express their belief that even ½ oz. to the ton will euable them to earn fair profits for the shareholders, whilst anything beyond, upon the preseut seale of working, would make the dividends very mueh larger, as the standing eharges do not inerease in proportion.

Shareholders and the public should distiuctly understand that the amount of eapital uncalled upon Yuruari shares is 2s., and the secretary iu a reeent letter has intimated that the direetors do not eontemplate making any eall, but think it very likely that 1889 will pass without sueh an infliction—a eireumstanee somewhat unique in the history of this eoueern, and one that signifieantly marks its improved position. Should eapital be wanted the direetors might fall baek upon a debenture issue of 17,000*l*., whieh they are authorised to make. The mouey would be applied to sinking the Water Shaft 300 or 400 ft. and driving levels, so as to conneet it with Cenieero. The interest on this money would be as nothing eompared with the great advantage to be gained, and would open up to the shareholders those prospeets of big dividends which hitherto they have only seen as through a glass darkly. For these reasons the direetors are justified in poiuting to Yuruari shares as so ridiculously below their intrinsic value that the prospects of a substantial rise present themselves in a future that is neither dim nor distant.

JULIA NITRATE CO.

THE Julia Nitrate Company, Limited, was a deeided success, the eapital having been applied for four times over. Letters of allotment and regret were posted this week. Further eonsideration of the prospeetus confirms the favourable view we expressed last week, that this is a property of no ordinary promise, and that it ean hold up its head with the best of its eontemporaries. The estate is large, and can be developed with ease and with eeonomy. The direetors have only to use due diligenee and the shareholders (those included who are now buying the shares at a premium) will have no eause to regret their investment. We see no reason why the dividends of the Julia Nitrate Compauy should not be large and eontiuuous.

RED REEF GOLD MINING CO., LIMITED.

TOWARDS the elose of last year we ealled attention to the prospects of the Red Reef Gold Mining Company, Limited, whieh we did not hesitate to deseribe as exeeptionally good. The shares have this week been dealt in at about ⅜ths premium. and bid fair to rise to a considerably higher priee. Indeed, some have gone so far as to say that they will experieuce one of those remarkable advanees of whieh the South Afriean market has reeently furnished us with numerous instanees. We were struek at the time the prospeetus was issued with the exteusive eharaeter of this property, embraeing, as it does, 66½ claims, eaeh measuring 150 ft long by 400 ft. broad. The reports were emphatie that the reefs were well-defined and gold-bearing, and we attaeh considerable importance to the ample supply of water at hand, whieh is stated to be sufficient, iu the dry season of the year, to run 150 stamps. It has for its near neighbours properties whose names are now becoming familiar to us as household words, and the later faets that have eome to hand justify the belief of the directors expressed in the prospeetus that "handsome dividends will be ensured on the capital."

THE O.P.Q. (OTAGO PIONEER QUARTZ) GOLD MINING CO., LIMITED.

THIS company is formed to work 1 mile of the gold-bearing reef known as the O.P.Q. (Otago Pioneer Quartz) Reef, New Zealand. The Capital is 100,000*l*., in 100,000 shares of 1*l*. eaeh, of whieh 33,000 will be allotted as fully-paid to the vendors, and the balance of 67,000 shares are now offered for subseription. Mr. Edmund A. Pontifex, of the Cape Copper Company. is chairman, and he is supported by what promises to be a good working board. The property

includes the line of reef, and the usual mining rights, in 41 acres of freehold land ; the remainder is the subject of concessions from the New Zealand Government, upon the usual terms upon which miuing properties are held in New Zealand. The purchase embraces a fine existing water-race, which will work the battery proposed to be erected at one eud of the reef, and in addition, the right to construct another for the other end. Timber is also stated to be obtainable in ample quantities within a short distance. The great body of the reef ranges in width from wall to wall from about 8 ft. to 16 or 17 ft. Assays have been made giving, it is said, gold, averaging as high as 5½ ozs. per ton, and the estimated cost of production is 3 dwts. per ton. It is further stated by Prof. Black, M.A., D.C.S., who is considered the chief authority on mining in New Zealand, that there will be enough gold-bearing quartz and mullock to crush 900 to 1,000 tons a week for a period of 10 years, working only above the level of the adits now proposed to be driven, and as regards working at the end of that period, the large extra amount of pyrites showing in the deeper lying stone is regarded as a certain indication that the stone will become richer in gold at lower levels. The purchase price is 70,000*l*., of which 37,000*l*. will be paid to the vendors in cash.

THE PRODUCTION OF WATER GAS BY THE GASEOUS FUEL, LIGHT, AND POWER CO., LIMITED.

THE monopoly claimed by the Leeds Forge Company for the United Kingdom for the use of water-gas for certain purposes is disputed by the Gaseous Fuel, Light, and Power Company, Limited, who claim amongst the advantages of their apparatus that it requires no stoking, that it emits no smoke, no smell, and no ashes. Some remarkable facts respecting this illuminating and water gas generator are to be found in the prospectus, the full text of which we publish elsewhere, and the secretary of the company is ready to answer all questions on this subject at his offices, 35, Royal Exchange. The advantages offered to heat, light, and power consumers, as summarised in the prospectus, are undeniably very great.

THE WEST BATTERY REEF GOLD MINING CO., LIMITED.

THIS is another South African property which has had the advantage of being reported upon by Mr. Percy Tarbutt, of the well known firm of Tarbutt & Quentin, and which starts under decidedly favourable auspices, having as its directors gentlemen of influence and experience in mining matters. The capital is 120,000*l*. in shares of 1*l*. each, 40,000 of which will be allotted as fully paid to the vendor. The company has good neighbours and its property (4,500 acres on the course of the reef) appears to be in the midst of the most productive part of the Rand district. The workings, when Mr. Tarbutt visited them, were 90 feet deep and the ore was then assaying a better yield as the shaft was put down. This yield has so increased that he anticipates an average of 1¼ ozs. per ton from the battery. No delay will take place seeing that the property is equipped with some first-class Sandycroft machinery capable of treating 12,000 tons a year. In addition to the 40,000 shares before mentioned—the vendor will receive 55,000*l*. in cash and will pay preliminary and promotion expenses. The company will have 25,000*l*. available for working capital, but judging from the prospectus it is only needed for extensions seeing that the property appears in every respect to be a going concern.

ELMORE'S PATENT COPPER DEPOSITING CO., LIMITED.

This company has been formed to acquire and work the British patents for the discovery made by Messrs. F. E. and A. S. Elmore for manufacturing copper articles direct from rough copper bars, thereby doing away with the processes of melting, rolling, forging, drawing, &c. The prospectus states that "This important invention, it is believed, is destined to take the same leading position in the copper industry which Bessemer's process has done in that of iron and steel, the enormous profits of which are well-known." The process has been favourably reported on by several distinguished experts. The capital of the company is 200,000*l*., in 100,000 shares of 2*l*. each ; and the first issue is 70,000 shares, of which 46,700 are now offered for subscription, the balance being allotted to the vendors in part payment of the purchase money. The price to be paid by the company is 100,000*l*., of which 46,600*l*. is taken in shares, this being the maximum amount allowed by the rules of the Stock Exchange to entitle the company to an official quotation. The directors are gentlemen of ability and standing, and their names are calculated to inspire the public with confidence in the company. The subscription list will open on Monday, 21st January, and close for town at 4 o'clock the same day, and for the country at 12 o'clock the following day.

THE "WOLVERAND KLERKSDORP."

NOTRE DAME DES VICTOIRES (TRANSVAAL) GOLD MINING CO., LIMITED.

WITH a share capital of 250,000*l*., in as many shares of 1*l*. each, this company has been formed to acquire and develop the auriferous reefs of "Banket," or conglomerate, known as the "Wolverand Mynpacht." The property is situate at Klerksdorp, which is now the centre of the large mining area known as the Southern Extension of Witwatersrand, and consists of 102 claims, comprising an area of 6,163,271 square ft. A considerable outlay has been incurred by the owners and the vendor company (the Caisse des Mines) in opening up and prospecting the reefs, and to show their faith in the value of the property and avoid loss of time, the vendor company have ordered at their own risk the plant and machinery estimated to crush 60 tons of ore a day. From the direction and dip of the numerous reefs traversing the property, it is suggested by the consulting engineer that it might be conveniently divided into three distinct mining setts, two of which may be sold to subsidiary companies, whereby a large proportion of the capital of this company may be recouped ; whilst that portion retained would leave the company in possession of a sufficiently large area to carry on successful mining operations. The purchase price of the property has been fixed at 200,000*l*., 83,000*l*. of which will be in fully-paid shares, 30,000*l*. in cash, and the balance in cash or shares at the option of the directors, thus leaving the working capital at 50,000*l*. Exhaustive reports on the property have been made by Messrs. Jones and Butler, C.E. and M.E., and Mr. Maitland Graut, A.M.I.C.E., of Johannesburg, and these gentlemen concur in thinking the property a very valuable one. We are informed that an offer has been received from a syndicate to purchase a small number of these claims for the sum of 75,000*l*. in cash and shares of a company to be formed for the purpose. The shares of the Wolverand Klerksdorp, now being issued, were yesterday said to be dealt in at ⅜ to ⅝ premium.

ZIERVOGEL GOLD MINING CO., LIMITED.

THIS is another property which the famous Witwatersrand district has just given birth to. Its object is to acquire and work certain mines, minerals, and mining rights upon a "Mynpacht" property on the gold proclaimed farm known as Leeuwport, and 289 adjoining owners' claims, all of which property is situated about 10 miles east Johannesburg, and is surrounded by some of the principal gold mines of this locality. The vendors are bound under their contract with the company to make a good title to the property, and to satisfy the directors of the correctness of the measurements. Development work has been carried on under the superintendence of experienced miners—shafts, cuttings and tunnels to various depths having been made, which have had the effect of proving and defining the reefs. The prospectus states that an ample supply of water will be available, that labour is abundant and cheap, and that coal is obtainable on an adjoining farm half a mile distant from the property, which farm it is proposed to acquire. The capital consists of 175,000 shares of 1*l*. each, and the present is an issue of 75,000. The vendor is to receive 140,000*l*., payable 100,000*l*. in fully-paid shares, and the balance in cash or shares at the option of the directors.

SECRETARY AND OFFICES (pro tem.)

Mr. C. H. WEATHERLEY, 14, GEORGE STREET, MANSION HOUSE, E.C.

PROSPECTUS.

THIS Company has been formed to acquire and develop the auriferous reefs of "Banket" or conglomerate known as the "Wolverand Mynpacht," situate at Klerksdorp, in the Transvaal, and which Mr. Edward Jones believes are identical in character with those in the Witwatersrand formation, and to be a continuation thereof to the south-west (vide his report and letter enclosed).

Klerksdorp is now the centre of the large mining area known as the Southern Extension of Witwatersrand. The area to be acquired by the Company consists of 102 claims (6,163,271 square ft.) selected by experienced miners as the best in the Mynpacht.

The owners and the Vendor Company have incurred considerable outlay in opening up and prospecting the reefs, and to show their faith in the value of the property and avoid loss of time, the Vendor Company have ordered, at their own risk, the plant and machinery estimated to crush 60 tons of ore a day. This is now in course of completion by Messrs. Davey, Paxman and Co., of Colchester, and will be shipped next month. Crushings may be therefore expected early, and returns of gold within six to nine months from allotment.

From the direction and dip of the numerous reefs traversing the property. it is suggested by the consulting engineer that it might be conveniently divided into three distinct mining setts, two of which may be sold to subsidiary companies, whereby a large proportion of the capital of this company may be reconped; whilst that portion retained would leave the Company in possession of a sufficiently large area to carry on successful mining operations.

Exhaustive reports have been made on the property by Messrs. Jones and Butler, C.E. and M.E., and Mr. Maitland Grant, A.M.I.C.E., of Johannesburg. These are printed in full, and will be found enclosed, and attention is invited to the extracts from some of the reports, which are quoted in this prospectus, from which it will be seen that these gentlemen concur in thinking the property a very valuable one:—

Messrs. Jones and Butler conclude their report as follows:—

"In the course of our professional work we have visited a great many mines in the Witwatersrand district, and we can confidently state that this is one of the best we have so far inspected. We have, therefore, no hesitation in recommending it as a very valuable property."

Mr. Grant states in his report that "in a cutting at the west end of the second row of claims he found a mass of reefs and leaders 100 ft. wide." and concludes by these words:—"As regards gold-bearing reefs this property is the best I have yet seen in the Potschefstroom district, and second in value to only one or two of the richest properties in the Witwatersrand."

Mr. J. Holleman, the Government assayer of Potschefstroom, certifies that from eight samples taken impartially from the reefs he obtained the following results:—

		Ozs.	dwts.	grs.	
From two at the rate of		8	19	18	per ton.
From two others	„	1	4	21	„
From two others	„	2	13	15	„
And two others	„	7	8	8	„
Average of eight assays		5	1	15	„

He adds:—"The gold extracted from the samples was nearly all very coarse, free from all chemical impurities, not coated at all, and remarkably easy to amalgamate."

The well-known richness of the Witwatersrand reefs and the recent wonderful returns of gold from there justify the directors in expressing their conviction that the Wolverand property should yield satisfactory results.

The results of working and crushings on the Noitgedacht, a neighbouring property recently developed, show, by published reports, milling returns of 1½ oz. to the ton.

Mr. Jones states that excellent coal exists in the neighbourhood, and an unlimited supply can be procured at about 20s. per ton. Important companies have been recently formed to work the valuable coal deposits of the district.

The property is remarkable for the number and richness of its reefs and, as will be seen on reference to Mr. Holleman's Report, the gold is all in the free milling state, and easily extracted.

The property is held under the usual and ordinary conditions imposed by the Mining Laws of the Transvaal on Mynpachts.

The Vendor Company, is the promoter, and has fixed the purchase price of the property at 200,000*l*., payable as to 30,000*l*. in cash, as to 83,000*l*. in fully-paid shares of the Company, and as to the balance, 87,000*l*., in cash or shares, or partly in cash and partly in shares, at the option of the directors, thus leaving a working capital of 50,000*l*.

The directors have secured the valuable services of Mr. Edward Jones, C. and M.E. (late of the De Beers Mine, Kimberley), as their consulting engineer.

Mr. Jones, accompanied by a competent manager, will proceed to the mines in time to superintend the erection of the machinery and start the crushings, and at the same time direct the mining operations being carried out on the reefs. His long residence and wide experience of mining in South Africa inspire the directors with the utmost confidence in his direction of the Company's operations in that country. The local management will be conducted by able and experienced men, practically conversant with mining operations in the Transvaal, as is evidenced by their success in the "Moss Rose" and "Wemmer" Mines.

The Vendor Company will provide all the preliminary expenses of the promotion and the issue of the capital, and they have reserved to themselves the right to enter into, and state they have entered into, arrangements with third parties for this purpose, expressed in contracts dated respectively the 7th January, 1889, which do not affect the Company, and to which it is not a party. As these agreements may technically be contracts within the meaning of Section 38 of the Companies Act, 1867, applicants for shares shall be deemed to have had notice thereof respectively, and to waive any further compliance with the provisions of such section.

The following contracts have been entered into (1) dated 12th day of July, 1888, and (2) dated 13th December, 1888, and both made between Charles Scott, Reubeu Ernest Cross, John Stroyan, Robert Cornick Stroyan, Frederick Alexander English, Donald Fraser, and James Lister Bilbrough of the one part and the Caisse des Mines of the other part, and (3) dated 15th January, 1889, between the Caisse des Mines of the one part and the Company of the other part. These contracts can be inspected at the temporary offices of the Company. Prospectuses and forms of application can be obtained of the bankers, or at the temporary offices of the Company where also originals of the copies of the reports herewith, plan and gold assays can be inspected.

Applications for shares should be accompanied by a deposit of 2s. 6d. per share. In cases where no allotment is made the deposit will be returned in full, and when a less amount is allotted than applied for, the balance of the application money will be applied to the amount due on allotment.

16th January, 1889.

The South African Gold Trust and Agency Company, Limited, are prepared to receive Applications for the 80,000 Shares offered for Subscription below.

The List will open at 11 o'clock a.m., on Monday, the 21st inst., and close for Town and Country not later than 4 o'clock p.m. the same day.

SECRETARY (pro tem.) AND OFFICES.

Mr. C. S. C. WATKINS, 2, GRESHAM BUILDINGS, E.C.

PROSPECTUS.

THIS Company has been formed to acquire and work the gold mines and surface-rights situated upon and being the south-western portion of the "Mynpacht," or exclusive mining reserve upon the proclaimed Gold Estate, Luipaard's Vlei, Witwatersrand, South Africa, and immediately adjoining the property of the Battery Reef Gold Mining Company, Limited.

The property extends for a distance of about 4,500 ft. along the course of the well-known Battery and other parallel reefs.

The Company acquires the freehold (subject to the usual annual payment to the Transvaal Government) both of the surface with the water thereon and the mines.

The property has been inspected and reported upon by Mr. Percy Tarbutt, Member of the Institution of Civil Engineers, Consulting Engineer to the Gold Fields of South Africa, Limited, and the Luipaard's Vlei Estate and Gold Mining Company, Limited, who visited it in April, and again in June last, since which the mining operations have been conducted under the superintendence of Mr. C. D. Rudd, Managing Director of the Gold Fields of South Africa, Limited, and during his absence by Mr. W. A. B. Anderson, late manager of Moodie's Gold Mining and Exploration Company, Limited.

The greatest depth attained in the workings at the time of Mr. Tarbutt's visit was 90 ft., and he then estimated the average yield, down to that depth, at nearly 1 oz. to the ton. Since then the monthly reports show a decided increase in the yield per ton, and he now confidently anticipates a yield of 1¼ ozs. per ton from the battery.

Mr. C. D. Rudd states "panning results show a distinct improvement in the yield at a depth of about 50 ft. below the deepest point tried by Mr. Tarbutt, so that the estimate put down in his report" (referred to above) "might fairly be expected to be exceeded."

There is on the property, and included in the purchase, a 20-head Sandycroft battery driven by a 25 h.-p. compound engine, capable of crushing 12,000 tons a year. A large quantity of mixed ore and casing has already been put through the mill during the works of exploration and development, producing about 2,500 ozs. of gold. The cost of mining and milling is believed not to exceed £1 per ton.

12,000 tons a year, giving 1¼ ozs. of gold per ton, would yield 15,000 ozs. per annum, which, taking the value of the gold at £3 17s. 6d. per oz., would give a money value of £58,125. Deducting from this £12,000 for estimated cost of production, and £8,000 for other expenses, including reserve for worked out shafts, depreciation on machinery, &c., a net profit of £38,125 per annum would remain available for dividend.

In reference to the supplies of ore, Mr. C. D. Rudd further states that in about six months, when the exploring works now being carried out are completed, an ample supply of ore should be obtained for 30 stamps.

Numerous parallel reefs are known to exist on the property, one of which has been cut on the adjoining Battery Reef property at a depth of 100 ft., giving assays of 1 oz. per ton.

Some of the richest reefs in the district, on the Robinson and other mines, have been found in underground exploration, their outcrops not appearing at the surface. Active explorations are therefore being prosecuted by means of a vertical shaft, which will be carried to a depth of some 460 ft. before it cuts the Battery Reef, and in which further rich discoveries may be made before it reaches that depth. This shaft will in the future be used as the main working shaft of the mine.

There is a sufficient stream of water for supplying the battery during the greater portion of the year. This supply is being augmented by the water from the workings, and the present dam is being raised so as to maintain a larger supply for the dry months.

The Vendor Company has fixed the price or consideration for the property, and for the obligations imposed on the vendors by the agreements below mentioned, at the sum of £95,000 payable as to £40,000 in fully paid-up shares and £55,000 in cash, the Vendor Company providing for the preliminary and promotion expenses of the formation of the Company up to and including the first allotment of shares. This will leave £25,000 available for working capital.

The property, including the 20-stamp battery above referred to, with its dam and water course, a manager's house, buildings for workmen, assay office, general office, and Kaffir quarters, stores, ore on dump, &c., all of which are included in the above mentioned purchase price, will be taken over as from 1st proximo.

The directors and promoters rely for the accuracy of the above statements on the reports of Mr. Percy Tarbutt and Mr. C. D. Rudd.

The following contracts have been entered into: (1) Contract dated 19th January, 1889, and made between the Luipaard's Vlei Estate and Gold Mining Company, Limited (the vendors) of the one part, and the West Battery Reef Gold Mining Company, Limited, of the other part in regard to the sale. (2) Contract dated 19th January, 1889, between the Luipaard's Vlei Estate and Gold Mining Company of the one part, and the South African Gold Trust and Agency Company, Limited, of the other part in regard to the preliminary and promotion expenses. (3). Various contracts in relation to the placing of the capital.

Copies of the above contracts, together with the memorandum and articles of association, may be inspected at the offices of the solicitors to the Company.

Applications for shares should be made on the accompanying form and forwarded, together with the amount of the deposit, to the Company's bankers.

If the whole amount applied for by any applicant is not allotted, the surplus of the amount paid on deposit will be appropriated towards the sum due on allotment, and where no allotment is made the amount will be returned in full.

Prospectuses and forms of application can be obtained at the offices of the Company, or at the offices of the bankers, brokers or solicitors.

19th January, 1889.

WITWATERSRAND.

SPECIAL FEATURES.—1. A Mynpacht or Mining Right over about 289 Claims on the Farm Leeuwport (**Vide MATHER'S GOLDEN SOUTH AFRICA p. 311**) "Something like 13 reefs have been found in it, including the Yellow, Sunday, Kimberley, and Free State Reefs. There is a good supply of water on the 60-claim property, and half-an ounce will pay the shareholders. all other matters being properly attended to." 2. Crushing will commence immediately, as 10 heads of stamps are now in course of erection, and a further 10 stamps are now arriving at the Mine.

The Subscription List will be opened on **MONDAY**, the 21st JANUARY, and be closed at Four o'clock on the same day.

ZIERVOGEL GOLD MINING COMPANY, LIMITED.

WITWATERSRAND, TRANSVAAL, SOUTH AFRICA.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1886.

CAPITAL, £175,000, IN 175,000 Shares of £1 Each,

Of which 75,000 Shares are now offered for Subscription. 20,000 have already been applied for, and will be allotted in full. Payable—2s. 6d. on Application; 7s. 6d. on Allotment; and the Balance in calls not exceeding 5s. each, of which one month's notice will be given.

WILLIAM THOMPSON, LEADENHALL BUILDINGS, LEADENHALL STREET, E.C.

PROSPECTUS.

THIS Company has been formed to acquire and work certain mines, minerals and mining rights upon a "Mynpacht" property on the gold proclaimed farm known as Leeuwport, in the Boksburg division of the now well-known district of Witwatersrand, in the South African Republic, and certain adjoining owners' claims, all of which property is situated about 10 miles east of Johannesburg, and is surrounded by some of the principal gold mines of this locality.

The Company acquires the mining rights on about 289 claims upon the northern portion of the Mynpacht before-mentioned, and 43 owners' and other claims adjoining, equal to about 332 claims, each 150 ft. by 400 ft., covering 450 acres, or thereabouts, adjoining the township of Boksburg.

The vendors are bound under their contract with the Company to make a good title to the property, and to satisfy the directors of the correctness of the measurements.

The Mynpacht property is held under the mining right lease from the Government of the South African Republic for a term of 10 years from the 5th February, 1887, renewable, subject to the law of the South African Republic, for further terms up to 99 years in all, at the annual rent of £112 10s., liable to be commuted at the option of the Government to 2½ per cent. of the value of the find; the adjoining 43 owners' and other claims are held under the owner's license of £6 per claim per annum. The usual license of £1 per claim per month is not payable in respect to any part of the property to be acquired by the Company.

The property has been reported upon by Mr. J. W. Harrison, M.E., and Mr. W. H. Greatbead, A.M.I.C.E., London, Sworn Government Land Surveyor of Cape Colony and the Transvaal, has surveyed the property and certifies to the accompanying plan.

The Mynpacht has been opened up, and the ground has since been worked and developed under the superintendence of experienced miners; shafts, cuttings and tunnels to various depths have been made, proving and defining the reefs. The following well-known reefs appear by Mr. Harrison's report to have been found upon the property, viz.:—The Yellow, Kimberley, Free State, Sunday, Red and Government, and other rich reefs have also been proved, to which names have not yet been given.

The vendors guarantee that 500 tons of ore have been raised and stacked ready for milling, the proceeds of which will belong to the Company.

The plans submitted, and Mr. Harrison's report, show a stream running through the property for about 2 miles, which affords an ample supply of water for the purposes of the Company. One large dam has been strongly constructed, and another is to be immediately constructed. This will contain sufficient water to supply 100 stamps. The facilities for working are increased by the fact that the battery sites are adjacent to the water and mines.

A considerable quantity of ore certified by the Government Claim Inspector of the district, Mr. W. C. Faure, to have been taken from the yellow reef, on this property, was sealed by him, and sent direct to Mr. D. C. Griffith, assayer to the Bank of England, and milled, and his certificate shows that the value of the ore was about £10 10s. per ton.

The following table of the result of assays of ore taken from this property, made by Messrs. Johnson, Matthey and Co. and D. C. Griffith, is taken from certificates of these gentlemen:—

Assays made by	Yellow Reef.	Kimberley Reef.	Sunday Reef.	Red Reef.	Government Reef.	Reef No. 1 No Name.	Reef No. 2. No Name.	
	oz. dwt. grs.	oz. dwt. grs.	oz. dwt. grs.	oz. dwt. grs.	oz. dwt. grs.	oz. dwt. grs.	oz. dwt. grs.	
Johnson, Matthey and Co., Assayers to Bank of England, and H.M. Mint.	13 8 0	2 2 0	4 16 0	13 8 0	2 4 0	26 12 0	3 4 0	Per ton of 2,000 lbs.
D. C. Griffith, Assayer to the Bank of England.	13 2 23	1 19 4	4 19 15	12 18 1	2 1 11	24 18 23	2 17 1	Per ton of 2,000 lbs.

In addition to the above, Mr. Harrison reports that assays have been made of ore taken from the Yellow Reef by Mr. Alfred Adair (Fellow of the Institute of Chemistry), Dr. Hahn, Ph.D., M.A. (Professor of Chemistry), and by Mr. W. E. Dowson, Analyst and Assayer to the Transvaal Government, and Mining Engineer, from ores taken at various depths.

The Company will take over at cost-price, a 20-head stamp battery, which the vendors are now erecting, with engines and other necessary machinery.

Labour is abundant and cheap. The vendors estimate the cost of mining and milling at not more than 15s. per ton.

Coal is obtainable on the adjoining farm about one-half mile distant from the property to be acquired.

Judging from the report of Mr. Griffith on the ore valued by him, and the assays above referred to, it may be reasonably assumed that the ore will yield an average of 3 ozs. to the ton; but on the basis of only 1 oz. to the ton, the directors calculate the profits likely to accrue to the Company as follows:—

Stamps.		Tons.		Working Days.		Tons.
60	×	2	×	300	=	36,000

and taking the gold at £3 15s. per oz., will give an annual return of £135,000, less mining and milling at maximum cost of 15s. per ton, will show a profit of £108,000 per annum, equivalent to upwards of 60 per cent. on the entire capital of the company.

The price to be paid for the property has been fixed by the vendors at £140,000, payable as to £100,000 in fully paid Shares, and the balance in shares or cash, at the option of the directors, the remaining £35,000 being considered ample for the purchase of stamps, additional engines, erection of battery houses, workman's cottages, and for working capital, immediately upon the erection of the machinery, steady returns from the mines may be looked for.

The Vendors, who are the promoters, pay all expenses up to allotment, and reserve their right to enter into contracts in reference thereto, and to the issue and placing of the capital. All applicants shall be deemed to have notice of any contracts that may be so entered into, and to waive any further description thereof.

The only contract entered into is made the 17th day of January, 1889, between Messrs. Alfred V. Solomon and Osmond Furniss, the Vendors, of the one part, and William Thompson, Trustee for the Company, of the other part.

The report of Mr. Harrison, certificates of the assayers, documents of title, maps, and plans of the property can be seen at the offices of the solicitors of the Company. This report and the certificates, documents, maps, and plans on which the above description and facts are based, were supplied to and are furnished by the vendors, who vouch for their accuracy, and the accuracy of this prospectus.

Applications for shares should be made on the form accompanying the prospectus and forwarded to the bankers of the Company.

If no allotment is made the amount received on application will be returned in full.

Prospectuses and forms of application can be obtained of the secretary, at the offices of the Company, or of the bankers, brokers and solicitor.

Appended is a list of the London quotations of shares in various gold companies in this district on the 14th January, 1889:—

Aurora	£1 shares	3¾		Goldfields of South Africa	£1 shares.	3¾

PROSPECTUS.

This Company has been formed to acquire and work the British Patents for the extremely valuable discovery made by Messrs. F. E. Elmore and A. S. Elmore, for manufacturing copper articles direct from rough copper bars which does away with the processes of melting, rolling, forging, drawing, &c., and the present costly and laborious methods of manufacturing copper articles, such as tubes, vats, cylinders, pans, printing rollers, wire for electric purposes, and a vast number of other articles too numerous to mention.

By this process copper is electrically deposited from the rough bars upon a revolving mandrel or mould upon the face of which a burnisher is caused to move automatically for the purpose of condensing the copper particles as they are deposited, thus not only rendering the material dense, silky, fibrous, and cohesive, possessing strength, ductility, and uniformity at present unobtainable, but at the same time producing articles at a low cost hitherto unknown, the article being produced automatically during the process of refining the copper.

This important invention, it is believed, is destined to take the same leading position in the copper industry which Bessemer's process has done in that of iron and steel, the enormous profits of which are well-known.

Messrs. Elmore have only arrived at their present perfected invention after years of application, the discovery of burnishing during the deposition of the copper having crowned the process with success.

The reports of the distinguished professional men and leading technical experts on Messrs. Elmore's invention are too long to set out, but the annexed extracts show that they have given unqualified favourable opinions, and have recognised the process as entirely novel and practical, and calculated to largely supersede the present method of working copper. They also make clear that for many years no discovery of equal metallurgical importance has been made. The advantages of the process, as stated by them, may be summed up as follows :—

1. That in the making of tubes and similar articles by this process, all drawing down and brazing is entirely done away with.

2. That there is practically no limit to the diameter of seamless pipes and other articles that can be produced, whilst by present processes these are strictly limited as to size, owing to the great expense of production.

3. That many copper articles, especially large tubes, vats, cylinders, &c., can be produced direct from rough copper far cheaper than by any other process.

4. That the electrical conductivity of the annealed copper has a conducting power of 4½ per cent. above that of the best guaranteed commercial copper.

5. That the copper articles produced by the process have been proved to have absolute uniformity of density, thickness, tensile strength, and true circular section.

6. That the copper can be varied in tensile strength and ductility according to requirements.

Works in Sheffield have been secured by the Company, and it is estimated that the machinery can be completed and the factory commence profitable work in about three months.

The British Patent has been submitted to counsel of the highest standing, also to Messrs. Abel and Imray, the well-known patent agents, to Dr. John Hopkinson, F.R.S., M.I.C.E., and to other experts, who have all testified to its validity. The whole of these opinions can be seen at the offices of the Company.

The patentees, Messrs. F. E. and A. S. Elmore, have agreed to serve the Company as managers for six years at a fixed joint remuneration of £550 per annum, and a further sum of £100 between them for every 5 per cent. dividend paid to the shareholders; their remuneration is thus mainly depending upon profits; so that the Company has the benefit of their experience and ability on the subject of copper depositing upon exceptionally advantageous terms.

With reference to the amount of anticipated profits by the Company, the directors hesitate to give a formal estimate, lest it should be thought exaggerated; it must, however, be obvious that if, as is claimed for it, the invention acquired by the Company supersedes the present complicated systems of manufacture, vast results must be obtained.

The demand for the more expensive articles capable of being made by this process (the price realised in some cases being as much as 5s. per lb.) far exceeds the capacity of the plant to be laid down, whilst the weight of the cheaper articles, such as copper wire, &c., can hardly be estimated. In proof of this, a glance at the numerous inquiries for articles manufactured under these patents, together with the testimonials and opinions from the trade, which can be seen at the offices of the Company, will show the magnitude of this industry. A few extracts from these are given in the enclosure accompanying the prospectus.

The Company's profits will be obtained from two sources :—

1. The grant of licences on royalties to the trade for the articles that are at present manufactured by them.

2. The earnings of the Company from its factory.

With reference to the first, as the annual consumption of copper articles is very great, even a small royalty would insure for the Company, from this source alone, a large revenue, it being evident that manufacturers in their own interest must adopt this process. Negotiations are pending with the well-known firm of copper smelters and manufacturers, Messrs. Thomas Bolton and Sons, of Oakamoor, Widnes and Birmingham, to adapt Messrs. Elmore's invention to their electrical plant, with a view to a permanent arrangement for its use by them on a royalty. The Company would thus obtain the great advantages of the extensive organisation of an established business on a large scale.

With reference to the second, reckoning only the output of the plant that is intended first to be put down, viz., 20 tons per week, and taking the estimated cost of manufacture by Elmore's process at double the rate adopted by experts, the net profit, calculating that an average price is obtained for the more expensive articles of only 2s. per lb., would, after deducting 25 per cent. for contingencies, amount to over £100,000 per annum, equal to a profit, from this source alone, of over 70 per cent. per annum upon the capital of the Company now to be issued.

One important feature of the Company is that Elmore's discovery, being a labour-saving process, the profit is unaffected, whether the price of copper, the raw material used, be high or low; in fact, were the present high price of copper reduced, it would increase the demand for the Company's productions and so enhance the profits.

From the above plain statement of facts it will be seen there is offered an investment of an entirely exceptional character.

The amount to be paid by the Company is £53,400 in cash and £46,600 in fully-paid shares of the Company, this being the maximum amount in shares allowed by the rules of the Stock Exchange to entitle the Company to an official quotation, for which they intend to apply.

The following contracts have been entered into :—An agreement, dated the 1st December, 1888, made between William Elmore, Francis Edward Elmore, and Alexander Stanley Elmore, of the one part, and John Hamilton Ward, as trustee for and on behalf of this Company, of the other part; an agreement, dated the 1st December, 1888, made between the said William Elmore, Francis Edward Elmore, and Alexander Stanley Elmore of the one part, and the said John Hamilton Ward, as trustee for the Company, of the other part; an agreement, dated the 1st December, 1888, made between the said William Elmore, Francis Edward Elmore, and Alexander Stanley Elmore of the one part, and Woodhouse and Rawson, Limited, engineers and electrical contractors, of the other part. Various other contracts have been made with reference to the acquisition of the patents, the formation of the Company, and the subscription of the capital; and subscribers for shares will be deemed to have waived all right, whether under section 38 of the Companies Act, 1867, or otherwise, to have any particulars of these contracts.

The memorandum and articles of association, the above contracts, the patents, counsel's and patent expert's opinions, and reports of the various authorities quoted herein, together with specimens of articles manufactured under the process, can all be inspected at the Company's offices, where, as also of the bankers and brokers, prospectuses and forms of application may be obtained.

Where no allotment is made the application money will be returned in full.

11, Queen Victoria Street, E.C., 18th January, 1889.

EXTRACTS FROM REPORTS OF EXPERTS.

The following leading experts have reported on Messrs. Elmore's process. The reports can be seen at the offices of the Company, and extracts therefrom will be found in the prospectus.

Mr. W. PARKER, the Chief Engineer Surveyor to Lloyd's Register Committee.
Dr. JOHN HOPKINSON, F.R.S., M. Inst.C.E.
Professor GEORGE FORBES, F.R.S.
Messrs. CLARK, FORDE and TAYLOR.
Mr. C. J. SIMMONS, M.Inst.E.E., Electrician and Contractor for the supply of Electrical Testing Instruments to H.M. War Department, the Postal Telegraph Department, &c.
Mr. W. JOHN, F.R.S.N.A., Member of Council of the Institution of Naval Architects, and Member of the Iron and Steel Institute.
Mr. MASSEY, M.Inst.C.E., M.S.T.E. and E., Engineer to the Queen.
And Mr. JOHN T. SPRAGUE, M.S.E.E., one of the leading authorities on electro-deposition.
Prof. A. W. KENNEDY, F.R.S., and Prof. W. C. UNWIN, F.R.S., have also made elaborate tests.

THE LATE SECRETARY—BRILLIANT PROSPECTS OF THE MINE—RETURNS HENCEFORTH TO BE INCREASED—VALUABLE DISCOVERIES—CONFIDENT VIEWS OF THE MESSRS. TAYLOR AND OF CAPT. PLUMMER—60 HEADS OF STAMPS.

A MEETING of the shareholders of this compauy was held at the Cannon Street Hotel, on Tuesday—Sir Charles Tennant, Bart., chairman of the company, presided.

The notice calling the meeting was read by Mr. JOHN TAYLOR (the manager), and the report of the directors (which appeared in last week's MINING WORLD) was taken as read.

THE LATE SECRETARY.

The CHAIRMAN : Gentlemen, perhaps this is not an inopportune moment to express our deep regret at the death of our secretary, which sad event has happened since last we had the pleasure of meeting you. Mr. Williams, I am sorry to say, died very suddeuly, and his loss is one which the directors deeply regret, and I cannot help thinking that in a considerable measure that feeling is shared by the proprietors. He was extremely attentive and polite, and very anxious to give the shareholders every information in his power. (Hear, hear.) Hence I was obliged to ask Mr. Taylor to read the notice calling the meeting. Gentlemen, as you are aware, this is not a meeting called to pass reports or accounts; it is simply a meeting of the directors and shareholders, to consider the position and prospects of the company, and talk over our mutual interests. The report of the directors, I think, is pretty explicit, and we should have issued it sooner, but, as you know, Capt. Plummer was here at our last meeting, and when he left for India he did not arrive there until late in September, and we wished to give him ample time to examine all that has been done during his absence, and to thoroughly inspect the mine in all its various workings, and give us a full and elaborate report upon its position when he arrived there. He has done so, as you are aware, and I think the report, which is appended to our own, is extremely interesting and valuable, aud

JUSTIFIES ALL THE HOPES THAT WE EVER ENTERTAINED OF THE FUTURE OF THE MYSORE MINE.

(Cheers.) I think we have never presented to you a report which, to my mind, is in every respect so satisfactory as Capt. Plummer's report is to-day. (Cheers.) I think, however sceptical and however diffident one might have been as to the future of the Mysore Mine, this report ought to satisfy, and set at rest, all fears in connection with this company. You are aware that it is not a small, but a very large property that we possess. We have a large block—double the size of any of the mines on the Mysore goldfield. It is in the centre of that goldfield, and is, I believe, going to be

ONE OF THE QUEEN GOLD MINES OF THE WORLD.

It is so in my own private opinion, and everything I hear tends to confirm me in that belief; and the telegram, which I shall have the pleasure of reading to you, and which was sent from the mine the night before last, is still more convincing and confirmatory of that view. (Loud cheers.) Wherever we have pushed our developments we have found gold. I will not go into the details of the various levels and workings, because Mr. Taylor, our manager, who is an infinitely greater authority on the subject, and more thoroughly informed than I am, will explain to you exactly the position of the mine. Perhaps my duty, in reference to that part of the subject, will be fulfilled if I read to you the telegram which I have just alluded to, and which is both extensive and comprehensive.

BEST TELEGRAM YET SENT FROM THE MINE.

Copy of telegram from Capt. Plummer, dated 14th January, 1889 :—"Incline below 400-ft. level, north of Taylor's shaft : Depth on slant, 163 ft.; width of lode, 4 ft.; assay of quartz, 1 oz. 1 dwt. Schaw's shaft : Depth, 245 ft.; width of lode, 2 ft.; assay of quartz, 5 dwts. Tennant's shaft : Depth 203 ft.; width of lode, 2 ft.; assay of quartz, 13 dwts. 400 ft. level, north of Taylor's shaft, driveu 510 ft.; width of lode, 2 ft.; assay of quartz, 4 ozs. 296-ft. level north, driven 562 ft.; width of lode, 4 ft.; assay of quartz, 4 ozs. 18 dwts. 236-ft. level north, driven 350 ft.; width of lode, 3 ft.; assay of quartz, 4 ozs. 18 dwts. 220 south of Schaw's, driven 42 ft.; width of lode, 2 ft.; assay of quartz, 12 dwts. South level, McTaggart's shaft, driven 320 ft.; width of lode, 2 ft.; assay of quartz, 13 dwts. 180-ft. level north, Tennant's, driveu 46 ft.; width of lode, 1 ft.; assay of quartz, 13 dwts. 180-ft. level south, Tenuant's, driven 49 ft.; width of lode, 1 ft.; assay of quartz, 6 dwts. 466-ft. level, uorth of Taylor's, extended to Italian stope; width of lode, 4 ft.; assay of quartz, 2 ozs. Two workings south of Taylor's : Width of lode, 4 ft.; assay of quartz, 1 oz. 14 dwts. Three stopes north of Taylor's : Width of lode, 4 ft.; assay of quartz, 2 ozs. 6 dwts. Depth of new shaft, 50 ft. 30 heads gravitation stamps working well. Large bodies of ore. Mine looking better than ever. Tailings machinery working well; new erections satisfactory. Expect largely increased returns when new shaft completed.—B. D. PLUMMER."

When Capt. Plummer sent his report, dated 27th November, he had driven upon the 296-ft. level 473 ft.; he has now driven 562 ft. The width of the lode on the 27th November was 3 ft.; it is now 4 ft., and the assay is considerably higher. (Cheers.) When he wrote his report in November it had been driven 258 ft. He has driven north 100 ft. since then. The lode then consisted of only small leaders of quartz, not continuous, or of any appreciable value. He has now come upon a lode 3 ft. wide, of au average of 4 ozs. 18 dwts.; there is also the 220 level in Schaw's shaft, which shows increased width and value. The 463-ft. level, north of Taylor's, is extended into the Italian stope, and he is looking forward with great interest to this point. Mr. Taylor will explain in his address the importance Capt. Plummer attaches to the opening of this lode down to the Italian stope. I think that that report, or telegram, leaves very little indeed to be desired, and that we may look forward with great confidence, in the course of the next three months, to have our

60 HEADS OF STAMPS WORKING,

and doubling the production we have received of late. (Cheers.) I may as well allude to the details of our own report. The returns for the six months ending June 30th were 10,650 ozs. of gold, worth 41,500*l*. This, compared with the returus of the correspondiug period of 1887, shows

AN INCREASE OF 21,000*l*. IN STERLING VALUE.

The returns of the latter half were affected by the restricted outpnt, and consequently show a decrease as compared with the first half of 1888, but from this time forward we anticipate a large increase. The tailings machinery looks as if it will yield a gross revenue of 18,000*l*. or 19,000*l*., which is also a small dividend in itself on the capital of the company. We have at present 16 rock-drills, and the whole of them, or nearly so, have been employed in driving and sinking. Capt. Plummer wants to use them for stoping purposes. We have six more on the way and six more ordered, so that in a short time we shall have 28 rock-drills, these being absolutely necessary for the developments now being carried on. We are also sending out a considerable amount of air-compressing machinery and a great deal of plant of various kinds, because Capt. Plummer is evidently very anxious to have the mine fully equipped. You see from the tone of his report that he looks forward to extracting very large quantities of ore, and therefore we have been spending a good deal of money in sending out machinery of various kinds, which Mr. Taylor will probably more fully allude to.

UNALLOTTED SHARES.

There are, as you are aware, some shares of the company (811) which have not been allotted. These 811 are in the possession of the company, and it will be for you to indicate how they should be disposed of. My own idea is (as I have had to do with similar things in other companies) to leave these shares to the board to dispose of in the manner they think best in the interests of the company. There are too few to distribute pro rata, and it will be desirable for you to entrust the disposal of those shares to the board. (Hear, hear.)

UNPAID SHARES.

Gentlemen, you know there is still 1*l*. to call up upon the shares. We have been pressed to call up this money at once. We shall require it, and the directors have decided to call 10s. in the middle of next month, and the remaining 10s. in the middle of April. I do not know that I have anything more to add, but I shall be glad to answer any questions and give any further explanations that may be desired. At this moment I think it my duty to ask Mr. Taylor to give his views of the present position and prospects of the mine. (Cheers.)

AN IMPORTANT AND DEEPLY INTERESTING SPEECH.

Mr. JOHN TAYLOR, who was received with loud cheers, said : Gentlemen, our chairman has spoken in feeling terms of our late secretary, and I feel sure that the kind words which have fallen from him will have found an echo in the hearts of all those to whom he was personally known. Mr. Williams was in the service of my firm for upwards of 34 years, and my brother and

I have not only to deplore the loss of a most able assistant in our business, but of a much esteemed and respected friend. (Hear, hear.) The perusal of this report must certainly have impressed you all very favourably—setting forth as it does the record not only of an immense amount of work done during the last six months—far more work than has ever been done in any mine on the Colar goldfield in a similar period; but also must have impressed you with the great quantity of rich quartz that has resulted from these operations. The workings are being carried on at three different portions of our property—first, at the south end in Schaw's and McTaggart's shafts, and next, about 1,500 ft. further north at Taylor's and Plummer's shafts, and again, at the great distance of 3,500 ft. at Tennant's and Henty's shafts. I have not, unfortunately, here a plan of the southern part of the mine, or of Tennant's shaft; but this is merely an interim meeting. At the next meeting to be held, I hope at the same time as last year—probably in the month of May—we shall have detailed plans sent home again from India, and I shall be able to present you with something more clear as regards these operations than I am able to do at the present moment. As far as Taylor's and Plummer's shafts are concerned, I shall be able to point out the details of the workings. In regard to Schaw's shaft—we have had rich quartz, but so far it has not proved of a lasting character. We are not very deep as yet, and perhaps ought not to hope for much. The shaft is down 25 ft. below the 220-ft. level. The lode in the bottom is 2 ft. wide, worth from 3 dwts. up to ½ oz., and Capt. Plummer says the quartz contains all that can be desired to induce the opinion that it will get richer as the shaft is deepened. A level is being driven south at the 220. The telegram shows the lode has improved to 2 ft. wide, assaying more than ½ oz. At McTaggart's shaft the 215 has been driven the long distance of 320 ft.; the lode has been small, but has yielded quartz at almost every point. The telegram says that the lode is 2 ft. wide, worth 13 dwts. There are old workings in the neighbourhood of this level, and, therefore,

WE MAY LOOK FOR DISCOVERIES HERE AT ANY MOMENT.

Tennant's shaft is 3,500 ft. north of Taylor's, and has been sunk to a depth of 203 ft., and we are sinking there as fast as we can. The telegram read mentions that the lode has improved to 2 ft. wide, and is worth 13 dwts. Levels have been driven at 180 ft. deep about 50 ft. in each direction, and we have a continuous lode, giving, at times, visible gold. For over 200 ft. south of this shaft the lode has been proved in the 80-ft. level, and was of a character to justify the expectation (as Capt. Plummer mentions) of better results when explored 100 ft. deeper. You will have noticed in this report of Capt. Plummer's that he has already begun to draw part of his supply of quartz for the mill from Schaw's and McTaggart's shaft, and also from Tennant's shaft. A small quantity has been taken from each. The quartz does not yet yield any large portion of gold, but still we do not expect very much until we have the works more fully developed. It is, however, to the workings at Plummer's and Taylor's shafts that the principal interest attaches. The distance driven during the last six months has been very great—very great indeed under the circumstances of native labour and hard rock, and

I MAY SAFELY SPEAK OF THE DEVELOPMENTS OF QUARTZ AS REMARKABLE.

(Cheers.) I do not think I need occupy your time in speaking of the numerous workings south of Taylor's shaft, as nothing of special interest has been met with there during the last six months. Several levels have been driven, and in one (the 296 south) we have an improvement, which, according to the latest mail, leaves the lode 4 ft. wide, and worth ¾ oz. to the ton; but it is at the workings north of Taylor's shaft that the most important development has taken place, and I approach this part of the subject with special satisfaction, because at your last meeting, on the 17th May, I ventured to prophesy as to what might be looked forward to here, and the anticipations I then held forth have been more than realised. (Loud cheers.)

A TRUE PROPHECY.

We had reasons—strong reasons—for expecting a great improvement, and I pointed out what those reasons were. I felt that it was my duty to do so, even running the risk I did, of placing before you the view I held in order that you might see how very important the question was, and in order that you might watch pretty closely how this matter resulted. I explained that although the telegram then read from the chair merely said that that quartz in the 296 level, north of Taylor's shaft, was 3 ft. wide, worth 5 dwts., and though that was not much to talk about, some of you may have been surprised that I attached so much importance to it. We had been driving the level in very poor ground, and had met with nothing, but we had been expecting and expecting, as I told you, because in a winze underneath the 173 level we had gone down in a lode 5 ft. wide, worth 1 oz. to the ton—a pay shoot, and not the main pay shoot; but it was dipping to the north, and was clear of the workings we had been previously carrying on. This 296-ft. level, almost from the day I spoke these words—that is, from the 17th May—commenced to pass through rich quartz, and instead of a small lode worth a few pennyweights—for 300 ft. we have had a very fine and powerful lode, yielding very rich quartz. (Cheers.) The report of the 30th November gave the end of that level as worth 5 ozs. 17 dwts., and on the 17th December the report gave the value as 5 ozs. 11 dwts., and the cable message, which the chairman has read, shows that

THE LODE IS NOW WORTH 4 OZS. 18 DWTS.

(Cheers.) A continuously rich lode for all that 300-ft. is an important point indeed. It is not necessary I should emphasise it, because it must be evident to all of you what we may hope to have there. With regard to the 236—the cablegram says the lode is 3 ft. wide, and worth 4 ozs. 18 dwts. The 400-ft. level, again, below has been driven 510 ft., and for over 400 ft. of this distance it has been in rich quartz in a lode 4 ft. wide. The assays have been from 1 oz. up to 4 ozs., and the cable message just read gives the end still as worth 4 ozs. The 466-ft. level, the deepest level in the mine at the present time (though I hope it will not be so long, but that we shall be soon driving on the rich end) has been driven 245 ft., and the greater part of the way in a productive lode. From the end of that level a cross-cut has been driven to the Italian stope, and it is now reported that the lode there is from 4 to 5 ft. wide, worth from 2 to 3 ozs. This level was driven on a western branch of the vein—the Italian stope being to the east. It is rather difficult to explain this mine, as we are practically working two veins, lying within 20 ft. to 40 ft. of one another, at varying distances. The Italian stope has been very rich indeed, and it is most reassuring to us to find that as we go deeper the lode continues to be so good.

THREE MAIN WORKS IN HAND.

With a view to the development of all this ground at greater depth, we have three works in hand—the main Taylor's shaft, which is now down 517 ft. from the surface, and nearly deep enough for another level; in addition to that an incline shaft is being carried down below the 400-ft. level for winding purposes; but the great work we have now commenced is a new shaft from the surface. Unluckily I have not a plan to show its exact position, but it is already sunk 50 ft., and is designed to go down through all the rich ground I have mentioned, and open up, in the most rapid way possible, those resources, as well as to give us facilities for extracting the ore more quickly than we could do by bringing it back to the other shaft, and to the machinery, which has already sufficient to keep it employed. Your chairman has spoken of the outlay of the new machinery.

NEW MACHINERY.

This has been a very anxious question with the board—perhaps a more anxious question with me, because on me, to a great extent, falls the responsibility of recommending it, which, of course, means the expenditure of more money. I have not hesitated to do so, because I have ever before me the condition of the mine to the north of Taylor's shaft. We have a very fine run of productive ground, and the only thing for us to do, as plucky adventurers, in this undertaking, is to supply it with funds and push on the work for extracting this rich quartz as fast as possible. (Cheers.)

NO NEED FURTHER TO RESTRICT OUTPUT.

Another very satisfactory matter which has come about for us, and for all of you, is that the restriction of the output for the time, which, of course, we all approached with a shake of the head (none of us could be very much pleased to find we were going to cut down our returns)—I say, it is an immense satisfaction to find how quickly the result we all desired has been brought about. The mine is in a state to admit of considerably increased returns, and I have not the slightest doubt that we shall see them from this time forward. Capt. Plummer told us that when the cross-cut at the 466 was holed to the Italian stope, a much larger quantity of ore could be broken, and that has been accomplished, and I have the firmest belief that when the message comes to hand, about the 5th or 6th of February, of the January crushing, you will find that the result of this holing, from the one vein to the other, will bring about what he has anticipated. But, gentlemen, he does not stop there, because the telegram your chairman has read told us that we are to have a further increase when the new shaft is made—a very considerable increase. (Cheers.)

ENERGETIC DEVELOPMENT.

But Capt. Plummer does not tell us—perhaps he is not as unwise as I am, and does not think it well to prophesy—he does not tell us when the shaft will be completed; but we must be assured that he is carrying on that work as rapidly as he can, and what you have read in the reports, and what I have said, must have led you to clearly see how quickly these works can be now pushed forward, as compared with what was the case two or three years ago. Therefore I do not anticipate that we shall have long to wait before the new shaft will be giving us that second increase in the returns which Capt. Plummer indicates. (Cheers.)

THE NEW SECRETARY AND HIS ANTECEDENTS.

I am sure it will interest you all to know, with regard to the secretaryship of this company (it is an important question for the large number of shareholders who visit our office, and for all concerned), that it has been placed in the hands of a gentleman on whom in every way reliance can be placed, and who, I am sure, will be found a most efficient successor to our good friend Mr. Williams. Mr. William Henry Rowse, the gentleman who has been appointed by us to take his position, has been known to me ever since I was a boy. I think it is 32 or 33 years since I first met him in Devonshire, and I have known him ever since. His father was one of the most respected agents employed by my grandfather and father. He was in their service, as mining agent, for more than 40 years, and I think that you will all find that the secretaryship of the Mysore Company, in being placed in Mr. Rowse's hands, will be in those that are thoroughly good. (Loud cheers.)

PRACTICAL SYMPATHY WITH THE FAMILY OF MR. WILLIAMS.

Mr. Walter James: I think the joy which must have been felt at this meeting, and on reading the reports of the directors and of Capt. Plummer, must have been considerably overshadowed by the sad loss which has befallen us in the death of the secretary—a subject that has been so feelingly alluded to both by the chairman and Mr. Taylor. I had the pleasure and privilege of knowing Mr. Williams for many years, and though I do not desire to load the memory of such a man with fulsome flattery, I must endorse every word that so far has been said. Whether we can do anything more than pass a vote of condolence with his widow or family I shall be perhaps told, and then I can embody it in the resolution I have to propose. I think we are all very much pleased both with the report of the directors and that of Capt. Plummer. Capt. Plummer we know to be very cautious, but on this occasion I detect that he has written with greater confidence than he has ever done before—(cheers)—a confidence that we must all feel. Although at one time our position was a little uncertain, we can now say that we know no mine in the world whose affairs are running so smoothly as those of the Mysore. Mr. Taylor has pointed out the importance of the discoveries that have taken place, and the hopeful nature of the enterprise as a whole. (Hear, hear.)

The Chairman: I quite endorse all that you have said as to the position of the mine, and as to the loss we have sustained. Perhaps I may as well at this moment state what the board are disposed to do with reference to the family of poor Mr. Williams, who, I understand, are not very well left.

THE BOARD PROPOSE TO VOTE THE FAMILY A SUM OF 200*l*.

(Cheers.) If the meeting sees right to endorse our views, I shall be glad to put it in a resolusion. There will be a subscription amongst various gentlemen who knew him intimately, and who share with us the deep regret we feel at his sudden end. In the meantime, we think

it will be graceful and appropriate on the part of the shareholders if they allowed the sum of 200*l.* to be handed by the directors to his widow and family. (Cheers.)

Mr. STAPLES heartily seconded the motion, which was carried by acelamation.

The CHAIRMAN: I shall be pleased to communieate with Mrs. Williams your kind expression of sympathy. Allusion has been made to Capt. Plummer's exceedingly prudent and eautious method of writing. He has always done a little more than he has said, and my opinion is that he will again do a great deal more. I have the greater confidence myself, kuowing, as I do, that Capt. Plummer is exceedingly sanguine as to the future of the Mysore Company.

CONGRATULATIONS.

Sir ROPER LETHBRIDGE: I think the shareholders present to-day have very little further to do than they have already done in passing this vote of sympathy with Mrs. Williams, and in congratulating your colleagues and yourself on the very satisfactory aspeet of affairs just now. There is no doubt that all the shareholders felt, as Mr. John Taylor well expressed it, a little disposed to shake their heads when they were told some months ago that the output was to be restrieted in order that development might further overtake extraction. It is really to all the shareholders a matter of very great congratulation that that period of restricted output has come to an end so much more quickly than most of us have thought. The report of Capt. Plummer, supplemented by the telegram read to-day, is of a character warranting the most sanguine expectations of the future. Capt. Plummer, to my knowledge, is a man of anything but a sanguine turn of mine. It is quite true that his performance has always been better than his words, and I am confident, now he is beginning to be sanguine himself, we can share that feeling with him, and can congratulate ourselves on our present position.

CONFIDENCE IN THE BOARD.

With regard to the small matter of the unissued shares, I do not think we can do better than leave their disposal in the hands of the board, who, undoubtedly and most emphatieally, possess our fullest confidence. (Cheers.) If it be necessary I should be glad to move a resolution, but I think the chairman will see what the sense of the meeting is, and will take that as sufficient for all practical purposes. We have come together to-day under singularly fortunate eireumstances, but for the one overshadowing loss of our respected secretary. I am exceedingly glad the meeting has adopted the views of the chairman in recognising his services, and we hope that he will, as promised, convey the sense of this meeting to Mrs. Williams and her family. (Cheers.)

The CHAIRMAN: I am much obliged to you for the kind and courteous attention you have given us. In disposing of these shares, we shall do that which we think best in the interests of the company, and you may rest assured we shall do nothing that will prejudice the value of the shares in the market. I do not think it neeessary to pass a forual resolution if you will allow Sir Roper to be the interpreter of your views. We shall certainly convey to Mrs. Williams your expression of sympathy and regard, and I am personally very much obliged to you for the way in whieh you have endorsed the feelings and views of the directors.

A SHAREHOLDER WHO WANTS A DICTIONARY.

Mr. STEVENSON: Canuot you make the fortuightly reports more clear?

The CHAIRMAN: I think Capt. Plummer flatters himself that he is already making them as clear as they ean be made, (Hear, hear.)

A SHAREHOLDER: Is it your intention to apply for a quotation for the new shares?

The CHAIRMAN: I think we had better not do so uutil they are fully-paid up, which will be in a short tiuie. (Hear, hear.) That is the whole of the busiuess.

CORDIAL THANKS.

Mr. W. H. BEAUMONT: I ask my fellow shareholders to pass a very cordial vote of thanks to you and your colleagues. There is one thing very eertaiu, that I have attended a good many meetings here, but have never had presented to me such a very satisfactory report, and such a very interesting statement as has been made to-day.

AN APT SCHOLAR.

What little knowledge of mining I possess I have derived entirely from Mr. Taylor's explanations. I can see perfectly the value of the ground from the 466 upwards to the 236, aud the euormous amount of ore remaiuing to be extracted. I heartily propose the resolution. (Cheers.)

Mr. HENRY STAPLES: I beg, with equal heartiness, to second it, aud wish that Capt. Plummer may be ineluded in it. (Hear, hear.)

The motion was carried amidst loud cheers.

The CHAIRMAN: I thank you on behalf of my colleagues and myself, and we shall take care that Capt. Plummer shall be made aware of all that has taken place, and I am sure he will be very much gratified.

The meeting then closed.

THE NEW ZEALAND ANTIMONY CO., LIMITED.

GOLD MINE TO BE SOLD—ANTIMONY THE CHIEF PRODUCT—DISPUTES WITH VENDORS—OUTPUT FROM MINE—UNCALLED FOR ATTACK ON OFFICIALS.

THE first annual general meeting of the company was held at the Cannon Street Hotel on Wednesday. "At this meeting" (said the notice) "a resolutiou will be submitted to authorise the directors to dispose of the company's interest in the 30 acres of gold quartz reef, situate at Jackson's Head, on such terms as they may think fit, and to accept payment therefor in cash, shares or debentures, in such proportion as they may be able to arrange, and to further authorise the directors to divide such cash, shares, or debentures, when received, among the shareholders, pro ratâ, according to their shareholding in the company; also a resolution specially sanctioning the payment of brokerage on placing shares included in item 3,610*l.* 15s. 10d."

Sir Walter Lawry Buller, K.C.M.G. (chairman of the company), presided.

Mr. W. B. FABIAN (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

A RÉSUMÉ.

The CHAIRMAN (Sir Walter Buller) said: Gentlemen, in moving the adoption of the report, a draft of which is now before you, I have only a few remarks to make, and these chiefly in the way of explanation. With your permission I will commence with the last paragraph in the report. You may remember that at the statutory meeting, held in this place on the 8th December, 1887, I made the following statement:—"One of these reports (furnished by the manager of works) contains a suggestion that steps should be at once taken for developing the gold mine which forms part of the company's purchase; and the board is asked to set aside a sum of 2,000*l.* for that purpose. But your directors have decided to make the working of the gold mine quite subsidiary to the antimony, as we are anxious to reduce the speculative element in this undertaking to a minimum. It may be necessary to incur a small outlay on this gold mine in order to keep alive the company's rights under the gold mining lease granted by the Government, and the resident director will be asked to sanction this if so advised by our local solicitors; but I can assure you there is no intention whatever of dissipating the working capital in speculative gold mining instead of the more legitimate work of bringing out and shipping the antimony; at any rate, not without first consulting the shareholders. Our present feeling is that the one is a speculation only, the other a certainty under the existing conditions." Following up the policy there indicated, your directors requested Sir William Fitzherbert to obtain from different parts of the mine, and to send to England, samples of the quartz for treatment and assay, in order that the value of the property might be properly tested. The first lot sent was a small one, scarcely exceeding 20 lbs., and although there was no gold visible, on being crushed at the Globe Mills, this sample yielded an assay of upwards of 5 ozs. of free gold to the ton. The next shipment of quartz, unfortunately, got mixed up in transit with the antimony ore forwarded by the same steamer, and its association with this very refractory mineral rendered it almost valueless for test purposes. But this second lot was speedily followed by a shipment of about 2 tons of quartz per Ionic, including a small parcel of exceptionally rich specimens. This third lot was placed in the hands of Messrs. Johnson, Matthey and Co. for treatment, and (with the specimen sample restored to it) yielded an assay of nearly 2 ozs. of gold to the ton. Your directors propose now to take power, by resolution of the shareholders, to dispose of the gold mine

FOR A PRICE OF NOT LESS THAN 135,000*l.*

(in cash and shares, as may be finally arranged), instead of asking the present shareholders to subscribe a further sum of 20,000*l.* for adequately working and developing it. Your directors are aware that there is another proposal before the shareholders which promises even larger results; but I may say at once that it does not commend itself to our judgment as a feasible one, nor, so far as I am aware, has it found much favour or support with our largest shareholders. It will be, however, for this meeting now to say whether this valuable property shall be disposed of in the manner proposed by the directors, which would secure an immediate return of the whole of our capital (125,000) in shares, besides a sum of 10,000*l.*, if not more, in cash, to be distributed in lieu of dividend. That is to say, supposing the proposal of your directors is carried out, our shareholders will receive for every share held by them in the Antimony Company a fully paid 1*l.* share in the gold mining company, and will participate pro ratâ in the minimum amount of cash for which your directors are stipulating, namely, 10,000*l.* Adhering, however, to the promise made at the statutory meeting, the board have been careful not to commit the shareholders to any absolute agreement, although all the necessary arrangements have been made for giving effect to their proposal. In the meantime, Sir William Fitzherbert has been asked, by telegram, to obtain a further supply of 10 tons of quartz, to be taken from five different points along the main reef, so as to admit of our testing the continuous richness of the lode along the whole extent of the 30 acres comprised in the company's lease. The shareholder who issued the circular in advocacy of the other plan is, I am glad to see, present at the meeting; for the board is anxious that he should have every opportunity of explaining his project, and of impressing upon the shareholders any advantages it may possess over the plan proposed by us.

ANTIMONY THE ALL IMPORTANT PRODUCT.

I will now pass on to speak of what, to my mind, is of far greater importance to this company, namely, the operations, past, present and future, at the antimony mine itself. Of course it is always more pleasant for a chairman to have to announce a good dividend, either in hand or in the near future; but in the development of a mine, there are sometimes features of far more real importance than the promise of an immediate return in cash. What we have to look to in the present case is our future position in regard to the production of antimony. Although there is no dividend immediately payable, I think I may fairly congratulate the shareholders on the soundness of the company, and on the amount of ultimately productive work that has been achieved during the comparatively short time that your directors have had effective control of the mine. For, as explained in the report, although the company has been nominally in possession of the mine since August 10th, 1887, they did not actually take it over till February, 1888, and as the accounts are made up to 30th September last, they show, in point of fact, only the results of about seven months' work. The contract of sale provided that from and after the date named therein the vendors should diligently work and manage the mine on account of the purchasers, who would be chargeable with the entire cost thereof. A correspondent, in every way competent to form an estimate, whose name I am not free to disclose, says that from the moment the contract was signed, the vendors slacked off work, and that for two months before handing over the mine, the work was absolutely at a standstill.

DISPUTE WITH VENDORS.

This state of inaction is, I understand, denied by the vendors. Your board can only judge by results, which, during the period in question, were worse than nothing, for they involved a very heavy loss in cash to our company. But we are claiming damages for this alleged breach of contract, and as the matter is now sub judice, it would be manifestly

improper for me to make any comments upon it. The ore already at grass and waiting to be eruded (as reported by our resident director) is about 3,000 tons, representing a cash value of about 14,000*l*., although for the purposes of the balance-sheet the company's auditors could only take cognisanee of what it had actually cost to prodnce up to 30th September, namely 5,250*l*., leaving all profit on sale out of the question. Your directors have reeeived in cash from Messrs. Cookson on aceonnt of antimony ore and metal delivered to them, nearly 6,000*l*., although only 4,592*l*. comes into the account as having accrued before the 30th September. This amonut, however, is redueible by the heavy penalty of 2,500*l*., which has been paid by the company to Messrs. Cookson under the contract for short delivery during the year which expired on October 13th. It may be reasonably asked, why did the directors enter into a contract to deliver a minimum of 2,000 tons during the first year of their operations, knowing, as they must have done, that a large amount of "dead work" would have to be undertaken in order to render such an output possible? The first answer to this is, that the Messrs. Cookson absolutely refused to enter into a contract for the purchase of the whole of our output for five years except on these terms. The contract itself was a most advantageous one for the eompany, and your directors were assured that there would be no difficulty in supplying the minimum of 2,000 tons. They accordingly agreed to this instead of a minimum of 3,000 tons, as demanded by the Messrs. Cookson. It is very certain, however, that your directors could not have agreed, under penalty, to supply such a quantity during the first year, but for the statement made on behalf of the vendors that there were already 1,500 tons of good ore at grass awaiting treatment. So satisfied were they on this point that it was at one time proposed to charter a sailing ship expressly to bring home this large quantity of ore, so as to expedite the anticipated profit. It turned out, however, that so far from there being 1,500 tons of available ore, there was only an accumulation of stuff of all kinds, most of it worthless matrix, and that the whole yield of marketable ore from this source would uot exceed about 300 tons or 400 tons. As to where the responsibility rests for

THIS GROSS MISREPRESENTATION,

it is hardly necessary for me now to express an opinion, because this is one of the grounds on which we claim payment from the vendors, who (as the directors are advised) are aeeountable for the penalty incurred under the contract. On this subject I shall now say no more, except that the directors have agreed to refer all matters in dispute to arbitration in the colouy, provided the arbitrators will admit the English evidence as part of the ease. It will be seen by this report that a very large amount of money (upwards of 7,000*l*.) has been spent in permanent work, the advantage of which is already becoming apparent, for Mr. Wearne, the mine manager, reports (on November 12th) a very satisfactory state of things at the mines. The map on the wall, showing the workiugs, will make this report quite intelligible to the meetiug.

MANAGER'S VIEWS.

"Endeavour Inlet,
"November 12th, 1888.

"Since my last report, a favourable change has taken place at two points of the miue. The first in the winze which is being sunk from No. 1 to conneet with No. 2. In this winze, 35 ft. down, we cut into the lode which looks very well. The lode is not wide—about 1 ft.—but the ore is very good. With the lode we got an increase of water which will necessitate more labour for continning this work. The other favourable ehange is in No. 4, where we have intersected a vein of good ore; as it is only just cut. I cannot say much about it, but I do not think it can be the same as that left underfoot in No. 3, or, unless that lode has changed its underlie, we are not yet at the point for intersecting it. However, it is very satisfaetory to get ore here, whatever lode it may prove to be. I have had to stop driving No. 3 level north for a time, and have put the men employed there to sink a winze from this level down to connect with No. 4. This work is urgently required, both for the convenience of working and for ventilation. As soon as this connection is made I will again push ou No. 3 north. In No. 2 the progress made lately has not been so good as I could have wished. The country is very hard; as the ground in the winze is also hard, I fear it will continue so right up to the lode. On the other hand, it is very satisfactory to find the lode clearing its way down through the strong country, and carrying good ore. Two prospecting drives are being driven into the slip, and though strong indications of ore are being met with on both sides, we have not yet cut a lode. I am very confident that we shall ultimately find here a much larger lode than any yet worked on the company's property, as the large blocks of very rich ore taken from the slip in the past must have come from an equally large lode. It is also at this point that we have had the favourable prospect of gold and silver, so that we have strong inducements for continuing the prospectiug here. I may also mention that one of the men I have in the mine is an old hand from the Nevada mines, and he says that the rock and lodes here are very similar to those obtained at the above mines."

VIEWS OF MR. FITZHERBERT.

Among the last reports received from the colony there is a very valuable one from Mr. William Fitzherbert, C.E. (who had been sent over to make a general inspection of the mine), giving an account of experiments whieh he had made in the way of eruding the raw ore by means of slow wood furnaces. This was done at the request of the London board, who had pointed out to the local management that, by ernding, a large amount of was tewould be saved, both in the ore itself and in the cost of freight, &c. Sir William Fitzherbert states that the experiments made by his son have been eminently successful, and that the mine manager will soon treat by this simple and very inexpensive process (fnel for the purpose being abundant and cheap) the whole of the 3,000 tons now at grass. Under the contract with the Messrs. Cookson, and at the price now ruling, the crude (of which there are some sample specimens on the table) will be worth 17*l*. a ton. I may add that sinee our last meeting the priee of antimony has been steadily rising, and that it now stands at 44*l*. 5s. per ton, the present price of ore, under our contraet with the Messrs. Cookson, being 12*l*. 11s. 3d. per ton. And here I may say that I think we are especially fortunate in being represented in New Zealand by a man of such high standing and recognised ability as Sir William Fitzherbert, the Speaker of the Legislative Council. Every mail brings with it fresh evidenee of the eare and attention which he devotes to the company's affairs; and on a recent occasion he sent his son, who is a civil engineer. over to the mines, at his own expense, in order to obtain the most reliable information on several points.

A DIRECTOR VISITS THE MINE.

I may mention also that one of your direetors, Mr. Jamcs Farmer, who had to proceed to New Zealand on his own affairs, has promised to make a thorough inspection of the mine dnring his visit, and to give the shareholders a personal report on his return to this country. The company is in this very satisfactory position, that although there has been an unexpectedly heavy drain upon the working capital for tunnels, machinery, and other permanent works, there has been no stint in the expenditure, whilst the company has, at this moment, a reserve fund of 10,000*l*. invested in Consols, bearing interest and immediately available when wanted. Seeing that all this heavy work has been done in opening up the mine, and that Mr. Wearne has succeeded in tapping the lode of antimony at the two points in the hill where he expected to find it, there seems no reason to doubt that, under intelligent local management, the output will now largely increase, and that this year we shall have no difficulty in meeting the requirements of our contract with the Messrs. Cookson, and be thus placed in a position to declare a good dividend on the capital of the eompany, wholly apart from the rich harvest which we hope to reap immediately by the sale of the gold mine. Gentlemen, with these remarks I beg to move the adoption of the report. (Cheers.)

Mr. Naidley: When this report first reached me, I thought there would be shown a haudsome surplus, but I was astonished when I saw a loss of 5,578*l*. I daresay many of you were equally surprised at such a result; and, in consequence, the shares have suffered on the Stock Exchange. I have cast my eyes over the balance-sheet, and said to myself—if this goes on, we may soon find ourselves in difficulties.

THREE CRUCIAL QUESTIONS.

I have, however, put to myself three important questions—firstly, is there enough ore; seeondly, have the directors the nccessary working capital; and thirdly, is there a market for the ore? I thiuk the first question has been completely disposed of by the chairman: there is no doubt that there is a quantity of rich ore before us. Then, is there the necessary working capital? The chairman has told us that there is 10,000*l*. in reserve; but there, I think, he somewhat understated the facts, for I see that there is cash in hand to the amount of 5,587*l*. There seems to be about 16,000*l*. of working capital in hand, which appears to me ample to develop the mine thoroughly. On the other hand, there are trade creditors to the extent of 8,480*l*., of which half is dispnted, and I think we may take it that it will be suecessfully disputed after what the chairman has told us. As to commission, I was never connected with a company in which the eapital was floated ou such cheap terms. I do not think it was necessary for the auditors to have called attention to this point at all. As to the disposal of the gold mine, I am disappointed that the direetors themselves are not prepared to undertake to work it, but I will offer no opposition to their policy. I have received a circular from a gentleman who proposes another scheme. I am sure he means it for our benefit, and offers it in a spirit of no hostility to the board; but I owe him a grudge to this extent, that I vainly spent 24 hours in trying to make out what it was, and from the sleepless night I passed I have not quite recovered even yet. (Laughter.)

THE BOARD CRITICISED.

Mr. Gibberd: I do not look at the balance-sheet in sueh a satisfactory light as the last speaker has done. We have paid 2,500*l*. to Messrs. Cookson as fine, but, if I am not misinformed, the fine per ton is 30s. Making every allowance for the diffieulties of the directors, I confess that this appears to me a most unsatisfactory state of things, and one that cannot be explained away by the roseate statements of the chairman. In what way has this unsatisfactory result been reached? I do not suggest that there has been want of energy on this side of the water, but the question arises whether the management on the other side is all that we could desire. I called at the office some time ago, and the chairman was good enough to enter with me into the positiou and prospects of the company, which were then unsatisfactory, and he especially laid stress upon the fact that the local manager was not a sueeess.

The Chairman: The local manager was almost immediately superseded, axd Mr. Wearne took his place. The directors telegraphed to Sir Wm. Fitzherbert to supersede Mr. Logau, and then Mr. Wearne was appointed.

Mr. Gibberd: I withdraw my remark. At that interview I said that if we had a night and day shift, the mine might be made to prodnce more. What amount of ore has been shipped since the end of the last financial year, up to the end of last month? I should like to know to what extent you have proper appliances for crude treating the ore? Will the directors in future publish regular information of what is done at the mine? I have called at the offiee occasionally and found a very obliging gentleman, who, assecretary, has beeu willing to tell me all he does not know. (Laughter.) I may remind you that we are proprietors of the mine, and it is our business to inquire, and we have a right to know in what way matters are progressing. It is most unsatisfaetory only to know at the end of the year what has been done. I concluded that we had delivered about 700 or 800 tons, and it turns out just about double the amount. I will support the sale of the gold mine, as proposed by the directors, in preference toany other scheme.

EXPLANATIONS.

The Chairman: As to short delivery—I can explaiu it in two words. When we took over the company we had a certain amount of metal, or star antimony, on the way home. Our smelters continued to refine, in order to use up the crucibles and ehemicals they had ou hand, and we got permission from the Messrs. Cooksou to use our material. The metal did not count under theeontract. We believed there was no risk whatever of our company having to pay any penalty, nor would there have been, if the people on the other side had done their duty by us. We had every reason to believe that the vendors were working the mine as we are now working it, and that we shonld be in a position to produce the amount of antimony we had coutracted for.

Mr. Gibberd: Who was in charge of our interests at the time?

DIVIDED AUTHORITY.

The CHAIRMAN: That is rather a difficult question to answer. Theoretically, the resident director was. He wrote, "It is utterly impossible that I can do anything until I am actually in possession. Until then I cannot be responsible for what is going on." But when the time came for him to take delivery on our behalf, he was asked to sign a certificate that everything was perfectly satisfactory, and he refused.

THE UNSIGNED CERTIFICATE.

He said: "I will take possession without prejudice to the rights of the company." If he had signed the certificate we should have had to pay the 4,000*l.* without question, which the vendors are now claiming. As to night and day shifts—it was a long time before we could get the people to understand the importance of this. Sir William now writes that the mines are being worked night and day, three shifts of eight hours each—knocking off at midnight on Saturday, and resuming work on the stroke of the clock at midnight on Sunday. As to the amount of ore here or in transit, we will give the full details as advised.

SHIPMENTS.

Since 30th September the secretary tells me that 165 tons have practically been delivered, or are in transit, and covered by insurance. Our contention is that the moment we get a telegram announcing the shipment of ore, and advise the Messrs. Cookson thereof, this is a delivery under the contract. As to the 3,000 tons to be cruded—I cannot give you the precise information as to how the cruding will proceed. I have over and over again urged upon the local management the importance of cruding the poorer qualities, because anything under 50 per cent. the Messrs. Cookson may refuse to receive, and a good deal has been shipped under that. We should then have the ore thrown back upon our hands, and the market would be closed to us. The first attempt at cruding failed, but then a week afterwards I got a telegram stating that the later experiments were eminently satisfactory, and the cruding would now proceed. Fuel is extremely cheap and abundant, and can be had for the taking away.

CRUDING.

By cruding, the metal is sweated out of the ore, and is taken in the form of pig iron, and then runs up to 70 or more per cent. It will pay us better to produce high-grade ore, and to crude the low-grade ore to something like the percentage I have named of pure antimony, because the cruding is effected by a slow furnace produced by fuel costing practically nothing. The directors will be willing to supply in future to the mining and other papers a statement of what has been actually done month by month. It has been an instruction to the secretary all through to give the fullest information to shareholders, and those who have called at the office and seen me will say that I have given them all the intelligence I could.

Mr. SIMPSON said he had applied at the office and could not get information from the secretary.

THE SECRETARY DEFENDED.

The CHAIRMAN: My secretary is a first-class man, and was selected from a vast number who applied for the position. Mr. Charles Simpson was a candidate for that position, and was rejected. (Laughter.) I must ask you to support me, and I shall certainly protect the secretary from an attack, in regard to which, in the matter of reply, his mouth is sealed. (Cheers.) These accusations come from a quarter that is not disinterested. If the secretary is worth a straw, he must use his discretion as to the information he gives, or he may put one shareholder at an advantage as compared with the rest. (Cheers.) If a shareholder had asked the secretary to publish information of a confidential kind, and he had done so, I should have dismissed him without waiting for my colleagues on the ground that such action would have been injurious to the company. We shall be ready to give all information, but if you have any confidence in your directors, you must trust them. What else are we here for but to administer your affairs to the best of our judgment? If we are not fit for the position, reject us. I am before you to-day for re-election, and so also is Sir John Stokes, and you will have an opportunity of dispensing with our services if you wish to do so—(Cries of "No")—but so long as we hold a fiduciary relation to you, you must trust us.

ALL INFORMATION GIVEN.

I say, without fear of contradiction, that I have always given to every shareholder what information I could give. I do not mind what you say about me, for I am able to defend myself, but I will not allow a subordinate to be attacked who cannot speak in his own defence. (Cheers.)

Mr. SIMPSON: You said you gave instructions that the shareholders should have every information they required.

The CHAIRMAN: Every information they ought to have.

Mr. SIMPSON: The secretary's reply to me was that it would not be right to give an individual shareholder information to the prejudice of the rest. (Cheers.)

The CHAIRMAN: And a very proper reply.

The SECRETARY: If you have any personal remarks to make about me, come and see me at the office.

REASSURING TELEGRAM.

The CHAIRMAN: This 3,000 tons, as I am informed by the resident director, is an average of 25 per cent. ore. It would never do to ship it, because it cost nearly 5,000*l.* to produce, and is worth, when cruded, over 14,000*l.*. You will see the extreme importance of our carrying through the cruding system, and I am satisfied that our manager is now doing so efficiently. We do not spare ourselves as regards work, but we are in the hands of people 12,000 miles from here, and it is very expensive getting information by telegram. I did telegraph, and asked if we might make sure of the minimum of 2,000 tons this year, and the reply was in the affirmative.

Mr. SIMPSON addressed the meeting, and said he was merely stating his experience as a shareholder making inquiries at the office. He did not concur in the sanguine anticipations indulged as to the future of the mine. Why had the output to the end of September been so small, and what would it be in the future? Would they be in a position to fulfil Messrs. Cookson's contract? He went on to quote from the manager's reports to show that at various times the mine was described as being in a good condition; and what, he asked, had become of the valuable ore from the stopes mentioned in May and June? What was the average percentage of the ore extracted from the mine?

The CHAIRMAN: I have already stated it to be about 40 per cent. but it is dressed up to 50. The Messrs. Cookson are bound to take under their contract all cruded antimony, but they are not bound to take the refined metal. Our cruded ore runs from 70 to 75 per cent. The Messrs. Cookson urged upon us from the first the importance of cruding. I have urged this upon the local management repeatedly, and they are now waking up to the importance of it.

Mr. GIBBERD: I think our interests have not been properly looked after on the other side.

THE BOARD'S PAMPHLET.

The CHAIRMAN: The shareholders were informed by a circular, in pamphlet form, of the position of affairs about July last. There was correspondence, and the explanations given resulted in our lodging a claim against the vendors of 14,000*l.* The pamphlet contained the report of Sir Wm. Fitzherbert, and also the narrative of a visit paid by the editor of the local newspaper, which we published, because it came from an independent source. It also contained a memorandum to the effect that we had been deceived by the vendors, and that we had entered a claim for heavy damages. The matter is now before the law courts, and I must not comment upon it. We are advised by our solicitors that we are right, and

WE MEAN TO FIGHT.

We say we have been very badly treated, and I might use a much stronger term. The 1,500 tons were stated by the vendors to be at the pit's mouth, and but for that statement we should never have entered into a contract for delivering 2,000 tons in our first year. We had a letter to that effect, written by the representatives of the vendors, and it was laid before the Messrs. Cookson at the office of the solicitors.

A FORTUNATE TELEGRAM.

I prevented, by a timely telegram, the balance of the purchase-money being paid. (Cheers.) We are claiming 8,000*l.* and unliquidated damages for breach of contract.

Mr. WAYLIN: How is it that the freightage is as much as 741*l.*?

The CHAIRMAN: We have had to get home everything by mail steamer, which costs 22s. a ton. The sum you have named includes 7s. 6d. cost from the Endeavour Inlet to Wellington, and on the arrival of the ore here we have to pay another 3s. 4d. for its conveyance under the contract to Newcastle. These figures together will make up the sum you are speaking off.

Mr. WAYLIN: May we be satisfied that the 2,000 tons will be delivered to Messrs. Cookson this year?

The CHAIRMAN here referred to a map on the wall showing where the former company had worked and where the manager had tapped the lode in two places below. They were, he said, working three lodes instead of one, and the resident director said that this output could be made.

CASH RATHER THAN SHARES.

Mr. EDGAR GREEN said he preferred that the gold mine should be sold for cash rather than shares.

The CHAIRMAN: We shall get as much money as we can.

In reply to Capt. Stern,

The CHAIRMAN said that practically they had only had possession of the mine for about seven months; whereas, they should have got it three months before. Under the articles, the directors appointed the managing director in New Zealand.

Mr. NAIDLEY thought the discussion had been useful, and that the position of the company was satisfactory.

The report was then unanimously adopted.

DIRECTORS RE-ELECTED.

Sir CHAS. CLIFFORD proposed the re-election of Sir Walter Buller and Sir John Stokes. Those who had heard the chairman to-day must know that he was master of the situation, and those who saw him in the office would be equally convinced that he brought to bear upon the company's affairs a clear intellect and good judgment. He need not descant upon the merits of Sir John Stokes to undertake the duties of a director.

Mr. BIRNSTINGL seconded the motion, which was carried.

Sir JOHN STOKES returned thanks, and said that the directors would not fail to work as hard in the interests of the company in the future as they had done in the past.

Mr. JOHN A'DEEN moved "That the directors are hereby authorised to dispose of the company's interest in the 30 acres of gold quartz reef, situate at Jackson's Head, on such terms as they may think fit, and to accept payment there for, in cash, shares or debentures, in such proportions as they may be able to arrange; that the directors be and they are hereby authorised to divide such cash, shares or debentures, when received, among the shareholders, pro rata, according to their holdings in the company."

Mr. REDMAYNE seconded the motion, and it was carried unanimously.

Mr. BIRNSTINGL suggested a plan of dealing with the gold property, of which he had given notice in a circular, but meeting with no support, it was dropped.

Mr. BIRNSTINGL moved "That the payments made by the directors for brokerage or commission on placing shares, amounting to 2,083*l.* 2s. 6d., and included in the item in the accounts of 3,610*l.* 15s. 10d. for preliminary expenses, be, and they are hereby, approved and adopted.

The motion was seconded, and carried unanimously.

Mr. BIRNSTINGL moved the re-election of the auditors, Messrs. Whinney, Hurlball and Co.

Mr. NAIDLEY seconded the motion, which was carried.

The same gentleman also proposed the cordial vote of thanks to the chairman, which concluded the proceedings.

THE PACHUCA SILVER MINING CO.

SATISFACTORY STATEMENTS BY THE CHAIRMAN AND MR. BAWDEN.

THE first general meeting of the Pachuca Silver Mining Company Limited, was held at the Grand Hotel, Sunderland, on the 10th inst Mr. John Robertson (director) in the chair.

The CHAIRMAN stated that the whole of the capital which the directors intend to allot at present has been subscribed for, with the exception of about 1,000 shares, which the directors themselves guaranteed. It was thought, however, that it would be fairer to give each shareholder an opportnnity of subscribing to the small balance before the directors appropriated them, and a circular to this effect has been forwarded to the shareholders. The engineer, Mr. Bawden, was present, and stated that he would leave this country before the end of the month, with all the appliances necessary to take from England, and that within 10 weeks of his arrival in Mexico he expected to be on to the mineral. He also stated that the immediately neighbouring mines, Santa Gertrudis, whose lodes are also in the company's property, had recently declared a month's dividend of $1,400 for shares, the original cost of which was $7 to $10 each. The meeting was well attended. There are now no more shares available for the outside public, unless a considerable premium be given for them.

The meeting closed in the usual way.

NACUPAI GOLD MINING CO., LIMITED.

PROSPECT OF SHAREHOLDERS GETTING A PORTION OF THEIR SHARES IN VENEZUELAN-AUSTIN COMPANY—TWO AND A-HALF YEARS' WORK, AND VERY LITTLE RESULT TO SHOW—LITIGATION AND LIQUIDATION.

THE PRESS.

A MEETING of this company was held on Monday at Winchester House, under the presidency of Mr. H. J. Leslie, the liquidator.

A discussion, first of all, arose as to whether the Press should be allowed to remain to report the proceedings—the liquidator himself inclining to the view that they should not. Speeches on both sides were delivered, and ultimately, on a vote being taken, reporters were asked to remain by eight votes against five.

PAST FACTS.

The CHAIRMAN : I do not want a prolix, but I shall be bound to a certain extent to go over old ground before I can make the present position of affairs clear to your mind. You will remember that the resolntions for the liquidation of this company were passed some considerable time ago. Our last meeting was held on the 28th of June, 1887, and I then told you it would appear that on the face of the resolution under which I was appointed liquidator, that my duties were simple, and would be very short. They, in fact, consisted of nothing, it was said, but signing the necessary papers to convey the property of the Nacupai Company to the Venezuelan-Austin Company for a consideratiou of shares—which shares I had to divide between the shareholders of the Nacupai Company. That appears, on the face of it, to be a very simple and easy duty, and one which need not occupy all this time, and I can quite understand shareholders feeling somewhat annoyed that at the present moment they have not one of their shares; but, as I told you at the former meeting, threats of litigation came thick and fast iu the early days of the liquidation, and after considerable trouble, by a systeu of "prodding up," I managed to get the liquidation, which was threatened, launched by Messrs. Holland, Son, and Coward, who sought to obtain a large number of shares in favour of a certain number of clients of theirs, and an action was commenced by Messrs. Zuccani aud others to recover various shares in the company, aud practically to

UPSET THE WHOLE SCHEME OF LIQUIDATION.

I told you, aud it is stated in the printed reports of the last meeting, how far things had progressed to June, 1887. Since then comparatively little has been done. A vast amount of time has been spent in doing very little, for this reason, that every possible delay that could be devised has been carried out in connection with this litigation. Every means that could be invented and thought of to prevent us from getting into Court has been used, but everything must come to an eud, and we got into Court, and, very much to our surprise aud our disgust, we received

A JUDGMENT AGAINST US,

as you doubtless know. We got a judgment which did not suit us at all, and which equally did not suit the plaintiffs. They got a judgment thcy did not expect, because it involved their paying a large sum into Court, and taking shares which then did not look like a profitable investment. The date of the judgment was August 9th, 1888. To give you some idea of how difficult it is to deal with people who have a desire to protract litigation, I may tell you the order of that judgment is not drawn up yet. I have been working away at the plaintiffs' solicitors ever since, and have only within the last three days got the minutes of the order settled, but the order itself is not yet passed and entered, because the judge did not mention exactly what date they would have to pay the money into Court, aud, therefore, we are before the registrar ou that point. With that exception the litigation is closed, and now the question comes how far I ought tell you anything further, having regard to my knowledge that what I am saying will be published. I may tell you that the judgment of Mr. Justice Kekewich amouuts to this, that you cannot wind up a company at all.

YOU CAN BURY, BUT NOT KILL A COMPANY.

He says you cannot kill a company, but you may bury it. People may allow notices and liquidations to come and go, but if you wind up a company 10 times ovcr, anyone who has the shred of a claim cau go and rake up the whole lot, and still enforce that claim. That is this judge's decision. There is uo case known, or statute known, which will uphold that dccision. I venture to say, without the slightest fear of coutradiction from anyone who has taken the trouble to read that judgment, that

IT WILL NOT STAND FOR FIVE MINUTES IN THE COURT OF APPEAL.

(Cheers.) It amounts to this, that an exccutor is in a better position than a testator ; that a thing a man could not do in his lifetime his executors can do when he is dead. The effect of the judgment is this, that you can never wind up a company. Mr. Nicholls absolutely dissolved Nacupai No. 1, as we kuow, and I had nothing to do with it. I said, and I believe rightly, that if Mr. Zuccani aud other gentlemen had any right at all in the shares in this company, they waived that right by not coming into Nacupai No. 2. They had notice of everything, and knew all about it, and one or two of them took shares in the Venezuelan-Austin Company, which was formed for the purpose of buying the assets from me, and yet after that they come up and say, "We have some sort of a claim upon those assets." With the one hand they do one thing, and with the other the opposite. One thing is quite certain, that if this judgment is to be upheld, then a resolution to liquidate a company will be impossible, because you can never get to the end of it, and there will be no

SUCH THING AS ABSOLUTELY KILLING A COMPANY,

which the Joint Stock Companies Act say can be done. Finding myself in this position, I said : If the plaintiffs in this action have a real claim, as they allege, why should not a great number of other persons have the same claim, and if so, it is impossible for me to say what proportion of shares, out of the lot I have to distribute amongst you, I should give to each person. I cannot sit down and make such a calculation when I do not know what amount of ground I have to cover. The result has been this : I have been injuncted against parting with any of these shares, and all I could do was what I did a short time since—consult some of the largest shareholders in this company. I went into matters very fully with them, and we came to this couclusion, that the best thing to do would be to

GET THE LEAVE OF THE COURT TO DISTRIBUTE A PORTION OF THE SHARES.

I went at once to the Court for this purpose, and was barred each time, by the fact that the Court had notice of liquidation in respect of which the minutes had not been drawn up. The chief clerk said : "How can I assent when you have a judgment against you made last August, and when no minutes have been drawn up?" We now have the minutes drawn up, and to-morrow I have a summons coming before the chief clerk for leave to distribute at any rate three-fourths of the shares. I estimate that that would be enough. I think more likely the chief clerk will give me leave to distribute one-half, and should that be done the notices can be sent out the same evening.

AN APPEAL.

With regard to this litigation I am strongly of opinion that the shareholders will be doing a wrong thing if they allow it to stay where it is. The instant these minutes are settled and a day appointed for the payment of this sum of money into Court, I propose to give notice of appeal, and I ask the shareholders to support me by passing a resolution expressing their approval of such a step. I do not propose to give you all the exact details as to the affidavits, aud various statements made in this case, because they will have to be used again, and I do not want to show our hands completely ; but I have told you simply and plainly the position of the case. I have found this liquidation, instead of being easy, one of the most exacting I have had ever to do with. It has wanted constant attention, and yet

I HAVE LITTLE OR NOTHING TO SHOW FOR MY WORK,

unless, indeed, it be the yards of paper that there are about this litigation, and which represent something like two and a-half years' work. I, however, do not propose to leave it until I have settled it, and I am advised by eminent counsel that this judgment cannot stand, and that when it gets to the Court of Appeal it will fall, and fall of necessity. I propose, therefore, to let you know the results of the application to-morrow. And when I get leave to-morrow I shall make the distribution. All I shall do to-day is to ask you to pass a resolution that you approve of the course of action I have taken with reference to the litigation, and approve my decision to appeal against this judgment. (Hear, hear.)

Mr. VAN RAALTE : I think Mr. Leslie has put before us the exact position of affairs, and I entirely endorse what he says. Everybody had a chance to come into the new company by paying their money, and those who did not are now trying to come iu, because they find the shares arc improving in value. I am not a judge, but I have a little commou sense. and I think you cannot give one man the favour and another uot. Hence my opinion is that this judgment will be reversed on appeal. I move a resolution, as indicated by the chairman.

Mr. Conder rose to speak, but was reminded that he was not a shareholder—in fact, one of the defendants of the action.

Mr. CONDER : I have made every effort to get on the list, but have never had a chance. I have a thousand pounds interest iu this company.

VIEWS OF A SOLICITOR.

Mr. LINDO, speaking on behalf of shareholders representing a large number of shares, something like 4,000 : I beg to second Mr. Van Raalte's resolution. I appear for shareholders resident in France, and have been a good deal connected with the company. This was a company which planned and carried out a re-construction scheme, a part of which was an exchange of shares—that is that a certain number of shares were to be delivered to old shareholders as fully paid up to the extent of 15s., leaving a liability of 5s. The question originally arose as to what should be done with regard to those shares which were held as a mortgage security by the plaintiff in the recent case of Zuccani against the company, and acting at that time for the company. I took the opinion of Mr. Rigby, Q.C., who advised me, in the first instance, that a notice should be given to the parties claiming in respect of Zuccani shares, and that at the expiration of the first uotice, a second notice should be given that unless they came iu within a month those shares would be absolutely forfeited. Those two notices were giveu, and no attention was given them by Mr. Zuccani. (No.)

The CHAIRMAN : That is quite right.

JUDGMENT TO BE REVERSED.

Mr. LINDO : We had before us a re-construction scheme, into which the greater portion of the shareholders fell, and a certain number declined. Mr. Leslie has told us the result of this unfortunate litigation, but I agree with him that on appeal the decision mentioned will be reversed. I have no hesitation on behalf of the gentlemen I represent in seconding this resolution, which ought to be passed, because it will enable the liquidator to settle a matter of great importance to this company, and also to others. It will show us on what terms we can re-construct a company. It is hard that

the shareholders should not have had their shares before, but it seems to me that the judgment of Mr. Justice Kekewich only affects at present a certain number of shares which might, under certain circumstances, be ordered to be retained by him, or allotted to the plaintiff or his nominees. The remainder of the shares might be divided, and I think that point would be best. If that be done I think we shall soon have a satisfactory circular from the liquidator, who, up to the present time, could not have acted differently from what he has done.

THE OTHER SIDE TOLD.

Mr. CONDER: You have heard one side of the story, and I should like to give you the other. I am one of those who found the money to purchase the original property that the Venezuelan-Austin Company now possesses. I paid 1,025*l*., and I have not received one iota in the shape of paper or anything else. I utterly deny that I have not tried to get it. My solicitor for three years has been trying to get these shares. I have made several applications, but have never succeeded, and have even offered to give the directors an indemnity if they would make the necessary allotment, but they would not accept it. I was ready to pay my 3s., but I could not get my shares.

A SHAREHOLDER: Did you offer to pay the call?

Mr. CONDER: Yes, if I could have got the shares, over and over again. I understand the judgment of Justice Kekewich to be this. Nacupai No. 1 sold the property to Nacupai No. 2. Nacupai No. 2 took over from No. 1 its responsibility, and when it sold its property to the Venezuelan-Austin Company it took over the same liability. The position in which I stand is that

I HAVE PAID MY MONEY FOR SOMETHING AND RECEIVED NOTHING,

and I am willing to pay my proportion of 3s. per share if they will give me my shares. I was present in Court when the Judge said:—"These gentlemen have paid for something, and they have a right to have something." I do not see why I am to be done out of my thousand pounds simply because somebody says, "Oh, you did not adhere to the instructions. You never gave me the opportunity.

Mr. ZUCCANI said he was present to represent his father, whose proxy he held.

The CHAIRMAN said he was not a shareholder, and therefore could not hold a proxy.

AN ALARMING STATEMENT.

Mr. ZUCCANI: I think, in fairness to the meeting, you will hear what I have to say, as my father's name has been mentioned. The liquidator has stated that every obstacle has been put in the way to prevent this litigation going through, but I beg to say, as a member of their firm, that that is incorrect. This property was sold with a defective title, and however you deal with it you have to face the great original fact that the title is defective, and always will be.

Mr. KLENCK remarked that the sooner the liquidator distributed some of the shares the better. He thought a compromise would be so much better than to go on extending the litigation. At the same time he was of opinion that the legal judgment had been obtained by a fluke.

NO COMPROMISE.

The CHAIRMAN: I do not think this is a case for any compromise. We are either right or wrong. With regard to the observations of Mr. Conder—things are not as he states. In May, 1885, at the time Mr. Nicholls was liquidator of Nacupai No. 1, he had to call a meeting to pass the sale of the whole affair to Nacupai No. 2. The condition was that certain preferred shares were to be issued, and certain deferred shares issued credited with 17s. paid, leaving a liability of 3s.

The resolutions were passed in accordance with the 161st section, which provides for the sale of the assets of the company for a consideration of shares, and which goes on to define the position of the shareholders. Mr. Conder might have done one of two things—he might have got his name on the register of Nacupai No. 1, which he did not do, or he might have made the liquidator deal with him in respect of his claims if he had chosen, but he did not choose, and now the judge says, as I understand it, that section 161 of the Companies Act is practically a dead letter.

The CHAIRMAN then put the resolution, which was carried.

On the motion of Mr. VAN RAALTE, the meeting closed with a vote of thanks to Mr. Leslie for presiding.

THE BATTERY REEF GOLD MINING CO., LIMITED.

TWO YEARS' ORE ON HAND—PROSPECTUS STATEMENTS MORE THAN REALISED—ACTIVE OPERATIONS AND CAREFUL MANAGEMENT.

THE statutory general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Monday—H. E. M. Davies, Esq., chairman of the company, in the chair.

Mr. CHARLES S. FAHEY (secretary) read the notice calling the meeting.

PROSPECTUS MORE THAN CONFIRMED.

The CHAIRMAN: This is merely a formal meeting, called in compliance with the 62nd section of the Act, which requires that a company shall call its shareholders together within four months of the date of registration. We have, therefore, no reports to lay before you, nor any business formally to transact; but as a good many shareholders have come on the register since we started, I propose to offer a few remarks which may be acceptable to you. Our company was registered exactly this day four months ago. The prospectus was issued on the 18th of June, and the shares were allotted on the 2nd of October, to 94 shareholders. We have at the present time about 200 shareholders. The prospectus, inviting applications, with the report of the consulting engineer, Mr. Tarbutt, gave a history of the property up to the latest date that it could do at that time, and the reports of Mr. W. A. B. Anderson have been published in the mining papers as they have come to hand—bringing the history of the mine up to as late a date as possible. Probably, many of the shareholders have not taken the trouble to read those reports, so I will briefly refer to them for the benefit of those who have not done so. In regard to the original prospectus—the encouraging statements made therein, I am pleased to say, have been most thoroughly substantiated in the working of the mine itself, and in the reports of Mr. Anderson, which have come to hand from time to time.

NATURE OF THE PROPERTY.

The property acquired by the company was the eastern portion of Luipaards Vlei estate, through which run several well known reefs of the district. To the north is the Bothas reef running right through the estate, and to the south the Battery reef, which also runs through the mining portion of the property acquired by our company. There are also intervening reefs, including Africander, Kelly's, and other reefs, not christened up to the present time. Work has only been commenced at Bothas reef and Battery reef. Two prospecting shafts have been sunk in the former, each of a depth of 60 ft., and there we have stopped, because we found the

BATTERY REEF TO THE SOUTH A GOOD DEAL RICHER.

As regards the Battery reef—that is the reef upon which the real work has been done, and experience has shown us that we have enough ore here to supply the mill. As to the work done on the Battery reef—I may tell you that the reef is situated on the ridge of the hill which runs down to the stream that supplies us with water. The reef there was stripped from the hill to the water for about 150 yds. in open adit, and from that point an adit level was driven on the line of reef right through the hill. It has now been driven from No. 1 shaft 301 ft., or about 450 ft. in all. Besides this we started a No. 1 shaft on the incline of the reef from the adit level, which is now down to 200 ft. Further on we started a second shaft which is down 179 ft.

2 YEARS' ORE READY.

Between these shafts we are driving levels 100 ft. deep from the adit level, and at the 200 ft. also, and I think we may safely say, at the present moment, we have ore opened up to keep our battery in full work for the next two years to come. (Cheers.) In addition to these we started a vertical main shaft to cut the Battery reef in depth. Mr. Tarbutt, our engineer, estimates that we shall cut that reef at about 400 ft. We have also started on the eastern portion of the property another incline shaft which is down about 45 ft. It is proposed to sink this shaft on the underlie of the reef to the same depth as Nos. 1 and 2—this is to the depth of 200 ft., and then connect the shaft under the river or stream with the two other shafts. Mr. Anderson reports that No. 3 is showing richer every yard driven. We cannot say much, however, because we are not deep enough. Again, we are starting on the western part of the estate at 1,000 ft. distance from the No. 2 shaft, a fourth incline shaft, but very little work has been done upon that at present. However, I think I may safely say that when our vertical shaft has been sunk deep enough to cut the Battery reef in depth, and the other shaft and levels are sunk and driven when we shall have sufficient ore to last as long as we want in the Battery reef alone. So much for the quantity of the ore; I will now refer to the quality. I daresay some of you will recollect that in the prospectus Mr. C. B. Rudd placed the Battery reef at a yield of 1¼ ozs. to the ton, and that Mr. Tarbutt placed it at 4*l*. 10s. per ton. Subsequent assays of the ore at various depths proved that these gentlemen formed

A VERY SAFE AND MODERATE OPINION.

I will quote from the mining reports that have come to hand since. Our manager reported on the 1st of October:—"Samples, taken after a fault in No. 1 incline at 175 ft., gave 12 ozs. 13 dwts., and in No. 2 shaft, from 15 dwts. to 10 ozs." On the 5th Mr. Anderson reports that "Assays made in No. 1 at 200 ft. gave 8 ozs. 16 dwts. 4 grs., and at No. 2, 3 ozs. 8 dwts. 10 grs. per ton." (Cheers.) I do not suppose that you are going to pass ore like this through the mill; we shall get nothing like those extraordinary results, but the estimate and the reports of Messrs. Tarbutt and Rudd certainly are justified by the later facts. You are aware that there are several other reefs upon the property, but at present we know very little about them. We fully expect that in sinking the vertical shaft we shall cut other reefs not showing upon the surface; indeed, I may say we have already cut one on No. 1 shaft, when we were cross-cutting to create a pumping station about 100 ft. down. It has been the experience of some of the principal Randt companies that the richer reefs have not shown on the surface, but have been good in depth, and we trust to find these reefs upon our property also. Mr. Rhodes, managing director of the Goldfields of South Africa, says that the Battery reef is no other than the now famous Champion reef, and in this opinion he is supported by Mr. Tarbutt, who has most carefully gone over this and the other reefs of the district. I may say that a cross-cut has been driven in depth on our property to intersect these reefs, but it has only just been started, and I would rather not say more about it until I have something more to lay before you.

POLICY OF DIRECTORS.

As to our policy, it has been to open up a real mine and place it in such a position that when we once start crushing we shall have no trouble, but that our supplies shall be well ahead of our wants. We have constructed a dam capable of holding 10,000,000 gals. of water, so that we can reckon on having no trouble in regard to the shortness of the supply of water. We have also, on the advice of Mr. Anderson, purchased a large quantity of coal during the summer months at a comparatively cheap price, so that our fuel supplies will be safe. Our manager's house is built; our Kaffir houses are constructed, and a 10-stamp battery is now, if not already erected, in course of erection. It has double discharging boxes and all the latest improvements. I am sorry to say we had a serious delay in shipping our boilers and engines, and but for this our mill would have been at work now.

CRUSHING.

The latest letters lead us to believe that we shall start crushing by at least the end of next month. The mine at the present time is in good working order. We have plentiful supplies, and the only question is what they will yield in the mill. We know the working expenses should not exceed 1*l*. per ton, and if the ore in actual crushing should yield, as I think we are justified in expecting, anything like 1½ ozs. to the ton, we shall have a very fine prospect before us. I can only say, in conclusion, that I shall be very pleased to answer any question shareholders may wish to put. (Cheers.)

THANKS.

Mr. HUNT: I have great pleasure in proposing a vote of thanks to

the chairman for the gratifying statement he has made to us, and for the agreeable way in which he has made it. We know more about our property than most companies do at the end of their first four months' existence. (Hear, hear.)

Mr. NORMAN seconded the motion, which was carried unanimously.

The CHAIRMAN: I am much obliged to you for the manner in which you have moved this vote of thanks, but I think my co-directors should have been included in it. I can only say that information as we receive it will be passed on to you as rapidly as the machinery of the office will allow. I should like to propose a vote of thanks to Mr. McWilliams, our energetic manager, who discovered the Battery reef, and who has worked hard and conscientiously at it ever since. He has been very well supported by Mr. Anderson, the managing director. Mr. Anderson fulfils his duty in every way, and keeps us informed of all that is going on.

Mr. TARBUTT: As I am personally acquainted with Mr. McWilliams, I should like to second the motion, and take the opportunity of saying that he is one of the hardest working miners I ever met, and that he has the interest of this company fully at heart. I do not think we can be in better hands than his.

The motion was carried, and

The meeting was then brought to a close.

Mr. C. D. Rudd reports the cutting of a new leader to the south of Bothas' reef, on the north-western corner of the Battery Reef Company's property, which assays 2½ ozs. per ton, at the depth of 80 ft. from the surface.

THE SONORA SILVER MINING CO., LIMITED

(IN LIQUIDATION.)

PROGRESS TOWARDS RE-CONSTRUCTION—FIRST LIABILITY THREE HALF-PENCE A SHARE—POSITION OF SUBSCRIBERS.

AN extraordinary general meeting of the company was held at Winchester House, Old Broad Street, on Wednesday, when the subjoined resolution, which was passed at the extraordinary general meeting of the company, held on the 31st December, 1888, was submitted for confirmation as a special resolution :—

"That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the Sonora Silver Mining Company, Limited, of the other part, be, and the same is hereby approved, and that the said liquidator be, and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such company, when incorporated, in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he may think expedient."

Allen H. Stoneham, Esq., liquidator.

In a circular signed by the secretary, Mr. Charles Goodyear, and dated January 4th, it was stated :—"It is intended to proceed without delay with the scheme of re-construction as explained by the chairman. Under this date you will receive from the liquidator a notice convening an extraordinary general meeting of the company, to be held at Winchester House, Old Broad Street, London, on Wednesday, the 16th inst., at 12 o'clock at noon, for the purpose of confirming as a special resolution the resolution numbered 4 on the notice of December 19th last. Although this meeting is formally for the purpose named, the directors trust you will attend."

The CHAIRMAN: This agreement seems to be fair and favourable to the re-construction of the company, and you will see the resolution says, "with such modifications as may be deemed expedient." It very often happens that when matters are discussed it is very inconvenient if shareholders find themselves tied down to a hard and fast line, and it is very difficult to get through it; therefore, the clause about modification is a very wise stipulation to put in. Of course you understand that I, as liquidator, shall have nothing to do with the agreement till the new company is formed, and the shareholders, having adopted the agreement, it is for it to be confirmed in the first instance, and then we shall be bound to carry these provisions. As it is drawn up with the express intention that the new company shall adopt it, I do not think there is any reason why it should not be adopted. If it is your pleasure that this resolution be passed, one of the shareholders will propose it.

Mr. DOYLE proposed the resolution as above.

DISCUSSION.

Mr. SERLE seconded the motion.

A SHAREHOLDER asked whether it was not unusual to give a liquidator such large powers to modify an agreement?

The CHAIRMAN said it was quite in order, and no material change would be made without the consent of the shareholders.

Mr. HARRISON: I am the largest shareholder, holding 30,000 shares, and I am perfectly satisfied.

Mr. MATHIESON: Could no understanding be come to between the liquidator and shareholders by which any shareholder of the present company who subscribes for 10 per cent. of what he would be entitled to in the new company would be permitted, after the report has been issued, to subscribe for the balance. I hold 1,500 shares. If I subscribe for the whole of my shares, and the report is not favourable, I shall be obliged to pay up the whole 1s. 6d.

PRECISE POSITION.

Mr. DOYLE: As one of the directors of the old company, and one of the new directors under the re-construction, to act until the statutory meeting, I may say it is proposed to register a company with a capital of 460,000*l.* in ordinary shares, and to make a call of 2d., which will bring in 2,500*l.* The directors will not expend any of that money in paying the old company's debts; but, in obtaining a report upon the property, as to whether it is worth while proceeding, if we cannot come to an arrangement about the matter, and if we find the property is not worth our attention, we shall return the balance, and we do not anticipate that in any case we shall spend more than

THREE HALF-PENCE PER SHARE.

The liability of the shareholders cannot possibly exceed the latter sum. (Laughter.) If it is decided to go on, a reasonable time will be given to every one in which to pay the remaining calls, all of which may possibly not be required.

The meeting closed with a vote of thanks to the liquidator for presiding.

BRITISH BROKEN HILL PROPRIETARY CO., LIMITED.

10th January.—I am instructed by the board to forward for your information the accompanying copy of a report on the company's mine, just received from Melbourne, and prepared by Mr. W. H. Patton, the manager to the Broken Hill Proprietary Company, Limited (the parent company), and consulting mining engineer to this company. Mr. Patton is recognised in the Colony as the highest authority on the Barrier Range Mining District, and on the working of silver-lead ores generally; and it must be gratifying to the proprietors to learn the very decided and favourable opinion which he has formed as to the value of their mine.—DOUGLAS PETRIE, Secretary.

14th November.—Commencing at the south end of block 15 I find in shaft No. 3, to a depth of 108 ft., carbonate ores assaying 6 ozs. silver and 22 per cent. lead; this grade of ore would not pay to work under our present conditions. At a depth of 108 ft. the ore shows improvement to bottom of shaft, a distance of 123 ft., the average value being 19 ozs. silver and 29 per cent. lead. On the 124-ft. level the vein was shown to be 37 ft. wide; on the 224-ft. level it is shown in the west cross-cut to be 88 ft., averaging 24 ozs. silver and 30 per cent. lead. The north drift shows the carbonate ore to extend 80 ft., averaging 21 ozs. silver and 30 per cent. lead; the drift to the south-west, 75 ft., is showing same quality of ore, and there is no doubt of its being the same ore found in block 14 adjoining your southern boundary line. These data give us 207,000 tons of carbonate ore in sight in this portion of the mine above the 224-ft. level, assaying 22 ozs. silver and 30 per cent. lead per ton, from which deducting 30 per cent. for mullock would leave nett 145,000 tons. The developments in shaft No. 1 show the existence of an immense lode of payable galena ore underlying the carbonates, which at this time shows a width of 120 ft., and the hanging wall is not yet reached. The west cross-cut shows evidence of being on the top of this development, and its full value cannot be ascertained until the shaft reaches the next (312 ft.) level. There is no reasonable doubt, however, but that this is the same galena vein struck in block 14 main shaft and the Patterson shaft of the Proprietary Company, and that it will prove to be the main lode of the country in its original condition of sulphide of lead carrying silver, the carbonate ores as found above water-level being the result of its decomposition or oxidation by surface influences. The lower workings in shaft No. 2 indicate that they are getting below the influence of surface disturbances, and that valuable developments may be expected in the northern explorations and in depth. The workings in shafts Nos. 4 and 5 show a mineralisation of the ground, but, as yet, no payable ore. Shaft No. 6 has evidently cut the same vein of carbonate ore that has been developed in the Junction and New North Mines, the character of the ore and the strike of the vein being the same. This is a very important development, and being so near your northern boundary line would indicate the existence of ore in that portion of your ground between shafts No. 2 and No. 6 (a distance of 2,500 ft.) which is now unexplored.

FUTURE WORKINGS.

The results of very full and complete consultations between Mr. Eyre, your manager, and myself have been to decide on the following suggestions being made to the board of directors as a plan for the future workings of the mine :—1st. To continue sinking the main working shaft, No. 1, as fast as the water will permit to the next level, and open out that level with the view of connecting with shafts No. 3 and No. 2. 2nd. To sink shafts No. 3 and No. 2, 100 ft. to the next level. 3rd. To continue the north drift in the 188-ft. level of shaft No. 2, following the supposed footwall as far as practicable, cross-cutting to the east and west at intervals of about 100 ft. 4th. To locate and sink a three compartment shaft at some point between shafts No. 2 and No. 6 as a main working shaft for Block 16. This point will be determined on from information which will be obtained in running the north drift from shaft No. 2, as mentioned above. 5th. To open out the 184-ft. level of shaft No. 6 to the north and south, and cross-cut at intervals of about 100 ft., eventually connecting with the Junction and New North workings for ventilation; also to open out the 100-ft. level for ventilation and to facilitate the workings in the 184-ft. level; also to sink shaft No. 6 100 ft. to next level as fast as water will permit.

CONCLUSION.

I wish to congratulate you on the marked improvement that has taken place in the mine during the last month, during which time there has been developed at least 145,000 tons of payable ore on the 224-ft. level, near shaft No. 3, and an undetermined (as yet) quantity of a high grade carbonate ore, on the 184-ft. level of shaft No. 6, which will, no doubt, prove to be an immense lode of payable galena (sulphide of lead) ore in depth. I also wish to draw your attention to the fact that your deepest work is but little over 200 ft. from the surface, and that every portion of your mine that is open shows a marked improvement in depth, and that practically two-thirds of your ground is, as yet, unexplored to that moderate depth. I wish also to convey, through you, my thanks to Mr. Thomas Eyre, your manager, for the kindness and courtesy extended to me during our joint labours on and about your property.—W. H. PATTON, Consulting Engineer.

HOLLOWAY'S PILLS.—The Great Need.—The blood is the life, and on its purity our health as well as our existence depends. These Pills thoroughly cleanse the vital fluid from all contaminations, and by that means strengthen and invigorate the whole system, healthily stimulate sluggish organs, repress over-excited action, and establish order of circulation and secretion throughout every part of the body. The balsamic nature of Holloway's Pills exercises marvellous power in giving tone to debilitated and nervous constitutions. These Pills dislodge all obstructions, both in the bowels and elsewhere, and are, on that account, much sought after for promoting regularity of action in young females and delicate persons who are naturally weak, or have from some cause become so.

BRITISH MINING INTELLIGENCE.

ANDERTON UNITED (16th Jan.)—The shaftmen are engaged putting in stull in the back of the 80-fm. level. This work will occupy three or four days longer, when the stoping of the back will be continued. The lode is 5 ft. wide; worth 8*l*. per fm. The stope in the back of the 70-fm. is worth 12*l*. per fm. In the 50-fm. level west the men are engaged driving by the side of the lode; by so doing, greater speed can be obtained, so as to reach the tin ground gone down below the 30-fm. level. The appearance of the lode as open by rhe side is very promising. We look forward to see a great change in the lode here shortly; the strata is highly charged with mineral. In the 30-fm. level west the cross-course has beeu driven through, proving to be full 12 ft. wide, of a fine description. The drivage is turned south on the west side. The character of the strata is exceedingly favourable for the production of ore. We hope soon to have favourable news to report from this drivage, as any day we may intersect the south lode. The general operations through the miue are going on satisfactorily.—J. GOLDSWORTHY.

BERTHA CONSOLS (9th Jan.)—The lode iu the 40-fm. level east produces 5 tons of copper and mundic per fm.; a short distance behind the end we have a rich lode of mundic and copper, full width not known yet. The several stopes along the back of the 40 are producing their usual quantities of mineral. Cook's stopes below the 30 will produce 10 tons per fm., and a rise in back thereof 7 tons per fm. The lode in the 40 level east of junction on north part is opening profitable ground, from 7 to 8 tons per fm., chiefly copper. West of junction the lode is improving, and has a very promising appearance for a deposit of copper. New engine shaft: The men have completed most of the necessary work previous to lowering the pitwork to the 53. All is working well iu the mine.—T. GREGORY.

BERTHA CONSOLS (16th Jan.)—The part of the lode being carried iu the 40-fm. level east produces 7 tons of mixed ores per fm., there is more lode standing to the south to be taken down at a futurc time. The stopes in back of this level are producing their full quantities of ores, and on the whole looking well. Cook's stopes below the 30 east produce 10 tons per fm., and a rise in back of the same level 6 tons per fm. In the 40-fm. level east of junctiou at thc old engiue shaft the lode has improved for copper, and will now yield 6 tons per fm. of that ore. The great lode below the 30 on the north part produces fairly well for copper and arsenical mundic. We have completed all the work necessary in the new engine shaft preparatory to putting down shaft rods, and fixing the pitwork to the 53-fm. level.—T. GREGORY.

BULLER AND BASSET (15th Jan.) — I rather cxpect that the shaft is full from the bottom to the 84, from the appearances at the last mentioned level. The work, however, will be got on with as fast as circumstances will admit of. Machinery: The machinery is working well throughout. During the week we have changed oue of the steam pipes connecting the boilers at the pumping engine to the horizontal engine used for capstan and winding purposes.—J. H. JAMES.

CWMYSTWYTH (16th Jan.)—I am pleased to inform you that the Comet lode in the end of lhe 15-fm. level west, is somewhat improved from last week's produce, and is now worth 12 cwt. of lead and 1 ton of blende per fm.; the rock is about the same. Owing to a considerable increase in the inflow of water to the winze, under the 15 west on the new lode we have decided to stop the siuking until the lode has been cut at the 30, and the water drained down, when it will be resumed, and a saving will thereby be effected in thc cost of sinking. Rather better progress is made in driving the 30 cross-cut north. There is no change to report from the stope in the back of Michell's level west, as the lode has not been cnt this week. The lode in the stope in the back of Gill's upper level west produces 1½ tons of blende in the fm. In the back of this (15) level, 25 fms. further west, we have started a uew stope, let to two men from the pare out of the winze, at 60s. per fm. The new lode at this point is worth fully 2 tons of good qnality blende in the fm., and there is a small string of lead ore on the north joint. The stope in the back of the 15 east on the Comet lode, produces 5 cwt. of lead and 1½ tons of blende per fm., and the two stopes west of the cross-cut on the same lode are worth respectively 8 cwt. of lead and 1¾ tons of blende iu the fm. The stope in the back of 30 east of the rise is somewhat improved, and for the width of the lode—9 ft.—produces 12 cwt. of lead and 1½ tons of blend per fm. There has beeu no frost to interfere with surface work during the past week, and everything has gone on fully.—J. B. ROWSE, T. ROWSE.

D'ERESBY.—The No. 9 south of the cross-cut north of Gors shaft continues to open out very satisfactorily, and when the ground is so opened as to have room for stoping, it will pay very well. Having regard to the fact that this is iu virgin ground, too much iuportance cannot be attached to it. The No. 9 end south is being driven on the "shale" for the sake of speed. The stope in the No. 1 sump is yielding from 2 to 3 tons of lead per fathom. The lead in the No. 2 sump at No. 8 appears to be thrown into the hanging, and will be found again by cross-cutting in that direction, so the sump itself is not so rich as it was.

DEVON UNITED (10th Jan.)—Willesford's shaft: I am pleased to iuform you that the lode in Willesford's shaft maiutains its exceedingly promising character, and is now 3 ft. wide; worth, for length of shaft, 12 ft., 6 tons of good quality copper ore; about 7 to 8 per cent. per ton. Thc cutting of ground for fixing the air eugine at thc 120-fm. level is progressing satisfactorily. Iu the cross-cnt south at the 60-fm. level west of Watson's shaft the ground is without alteration.—I. RICHARDS.

— The following wire has since been received from the manager:—"Lode in Willesford's, no alteration; 6 tons for length of shaft, 12 ft. —RICHARDS."

EAST BLUE HILLS.—A horse whim has been put to work on the Pink shaft, and the deep adit level east has been cleared, and driving commenced cast on the Pink lode, which has a promising appearance. No change to note in any other part of the mine.

EAST GRASSINGTON.—The following report, dated 9th January, has been received from the manager:—East shaft: In the 47-fm. level west the lodc has been somewhat near order, and more spare for progress, but is again opening out, being to-day 2 ft. wide; its component parts are principally limespar and gossan, with a small leader of lead ore on the south wall; worth 8 cwt. per fm. A stope in back of this level yields 10 cwt. of lead ore per fm. In the intermediate level east of No. 2 sump below Amy's workings thc lode is 2 ft. wide, and worth 12 cwt. of lead ore per fm.; the lode iu the same level west is 2½ ft. wide, yielding 15 cwt. of lead ore per fm. Inthe drivages east and west of No. 3 sump the lode will yield respectively 15 aud 40 cwt. of lead ore per fm. Harris's main engine shaft: This shaft is in a regular course of sinking by a full complemcnt of hands. With the aid of the new engine we hope to reach the 47-fm. level at an early date, and thence proceed with sinking to the 60; afterwards intersecting the lode at the three levels simultaneously. Surface: Notwithstanding the unfavourable weather we have got the new engine to work, and are making good progress with the pumping arrangements. We have weighed off a parcel of pig lead, and commence smelting next week.

ECTON (8th Jan.)—Clayton: In thc cross-cut at the 80 on Chadwick there is no change; there is considerable limespar in the end with spots of copper. I am working the pumps one day a week, which kceps the mine dry. Have done nothing more at either of the places where there is good copper at 110. At Water Bank wc are still cross-cutting the lode at the 45 to find its width; so soon as this is proved we shall drivc north and sonth a winze to sink on the best part of it. The next level, Clayton deep adit, is 33 fms. below our cross-cut, but I do not propose to do anything there at present to find the lodc until we have proved more distinctly where it goes down. The ground is so full of heaves and faults I cannot depend on its preseut conrse being reliable. We have now cross-cut six or seven ft. in thc lode, bnt are not through it. It contains lead blende aud copper worth sending to the dressing floors, but will no yet pay both mining and dressing cost. At Swanslow, in the southwest of our property, some 50 years ago an old miner with his son-in-law worked some copper which out-cropped to surface, from which he is reported to have made sufficient to buy his freehold farm. I have beeu puzzled to find a reason for the work being given up, but imaginc I have it in the fact that in a wet time as two weeks ago, there is a rush of water equal to at least 5,000 gallons per hour. As there were only two men and two girls at work, they could not cope with anything of that sort, and the erection of pumping machinery by them at that date was out of the question. Their shaft does not seem to have been more than 3 fms. or 4 fms. deep, and from it they worked along the course of the ore into the side of the hill. Capt. Williams, who was here sometime afterwards, commenced an adit lower down to drain the water, but left before much was doue, and before the lode was cut. I am now driving to get under the old shaft, and let down the water, and expect to cut the lode in 4 fms. or 5 fms. driving. This will be practically a new mine. —A LUDLAM.

GREAT FORTUNE.—In the winze siuking below the large cutting to the adit level the branches have improved, and are uow valued at 4*l*. 10s. per fm. This winze will open out good stoping ground. The Conqueror branches are valued in the aggregate at 16*l*. per fm., and five tribute pitches at 14*l*. per fm., making the total values this week 34*l*. 10s. per fm.

GAWSTON (8th Jan.)—The lode in the winze sinking below the 105 east is much the same in appearance and value as last reported; the stope in the bottom of the 95 east will yield 10 tons of mundic per fm. The lode in the 95 east is 6 ft. big, principally capel and arsenical mundic, yielding 12 tons per fm. Nos. 1 and 2 stopes in the back of this level will yield 10 and 12 tons of mundic. The stope in the back of the same level east of rise will yield 9 tons of mundic per fm. The stope in the bottom of the 82-fm. level will yield 11 tons of mundic per fm. The stope in bottom of the 70 east will yield 8 tons of mundic per fm.—G. ROWE.

KINGSIDE (16th Jan.)—The sinking of Taylor's shaft below the 22-fm. level is now going on regularly, and fair progress is being madc thercin. In the 11-fm. level driving west of Taylor's shaft, this lodc is of a promising character, and now yields a good mixture of lead orc. The same lode in the winze below the 11-fm. level east of Taylor's shaft is yielding 7 cwts. of lead ore per fm. The south lode being driven upon at this level west of Taylor's shaft is opening out wider, and contains strong spots of lead ore. The new lode at Burrel's level going east of Pengueilan brook is 3½ ft. wide, containing small branches of lead, and showing strong indications for an improvement. Fair progress is beiug made in driving the cross-cut towards this lode from the adit level east of Pengueilan shaft. The weather at present is mild, and all surface works are being pushed onward as fast as possible.—J. B. ROWSE, W. H. PAULL.

LEADHILLS (1st Jau.)—Monthly report.—Brown's vein: Eight men are set to drive the 145 level 58 fms. 3 ft. south of Jeffrey's shaft, at 110s. per fm.; vein 4 ft. wide, showing strong quartz aud ore worth 10 cwt. per fm. Eight to drive the 145 level 6 fms. north of Wilson's shaft, at 100s. per fm.: vein 5 ft. wide, charged with promising quartz and ore worth 40 cwt. per fm. Six to sink winze 1 fm. below the 130 north of Wilson's shaft, at 100s. per fm.; vein 7½ ft. wide, composed of strong quartz and ore worth 20 cwt. per fm., and likely to improve immediately. Four to drive the 13023 fms. 4 ft. north of Jeffrey's shaft, at 100s. per fm.; vein above 4 ft. wide, composed of kindly quartz and stones of ore not to valuc, but it is wet. Four to No. 1 stope above the 130 south of Jeffrey's shaft, at 42s. 6d. per fm.; worth 40 cwt. of ore per fm. Four to No. 2 stope, at 40s. per fm.; worth 40 cwt. of ore per fm. Four to No. 1 stope above thc 130 north of Wilson's shaft, at 33s. 6d. per fm.; worth 45 cwt. of ore per fm. Four to No. 2 stope, at 33s. 6d. per fm.; worth 50 cwt. of ore per fm. Six to stope above the 130 south of Wilson's shaft, at 45s. per fm.; worth 95 cwt. of ore per fm. Four to No. 1 stope abovc the 115 south of Wilson's, at 42s. 6d. per fm.; worth 30 cwt. of ore per fm. Four to No. 2 stope, at 35s. per fm.; worth 25 cwt. of ore per fm. Four to stope above the 100 south of Wilson's shaft, at 60s. per fm.; worth 40 cwt. of ore per fm. Eight to stope above the 85 north of Jeffrey's shaft, at 47s. 6d. per fm.; worth 40 cwt. of ore per fm. Four to stopc above the 35 south of Flat-rod shaft, at 50s. per fm.; worth 50 cwt. of ore per fm. Four to drive above the 20 south of Flat-rod shaft, at 50s. per fm.; worth 30 cwt. of ore per fm. George's Roust vein: Four to drive Gripp's adit 324 fms. north of Muir's cross-cut, at 120s. per fm., and 20s. per ton of ore; qnartz 5 ft. wide with ore, worth about 5 cwt. of ore per fm.—T. NEWBIGGING.

MELLANEAR (16th Jan.)—The south part of the lode iu thc 150-fm. level east of Gundry's engine shaft is 6 ft. wide, yielding stones of copper ore and tinstone of low quality, mixed with a good deal of arsenical mundic, which we cousider a good indication for tin. The lode maintains a very strong appearanee, and is well defined, aud letting out a large strcam of water. The lodc in the 140

east of Gundry's shaft is 3 ft. wide, yielding stones of copper and tin ores, but at present rather disordered. The lode in the 120 east of Gundry's shaft is 6 ft. wide, yielding 2 tons of copper ore per fm. and good stones of tin, and is improving in appearance. The north part of the lode in the 110 west of Gundry's shaft is 5 ft. wide, yielding 2½ tons of copper ore per ton, and the ground is improved for driving. The shaftmen have completed the penthouse at the 150, and are now preparing to change the bottom windbore, which was cracked some time ago in blasting. When this is replaced we shall resume the sinking of the engine shaft. There is no change to notice in the tribute department. All our machinery is in good working order, and the mine is in fork throughout, and there has been no increase in the water underground during the past week.—J. Gilbert.

MID-DEVON (12th Jan.)—Surface: The rainfall this week has been heavy. On Tuesday morning we had a breakage in alignment of rods, and another on Wednesday night. After this we discovered that the axle of water-wheel was broken, necessitating repair for it could be again worked. Couplings have been ordered from foundry for this repair, which I am expecting to be delivered here to-day. After we get them I hope in a few hours to get the wheel again to work. C shaft: The 60 east has been driven by 9 men, 3 ft.; total distance from shaft, 21 fms. 3 ft.; the strata is slightly easier. The capel and garnet not being so compact, apparently it is on the point of changing, and expect more favourable stratas; it yields a little ore. The 50 east: No. 2 stope, 3 stope, and extreme point of drivage, worked on by 6, 6, and 2 men respectively, are worth 9*l*., 13*l*. 10s., and 10*l*. 10s. respectively per cubic fm.—J. Neill.

PHŒNIX UNITED.—The setting report states:—We have at various points throughout the mine 14 pitches at tributes varying from 8s. 6d. to 11s. in the £ for tin.

PRINCE OF WALES.—In the bottom of the shaft the main lode and flat lode have come together, and appear now as one well-defined lode, tinny throughout for the width opened, which is 10 ft. The various other operations underground are proceeding satisfactorily, five points being valued in the aggregate at 12*l*. per fm. A large extent of paying ground is now being laid open. At surface preparations are being made for the erection of a new calciner, dressing floors are being extended, and all other dressing appliances are being rapidly hastened on, so that in the course of a very short time everything will be ready for large monthly returns.

PRINCE ROYAL.—The adit level is being cleared, after which they will at once commence to pump out the water.

ROMAN GRAVELS (17th Jan.)—We have just been all through the underground workings. The stopes throughout the mine are producing ore in quantities quite equal to last week's report. The 135 forebreast south has somewhat improved in value since last week, and it would seem that we are passing over a nice bunch of ore on the footwall side of the drivage. The footwall has not been seen during the last 7 or 8 fms. driving, but will be met with as the end advances. The other forebreasts are just as reported last week.—A. Waters and Son.

SOUTH DARREN (10th Jan.)—The lode in the 142 end east is strong, showing a little lead, but not to value. The same level west is worth 12 cwt. of silver lead ore per fm. The 110 end east is worth 10 cwt. of silver lead ore per fm. The lode in the 100 end west is large; we are cutting into the footwall side to ascertain its full width value. What has been cut down contains good stones of copper and a little lead. Other points are without much change. Drawing and dressing are being pushed on.—J. Mitchell.

SOUTH DARREN (17th Jan.)—The 142 end east is without change. The same level going west is worth 12 cwt. of silver-lead ore per fm. The 110 end east is worth 8 cwt. of silver-lead ore per fm. The stripping of the lode in the 100 west is producing a good mixture, copper with a little lead. On Saturday next we intend to sample 25 tons of silver-lead ore, for sale on the 25th instant.—J. Mitchell.

TREGEMBO (8th Jan.)—Pennick's shaft is 11 fms. 5 ft. below the 30-fm. level. We hope to complete this lift in another month from now or probably before. The 42 east end is worth 5*l*. per fm. The 42 west produces low-price tin stone. The 30 east end is poor, being disordered by a small crossing. No change in the stopes worthy of note. In the 16 north cross-cut nothing has been met with. In the 30 south cross-cut we have met with a small branch 6 ins. wide, producing tinny work, worth by assay 22 lbs. in one ton of stuff. This is worthy of trial some day. At present we shall continue the cross-cut.—T. Hodge.

WEARDALE.—Ore raised for the week, 77 tons: ore dressed for the week, 72 tons; ore, &c., smelted for the week, 124 tons, producing 69 tons of pig lead.

WEARDALE.—Ore raised for week, 67 tons; ore dressed for week, 71 tons; ore, &c., smelted for week, 109 tons, producing 65 tons of pig lead.

WEST CARZISE.—In driving the cross-cut south, and also the 30-fm. level west, cross branches are being met with which the agent considers are good indications as being feeders to the lode, and he is daily expecting to cut a good lode.

WEST GODOLPHIN (7th Jan.)—During the past week the shaft has been sunk 2 ft.; the ground is more spare. No change in the other bargains to report.—T. Hodge.

WEST WHEAL GRENVILLE (8th Jan.)—We are connecting pole, main rod, &c., at the 70-in. engine shaft to-day, and when the water is again drained to the above-named level shall proceed to drop forking lift, when we hope to make fair progress in reaching the 80-fm. level.—T. Hodge, J. Skeat.

WHEAL CREBOR.—The lode in the 200-fm. level continues of the same nature, the small seam of copper ore being of rich quality, and the lode altogether, which is 5 ft. wide, is of a very promising character. The other points are without any material change.

WHEAL METAL AND FLOW.—The Metal lode in the 35-fm. level maintains its promising appearance. The operations in the Flow for the increase of water are being continued, and the supply for dressing purposes is increasing.

WHEAL UNY.—The water is again in fork to the 214-fm. level. The 180-fm. level east is opening very encouragingly, the stuff drawn from it assaying 23 lbs. of tin to the ton. The 190-fm. level east also presents a favourable appearance.

FOREIGN MINING INTELLIGENCE.

ALAMILLOS (9th Jan.)—The lode in the 70 east of San Felipe's shaft is very regular and compact, but not of any actual value. In the 85 west of same the lode yields good stones of ore. A great length of profitable lode was opened up in the past month in the 130 west of Taylor's engine shaft, valued at 1½ tons per fm. The lode in the 115 east of San Victors is more regular than it was, and yields good stones of ore. The lode has further improved in the 70 east of Judd's shaft, present value 1½ tons per fm. The usual quantity of ore was delivered into the sores in the past month, and the stopes are yielding fairly well at present. The works at surface are kept on very regularly, and the machinery is in very good working order. We estimate the raisings for January at 200 tons. The tributers returned 101½ tons of mineral in the past month.

ANTIOQUIA (FRONTINO).—The directors have received advices for the month of October, dated 1st November:—305 tons produced 346½ ozs.; average, 22 6-10th dwts.; value of the gold, 901*l*. 0s. 1d.; cost at the mines, Medellin and in London, less exchange on cost, 487*l*. 15s. 4d.; estimated profit, 413*l*. 4s. 9d.

BALAGHAT MYSORE (24th Dec.)—North engine shaft: The shaft is now down 79 ft. 5 ins. below the 330-ft. level; the lode remains without any change. I intend putting a rock-drill here at the beginning of the year, when I hope to make satisfactory headway. At the 330-ft. level 52 ft. have been driven, making a total distance of 327 ft. 3 ins. from the shaft; the quartz has averaged nearly 1 ft. wide, but of various values, but for about the last 20 ft. we have been in the same channel of ground as the 270 shoot, and the quartz has been of a more uniform size and quality, viz., about 1 ft. wide, and worth from 2½ ozs. to 3½ ozs. of gold per ton. The 270-ft. level north has been driven 3 ft. 6 ins., or 628 ft. 3 ins. from the shaft; the lode is at present poor. The No. 3 winze has been sunk 3 ft. 6 ins., or 16 ft. 6 ins. below the level; the quartz is somewhat smaller, but of about the same value, viz., 2 ozs. of gold per ton. The stopes in the bottom of this level yield quartz of an average of 1 ft. wide, and worth 2¼ ozs. of gold per ton. The No. 2 cross-cut east has been advanced 4 ft. 6 ins., or 47 ft. from the level. About 3 ft. behind the present end we struck a small branch, but not of much value. The machine stopes in the back of the 270-ft. level north produce quartz of 1 ft. wide, and worth 3¼ ozs. of gold per ton. The Moplahs stope, also in the back of this level, yields quartz of about 9 ins. wide, and worth 1½ ozs. of gold per ton. The 165-ft. level north has been extended 7 ft. 6 ins., or 141 ft. from the shaft; the lode is somewhat disordered, and the quartz has been much smaller, and at present is without value. I hope the end will soon again improve. Air shaft: Operations have again been resumed at the winze, in the bottom of the 95-ft. level. I hope, in the course of a little time, to effect the communication with the 165-ft. level at the north engine shaft. Surface: The general work at surface is progressing satisfactorily.—Capt. Pryor.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 10th Nov.: Have raised 130 tons of quartz for the fortnight, which is now being crushed at the company's mill. The contractors have sunk the vertical shaft a further depth of 29 ft., making a total depth from the surface, 609 ft.; they will put in frame and timber up 120 ft. during the next fortnight. All machinery in connection with the mine in good order.

BRATSBERG (7th January.) — Hoffnung mine: No. 2 adit level is yielding about ½ ton per fm. The rise in the back of No. 2 continues to open up a highly productive lode, now worth 2 tons per fm. We have again resumed the cleaning up of the winze in the bottom of No. 2 adit, and as soon as the accumulated stuff and water is hoisted out, which will probably take place in a few days, sinking will be commenced. The lode of No. 3 adit level has been very changeable of late; at present yielding only saving work, but its general appearance is satisfactory. The rise in the back of No. 3 is worth ½ ton per fm. At Ball's shaft the lode in the mid-level is carrying the usual good and regular appearance that has characterised it since the commencement of the development of this point, now worth fully 1 ton per fm. No. 4 level is progressing very well; the lode is somewhat disturbed, but a leader of quartz against the hanging-wall will yield ½ ton per fm., whereas the other part of the very large lode is entirely unproductive. No. 5 level west is worth ½ ton per fm. No. 5 level east is without change. The mid level at Murchison's is producing only saving stuff, but the lode looks very promising. The rise in the shallow workings is worth ¾ ton per fm. It will be observed that at present, as well as for some weeks past, our main levels have fallen off in value; this, however, is doubtless only a temporary change, which we trust will only be for a short time. At all events, owing to the development carried out during the past year, sufficient ground is laid open to enable us to employ miners enough to make a production of 2,000 tons 20 per cent. ore during the current year from this mine. The number of miners now employed here is 82. Johannes Mine: During December the cross-cut was advanced 13.65 metres, making the present end 28.80 metres from the Hoffnung lode, and according to the present rate of driving, we ought to strike the lode by the end of April. Another highly mineralised lode or side-branch has recently been driven through, which again encourages us in our hopes of meeting with something very good when we strike the main lode. At the winze in the shallow workings we have been unfortunate, and progress delayed. In hoisting the bed of the engine the lifting gear snapped, and caused a breakage in the bed. It has, however, been repaired, and the engine is now at work hoisting out the water previous to re-starting the sink again; 10 men still engaged here. Næsmark Mine: Barker's shaft at the end of last month was down 19.20 metres from the adit level. Owing to a considerable increase of water cut in the bottom of the shaft progress in sinking has not been so good as during the past few weeks, being only at the rate of 1 metre per week. By putting on extra hands we have, however, overcome this difficulty, and hope to get at least 1½ metres per week. The lode to-day is not yielding much ore, but as this lode is given to great fluctuations we may meet with good ore at any time. As depth is attained no change has taken place in the character of the ore, and we have no doubt of being able to dress it up to 35 per cent. for copper, and judging from recent assays this ore will further contain from 40 to 50 ozs. silver, and ¾ oz. gold per ton. At present rate of sinking, we expect to get the shaft sufficiently deep to start driving north and south on the lode, and commence stoping operations by next May, and, as soon as possible thereafter, shipment of the ores will follow; four miners and five assistants are employed here. Surface work and remarks: As in latest report stated, the dressing machinery is now undergoing enlargement, and we hope to be able to re-start about the middle of March with its capacity augmented by 50 per cent. All, however, depends on the early arrival of the castings from England,

but, as we are in receipt of an invoice for freight from the English steamship company, we anticipate their arrival shortly. The Constance with 230 tons has been loaded, and we have received bill of lading, dated 3rd January. There now remains at Skien, and en route, about 120 tons, which, if possible to find means, will be shipped forthwith.—J. D. HOLMAN.

BRITISH BROKEN HILL PROPRIETARY.—Report for the week ending 5th December. Main shaft: Sunk 3 ft., and timbered 10 ft.; total depth, 264 ft. Western cross-cut: 212-ft. level driven 14 ft., making total distance from shaft 150 ft. There is a cavern in the end similar to that in the 224-ft. level No. 3 shaft, and beyond it (on the line of the cross-cut) the ore has changed to carbonates, and the silver contents have increased; this is another valuable discovery. No. 2 shaft: 188-ft. level north extended 7 ft., making 144 ft. from cross-cut. Ground getting harder. No. 3 shaft: The 224-ft. level north has been driven 5 ft. in hard silicious galena, with no indication of change; distance from shaft 84 ft. Contract for the same level south abandoned by contractors, and is now being driven by wages men. End now in country rock. No. 6 shaft: South level driven 18 ft. by contractors, making total distance from main cross-cut 100 ft. Galena in the end at present. North level extended 8 ft., 127 ft. from cross-cut. This end is also in galena, the quality of which improves going north. Concentrating plant: Steam stamp erected; steady progress with the other work in hand. Pumping plant: Putting in foundation for the bob, &c.—T. EYRE.

CORTEZ (30th Dec.)—During the past week the work done on the mines has been as follows:—The Boss drift advanced 15 ft.; cut a vein of porphyry containing some quartz of a low grade; face of drift now in porphyry. Main tunnel, west drift, advanced 4½ ft.; have done some work on quartz vein 150 ft. west of turntable. The ledge shows a strong vein of quartz, and is of a very promising appearance. Middle tunnel, east drift, advanced 10½ ft.; no change in the ground since last week. West drift advanced 1 ft.; upraised 8 ft. on quartz vein west of turntable; extracted 9 tons of ore of an average value of $40 per ton. Upper tunnel, west winze: Extracted 12 tons of ore of an average value of $40.00 per ton. Cap's breast: No ore extracted, as work of driving the incline interferes with the extraction of ore. North-east upraise: Ore breast unchanged; extracted 58 tons of ore of an average value of $80.00 per ton. North-west (big porphyry) upraise: Extracted 110 tons of ore of an average value of $150.00 per ton. Ore hauled to mill, 100 tons. Mill was closed down during week to do necessary repairs. Bullion shipped, 15,260 fine ozs. silver.—WELSH.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 24th Nov.: Mr. Thomas, engineer, reports: We have received here the last six settlers, and they are fixed in position. I might state here that the whole of your machinery, less two of the bottom Brown and Stanfield's concentrators, is now fixed in position; those two machines will be fixed during the forthcoming week, so that the whole of the work to be accomplished now is fixing the light connections and the leading shoots for carrying minerals and sands from one machine to the other water connections, etc.

DAY DAWN P.C.—Report of mining manager for the fortnight ending 24th November:—Ladders have been placed from No. 10 level to the sink in underlie shaft No. 1. The number of trucks to the Excelsior mill, 165 for the fortnight; the number of drays to the Defiance mill, 42; estimated quantity, 1,016 tons. The amount of quartz hauled from the shaft aud each level is as follows, viz.:—Shaft, 135; No. 10 level, 364; No. 9 level, 652; No. 8 level, 459; Nos. 6 and 7 levels, 519; No. 5 level, 180; total, 2,309. No. 2 underlie shaft has been continued 5 ft. more, making its present depth 165 ft. No change.

DEVALA-MOYAR (4th Dec.)—Harewood reef: The winze is 10 ft. below the deep tunnel. For the first 6 ft. the lode became flat, but it has again resumed its regular course, with an underlie of 2½ ft. in a fm. In the horse the lode pinched to 1 ft. wide, yielding 2 tons pyrites to the fm. This pinch I regard as only a temporary one. In the tunnel driving west of the pyrites winze, the lode is all the width of the tunnel aud better for free gold but the pyrites has fallen off, the yield being 1 tou pyrites only to the fm. Distance from winze 14 ft. Driving east we have accomplished 16 ft. in; the lode here also is better for free gold, but not for pyrites, the quantity of which is the same as in the west.—J. WILLIAMS.

EAGLEHAWK CONSOLIDATED.—Abstract of reports received from the mine, dated the 1st December:—Since my last report we have cut the plat at the 550-ft. level; size of plat. 12 ft. by 12 ft., and 8 ft. high, and securely timbered the same; this gives us plenty of room both for sinking and driving. At 12 ft. from the west side of the shaft we struck the reef, and cut into it 5 ft., but not through it; there is a good east wall taking its regular course, but no payable gold so far. I shall be able to form a better idea of its value after it has been cut through. The rise in the 450-ft. level north has been continued a further distance of 14 ft. for the fortnight; total, 68 ft. from the back of the drive. No change since my last report.

FORTUNA (9th Jau.)—Canada Incosa: The lode in the 100 driving west of San Pedro's shaft although strong and regular has declined in value in the past fortnight. In the 110 east of Lownde's shaft the lode is small with good stones of ore, and worth ½ ton per fm. The 130 west of O'Shea's engine shaft is now in coutact with the main cross-course, which throws the lode, judging from the upper level, nearly 20 metres south. Los Salidos: A great length was opened up in the past month in the 188 east of Taylor's engine shaft; the lode is rather small at present and produces ¾ ton per fm. A splendid piece of lode was driven through in the past month in the 175 driving in the same direction, valued at 3 tons per fm. In the 160 east of San Miguel shaft the lode is very small, and the granite hard, worth ½ ton per fm. The usual quantity of ore was delivered into the stores in the past month and the stopes are turning out moderately at present. The works at surface are kept on very steadily, and the machinery is in good condition. We estimate the raisings for January at 300 tons. The tributers returned 169¾ tons of mineral in the past month.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines dated 24th November and 8th December. Also a letter from Messrs. Restrepo, dated 12th November. The statement of profit and loss for the month of November is as follows, viz.:—1,055 tons from general mines produced 656 ozs.; tributers' gold, 343 ozs.; total, 999 ozs. Also 1,820 lbs. of sulphurets contaiuing 73 ozs, of bullion. Estimated value of the gold and sulphurets, 2,310*l.* 6s.; cost at the mines, Medellin, and in London, 1,916*l.* 4s. 3d.; paid for gold bought of tributers, 621*l.* 17s.—2,538 1s. 3d. Estimated excess of expenditure, 227*l.* 15s. 3d. The severe drought which has prevailed for so many months still continues, and accounts for the returns being still further reduced, and for there being a loss on the operations on the month. It will be seen that Mr. Hodge refers to having cut the lode in the 285 feet level in Silencio, and he encloses an official assay report, dated 8th December, states as follows:—Sample from rock broken 285 end north: Yield per ton—gold, 7 ozs. 0 dwts. 11 grs.; silver, 4 ozs. 1 dwt. 6 grs.

GOLD ESTATES (TRANSVAAL).—The mining report for the week ending 18th December last states everythiug is going on well. No. 3 on the new reef is still 3 ft. thick, and producing excellent grade ore, and No. 2 on the same reef shows vein wideuing out, and also continues of first-class quality. No. 3 on Button's has considerably improved — in fact during the past week it has been of greater value than any end I have witnessed on the farm. It is now 4 ft. thick, and producing ore that will go at the mill 2 oz. per ton. We have apparently passed through a very rich shoot from the appearance of the surface. I have every confidence of meeting more pockets ahead. All other points same as when last reported. The road is being pushed on with all possible despatch, and the same remark may be applied to the water-race.

GOLDFIELDS OF MYSORE (22nd December).—Fortnightly report.—The usual progress is being made in sinking Bridge shaft, and in driving north and south at 105 ft. In both these ends there are only a few stringers of low grade quartz. The work of cutting down middle shaft between the 108 ft. and the 175-ft. levels is nearly completed. Driving north of middle shaft at 175 ft., there is a good-looking lode worth for the 4 ft. in width carried 1 oz. 8½ dwts. a ton. Driving south at 175 ft., the lode is broken up, and there is nothing to value in the end. Driving north at 108 ft., 1½ ft. in width of the footwall part of the lode is carried in the end; worth by assay 6 dwts. a ton. In the winze below this level 3½ ft. in width of the lode is carried in the bottom; worth by assay 11¾ dwts. a ton. Driving south at 108 ft., the old works are now the full width of the end. Champion lode: Sinking prospect shaft, there is no change to report. Fair speed is being made in sinking. Coromandel shaft: Driving south of this shaft at 150 ft., the lode is about 2 ft. wide, but the quartz is of low quality, being only worth from 1 to 2 dwts. a ton.—W. FRECHEVILLE.

JOSEPHINE.—Extract from superintendent's report for week ending December 22nd:—The main shaft has been sunk 13 ft.; total depth, 460 ft. At 450 ft. we had a considerable swelling in the quartz, but at the bottom it is about 10 to 12 ins. again. I have had four samples assayed by Prof. Price, with the following results:—430 ft. depth, $8.27; 440 ft. depth, $29.03; 448 ft. depth, $16.44; 450 ft. depth, 17.71; or an average of say $17.86 per ton. The 400-ft. level west has been driven 14 ft. in low-grade quartz, about 12 ins. wide.

LINARES (9th Jan.)—Pozo Ancho: The lode in the 155 driving west Warne's shaft is a little larger than it was, producing ½ ton per fm., but only yields occasional stones of ore. In the 155 east of last-named shaft the lode is large and promising, yielding ½ ton per fm., with good stones of ore. The lode is large and regular in the 145 east of San Tomas shaft, but does not contain any ore. Peill's engine shaft sinking below the 155 will be completed to the depth necessary for a 178-fm. level in the present month. The lode is getting very small in No. 264 winze below the 135-fm. level, and is now worth ½ ton per fm. The usual quantity of ore was delivered into the stores in the past month, during which the stopes did not undergo any change of importance. The works at surface are kept on very steadily, and the machinery is in good condition. We estimate the raisings for January at 200 tons. Quinientos: A very great length was driven through in the past month in the 130 east of Taylor's engine shaft; the lode is of a promising appearance, and yields ½ ton per fm. In the 115 west of Taylor's engine shaft the lode is strong and regular, yielding good stones of ore, and worth ½ ton per fm. A splendid piece of lode was driven through in the past month in the 115 east of Taylor's engine shaft, valued at 4 tons in the fm. Compan's winze below the 100-fm. level is being sunk at a good rate in a valuable lode, producing 2 tons per fm. We estimate the raisings for January at 125 tons.

LIVINGSTONE.—Fortnightly report from mine, dated 24th November:—I beg to report that the underlay shaft has been sunk a further distance of 10 ft. for the past fortnight, making the distance 96 ft. from the No. 2 plat. The reef is 1 ft. wide. It appears to be improving in the last breaking down, carrying a good deal more mineral than I have seen before, and the ground is much better for working. Winze: I am stoping and driving with four men from the winze, stoping with two men. On the eastern side the reef here is 8 ins. wide of good-looking stone. I am driving on the western side also with two men. The reef is 15 ins. wide, of fairly good-looking stone. This has been extended 8 ft. for the past fortnight, making it 20 ft. from the winze. Number of trucks sent to mill for past fortnight is 52.—N. MAYNE.

MESQUITAL DEL ORO.—Mine captain's report dated 14th December.—Work done in the mine during the week was as follows:—Acerada level east of Sans shaft: Driven 6 ft.; total, 68 ft. A little improvement during the past week. Sans shaft: Sunk 11 ft.; total, 267 ft. 6 ins. Shaft completed to the 137 level. The 85 level east: Driven 5 ft.; total, 521 ft. 6 ins. A little improvement, but still not worth saving. The 137 level east: Driven 2 ft. 6 ins.; total, 524 ft. 6 ins. Reef looks well, and shows a little free gold. The 137 level east, winze C: Sunk 1 ft. 6 ins.; total, 22 ft. 6 ins. No alteration since my last report. The 190 level east: Driven, 3 ft.; total, 352 ft. The reef still continues to look well, and show free gold. The 256 level east: Driven 4 ft. 6 ins.; total, 199 ft. 6 ins. A little improvement during the past week. The 256 level west: Driven 3 ft.; total, 126 ft. 6 ins. Reef shows good indications for the western ground. San Miguel tunnel: Driven 11 ft.; total, 1,613 ft. 6 ins. Pushing with all possible speed. Stope B, 137 east: Reef still continues on an average ore. The work done during the past week is rather small, owing to the feast days and the miners not working.

MONTE CHRISTO.—The manager's reports of 19th November and 3rd December, arrived together. Since the last report the Monte Christo main shaft has been sunk another 22 ft. making a total depth of 59 ft. from the bottom level where this company commenced sinking. The lode which was broken up had concentrated at a depth of 48 ft. into one small vein of good-looking stone about 4 ins. wide, showing gold, the walls being well defined. Below this it

increased gradually in size to 1 ft. 3 ins. at a depth of 59 ft., but it has not increased in richness. If the stone continues to increase in thickness the manager expects the gold to increase. The eastern drive was driven 28 ft. 4 ins., making a total length of 123 ft. 4 ins.; no change to speak of. The shaft on the new reef (now called the West Monte) was sunk 50 ft.: total depth, 66 ft.; the lode varying from 4 ins. to 1 ft. in width, carrying enough gold to pay working expenses, but the stone not so good in the bottom as 10 ft. higher up. The Endeavour main shaft is cut down and timbered 80 ft.; when completed it will be the best in the Normanby district. The manager purposes soon to set men to trench on the outcropping reef, of which there are a number.

MONTE DEL ORO (5th Jan.) — Fortnightly report. — Taylor's engine shaft: Notwithstanding operations were suspended for about three days owing to the engine failing to keep in fork the enormous quantity of water, yet the 186-ft. level north of the cross-cut has been extended 14 ft. during the fortnight, in a lode composed of quartz and slate intermixed with an average width of nearly 2 ft. From the cross-cut this level has been driven a total length of 144 ft. Last night the men working in this level broke through to an old working which, as far as can now be seen, appears to be a level driven south of shaft No. 6 by the ancients. We have commenced clearing it out, and therefore in a few days I hope to be able to report more fully in regard to it. The driving of the 186-ft. level south of the cross-cut was also interrupted by the great influx of water, but 8 ft. have been driven since last report, making the length of the level now 120½ ft. In addition to driving the men were employed several days blasting out the western part of the lode which at this place is wider than the end. In the cross-cut to the west of the shaft the ground has become harder, and consequently more spare for driving, but a distance of 24½ ft. from the shaft has now been reached. Shaft No. 5: The shaft has been cleaned out to a depth of 101½ ft., and it is satisfactory to note we have passed through the big crush which has so much retarded progress with this work. The run of the lode has also been passed, and the shaft is now firm and good. Winze No. 1: This winze is being sunk by nine men, and for the last fortnight very good progress has been made, 20 ft. being sunk, which makes a total depth of 110 ft. from the bottom of the 76-ft. level; the lode is about 2 ft. wide, and carries a small vein of quartz, scarcely averaging a foot in width. The following are the results, received to-day, of assays, made in London, of seven samples taken from different parts of the mine, viz.:—No. 1 sample from north end assayed 12 dwts. 21 grs. of gold per ton; No. 2 sample from south end assayed 7 dwts. 20 grs. of gold per ton; No. 3 sample from winze No. 1 assayed 6 dwts. 13 grs. of gold per ton; No. 4 sample from stuff, shaft No. 6, assayed 19 dwts. 14 grs. of gold per ton; No. 5 sample from north end assayed 15 dwts. 15 grs. of gold per ton; No. 6 sample from south end assayed 3 dwts. 22 grs. of gold per ton; No. 7 sample from stuff, No. 6 shaft, assayed 1 oz. 3 dwts. 12 dwts. of gold per ton.—J. ROBERTS.

MYSORE WEST.—Report for the fortnight ending 24th December. —Walker's: The 300 cross-cut has been advanced east from this shaft 4 ft. The rock is hard for cutting, but greater progress will be made as soon as we can get in far enough to fix the stretcher bar for supporting the rock-drills. The 225 north: This heading has been advanced 5 ft. 6 ins., making 107 ft. 1 in. from shaft. The reef here is 3 ft. thick, producing 7¼ grs. of gold per ton of quartz. The 225 south: This heading has been advanced 6 ft. 6 ins., making 97 ft. from cross-cut; the reef here is 4 ft. thick, producing a trace of gold in the assay. The 150 north: This heading has been advanced 9 ft. 6 ins., making 322 ft. 1 in. from the cross-cut at Walker's; the reef here is 5 ft. thick, producing a trace of gold in the assay. This is a magnificent reef and is cutting through the foliations of the schist right away under where there is no surface ourcrop. I believe it will become more productive in this direction, and I have great hope of tracing it even upon Mysore-Wynaad.—Capt. TREGAY.

MYSORE-WYNAAD CONSOLIDATED.—Report for fortnight ending 24th December:—Engine shaft: The 100 north heading has been advanced 10 ft. 8 ins., making 33 ft. from shaft; the reef here is 4 ft. thick, of ferruginous vein matter and quartz. The water is very quick, and we cannot resume the sinking until the machinery is up. Machinery: We are pushing on with the winding engine and shaft tackle, and hope soon to be ready with that work.—Capt. TREGAY.

NEW EBERHARDT.—The mine manager reports under date Dec. 29th as follows:—I beg to make the following statement of progress made in the mine for the week ending this date. Owing to the holidays intervening, it is hardly worth reporting the number of feet at the different points. South cross-cut from surface drivings has been advanced for the week 21 ft.; total length, 26 ft. The face of drift is still in low grade quartz. South drift: At this point the small seam of ore still continues, although the grade is not quite as good as it has been. Average assays for the past week show the value of the ore to be $50.28. We have taken out about 5 tons of this ore during the week. West drift from north shaft: No. 1 has been advanced for the week 6 ft.; total length, 28 ft. The face of the drift is a mixture of quartz and lime, but no ore as yet. North shaft, No. 2, has been extended downwards for the week 3 ft.; total depth, 54 ft. Ground continues very hard. Shall start drift at once from 50 ft. point in this shaft. North shaft, No. 3, has been extended down for the week 6 ft.; total depth, 35 ft. Bottom of shaft still in broken ground, carrying some quartz. East cross-cut from bottom Gore incline has been advanced for the week, 10 ft; total length, 77 ft. Face of this drift is still in the broken quartz and lime.

NINE REEFS (24th Dec.)—Mining operations:—Malleson lode, main shaft: 310-ft. level north, driven by one miner and six coolies, has advanced 5 ft; total distance from shaft being 66 ft.; the vein in the drift is 5 ft. wide; the assay, 1 dwt. 7 grs. gold per ton. Morrison's shaft, sinking by one miner and eight coolies, has not been measured. The part of the vein carried in this shaft is about 5 ft. wide, the assay being returned as 2 dwts. 18 grs. The 185-ft. level north of Morrison's shaft, driven by six coolies, has advanced 3 ft., the distance from the shaft now being 127 ft. 11 ins.; the width of the vein is 4 ft.; the assay, 9 dwts. 18 grs. This drift is improving, and is getting under extensive old workings. Baynard shatt: 310-ft. level north, driven by one miner and six coolies, has advanced 4 ft.; total distance from shaft, 24 ft.; the width of the vein is 5 ft.; the assay, 15 grs. of gold per ton. The 310-ft. level south, driven by six coolies, has advanced 4 ft.; total distance from shaft being 25 ft. 3 ins. The part of the vein carried is 5 ft. wide; the assay, 15 grs. gold per ton. Stopes: No. 1, in the back of the 185-ft. level north of main shaft by one miner and three coolies; vein 6 ft. wide; the assay, 12 dwts. 19 grs. gold per ton. No. 2, also in the back of the 185 ft. level, north of main shaft, by eight coolies; vein, 6 ft. wide; the assay, 1 dwt. 23 grs. of gold per ton. No. 3, in the bottom of the 185-ft. level south of Baynard shaft, by 12 coolies; vein 4 ft. wide; assay, 1 oz. 10 dwts. 15 grs. of gold per ton. No. 4, in the bottom of the 185-ft. level south of main shaft, by 12 coolies; vein, 5 ft. wide; assay, 15 dwts. 15 grs. of gold per ton. No. 5, in the bottom of the 185-ft. level north of main shaft, by 12 coolies; vein 5 ft. wide; assay, 1 dwt. 7 grs. of gold per ton. Champion lode, Vyvyan shaft: 145-ft. level south, driven by one miner and six coolies, has advanced 9 ft. 4 ins.; a total distance of 260 ft. 6 ins. The vein is 14 ins. wide; the assay 9 dwts. 2 grs. of gold per ton. North stope, in the back of the 145-ft. level north of Vyvyan shaft, by eight coolies; vein 14 ins. wide; assay, 14 dwts. 8 grs. of gold per ton. South stope, in back of the 145-ft. level south of Vyvyan shaft, by six coolies; vein 20 ins. wide; assay, 1 oz. 14 dwts. 9 grs. of gold per ton.—Capt. BENNETTS.

NORTH MEXICAN.—I have received a letter from Mr. Hofmann, in which he tells me the timberman will be here within eight or 10 days. Next Monday I will work the shaft night and day, and start to work the same from the surface, so when the miner arrives can commence to timber it and work on it as fast as possible. I have continued work on the Durana because it is necessary. In San Nicholas there is nothing particular to mention, as I am working to the surface, and not down to the bottom. The men have risen 10 ft. during the week. Hoping that very soon I can be working with full speed, and strike something in the San Nicholas vein.—R. J. CARLISLE.

NUNDYDROOG (25th Dec.)—In consequence of the Christmas holidays I am unable to write you a full report this week. Everything, however, is going on at the mine in the usual satisfactory way.—B. D. PLUMMER.

OOREGUM (25th Dec.)—Fortnightly report.—Main shaft: The 250-ft. level south from cross-cut west has been driven 12 ft. 9 ins., or 121 ft. 1 in. from cross-cut west; the lode is 3 ft. wide, with a band of country rock in the middle of it, which is 15 ins. wide; a sample taken from it gives an assay of 1 oz. 3 dwts. 22 grs. of gold per ton of quartz. The 250-ft. level north has been driven 11 ft. 2 ins., or 81 ft. 2 ins. from cross-cut west; the lode is 1 ft. 6 ins. wide; a sample taken from it gives an assay of 4 ozs. 11 dwts. 10 grs. of gold per ton of quartz. Low's shaft: The 270-ft. level driving south from shaft, 2 ft. 8 ins. have been driven, or 12 ft. 4 ins. from cross-cut west; a sample from it gives an assay of 8 dwts. 17 grs. of gold per ton of quartz. The rise in back of the 270-ft. level south of shaft, 1 ft. 3 ins. has been done, or 4 ft. above the back of level; the lode is 1 ft. wide, and gives an assay of 9 ozs. 15 dwts. 23 grs. of gold per ton of quartz. The 270-ft. level driving north of shaft, 2 ft. 9 ins. have been done, or 88 ft. 8 ins. from shaft; there is no change here since last reported on. The 200-ft. level driving north, 3 ft. 9 ins. have been done, or 257 ft. 2 ins. from shaft; the rock here is the same—still in a disturbed state, letting out a little water. The winze sinking in bottom of the 200-ft. level north of shaft, 2 ft. have been sunk and is 26 ft. 6 ins. below the level; the lode is at present pinched; no sample was taken from it. The intermediate level, north of shaft, has been driven 8 ft. 6 ins., and is holed into old workings that were met with in the rise above the back of this level; this drivage is suspended; the men are now employed cutting out the quartz standing south of the rise here. The 200-ft. level driving south, south of shaft, has been driven 4 ft. 6 ins., or 108 ft. 7 ins. from cross-cut west; the lode is 1 ft. 6 ins. wide, and gives an assay of 15 dwts. 6 grs. of gold per ton of quartz. The intermediate level south, south of shaft, 9 ft. 6 ins. have been done, or 105 ft. 8 ins. from old workings; the lode is 2 ft. wide, and gives an assay of 2 ozs. 1 dwt. 9 grs. of gold per ton of quartz. The winze sinking in bottom of the 200-ft. level at the end of cross-cut west, south from shaft, 4 ft. 6 ins. have been done, or 55 ft. 8 ins. below the level; the lode is 1 ft. wide, and gives an assay of 1 oz. 12 dwts. 6 grs. of gold per ton of quartz. The stope in back of the 100-ft. level, north of old workings; the lode is 2 ft. wide, and gives an assay of 17 dwts. 10 grs. of gold per ton of quartz. The stope in back of the 100-ft. level, south of old workings; the lode is 2 ft. wide and gives an assay of 6 dwts. 12 grs. of gold per ton of quartz. Probyn's shaft has been sunk 6 ft., or 76 ft. below the 230-ft. level; the lode is 4 ft. wide, and gives an assay of 3 ozs. 16 dwts. 5 grs. of gold per ton of quartz. The 230 winze north of shaft is now 20 ft. 3 ins. below the level; the lode is 2 ft. wide, and gives an assay of 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The 230-ft. level driving south from shaft 5 ft. 6 ins. have been driven, or 74 ft. 7 ins. from shaft; the lode is 5 ft. wide, and gives an assay of 3 ozs. 14 dwts. 2 grs. of gold per ton of quartz. The plat for winze in bottom of this level is near completion; we have cut into quartz 4 ft., and have the hanging-wall; sample from this gives an assay of 2 ozs. 1 dwt. 9 grs. of gold per ton of quartz. The 166-ft. level has been driven 5 ft. 8 ins., or 176 ft. 9 ins. from shaft; the lode is 3 ft. 6 ins. wide, and gives an assay of 2 ozs. 9 dwts. 20 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level, south of shaft, is 10 ft. deep; the lode is 3 ft. 6 ins. wide, and gives an assay of 5 ozs. 2 dwts. 8 grs. of gold per ton of quartz. The rise in back of the 166-ft. level, south of shaft, 3 ft. 6 ins. have been done, or 16 ft. 6 ins. above the level; the lode is 3 ft. wide, and gives an assay of 10 dwts. 21 grs. of gold per ton of quartz. The stope in back of the 230-ft. level at the north end of No. 1 winze south of shaft, the lode is 2 ft. wide, and gives an assay of 5 ozs. 8 dwts. 21 grs. of gold per ton of quartz. The stope in bottom of the 166-ft. level, north of shaft, the lode is 2 ft. 6 ins. wide, and gives an assay of 2 ozs. of gold per ton of quartz. The 130-ft. level driving south from Old Battery workings, underneath the North Battery shaft, 8 ft. have been done, or 16 ft. from these old workings. This drive we hope soon to communicate with the shaft. Stamps: These continue to work well; we have the new boilers at work, and are steaming easy. All our machinery and pitwork continue to work well.—W. MARTIN.

For other Reports from the Mines see usual pages.

The shares of the First Netherlands Transvaal Gold Mining Co. have, we are informed, been heavily subscribed for in Amsterdam.

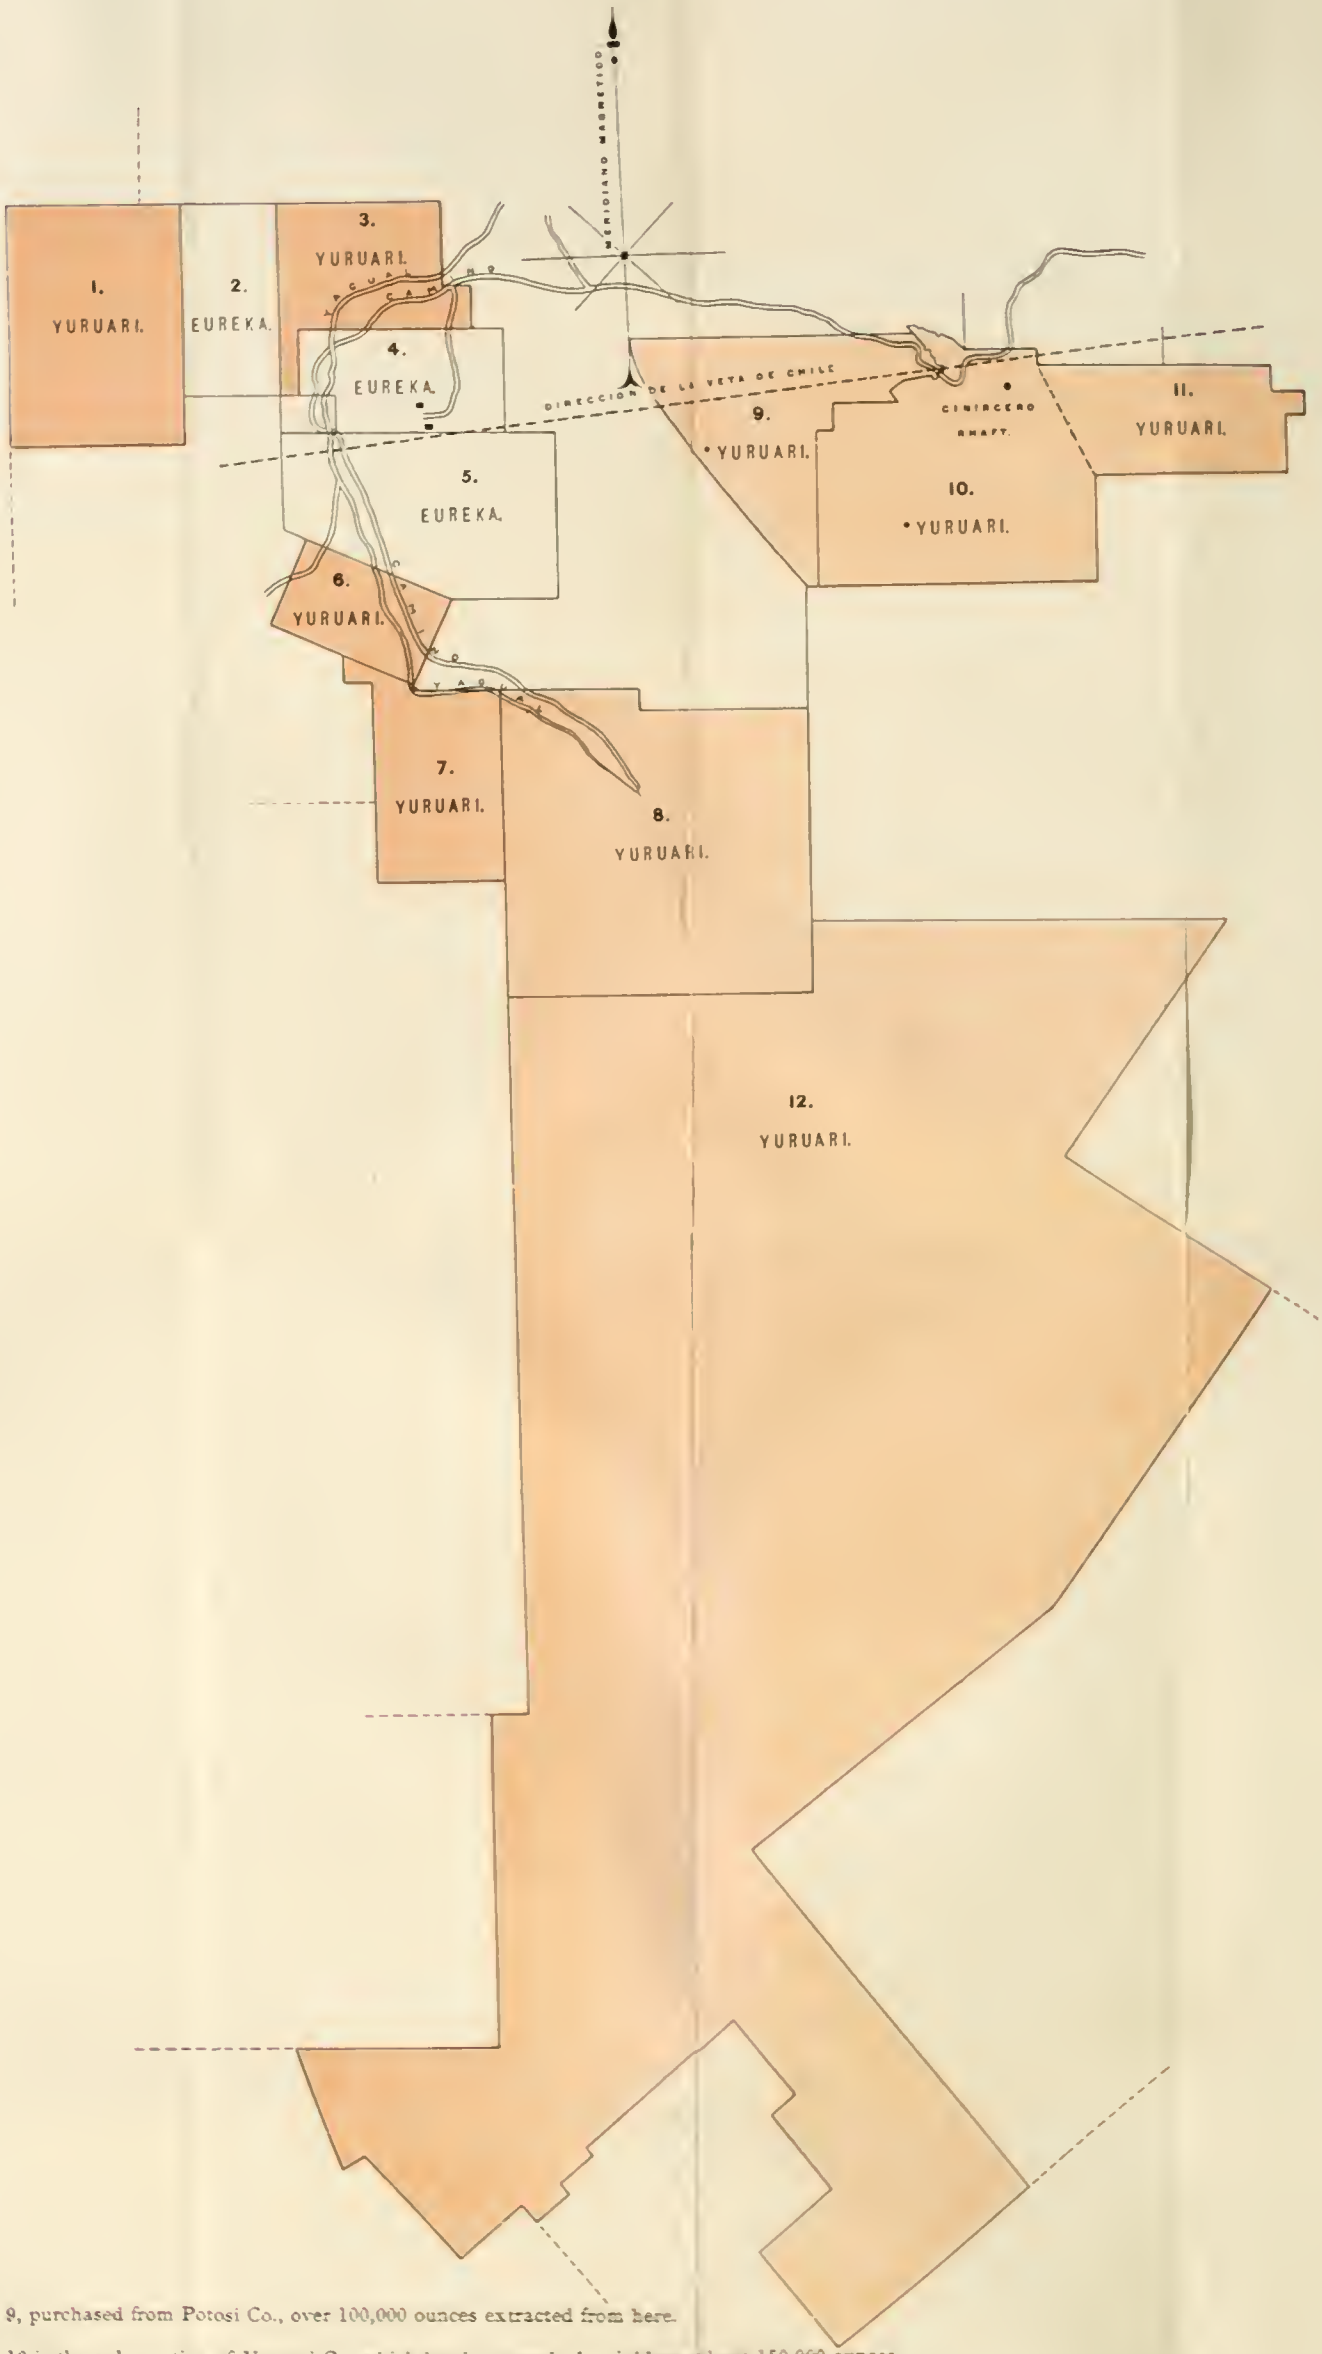
General Plan

OF THE PROPERTY OF

THE YURUARI COMPANY, LIMITED.

N.B.—Surface Plan of all Concessions (marked in Red) belonging to this Company.



*No. 9, purchased from Potosi Co., over 100,000 ounces extracted from here.

*No. 10 is the only portion of Yuruari Co. which has been worked—yielding about 150,000 ounces.

The COLONIAL BANK of NEW ZEALAND (LONDON BRANCH) are authorised to RECEIVE SUBSCRIPTIONS for 67,000 Shares in the O.P.Q. (OTAGO PIONEER QUARTZ) GOLD MINING COMPANY, LIMITED.

THE O.P.Q. (OTAGO PIONEER QUARTZ) GOLD MINING COMPANY, LIMITED.

FORMED TO WORK ONE MILE OF THE GOLD BEARING REEF KNOWN AS THE "O.P.Q." (OTAGO PIONEER QUARTZ) REEF, NEW ZEALAND.

CAPITAL, £100,000, IN 100,000 SHARES OF £1 EACH,

Of which 33,000 will be allotted as fully-paid to the Vendors, and the Balance of 67,000 Shares are now offered for Subscription. Payable, 5s. per Share on Application; 5s. per Share on Allotment; and the Balance by calls of 5s. each at intervals of not less than One Month.

DIRECTORS.

EDMUND A. PONTIFEX, Esq., A.M.Inst.C.E., and F.C.S., Chairman.
HENRY WELD BLUNDELL, Esq. (Director of the Cumberland Gold Mining Company, Limited).
ARCHIBALD FAIRLIE, Esq., C.E. (Director of the Taltal Nitrate Company, Limited).
Sir SAMUEL CANNING, M.Inst.C.E. (Director of the Royal Silver Mines of Potosi, Limited).
MARK HELMORE, Esq. (Director of McNamara and Company, Limited).

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring and working the mining rights in a highly valuable auriferous property of about 100 acres, situate at Waipori, in the province of Otago, New Zealand. This property is in the centre of the most celebrated goldfields of New Zealand, and includes over one mile of the well-known gold-bearing reef known as the "O.P.Q." (Otago Pioneer Quartz) Reef, which is the "Master Reef" of the district. It is distant only 12 miles by a good road from the railway terminus at St. Lawrence.

The property includes the line of reef and the usual mining rights in 41 acres of freehold land; the remainder is the subject of concessions from the New Zealand Government upon the usual terms upon which mining properties are held in New Zealand. There will be an ample constant supply of water for working the reef in the thorough manner recommended in the reports of mining experts, inasmuch as the purchase includes a fine existing water-race, which will work the battery proposed to be erected at one end of the reef, also the right to construct another for the other end. There is also an ample supply of timber within a short distance.

Professor Black, M.A., and D.S.C., Professor of Chemistry, Metallurgy, and assaying in Otago University and School of Mines, &c., &c., and President-Elect of the Chemistry and Mineralogy Section of the Australasian Association for the advancement of Science; Mr. L. O. Beal, jun., C.E., Mining Engineer, &c., and Lecturer on Land and Mining Surveying in the University of Octago; and Mr. C. C. Rawlings, M.E., F.G.S., of Melbourne, in their reports, state that the O.P.Q. reef will show a yield of gold averaging 10 to 11 dwts. per ton, and that in addition to the ordinary quartz and mullock considerable bodies of stone (hundreds of tons in some cases) will be met with, which will yield from 1½ to 3 ozs. and even more per ton.

The reef is so situated that it can be worked at a comparatively small cost by adit levels driven from each end of the property into the reef itself.

It has for some time past been worked to a very limited extent and with inadequate machinery, at various separate points, by a few parties of working miners, without capital or concerted action, whose interests the Company is formed to acquire. These workings conclusively prove the continuity of the reef.

The great body of the reef ranges in width from wall to wall from about 8 ft. to 16 or 17 ft. The quartz is of very good quality, and being of a friable and laminated texture is easily crushed. In several places it consists of a loose rubbly mass, which is easily got out with a pick and shovel. It is one of the most manageable reefs in the New Zealand goldfields, and the quartz is closely allied to the best quartz in the "Homeward" portion of the Great Eastern Mine at Rough Ridge, in the same formation, which has been yielding nearly 3 ozs. of gold to the ton.

The reef also contains a fair but not excessive proportion of rich gold-bearing iron pyrites (see assays below) in a fine state of division, which it is expected will be a considerable source of profit when proper appliances are provided for extracting the gold.

Prof. Black, when inspecting the property in June, 1888, took with his own hand from various parts of the reef 500 samples of quartz and mullock so as fairly to represent the quality of the stone from one end of the property to the other. The following are the assay results of the samples so taken:—

SUMMARY OF ASSAYS (to be inspected at the Solicitor's Office).

	ozs.	dwts.	grs.
1. Assay by Prof. Black of 66 samples, averaging per ton	0	16	10
Do. do. do. six samples, averaging per ton...	4	8	14
Do. do. do. five samples, averaging per ton	5	10	4
2. Assay by Messrs. Johnson and Sons, Assayers to Bank of England, of 9 cwt. (seven samples) of mixed quartz and mullock, and by the Globe Milling Company, New Broad Street, London, or 102 lbs. of quartz, all from the present workings, giving gold, averaging per ton	0	16	12

PROPOSED METHOD OF WORKING.

The great width of the reef and the enormous bodies of auriferous stone in it justify the sub-division of the crushing plant into two large batteries, and the length over which it extends renders it desirable to erect one battery at either end of the reef. There is plenty of room to take the stone out, and there are also excellent sites for both batteries, and, the reef being accessible at a low level at both ends of the property, adits can immediately be driven into the reef itself, and the levels of the adits will be such that the drainage of the mine will be provided for at a very small expense. By working in this manner the output will be more than double what it would be with one battery, for not only can double the working force be put on, but the average distance of the stone from the crushing power will be greatly diminished, and one mining manager can direct all the operations.

ESTIMATED YIELD.

It is stated by Professor Black that there will be enough gold-bearing quartz and mullock to crush 900 to 1,000 tons a week for a period of 10 years, working only above the level of the adits now proposed to be driven, and as regards working at the end of that period, the large extra amount of pyrites showing in the deeper lying stone is regarded by the above-mentioned experts as a certain indication that the stone will become richer in gold at lower levels.

The following estimated yield of gold during the first period of 10 years is summarised from the reports of Prof. Black, Mr. L. O. Beal, and Mr. Rawlins:

Prof. Black's Lowest Estimate.—Net profit, £38,750 per annum—equal to 38¾ per cent. per annum upon the entire capital of the Company.

Mr. Rawlins's Lowest Estimate.—Net result, £47,588—equal to about 47½ per cent. per annum upon the entire capital of the Company.

Prof. Black's Higher Estimate and Mr. Beal's Estimate.—Net profit £77,500 per annum—equal to 77½ per cent. per annum upon the entire capital of the Company.

It is stated by Prof. Black and Mr. Beal that 3 dwts. (value about 12s.) of this gold is sufficient per ton to pay all working expenses, and this is corroborated by Mr. Rawlins in his report.

Prof. Ulrich, Director of the Otago School of Mines, and Professor of Mining in the Otago University, in his Government report of 1875 speaks of the O.P.Q. reef as "one of the richest, best developed, and most extensive reefs in this province."

The gold raised in Otago from January, 1857, to 31st March, 1887, according to the Government returns, amounted to 4,547,077 ozs., and was worth £17,941,016. The increase in the year 1886-87 over the preceding year was 8,949 ozs.

The working capital of £30,000 is estimated to be ample for the erection of machinery and the development of the property.

CONTRACTS.

The only contracts are dated 4th day of January, 1889, between Charles John Fox and George Edgar Hope Pearse, and John Alexander Macmeikan. 9th May, 1888, between Edmund Hill and others and James Barclay and others. Same date, James Porter and others and James Barclay and others. Same date, John Thompson and others and James Barclay and others. 16th June, 1888, James Ritchie and others and James Barclay and others. Same date, James Barclay and others and A. W. Pearse. 26th June, 1888, James Barclay and others and A. W. Pearse. 11th July, 1888, James Barclay and David MacIntosh and A. W. Pearse. 20th July, 1888, James Barclay and A. W. Pearse. 26th November, 1888, G. H. Gordon and A. W. Pearse. 27th December, 1888, A. W. Pearse and the vendors.

Full prospectuses and forms of application can be obtained at the Offices of the Company, or at the offices of the bankers, brokers, or solicitors.

THE PRODUCTION OF WATER GAS

BY THE

Gaseous Fuel, Light, & Power Company,

LIMITED.

The Leeds Forge Company, Limited, claim in their Prospectus to hold the Monopoly for the United Kingdom of the use of Water Gas for certain purposes. The Gaseous Fuel, Light, and Power Company, Limited, are, however, Proprietors of Patents of Apparatus for the Manufacture of Water Gas and Illuminating Gas, and have had for the last five years the means of supplying the Public with this source of Power and Light. Neither the Leeds Forge Company nor anyone else can therefore hold the Monopoly claimed.

THE FOLLOWING ARE THE ADVANTAGES OF THIS COMPANY'S APPARATUS:—

NO SMOKE.
NO SMELL.
NO ASHES.
NO STOKING.

ONE THOUSAND CUBIC FEET OF WATER GAS FOR ONE PENNY.
ONE THOUSAND CUBIC FEET OF LIGHTING GAS FOR ONE PENNY.
40-HORSE POWER FOR ONE PENNY PER HOUR.
APPLICABLE FOR LIGHTING, HEATING AND POWER.
NO COSTLY COAL REQUIRED.
WILL BURN ANYTHING, FROM TOWNS' REFUSE TO THE SMALLEST AND CHEAPEST COAL-SLACK, GAS COKE, BREEZE, OR PITS' REFUSE.

The Gaseous Fuel, Light and Power Company, Limited, are prepared to grant licenses for the use of their process, which has for its object the production of cheap Water and Illuminating Gas, and, at the same time, the recovery of Tar, Ammonia, Coke, and other valuable products; whilst giving abundant heat for producing steam for smelting, &c., &c.

This cheap Illuminating and Water Gas Generator is the most efficient Water Gas producer known, giving from 50,000 to 100,000 ft. of 16-candle power illuminating gas per ton of the smallest and cheapest Coal-Slack at one operation.

This Water Gas Generator is also one of the best adapted for the conversion of a number of hitherto waste materials into cheap and good Illuminating Gas, such as Gas Coke Breeze, Pit refuse, Shale, &c.

One great novelty in this invention is the system of recuperation of heat savers or regenerators, utilising nearly the whole of the waste heat generated during carbonisation and gasification. These recuperators are of vast importance in the final economy of Coal, by heating the necessary air from 600 to 1,000 F. for perfect combustion of the gases, which gives an economy of 45 per cent., or, in other words, with the air supply at 1,000 F., 11 cwt. of Coal-Slack, gasified by this invention, will do the same amount of work as 1 ton of the best Bituminous Coal when the air is not thus heated.

The advantages offered to the Heat, Light, and Power consumers may be briefly summarised as follows:—

1. The lowest quality of Coal-Slack, or Wood, Peat, Saw-dust, Towns' Refuse, Shale, &c., can be used with equal advantage to the best Bituminous Coal.
2. Cheap Coal-Slack will give 150,000 to 200,000 cubic ft. of gas per ton of Coal-Slack or Refuse, as against 10,000 obtained by Gas Companies from the best Coal.
3. The gases can be made any illuminating Power at will.
4. Although conveyed through one set of mains (instead of two) the gas can be used for Heating or Lighting purposes at will.
5. The gas generated by this apparatus will evaporate 15 to 20 lbs. of water per 1 lb. of fuel used.
6. This invention will give 5,500 heat units per cubic meter, as against 2,000 from any other gas.
7. 25 cubic ft. of gas will give 1 h.-p. per hour in Otto's or other Gas Engines at a cost of less than 1-16th of a penny.
8. Good Illuminating Gas (or Water Gas, as required) for less than one penny per thousand cubic feet.
9. About 80 per cent. of the Heat of Coal is utilised by this apparatus, as against 10 per cent, by using crude fuel.
10. It is the cheapest source of Power for obtaining and generating Electricity, for driving Dynamos for the Electric Light, charging Accumulators, and all other Electrical purposes where Power is required.
11. No smoke; no long chimney required; no fire bars; no stoking; no burning out of boilers through the introduction of cold air, the durability of a boiler being doubled by this invention.
12. It is equally applicable for domestic use and for steam boilers, whether marine or stationary, for supplying Water Gas for Iron and Steel Works, Tin-plate Works, Chemical Works, Brick Works, Tar Works, Sugar Refineries, Paper Mills, Collieries, Malting, and all other purposes where Heat, Light, or Power are required.
13. It is inexpensive, takes up very little room, and is a source of income to all large users of steam power.

For further particulars apply to the Secretary, 35, Royal Exchange, London, E.C.

* Against the Writer.

From the above it will be seen that had purchases been effected upon every recommendation published in this Circular, they would have resulted forty-nine times in a handsome profit, and only fourteen times in loss. The losses, too, it will be observed would have by no means been large, while the profits in some cases may have reached hundreds per cent. On the other hand, had holders of shares acted upon the recommendation given to sell, they would in twenty-two cases have saved a considerable proportion of their capital; while in two only would they have been better off for holding on. Upon the whole, the writer cannot but come to the conclusion—one in which he trusts his clients and friends can fully bear him out—that his Circular must have proved nearly as useful to others as it has been to himself. That it has proved successful to himself is shown by the fact that, originally only four pages, it now covers 28 pages. In gratitude to his friends and clients, without whose support, of course, he could have done nothing, the writer feels the least he can do is to leave no stone unturned to make future Circulars as reliable as possible, while trying to put all such information as may be afforded into as readable a form as circumstances will permit.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

MR. THOMPSON would suggest to his readers that it appears hardly fair that those taking advantage of the advice contained in this Circular should transact their business through other Brokers. Should the recommendations contained herein proved unprofitable, it is certain that the writer will be blamed, whereas, should they turn out well, he will gain no advantage from those doing their business elsewhere—possibly not even the bare credit of having given good advice.

THE PAST.

(From Mr. Thompson's Circular, January 8th.)

1889.—A New Year commenced, and it seems a prosperous one, too! But before proceeding to consider the future, let us follow the example of most of those engaged in the mercantile world and make out a balance sheet for the year gone by. The writer finds *his* by no means unsatisfactory, and in looking at the balance of profit which he finds standing to his credit, he has experienced a somewhat natural curiosity as to the position of his friends, and especially as to that of those who may have perused this circular and acted upon his advice. With a view to satisfying this curiosity he has lately devoted a spare day to looking through back numbers of this circular, and making out a Table showing his recommendations and how far these may have proved, by the light of subsequent quotations, successful or otherwise. He finds the result so far satisfactory that he is now tempted to place this Table before his readers and friends, and would here only remark that, as it was made out at first only for his own guidance, it has been put together as fairly as he has found possible. It will be observed that where shares have been recommended for purchase or otherwise, the date is given of the circular in which such recommendation has been published, as also the price which has subsequently been reached, and the date of the circular in which such price may be found. Thus, those who have kept by them the circulars sent to them can check this Table for themselves. Shortcomings may doubtless in some cases be found, but against these the writer would point out that there are many shares which were recommended by him some time ago, and which can hardly be mentioned as having risen only this year. Thus, in 1887, as his friends will remember, the writer was a strong advocate of Kimberly Central Diamond Shares at about £8, while he a little while previously recommended Colombians and Oritas at 5s. and 6s. respectively, the writer being, he thinks, their only supporter at that time. Kimberley Centrals last year touched 49, and Colombians and Oritas each 42s. 6d. —a rise in the former case of FIVE HUNDRED PER CENT., and in the two latter of SEVEN HUNDRED PER CENT.

Telegraphic Address—
"NICHS," LONDON.

"KAPANGAS."—Those interested in these shares should at once consult Mr. Nicholls. The company has considerable funds in hand to vigorously prosecute the important trials recommended by Capt. Hodge. The balance available for distribution or otherwise at the date of the last balance-sheet (July, 1888) was about £16,000, since which time profits have been earned amounting to about £7,000, so that, after deducting the dividend just paid of 6d. per share (£4,725) from these two amounts, there remains a good round sum. THESE ARE FACTS, AND THE FIGURES CAN BE AUTHENTICATED.

Mr. Nicholls is in a position to afford trustworthy information and advice to intending investors and others in the selection of Mining Shares either for Investment or Speculation. Orders by letter or telegram promptly attended to. Send for Price List.

The Lists of Applications open THIS DAY, and will close at 4 p.m. on MONDAY, instead of TUESDAY, as previously advertised.

DR. E. SYMES THOMPSON, of 33, Cavendish Square, W., Professor of Medicine, in a Lecture given at Gresham College, Basinghall Street, on Friday, 18th January instant, alluded to the prospect of a railway running direct from a port on the Oliphant River to Kimberley, and to the existence of Nitrate deposits along the line of route. Calvinia lies on the course of the proposed railway, and is the only district in which the existence of such a deposit has been traced. In the course of this lecture Dr. Thompson stated that the rainfall in Calvinia was on an average two inches only a year.

The latitude of Calvinia, the province in which this property is situate, is 32 degs., or identical with that of Chili—hence the atmospherical conditions are similar.

THE ZOUT KOM NITRATES, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1888.

CAPITAL - £125,000, IN 25,000 SHARES OF £5 EACH.

Of which the Vendor agrees to take the largest amount allowed by the rules of the London Stock Exchange, and the Balance in Shares is now Offered for Subscription at Par. PAYABLE—10s. per Share on Application, £1 10s. on Allotment, £1 in One Month, £2 in Two Months after Allotment.

PROSPECTUS.

The property to be acquired by this Company is in one block, containing about 7,000 acres, in the Calvinia District of Cape Colony, whence there are good roads to Cape Town, and to various parts of the coast; and, as will be seen by the Government maps, 2,000 acres of the property are described as Zout Kom, or Saltpan.

Professor Brandford has inspected and reported on this property. He was formerly Professor of Medicine, &c., at Ediuburgh, and was employed as a professional expert by the English Government to report upon the North-Western Province of the Cape Colony.

In reference to this property the Professor reports as follows:—

"There is a plentiful supply of water.

"The ground is rich with nitrate and sulphuric acids, in combination with bases of metallic sodium and potasium, forming the valuable sorts known as nitrates and sulphates of soda and potash.

"The samples taken from the property have been submitted to Prof. Aitken, of Edinburgh, who testified to their showing over 50 per cent. of manurial products.

"The raw material, which lies on the surface, varies from 1 ft. to 4 ft. in thickness on about 2,000 acres, and exists in less quantities on the remainder of the land, and is easily worked. The quantity cannot be estimated with certainty; but there is every indication of a large deposit, and, cousidering the enormous area, the yield should be equal to, if not greater, thau that of the Chili Companies.

"The cost of production, including the transport, dressing, &c., is estimated not to exceed ¾d. per lb., f.o.b. at Cape Town.

"The present prices of nitrate and sulphate are £11 and £8 5s. per ton respectively; assuming, however, that on the average the latter will be the price realised, the output of 20,000 tons per annum would yield a net profit of £25,000 per annum, which output could be increased pro ratâ as additional working capital was provided.

"The title to the property is direct from the Government, and the holding is in the nature of freehold."

The title deeds are in London, and the property will be trausferred free from all incumbrance.

The price to be paid by the Company for the property, as fixed by the vendor, is £100,000, of which the vendor stipulates that he shall be paid the largest amount in shares permissible by the rules of the London Stock Exchange.

It will be seen that the property acquired by this Company is of the most valuable nature, and the price compares most favourably with that paid for properties of a like description.

The Colonial Blue Books give the value of irrigated lands in the Cape Colony to be as high as £30 to £50 per acre.

It is well known that deposits of nitrate and sulphate have existed in many countries; but owing to the influence of rains, have not paid for the working. The climate of South-Western Africa (in which Calvinia is situate) is exceedingly dry, there being on au average only two falls of rain a year. The necessary water for all purposes is obtained from the existing lakes, aud from wells which are supplied naturally from higher ground. The property to be acquired by this Company is situated on the borders of the arid plains of Great Bushman Land. 3,000 ft. above the level of the sea. The latitude of Calvinia is 32, or practically the same as Chili, hence the atmospherical conditions are similar.

The sum of £25,000 is considered a sufficient provision for working capital to ensure an output of at least 20,000 tons per annum, and powers are taken to increase the working capital as may be found necessary, by the issue of debentures or otherwise, for which purpose trustees have been nominated.

The following are the present prices of nitrate shares on the London market:—

(*a*) The Liverpool Nitrate Compauy paid 40 per cent. last year, 50 per ceut. this year, and is expected to pay 60 per cent. next year. Its £5 shares are quoted at £29.

(*b*) The London Nitrate Company has also paid very large dividends, and its shares are quoted at £29.

(*c*) The Primitiva Nitrate Company is earning nearly as much as the Liverpool; and it is an "open secret" that next year's dividend is estimated at no less than 100 per cent., while its £5 shares already command £35.

(*d*) The shares of the San Jorge Nitrate Company already command £9 a share premium.

(*e*) The shares of the San Pablo Nitrate Company are quoted at £13. This company has just declared a dividend at the rate of 20 per cent. per annum.

(*f*) The shares of the Santa Luiza Nitrate Company are quoted at £5 premium.

According to recent reports, the consumption of chemical manures is on the increase in this country, on the Continent, and abroad.

The only contract entered into by the Company is one dated January 25th, 1889, and made between C. H. Dummett of the first part and the Zout Kom Nitrates, Limited, of the other part.

The vendor will provide all the preliminary expenses of the formation and bringing out of the Company and the issue of its capital, and he has reserved to himself the right to enter iuto, aud has entered into, arrangements with other parties for this purpose, which do not, however, affect the Company, and to which it is not party. In connection with these arrangements there is also a letter from W. C. Braudford to C. H. Dummett. As these arrangements, may, technically, be considered to be contracts within the meaning of Section 38 of the Companies Act, 1867, applicants for shares shall be deemed to have notice thereof, and to have waived any fuller compliance with such section with reference thereto.

The memorandum and articles of association, the contract for purchase, and all the reports referred to in this prospectus, may be seen at the offices of the solicitors to the Company.

Should no allotment be made, the deposit money will be returned without deduction, and where the number of shares allotted is less than the number applied for, the surplus will be credited iu reduction of the amount payable on allotment.

Prospectuses and forms of application can be obtained from the bankers and the brokers, and at the offices of the Company.

London, January, 1889.

TELEGRAMS: "CRUSHING, LONDON." TELEPHONE NO. 11,014.

GLOBE MILL COMPANY.

OFFICE AND SHOWROOMS:—

BLOMFIELD HOUSE, NEW BROAD STREET, LONDON, E.C.

A "GLOBE" MILL with eight wearing parts will turn out the same quantity of material as a 40-Stamp, 600-lb. Battery, which in stamps and dies alone has 80 wearing parts; the guide bearings, tappets, and tappet shaft bearings numbering a further 160.

WET or DRY MILLS in constant operation at their Reduction Works, Bermondsey Wall, S.E.

NOW USED BY H.B.M. GOVERNMENT AT WOOLWICH ARSENAL.

By permission of Captain Josiah Thomas, the Mill can be seen at work on tin stuff at the Dolcoath Mine, Camborne.

NOTICE.

Where sets of three, or more, Mills are supplied the Globe Mill Company undertake, if required, all renewals at a fixed rate.

First Award and Silver Medal by the Mining Institute of Cornwall, 1888, after the Mill had been running on tin stuff on the Dolcoath Mine. Received the only Award given for Grinding Machinery at the Royal Agricultural Societies' International Exhibition.

The Globe Mills are guaranteed to yield a greater product of material of equal fineness in a given time, with less first cost, less power, less space, less foundations, less labour, less slime, less water in wet grinding, and less cost for repairs than stamps, or any other system of pulverisation whatever.

MANUFACTURERS

SECRETARY AND TEMPORARY OFFICES.

Mr. C. JERMYN FORD, 17, OLD BROAD STREET, LONDON, E.C.

PROSPECTUS.

THIS Company is formed to acquire the well-known mining claims of The "Edwin Bray" Gold Mining Company, which adjoin and lie between the famous "Sheba" and "Oriental" Gold Mining Properties, situate on the Sheba range, a few miles from Barberton, De Kaap Goldfields, South African Republic, and to provide the necessary working capital.

These claims are held under the usual Government mining license, and at the time of the discovery of the now celebrated Sheba reef, formed part of the original "Sheba" Company's block of 25 claims, 19 of which were formed into "The Sheba Gold Mining Company, Limited," and the remainder into a subsidiary Company (named after Mr. Edwin Bray, one of the original prospectors) having a nominal capital of £25,000 in £1 shares, which were divided pro rata amongst the original "Sheba" Company's shareholders, prospecting expenses only being provided. These £1 shares have always commanded a considerable premium. To further evidence the high estimation in which the property is held, four of the largest South African shareholders in the original "Edwin Bray" and "Sheba" Gold Mining Companies, who have been connected with the property since its discovery, have offered to take up more than half of the shares now submitted for public subscription.

Information is just to hand that the Government has granted permission to construct a wire tramway; and one of the best water-races on the Queen's River has been secured, together with a stone-breaker, 10-stamp battery, and turbine already erected. By means of this wire tramway the Company will be able to transport its quartz from the mines to the battery site on the river, at an estimated cost of less than 2s. per ton. The Sheba Steam Tramway is now being constructed close to the property.

A considerable amount of work has already been done by opening up the claims, which lie on the side of the Sheba Range, and the mine is now in a position to commence extracting quartz at once. Several adits have been driven, cutting the lode near the centre of the ground, also at the "Oriental" boundary on the west, and "Sheba" boundary on the east, proving the existence of a large and wide body of auriferous ore, which apparently runs right through the claims. No. 3 adit, on the east, unquestionably proves that the "Sheba" reef enters the "Edwin Bray" property.

Some of the stone extracted is identical in appearance with the Sheba quartz, and carries visible gold, especially in No. 2 adit, where a "shoot" of gold has been struck of great promise.

Certified assays of samples taken from the property accompany the prospectus.

Mr. Alfred Woodhouse, Mem. Am. Inst. Min. Eng., F.G.S., late Consulting Engineer to the "Sheba Gold Mining Company," reports November 9th, 1888:—"At the time of my last visit I anticipated rich ore would be found as work proceeded. . . . A rich shoot of gold has been cut in No. 2 drive, about 250 ft. from the eastern (Sheba) boundary. This shoot is about 60 ft. wide and 6 ft. long, and fire assays show yields of from 3 ozs. to 12 ozs. of gold per ton. I do not think this will prove to be the only shoot of gold in the claims, but that others will be found as the ground is proved to the westward. I have a high opiniou of this property, which is likely to prove of great value."

Mr. J. W. Abbott, Mining Manager to the Edwin Bray Gold Mining Company, reports, 16th October, 1888:—"It will be seen from the reports and assays from various parts of the property that gold has been found in the drives at either end of the ground, in No. 3 adit, which adjoins the Sheba Gold Mining Company's ground, and No. 1 adit next the Oriental Company's ground, and also in the intermediate drive No. 2, in the upper drive No. 4, and in the outcrop on the surface."

The "Sheba" Gold Mining Company adjoining, with only 20 stamps working, and notwithstanding delays and stoppages, made the following splendid returns from October, 1887, to August, 1888.

	Crushed.	Yield.	Value.
Oct. 1887 to March 1888	2,680 tons	9,685 ozs.	£37,904
Being an average of 3 ozs. 12 dwts. 7 grs. to the ton.			
	Crushed.	Yield.	
April 1888 to Aug. 1888	2,197 tons	8,410 ozs.	£32,820
			£70,724

Being an average of 3 ozs. 16 dwts. 13 grs. to the ton.

In addition to the foregoing about 1,085 ozs. have been obtained from blanket concentrates, valued at nearly £4,000, but these returns are not considered anything like the produeing power of the mine when in full work with a large battery.

The work already done in the Edwin Bray Mine has exposed a large body of quartz, sufficient it is estimated to keep a battery going for many years; and assuming the quartz to average only 1 oz. per ton, which, judging from the assays, will be well within the mark, the return from 40 stamps, crushing 40 tons per day, and working 25 days per month, will be 12,000 ozs. per annum, which at 72s. 6d. per oz. equals £43,500, and taking the working expenses at £1,000 per month, shows the annual net profit of £31,500, or nearly 50 per cent. on the whole capital.

The adjoining "Sheba" Gold Mining Company's £1 shares (£600,000 capital) are now quoted at 60 to 70 per cent. premium. The £1 shares of the "Oriental" Company adjoining on the western boundary (capital £120,000) stand at about 150 per cent. premium. It is confidently expected that the shares of this Company by reason of its position, excellent prospects, and modest capital, will also attain a very high value.

By agreement between the original "Edwin Bray" Company and Mr. Walter Williams Webster, the capital of the Company has been fixed at £65,000, and the purchase price at £45,000, which includes the valuable Mazeppa Water-Race on the Queen's River, with its turbine, battery-house, stone-breaker, &c. This is payable as to £42,000 in fully paid shares, and £3,000 in cash, leaving £20,000 available for working capital.

Mr. Walter Williams Webster will provide all the preliminary expenses of the formation of the Company previous to allotment, and he has reserved to himself the right to enter into, and has entered into, arrangements with third parties for this purpose, to which the Company is not party. As these arrangements may, technically, be contracts within the meaning of section 38 of the Companies' Act, 1867, applicants for shares shall be deemed to have notice thereof, and to have waived any fuller compliance with such section than here given.

The contract is dated Barberton, 19th November, 1888, and made between the original "Edwin Bray" Gold Mining Company, and Walter Williams Webster. By this agreement, this Company takes over the entire property subject to all existing contracts and engagements. Copies of the above contract, together with the memorandum and articles of association, reports, &c., may be inspected at the offices of the solicitors to the Company.

Applications for shares should be made on the form accompanying the prospectus, and forwarded, with the amount of the deposit, 2s. 6d. per share, to the Bank of Africa, Limited, 113, Cannon Street, London, E.C.

If the whole amount applied for by any applicant be not allotted, the surplus of the amount paid on deposit will be appropriated towards the sum due on allotment, and where no allotment is made, the sum will be returned in full.

Prospectuses and forms of application can be obtained from the Company's bankers, brokers, solicitors, or the secretary, at 17, Old Broad Street, London, E.C.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

THE MINING MARKET.

CITY, FRIDAY EVENING.

SOUTH AFRICANS DECLINE—NEW COMPANIES CONTINUE TO COME OUT—DIAMOND SHARES DOWN—INDIAN GOLD SHARES STEADY—COPPER SHARES WEAK—HOME MINES WITHOUT FEATURE.

The market has been all South African. The shares in which brokers have been accustomed to deal formerly are scarcely named. The market knowledge of Dutch being limited, business is now taking place in shares, the pronunciation of the names of which makes painfully manifest the reprehensible neglect there has been to study the vernacular of Holland. It is noteworthy that during the week the South African Market has been far less steady, and but for the support of Hatton Garden and Holborn Viaduct combined, there might have been a collapse; but the buyers have always come in at the right time and tottering shares have been steadied. No arrangement has been made with the Stock Exchange, and much speculation is rife. not merely in the shares, but as to what will be the outcome of the next settlement. Some observations with regard to South African Companies that have no London offices are made in our leader columns.

Meanwhile the flow of new companies continues. Some of them have given the public no time to consider their prospectuses. The lists have opened at one hour of the day, and closed at another hour on the same day. In these cases the shares are not taken by the public, but syndicated; but it is fondly hoped that investors will come in later on at a premium. Against such concerns our readers are warned. One of two reasons may be relied upon in cases where lists are opened and closed within a few hours—either that there is no intention to allot shares to any of the public, or that the concerns themselves will not bear close investigation. In such cases, unless valid reason be shown, our readers would do well not to take any interest in them.

Diamond shares have been down, the market being weaker than we have known it for a long time past.

Indian shares have been steady; if anything, fractionally lower, despite their great merits upon which we never tire of insisting, because we believe the future will justify what we say.

Copper shares have been unsteady, and copper itself is a shade lower. No formal announcement has been made of the syndicate, or trust, to which we alluded last week. French holders have been selling, particularly Rio Tintos, which have had a considerable fall.

In the Foreign Market a good business has been done in Pahang, Callao Bis, Denver, Eberhardt, and Kapanga, all of which show firmness.

Tetuan shares have had a large rise during the past week and the general opinion of the market is that they will go very much better. Be this so or not, the steadiness of the market at the moment points strongly in the direction of the opinion of the majority. The rise in these shares has been very remarkable since they were first recommended at about half-a-crown.

Moruya shares have been in strong demand, and an active market has sprung up. The latest report states that all is progressing well, and that profits are being made by crushing free milling ore. The manager intends erecting buddles and concentrators for the purpose of concentrating the rich pyrites from the tailings. As the merits of this property become better known we anticipate an even more active market.

The Home Market has been featureless.

AFRICANS.

A large business has again been done in African shares, but once or twice during the week there was manifested a feeling to take profits, and in consequence prices fell. There is also considerable discussion with regard to the settlement on the coming account, hence quotations have not as a rule been so firm as last week:—

A fall has taken place in the following: Imperials, $\frac{1}{8}$; Orientals, $\frac{1}{4}$; Pigg's Peak, $\frac{1}{8}$; Republics, 6d; Thomas, $\frac{1}{4}$; Moodie's (fully-paid), $\frac{1}{16}$; Aurora, $\frac{1}{8}$; Bantjes, $\frac{3}{8}$; Blackreef, $\frac{3}{8}$; Cornucopia, $\frac{1}{4}$; De Villiers (Robinson), 20s.; Durban Roodepoort, 40s.; Ferreiras, 50s.; Geldenhuis, $\frac{1}{8}$; Goldfields of South Africa, $\frac{3}{16}$; Golden Kopje, 10s.; Henry Nourse, $\frac{1}{4}$; Johannesburg Pioneer, 40s.; Jubilee, 20s.; King Solomons, 2s. 6d.; Knight, 3s.; Longlaagtes, 1s. 3d.; Main Reefs, $1\frac{1}{4}$; Mays, 30s.; Modderfontein, 4s.; Moss Ross, 12s. 6d.; Nabob, 15s.; Royal, 30s.; Simmer and Jack, 20s.; Spes Bona, 20s.; Star, 15s.; Vogelstruis, 12s. 6d.; Wemmers, 2s. 6d.; and Wolhuters, 10s.

The following have risen:—Horo Exploration, 2s. 6d.; Johannesburg Waterworks, 17s. 6d.; Bankets, 5s.; Bothas, 1s.; Crown Reef, 5s.; Dornkop, 1s. 3d.; Heriots, 10s.; Jumpers, 30s.; Salisbury, 4l.; and Stanhope, 7s. 6d.

The following are the closing prices:—

Wolhuters	4 —	4¼

Indian Shares.

There has been very little doing in the Indian Market this week, and prices generally are slightly lower. Balaghats have fallen 1s., Goldfields of Mysore, 1s. 3d., Mysore Reefs, Wynaad, and South-east Mysore 6d.; the only improvement being 9d. in Nine Reefs.

Diamonds.

This market has been very uncertain, and the public do not appear to believe in the recent upward movement. Prices have given way all round; for instance, the following have declined: Anglo-African 3/16; Bultfontein (new shares) ½; De Beers, 1¼; Griqualand West, ½; New Consolidated, 1s.; New Jagersfontein, ¼; United, ⅛; and Loudou and South African, ⅛. There has not been a single rise to notice. Prices close as follows:—

Anglo-African	4¼ —	4½
Bultfontein, new shares—	4¼ —	4½
Central Dorsfontein	8 —	10
De Beers Consolidated	16½ —	16¾
Gordon Diamond	19/ —	21/
Griqualand West	6 —	6¼
New Consolidated	24/ —	25/
New Jagersfontein	14¼ —	14½
South African (Pullinger)	17/ —	18/
Spes Bona (Bultfontein)	6/6 —	7/6
United	2¼ —	2½
United Jagersfontein	18/6 —	19/6
London and Orange Free State Explor. ...	4¾ —	5¼
London and South African Exploration ...	17 —17¼	x rights xd
Read's Drift Land Co.	2½ —	3

Copper.

Copper shares have been active, but the public appear to be losing faith in the present high prices, and, in consequence, quotations have not been maintained, with the exception of Quebrada—the changes are a fall of ⅝ in Cape Copper, ¼ Copiapo, ⅛ Libiola, ¾ Masons, ⅜ Namaqna, ⅛ Panulcillo, 2⅞ Rio Tinto, ⅛ Tharsis, while a rise of ⅜ has taken place in Quebrada.

Foreign Mines.

There has been a fair amount of bnsiness doing in the cheap foreign shares this week, and very few changes have taken place. The following show a rise: 6d. in Callao Bis, 3s. Colombian, 1s. 6d. Orita, 2s. 6d. Tetuan, 2s. 6d. United Mexican, and 9d. in Venezuelan Austin, while a fall has appeared of 1s. 6d. Balkis, 1s. Barretts, 6d. Dickens Custer, 1s. 3d. Don Pedro, 10s. El Callao, 6d. Empire, 1s. 3d. Montana, 9d. New Russells, and 6d. West Argentiue.

Australians.

With the exception of Etheridge United Shares, which have been in strong demand, there has been little or no business doing in this market. The chief other movement has been a fall of ¼ in British Broken Hills, 1s. Bonnie Dundee, and 1s. Livingstone.

The following list shows the principal changes in the mine which have taken place:—

	Last Week.		This Week.	
Carn Brea	11¾	12 ...	11¼	11¾

LATEST FROM THE MINES.

Colonial Mines.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight, ending 19th instant, is as follows:—290 tons crushed. Yield of gold, 434 ozs. Approximate value, 1,500*l*. Fortnight's expenses, 1,190*l*. 15 head of stamps only.

Day Dawn P.C.—The following cablegram gives the result of this company's crushing for the fortnight ending 19th January, viz.:—"850 tons; 823 ozs." (Estimated value, 2,798*l*.)

Mosman.—A cablegram from Mr. W. Holliman, manager in Charters Towers, dated 23rd January, states: "Crushed 575 tons of quartz from North Australian Mine, yielding 1,100 ozs. of gold. Now crushing 350 tons from Eastward Ho! Mines looking well." Note: The approximate value of this crushing is 3,800*l*., and the average yield is 1 oz. 18 dwts. 6 grs. per ton of quartz.

Ravenswood.—The directors have to-day received the following cablegram from Mr. Barton, general manager:—"The result of the last clean up was 484 ozs. of gold, valued at 1,590*l*. Average yield, 2 ozs. per ton." This cleaning up is evidently that of stone raised and treated up to end of year, as promised by Mr. Barton in his letter of 3rd December last. The telegram is most satisfactory.

African Mines.

Forbes Reef.—Letters of allotment and regret in this company have been posted.

Hill's Waterfall Estate.—Telegram from Mr. Hill, the vendor, received 23rd January:—"Helston, Cornwall, 4.10 p.m. Hill's Waterfall Company, Gresham House, London. Another rich reef struck on Christmas Day as advised by letter.—Hill." The office of the company has been removed to No. 183, Gresham House, E.C., and Mr. John Jameson Truran has been appointed secretary.

Moodie's.—The following are the returns from the property for December as cabled from Pietermaritzburg:—"Claims rented or leased, 639; claims rented or leased, which are producing returns, 11; 792 tons crushed by claimholders yielded 495 ozs."

South Africa.—The following particulars of work relate to the week ending 22nd December:—Blue ground hauled, 4,675 loads; blue ground washed, 2,813 loads; diamonds obtained, 860 carats; estimated value, 800*l*.; reef hauled, 160 loads.

Wassau (Gold Coast).—The remittances of gold for the month of November last were 128 ozs. 2 dwts. of the nett value of 484*l*. 10s. 3d. The mill worked (with 24 heads of stamps) 21 days 13 hours, and during that period crushed 407 tons of ore—the yield of gold per ton being 0.32 oz.

Foreign Mines.

Colombian Hydraulic.—Cablegram of the returns for December:—"We have cleaned up after a run of 500 hours; the gross returns are 2,500*l*.; the net profit is 1,600*l*."

Don Pedro.—Telegram dated Marianna, 23rd Jauuary:—"Sinking progressing very satisfactorily."

La Luz.—Copy of cable: "Have cut in the San Miguel Mine;

splendid lode 13 ft. wide, giving 2½ ozs. of gold to the ton, besides large percentage of silver."

LA TRINIDAD.—Mr. Harvey, the general manager, cables that he had "On January 10th shipped 12 silver bars valued at $17,000." Seventh bullion shipment.

MEXICAN SANTA BARBARA.—Messrs. John Taylor and Sons have been appointed consulting engineers to the company, and the registered office of the company is now at 6, Queen Street Place, E.C. Mr. J. F. Sandeman has resigned the office of secretary to the company, and Mr. Henry Ward has been appointed in his place.

NEW HOOVER HILL.—The directors have sold, through Messrs. Pixley and Abell, the 160 ozs. of gold obtained in the month of December, realising 534*l.* 14s. 8d.

PAHANG CORPORATION.—We learn that the Sultan of Pahang has become a shareholder in the Pahang Corporation, Limited, and that he holds a large number of shares in it. The importance can scarcely be over-rated, of the ruler of the country having thus identified himself with the interests of the corporation, which his power and authority will give him so many opportunities of promoting. The recent appointment by the Secretary for the Colonies of Mr. Rodger, as British Resident at Pahang, points to the importance which the country is assuming in the eyes of the Home authorities.

PALMAREJO.—The chairman, Mr. F. Pigou, leaves Liverpool on Saturday, the 26th inst., by the Aurania, en route to the company's mines in Mexico,

PINOS ALTOS.—Bullion return from the 1st to 12th inst. amounted to $14,000. The manager reports that telegraphic communication has been interrupted through a heavy fall of snow. The out-turn for the week ending 19th inst. was $9,000.

VICTORY.—The following news has been received from the superintendent at the mines:—December 25th. Since my last, of December 11th, the shaft has been sunk a distance of 9 ft., making a total depth from platform of 156 ft. It still continues to look very good, being full of veins of quartz running between the two walls. It has been timbered, track and guides to bottom.

HOME MINES.

MARKE VALLEY.—A very encouraging statement was made on Wednesday by Mr. F. G. Lane, the chairman, as to the position and prospects of the mine. That the position has improved is seen from the fact that whereas the calls were formerly 4s. per quarter they are now 1s., and bid fair shortly to cease. Some important points are "coming off" very soon, and for these the shareholders will not have long to wait.

NEW COOK'S KITCHEN.—At the meeting on Thursday a call of 3s. was made. The loss on the 16 weeks was 657*l.*, and the total debit 874*l.*

SOUTH CROFTY.—A call of 6s. was made. The loss on the 16 weeks was 1,855*l.*, and the total balance 1,876*l.*

SOUTH DARREN.—A call of 6d. has been made.

WHEAL COMFORD AND NORTH TRESAVEAN.—The whole of the materials of this mine, in the parish of Gwennap, on which Cornish gentlemen have spent some thousands of pounds, are to be sold by auction.

FOR LATEST PRICES
AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 140 AND 141.

METALS.

COPPER has been quiet. Up to yesterday the syndicate had been buyers of G.M.C., three months, at 78*l.*, at which they took several hundred tons. They were not buyers for cash over 77*l.* 5s. Yesterday they changed their tactics and bid 78*l.* for cash copper, refusing to buy three months at any price. Business was done for cash and early prompts from 78*l.* to 78*l.* 2s. 6d., but in the afternoon, the syndicate not buying, closed sellers at 77*l.* 15s. cash; three months prompt was done at 74*l.* The market is steadier this morning; 77*l.* 10s. paid for 1st Feb.; three months nominally at 75*l.*, 76*l.* Australian quite nominally. We quote Wallaroo, 83*l.* 10s., 86*l.* Burra, 83*l.*, 85*l.*; English tough, 78*l.*, 80*l.*; strong sheets, 83*l.*; India sheets, 80*l.*; yellow metal sheets, 7d., 7½d.; ore, regulus, &c., 14s., 16s. per unit; best selected, 79*l.* 81*l.*

TIN has been quiet. Straits sold from 97*l.* 10s. to 96*l.* 17s. 6d. cash, improving to 97*l.* 2s. 6d., and closing at 96*l.* 17s. 6d. cash. Three months has ruled 12s. 6d. to 15s. per ton over cash, and Australian 5s. to 7s. 6d. premium over Straits. The Dutch Market has been quiet. Banca 58¾fl.. Billiton 58½fl. English ingots, 100*l.*

TIN PLATES are steady. Ordinary coke, Liverpool, quoted 13s. 3d.

SPELTER has been quiet. 18*l.* 5s. to 18*l.* 7s. 6d. for ordinary brands, ex ship here.

LEAD dull. We quote soft Spanish, 12*l.* 17s. 6d.; soft English, 13*l.* 13s. 5d.; L.B. China pigs, 14*l.*

QUICKSILVER lifeless. Rothschild still quotes 9*l.* 10s.; second hands firm, 8*l.* 5s., 8*l.* 6s.

ANTIMONY steady; 44*l.*, 45*l.*

LONDON METAL MARKET.

4.30.—Closing official report.—Copper: Chili bars, cash, 77¼, ¾; three months, 74¾, 5¼; G. M. brands, 77¼, ¾; three months, 74¾, 5¼; best selected, 79; strong sheets, 83; English tough, 78½, 9. Tin: Fine foreign, cash, 96⅞, 7⅜; three months, 97⅜, ⅞; Australian, 97¼, ⅜; English ingots, 100.

GLASGOW PIG IRON MARKET.

11.11.—Market opens steady, with business at 41s. 5½d. cash; 41s. 7¼d. one month; now buyers these prices; sellers, ½d. more. Market rather easier, moderate business. Middlesbro' done, 33s. 9½d. cash; closing buyers, 33s. 9d. cash; 34s. one month; sellers, 1d. more. Hematite done 44s. 10d. one month; closing buyers, 44s. 5d. cash; 44s. 8d. one month; sellers 1d. more.

COMMERCIAL NOTES.

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 2,594*l.*; Eastern and Midlands, 93*l.*; Great Northern, 3,607*l.*; Great Western, 2,880*l.*; Hnll and Barnsley, 1,757*l.*; London and North-Western, 6,127*l.*; London and South-Western, 2,325*l.*; London, Chatham and Dover, 619*l.*; Manchester and Sheffield, 1,449*l.*; Metropolitan, 425*l.*; Midland, 9,361*l.*; North British, 3,302*l.*; North-Eastern, 7,991*l.*; and North Staffordshire, 432*l.*

The Brighton Railway traffic return for the week ended January 19th exhibits an increase of 2,209*l.*, and the South-Eastern an increase of 603*l.*

For the week ended 19th Jannary the Mexican Railway traffic receipts were 17,500*l.*, against 15,800*l.* last year, showing an increase of 1,700*l.* The net earnings of the Central Pacific Railroad for November were $514,530, compared with $601,658 for the previous year.

The Cleveland, Columbus, Cincinnati, and Indianapolis Railway net earnings for the 11 months ended November were $1,338,339, against $1,645,321 in 1887. After providing for interest on bonds, taxes, and other fixed charges, there remains a balance to credit of income of $596,481, against $891,343 for the previous year. For November the Macahe and Campos Railway receipts were 22,690*l.*, or 9,820*l.* more than in 1887.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases: London Street, 147*l.*; Provincial, 649*l.*; London, 328*l.*; North Metropolitan, 983*l.*; Belfast, 270*l.*; Southampton, 13*l.*; London Southern, 12*l.*; Sheffield, 101*l.*; Calcutta, 145*l.*; Bordeanx, 24*l.*; Sunderland, 43*l.*; Swansea, 19*l.*; Continental Metropolitan, 93*l.*; Glasgow, 304*l.*; South London, 28*l.*; Gothenburg, 57*l.*; Bristol, 159*l.*; German, 75*l.*—Decreases:— Hull, 8*l.*; Calais, 8*l.*

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (23rd Jan.)—The lode in the 40-fm. level east or part thereof being carried produees 6 tons of mixed ore per fm. Stopes in back of same level are producing their usual quantities of mineral. Cook's stopes below 30 produces 10 to 12 tons per fm. Lode in 40 level east of junetion and old engine shaft will produee 8 tons per fm., and in the end west of junction 6 tons per fm. We are opening a produetive lode below the 30 west of old engine shaft near the junction. No ehange in any other part of the mine to notice.—T. GREGORY.

BLUE HILLS.—This old mine is rising, Phœnix-like, from its ashes, and bids fair to be again one of the brilliant stars of the district. At the meeting last week a profit of 480*l.* was shown, which is only the beginning of great dividends if the Baldhu lode continues its produetiveness. From the fact that this lode is the one now being worked in East Blue Hills, this improvement certainly enhanees the valuc of that mine. It may be interesting to state that this Baldhu lodc at the 66-fm. level, which is the deepest point yet reaehed on this mine in the whole district, is 3 ft. wide, worth fully 30*l.* per fm., and showing every indieation of still further improving, and opening up a rich mine.

BULLER AND BASSET (22nd Jan.)—Copper Hill main shaft: The shaftmen having completed the easing, as per report of the 15th inst., are now employed at clearage of shaft below the 84-fm. level, and will be ready by to-morrow (Wednesday) morning to drop the lift 9 ft. (one pump) below the said 84, when they will proceed to cut bearer poles and put in the bearers required for supporting the extra castings dropped to the bottom of shaft, &c. Maehinery: The engines and pumps are doing very good duty.—J. H. JAMES.

D'ERESBY.—The grouud in the No. 2 sump is reported to be harder and morc sparc for sinking, but the lead holds good. The No. 9 south will be shortly up to the No. 2 sump, when they will commence cutting into the lode under the sump. The No. 9 north is still looking very well; the lode is from 2 to 3 yds. widc, with lead throughout. This is a splendid point, as the lode seems to be free from auy disturbing influenees, and is undeveloped for a great length and height. It will be satisfaetory to the shareholders to know that there is now every probability that the capital required to complete the development of the mine will bc obtained. The direetors havc agreed to take their proportions, and other friends have come forward to help on the work, so that we may now say sufficient capital will be assured to do all that is required to bring the mine into a dividend state.

DEVON GREAT CONSOLS (24th Jan.)—Wheal Maria, Eastern shaft, Capel Tor lode: In the cross-cut north, at the 86, the ground coutinues favourable for progress, and very congenial for the produetion of mineral. No lode has been taken down during the past week in this part of the mine, there is consequently no alteration to advise since the report of the 17th inst. Wheal Emma, Railway shaft, new south lode: In the cross-cut north at the 260 west ou the middle part of the lode near the furthest poiut reached, a branch about 6 ins. wide has been intersected, consisting of capel quartz, with peach, carbonate of iron, and a little mundic. With this exception the ground has been much the saine as for some time past, consisting of killas, with, in plaees, thin layers of quartz. Watson's engine shaft: The cutting of plat at the 160 is completed, and the cross-cut north is now being driven with a full force of men, so as to reach the lode as quickly as possible. In Lock's rise in the back of the 148 west the lode, 3 ft. wide, is very promising, and is yielding 3 tons of copper and mundic ores per fm. In the 136 east and west the lode is 3½ ft. widc, and at each point yields 3 tons of copper and mundic ores per fm., and is also very promising.—I. RICHARDS.

DEVON UNITED (24th Jan.)—Willesford's shaft: During the past month Willesford's shaft has been sunk 1 fm. 3 ft. 6 ins., making a total depth of 12 fms. below the 120-fm. level. The lode is of good size (3 ft. wide), and exceedingly promising, and is worth for length of shaft (12 ft.) 6 tons of good quality copper ores per fm. The cutting of ground for fixiug air engines at the 120 is being got on with satisfactorily, and will be completed in the course of another week or 10 days. The cross-cut south at the 60 west of Watson's shaft has been driven 5 fms. 4 ft., the ground being congenial for the production of miueral and favourable for exploration. The machinery throughout the mine is in good order, and working well.—I. RICHARDS.

DRAKEWALLS (23rd Jan.)—Since cutting the south wall of the lode at the bottom of the mine and ascertaining its full size (40 ft.) from north to south, we have commenced driving east on the south part, which has a very fine appearance, and will produce 8 tons of mundic ore per fm., and a small portion of tin. The lode in the 147 east on the north part will yield 10 tons of mundic per fm., and produces rich stones of yellow copper; good progress is being made. In the 147 driving west of the shaft on the north part of the lode we have just passed through a cross-course 2½ ft. wide, and have now reached the lodc to the west thereof, which has a magnificent appearance, and will yield fully 12 tons of rich arsenical mundic per fm., with a little tin throughout; ground good for exploration. The lode in the 132 east is composed of hard capel and spar, and saving work for copper and mundic ores. In the 132 west of the engine shaft the lode has a very promising appearance, and during the last 6 ft. driving it has greatly improved, and will yield 4 tons of copper and mundic ores per fm. In taking down a piece of lode to the north of the drivage at the 132, west of the engine shaft, we find it continues to yield 7 tons of copper and mundic ores per fm. We are pushing on with all our surface work as fast as possible, and hope to have the new ealciner at work by the end of the present month. We have just cleaned out the flues, and sold to the Coombe Company 21 tons 17 cwt. 2 qrs. arsenic soot, realising 161*l.* 2s. 2d. We also sold yesterday, to Messrs. R. R. Mitchell and Co., 2 tons 9 cwt. 3 qrs. 24 lbs. black tin, at 51*l.* 15s. per ton, realising 129*l.* 5s. 8d.—H. RODDA.

EAST BLUE HILLS.—A very satisfactory report was received yesterday, showing that in the 30-fm. level west of cross-course there is an improvement, where the lode is worth 15*l.* per fm., and the stope in the back of it worth 12*l.* The Pink lode is being opened on at the adit level, which is 50 fms. from surface, so that it is expected something of value may soon be reported from that operation. The recent important improvement in the old Blue Hills Mine on the Baldhu lode is most encouraging.

EAST GRASSINGTON.—The following report, dated 23rd January, has been received from the manager:—East shaft: The lode in the 47-fm. level west is 2 ft. wide, principally composed of limespar, sulphate of barytes, and lead ore, worth 8 cwt. per fm. A stope in back of the level in a lode 2 ft. wide, and worth 8 cwt. of lead ore per fm. In the intermediate level west of No. 2 sump below Amy's workings the lodc has passed through a nip, but is opening out again most satisfactorily, and is upwards of 2 ft. in width, carrying highly congenial matrix, and producing nice branches of blue and grey lead ores, worth 18 cwt. per fm.; this run of ore ground is lengthening westward as depth is attained. The lode in the same level east is 2 ft. wide, and worth 18 cwt. of lead ore per fm. In the level west of No. 3 sump the lode is in two divisions, with a horse of limestone between both branches, are worth together 140 cwt. of lead ore per fm. In the same level east the lode is 2 ft. wide, carrying limespar and barytes intermixed with lead ore, being good saving work for dressing. A stope in back of the 37 has slightly improved in value, and yields 10 cwt. of lead ore per fm. Harris maiu engine shaft; Rapid progress is being made in sinking this shaft, now down 10 ft. 6 ins. below the 37. The 22 h.p. Robey hoisting and pumping engine has been thoroughly overhauled, and is in good trim and working smoothly, and with the aid of which we hope to reach the 47 and cross-cut the lode at an early date. Dressing and surface operations are pushed forward as fast as the weather will permit. We weigh off another parcel of lead next week.

ECTON (21st Jan.)—Clayton mine: In the 80-fm. level, going west on Chadwick vein, we have cut the first saddle. We expect to have two more to cut to get into the one which carries ore in Clayton; the end is tight and hard still, although the vein of spar still goes with us. The rock is not uncongenial for ore-bearing, but is too tightly pressed at present; there are only occasional spots of ore, and until to-day it has been very dry. Now, however, there is a little trickle of water which we hope means less compact rock in front. Water bank: We have cut through the lode; at least we have gone 2 ft. since we had any ore, but have not come to a definite wall to the lode in the west. I have put the men to drive north and south on the lode to examine it before sinking upon it. It contains lead, copper, and blende saving stuff, but not enough to pay. Swanslow: The cross-cut towards the lode is in 2 fms., and is letting out water freely, but I expect to have to drive several fathoms further to cut the lode, which yielded copper some 7 or 8 fms. above.—A. LUDLUM.

GAWTON (22nd Jan.).—All our underground bargains continue without any change to notice during the past week and all our surface work is going on first-class.—G. ROIDE.

GREAT FORTUNE.—There is no particular change reported this week; the values of the different points are maintained, and preparations are being made to follow them down 10 fms. in the old engine shaft, which may treble the present returns in the course of the coming spring. Here will be a splendid investment in the course of a few months if the price of tin keeps up.

MID-DEVON.—Report for week euding 19th January.—Surface: The fine weather of the past week has enabled the repairs to water wheel axle to be executed without hindrance. The couplings arrived here from the foundry on Sunday morning early, when they were as quickly as possible got into position and fitted to axle, and all got in working order by midnight on Monday. On starting we found there was a little motion in the fractured end, but this, with occasional tightenings of bolts in couplings, has nearly stopped, and hope by careful attention, and screwing when necessary, to overcome it eutirely. We are not working the wheel at full speed, but when couplings have adjusted themselves to the axle, shall increase speed of wheel to the end of again draining the water to bottom of shaft. A shaft: The water is down to bottom of the 80. C shaft: The 60 east has been driven by nine men 5 ft. 6 ins.; total distance from shaft, 22 fms. 2 ft. 6 ins. The strata is much easier and more congenial, yielding a little ore in saving quantities; it is embedded in chlorite, quartz and axinite, and conducive to a greater yield. The 50 east: Stopes Nos. 2, 3 and extreme end of drivage worked by six, six and two men; are respectively worth 9*l.*, 15*l.* aud 10*l.* 10s. per cubic fm. for copper ore.—J. NEALE.

PRINCE OF WALES.—No particular point to notice this week. All the works are being satisfactorily and vigorously carried on, and a large quantity of tin is being accumulated for a new calciner to make ready for market.

SOUTH CONDURROW (23rd Jau.)—We have laid down the tramway in the 108-fm. level west of Marshall's and have set the men to rise the back in a strong and kindly lode. In the meantime we are forcing on the driving west. The north part of the lode west of the cross-cut in the 70 east of King's is now worth 25*l.* per fm. There is no other change to notice throughout the mine.—W. RICH. W. WILLIAMS, H. KING.

SOUTH DARREN (24th Jan.)—The following bargains were let on Saturday last for one month: To drive the 142 end east by four men at 8*l.* 15s. per fm.; there are small strings of lead all through this end, but not to value. To drive the 142 end west by two meu at 8*l.* per fm.; lode worth 12 cwts. of lead ore per fm. A stope in this level by four men at 3*l.* 7s. 6d.; worth 10 to 12 cwts. of silver-lead ore per fm., with a good mixture of copper. To stope in the end of an old stope in this level by four men at 3*l.* 7s. 6d. per fm.; worth 12 cwts. of silver-lead ore per fm. To drive the 110 end east by two men at 6*l.* 15s. per fm. The lode looks kindly; worth 8 cwts. of silver-lead ore per fm. A stope in this level by two men at 3*l.* 5s.; worth 10 cwts. of silver-lead ore per fm. To drive the 100 end west by four men at 8*l.* per fm. The lode here is very wide, showing a little lead all through it. We are stripping it down to the full width, and there are good branches of copper in the north side, which we think is the main part of the lode. We shall drive on that side as soon as the stripping is finished. A stope in this level behind the end by two men at 3*l.* 7s. 6d. per fm.; worth in places from 10 to 15 of lead, 1 to 1½ tons of copper per fm. A stope in this level by four men at 3*l.* 10s. per fm., worth 12 cwts. of lead and 12 cwts. of copper. A tribute pitch in 130 east by four men at 8*l.* 10s. for clean lead ore. This place turned out well last month, and we think it will do so again this month.—J. MITCHELL.

— (25th Jan.).—There was a lead ore sale to-day of 25 tons to Nevill, Druce and Co. at 12*l.* 11s. 6d.

TREGURTHA DOWNS.—Sold on Saturday, 12th inst., 8 tons 13 cwt. of tin ore at 60*l.* per ton, producing net 518*l.* 12s. The tin sold last year amounted to 206 tons, which realised net 13,985*l.* 15s.

TIN ERA (22nd Jan.)—There is not much change in the deep adit

cross-cut north since the date of my last week's report. According to the dialings, we have only some 4 or 5 fms. further to drive to intersect the lode, from which good returns have been made in the level above, and I hope ere long to see a more favourable change in the ground, and, upon the intersection of the lode, to report a good discovery.—R. KNOTT.

TREGEMBO (22nd Jan.)—Pennick's shaft is down the required depth for a 42-fm. level. We shall now commence to case and divide down the shaft, which we hope to complete this week, when we shall start to drive towards the lode, which cannot be far off. No change in the ends worthy of note. Our stopes, on the whole, are not looking quite so well. Nothing has been met with in the cross-cuts since my last.—T. HODGE.

WEARDALE.—Ore raised for week, 66 tons; ore dressed for week, 103 tons; ore, &c., smelted for week, 153 tons, producing 75 tons of pig lead.

WEST CARSIZE.—The ground is changing in the 30 cross-cut, small branches are appearing containing tin and letting out much water, and all other points are producing rich tin in small branches, which may probably fall into a great lode in depth. The district is one of great promise, and people well acquainted with it predict great success if it can be carried out.

WEST GODOPHIN (22nd Jan.)—The engine shaft is 10 fms. 1 ft. 8 ins. below the 107-fm. level; no change in the rock. The 107 west on Bellingham's lode produces low price tinstone; it is a promising end. Nothing new on piuk lode.—T. HODGE.

WHEAL GRENVILLE (24th Jan.)—We stopped on Monday to pack piston at our big engine, change clacks, and pack poles. I am pleased to say we are again forking; the machinery is working well. We close our fortnight sale this evening; about the usual quantity.—T. HODGE.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR.—Production to 31st December, 1888, 13,841 tons crushed yielded 1,693¾ tons rich silver-lead ore. Corresponding period of 1887, 12,135 tons crushed yielded 1,374 tons. As usual dressing operations were discontinued on the 31st December, and will be resumed as early in March as the weather will permit. During this period the machinery which runs continuously from March to December is thoroughly overhauled, repaired, &c., and underground operations are prosecuted with the utmost vigour in order to make the stock of crude ore as large as possible by the time the dressing-floors are started.

4th Jan.—76 men driving; aggregate value of ends per fm., 5 tons 10 cwt.; 188 men stoping; aggregate value of stopes per fm., 11 tons 15 cwt.; 16 men rising, 14 men cross-cutting, 119 trimmers and ore-pickers.

BRATSBERG (14th Jan.)—Mining report No. 55. Hoffnung Mine: No. 2 adit level is worth ½ ton per fm., and the rise in the back of the same level 2 tons per fm. for the length carried. The sinking of the winze in the bottom of No. 2 is in progress, carrying a large lode worth 1½ tons per fm. A good deal of ore has recently been met with at No. 3 adit level; but the lode has been fluctuating much in value, now yielding about ½ ton per fm. The rise in the back of No. 3 is worth about ½ ton per fm. The mid-level at Ball's shaft is producing 1 ton per fm. No. 4 level is yielding ½ ton per fm. No. 5 level east and west is unchanged since last report. The mid-level at Murchison's is yielding about ½ ton per fm., and the rise in the shallow workings ¾ ton per fm.; 84 miners employed here. Johannes' Mine: Good progress is being made in driving the cross-cut, and the sinking of the winze at the shallow level is going on fairly well, the lode has been making small and poor, but there are now indications your meeting with ore shortly. Ten miners employed here. Naesmark Mine: Barker's shaft has been sunk about 1½ meters during the past week; the lode for the time being is poor, but there appears to be some new quartz leaders making again, and we may expect to find ore in a few days. No change in the number of miners employed. Surface work and remarks: The work about the machinery is going forward, but we are unable to progress with it as fast as we should like owing to the non-arrival of the castings.—J. D. HOLMAN.

CALLAO BIS (26th Dec.)—Unda shaft: We have sunk since last reported 4 ft.; total depth now 370 ft. The 350-ft. level on new lode does not improve, it has been driven since last report 5½ ft. I recommend we stop this work, and cross-cut at this depth. At the 250-ft. level I started a cross-cut north, with the view of cutting a branch of quartz found at the 200-ft., and which, if it continues down, we ought to meet at about 24 to 30 ft. from the level. The ground driven up to date at this point is 10 ft. Sosa-y-Mendez: In cross-cut we have driven 26 ft., making total distance 84 ft. In the last few feet we have come across small veins of quartz, probably belonging to the same lode. I consider that the Sosa-y-Mendez concession should be thoroughly prospected, as it is virtually unknown, except by some work done by the old company near the Mocupia Creek, and the adit level at the west end of the concession. Mill: Since my last advice I have not run the mill. I have, however, decided that in the beginning of the new year to crush what we have, also a few tons from the Sosa-y-Mendez.—G. W. EUSTICE.

CAPE COPPER (30th Nov.)—Ookiep: The ground in the 105-fm. level east of No. 5 level has not undergone any change to notice since last report; it continues to produce stones of copper ore. The stope in the back of the 105-fm. level east of No. 68 winze maintains its yield of 6 tons of copper ore per fm. The rock in the 92-fm. level (No. 11) north-east of No. 51 winze shows a slight improvement. The ground is more favourable, and has during the last few days produced some stones of copper ore. The stopes in the 92 and upper levels continue to yield their usual quantities of copper ore. Trial Mines—Springbok: The ground in the 59-fm. level south-east of shaft is still yielding some saving work, but nothing to value. The ground in the 59-fm. level north-west of shaft continues to present spots of copper ore. The ground in the winze which is situated about 12 fms. north-west of shaft (towards old mine) sinking below the 59-fm. level shows further improvement, and now yields 4 tons of rich quality copper ore per fm. (By later reports this has fallen to 1 ton.) Kotzees Mine: There is no particular change to notice at this station; the ground in the 25-fm. level north-west of shaft yields stones of copper ore. The ground in bottom of shaft having become less congenial, we have deemed it expedient to temporarily suspend the sinking and to commence to extend levels in the apparent direction of the productive ground at a depth of 25 fms. We shall be able to thoroughly develop this locality by driving in a south-westerly and south-easterly direction. The indications on the surface are of a very promising nature, and warrant a good outlay being made. Should anything valuable be intercepted in either of the two trials named, sinking in the shaft will be immediately resumed. Nababeep south: The ground in bottom of shaft sinking below adit level shows no change, but is still impregnated with rich specks of purple copper ore. We shall now be enabled, if necessary, to sink to a considerable depth, and we trust our efforts to make a good discovery will not be in vain. Ookiep east: The ground in the 58-fm. level south-west of shaft seems to be improving, producing a larger proportion of copper ore than heretofore; magnetic iron pyrites are still abundant, and would be detrimental to dressing. At present the forebreast is worth 1½ tons of copper ore per fm. The pumping or draining of the water has been started, and the pitwork is doing good duty.

— Returns for November: Ookiep (including surplus on previous month's returns), equal to 2,400 tons of 21 per cent. Arrivals at Port Nolloth: The Golconda, Sindbad, and Magnet. Arrivals at Swansea: The Gateside, Andaman, Beta, Glanrafon, Caswell, Maxima, and Abercarne. Bills of lading received: 780 tons of ore, per Mount Vernon, 480 tons, per S. T., 850 tons, per Esempio, and 800 tons, per Carmelita.—Capts. LANKSBURY and HENWOOD.

COLAR CENTRAL (1st Jan.)—Low's engine shaft: East cross-cut has been driven 8½ ft.; total distance from shaft, 115½ ft.; ground still remains unchanged in all respects. We have not yet fairly commenced to drive on the quartz met with in this level, but I hope to get this work well in hand during the week. West cross-cut has been driven 9½ ft.; distance from shaft, 120½ ft.—still driving in hard, unproductive country. The water has somewhat increased at this point, as we are getting nearer to Darlington's shaft, which has about 50 ft. of water in it. The speed at both points in Low's engine shaft is not so good as usual, owing to our having stopped the engines to thoroughly clean boilers, flues, &c., at Christmas. The compressor engine was consequently idle for several days. Underlay shaft: The 171 east drive has been driven 1½ ft.; distance from cross-cut, 40 ft. The contractor here will be changed now, and another lot put in. New trench shaft: West cross-cut was driven 6 ft., making total distance from shaft, 55 ft. As nothing of an encouraging nature was met with, we put the men to cross-cut east, and 35½ ft. were driven, making the east cross-cut now 44 ft. from shaft. East boundary shaft has been secured and timbered downright for 27 ft. We shall not be ready to commence sinking again as early as I had anticipated I hope, with the aid of the bullock-whim, we shall be able to sink to a depth of 90 or 100 ft., and then cross-cut. New trial pit alluded to in my letter of 18th December has been sunk 21 ft. 6 ins., making a total depth of 35 ft. 6 ins. This has now been suspended. Surface: All machinery is working very satisfactorily.—A. S. B. OAKLEY.

CONSOLIDATED ESMERALDA.—The superintendent, under date January 1st, reports that work on the Durand Mine for the week has been as follows:—South drift 375-ft. level extended 23 ft.; total, 87 ft. The ore chute has not yet been reached, but the distance to run should not be far. South drift 325-ft. level extended 15 ft.; total, 202 ft. Fine big ledge, but it will not be profitable to crush this ore until electrical power plant has been completed and steam power dispensed with.

CORTEZ (5th Jan.)—Work on the mines for past week has been as follows:—The Boss tunnel connected with main tunnel; whole length of Boss tunnel, 362½ ft. Main tunnel: East drift advanced 5 ft.; no change in ground. Middle tunnel: West drift advanced 7 ft.; now a large body of ore averaging 50 ozs. per ton in the face of the drift; upraised 7 ft. on the vein 150 ft. west of turntable; extracted 12 tons of ore from this vein. Upper tunnel: West winze sunk 6 ft. on vein and extracted 30 tons of ore. Caps breast: Incline advanced 5 ft.; no ore extracted from stope, as work of driving incline and stoping cannot both be carried on at the same time. North-east upraise: Ore body improved since last writing; 90 tons of ore were extracted, valued at $90.00 per ton. North-west upraise: Extracted 75 tons of ore of an average value of $150.00 per ton. Ore hauled to mill, 110 tons. Mill has run steadily, and treated 116 tons of ore.—WELSH.

DEVALA-MOYAR (31st Dec.)—The lode in the winze sinking below the deep tunnel is about 1 ft. wide; very regular, with a beautiful wall to sink with, and yields about 1½ tons pyrites to the fm. The tunnel driving west of pyrites winze does not contain so much pyrites, about 1 ton to the fm., but it is much better for free gold. The lode in the tunnel east contains a little pyrites, but at present it is not of much value. Assays of samples taken respectively 5th, 12th, 27th December:—Pyrites winze, 1 oz. 13 dwts. 2 grs., 1 oz. 7 dwts. 10 grs., and 1 oz. 3 dwts. 11 grs.; west tunnel, 1 oz. 19 dwts. 4 grs., 4 ozs. 11 dwts. 11 grs., and 1 oz. 10 dwts. 1 gr.—J. WILLIAMS.

EAGLEHAWK CONSOLIDATED.—The secretary sends us the following abstract of reports from the mine, dated the 6th and 8th December.—The plat at the 550-ft. level has been securely timbered; it is 12 ft. by 12 ft. and 8 ft. 6 in. high. At 13 ft. from the shaft a reef has been cut; it is proved to be 13 ft. wide, and although it is highly charged with minerals and very solid; no gold has been seen, except a little in dish prospects. However, driving south has been commenced, and something may be found shortly.

ETHERIDGE UNITED.—The mining manager reports for the week ending 17th November:—Ropewalk: The poppet heads, &c., being now finished, the men are employed in making an ore bin; this will hold 50 or 60 tons of stone, and is so constructed that by simply raising a trapdoor the waggons conveying the quartz to the mill will be filled. Canadian West: The 100-ft. level east has now been driven a distance of 95 ft. from the shaft. The reef is 2 ft. 6 ins. wide. The 140-ft. level east is driven 34 ft. from the shaft. The reef is 3 ft. wide, very hard, and highly pyritous. We are now assured of the existence of a large quantity of quartz in this property. Canadian Middle: This shaft has been sunk during the past week a further distance of 7 ft., making the total depth 66 ft. The reef is brown stone and ferruginous in character, and seems to improve as we go deeper. I send you a cutting from a local paper which may be of interest:—"Mr. Walpole describes the Etheridge as the finest goldfield in Australia, and says that there are 500 square miles of auriferous country in that district, and all that is wanted to develop the resources of the place is an easier means of access. Mr. Walpole had an interview with the Minister for Mines on Saturday, and while discussing the claims of the Etheridge to consideration, Mr. Macrossan, who knows

the district thoroughly, assured him that the Government did not intend to neglect the district, and said the time would come when the railway would be continued from Croydon through that district. Mr. Walpole suggested to Mr. Macrossan that a series of holes, about 10 miles apart, at a total cost of about 250*l*., should be dug on the route from Townsville and the sides boarded, so as to prevent the sand falling, and filling them up again. Mr. Macrossan thought the various divisional boards might construct these holes, but Mr. Walpole said that was impossible, as the boards had no money to spare for such work." Both the 100 ft. and 140 ft. levels are looking as well as ever. Etheridge reef: In my last communication from Mr. Davis he said everything was going on satisfactorily. By this mail I am sending you two photos of the mill at Goldsmith.

FRYERSCREEK.—The directors of this company have received the following advices, dated 13th December :—We have commenced to drive north of cross-cut at the 623-ft. level, on what I thought to be a cross-head, when we met with it in driving the cross-cut. There is no fluccan on the wall, and the wall is cutting to the east of north about 20 points, in very hard sandstone. There is a bar of black slate 4 ft. east of the wall, which will junction with the wall in another 2 ft., which, I think, will make a change in the wall. There is a small seam of quartz on the wall. We have two men working in this drive for the past week. Drive now in 5 ft. This drive, or wall, is 29 ft. east of the slide on which the level is driven south. We also intersected the eastern wall in the western drive going south 65 ft. from the cross-cut, which did not make any change in the drive. We have also extended the cross-cut west at the 520-ft. level another 14 ft., making 29 ft. from the eastern lode, and have holed through to the rise from back of 623-ft. level. The rise about 20 ft. above the back of this level; so we have good ventilation at the 623-ft. level. We have started to drive south on the eastern lode at the 520-ft. level drive in 6 ft. from the cross-cut. We have very good ground, mostly slate, with a fluccan 8 ins. in thickness, but no quartz as yet. But I expect to get stone when we junction with the slide. We have four men working in this drive, two shifts. The 260-ft. level: The quartz going south in this level is cutting out with the hard sandstone, and better ground coming in the drive. There is a fresh make of stone coming in the face under the stone that is cutting out. We cannot find any gold in the stone, The stone in the north drive is just the same thickness. We have only three men working the two faces for the past week. Could not find any gold in driving east of the wall; stone split up in small leaders in hard sandstone. I expect to meet with the slide in the north drive about 80 ft. from the winze, where I expect a change for the better, on the north side of the slide. Drive now in 38 ft. from the winze, and the south drive is now in 64 ft. from the winze. The 320-ft. level, western shaft: The contractors have extended this level north 14 ft. for the past fortnight. The face of the drive is not looking so well again. There is a very hard block of sandstone coming in the drive, and pinching out the quartz. The ground is very changeable in this drive. The footwall, slate, with small seams of quartz, but not payable. We have the cistern made for the condenser of the pumping engine, and everything that is required for the same. We shall put it in its place during the Christmas holidays, also overhaul the machinery at the same time.

GARFIELD (5th Jan.)—The mill was started up on the 1st inst., and has since been doing excellent work.—Hooper.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending 7th December.—I have to report that during the past fortnight the main shaft has been sunk a further depth of 6 ft., making the total depth from surface 1,229 ft. The rock in the bottom is purple conglomerate, with no appearance of any change. Sinking was discontinued on Saturday. the 1st inst., and cross-cutting east at the 1,200-ft. level was commenced on the 3rd inst.; the distance from the shaft to the eastern boundary is 410 ft.; this cross-cut will be proving ground, that has never been prospected, and there is every probability of other reefs being met with before the Phœnix reef is reached. Cross-cutting west for the March reef, at the 930-ft. level, will be commenced next week; the March reef should be met with at a distance of 175 ft. from the shaft.—T. Ramage.

GYMPIE GREAT EASTERN (29th Nov.)—Fortnightly report: During the past fortnight the cross-cut at the 634-ft. level has been extended 11 ft.; total from the shaft, 96 ft.; at this point we cut the main reef on Monday last, but did not break into it yet, as we intend to hole through to the winze first. We are driving south now to get to the winze. The winze on the Great Eastern reef has been sunk 13 ft.; total, 65 ft.; there is a large body of crushing stuff showing a little gold. We are also driving north here to the 634 ft. cross-cut; I expect to hole through any time. This will leave 68 ft. of backs to be worked in this block. The winze at the 580-ft. level in the eastern cross-cut to cut the 1 South Great Eastern reef has been sunk 15 ft.; total 30 ft., and timbered 15 ft.; total timbered, 20 ft.; the country is good hard slate. There is water making equal to two small buckets per hour. The stopes above the 400 and 500-ft. levels are all showing fair gold. For the four weeks ending November 19th, there were 540 tons of quartz raised and crushed, for a yield of 1,057 ozs. 2 dwts. of smelted gold. The 10 head of stampers have been crushing for the Nicholl's Lease Company since the 26th inst. The weighbridge was finished on the 23rd inst. I think it would be advisable to run the next washing up as near the holidays as possible, as the boilers at the battery will have to be cleaned, and the winding engine will want overhauling, as the plates on the boiler are very thin in two places near the mud holes where two pieces will have to be put on. Everything about the mine and winding engine is in fair working order. There are 81 men employed, 71 on the mine and 10 at the battery.—J. James.

HUMBOLDT ELECTRIC POWER AND MINING. — The superintendent, under date January 1st, reports the west cross-cut from the 300-ft. level has been extended 16 ft. in the week, making its total length 98 ft. The east cross-cut is out 40 ft.; progress for the week, 15 ft., the face of the drift being still in quartz of a very favourable character, some of which is partially decomposed, and shows red oxide of iron. Three small streaks of ore have been cut, assaying to 1½ ozs. gold per ton. The whole of the ledge, now over 100 ft. wide, is big block quartz, and carries gold throughout. Finding the rich streaks is very encouraging, and gives promise of developing into a body of ore as the east wall is neared. The shaft has been sunk 5 ft.; total, 315 ft.

INDIAN.—Report from the mines dated 31st December.—The Christmas holidays having intervened since my last report, there has not been any change worthy of remark throughout the underground operations. The following are the measurements for the week ending the above date :—Coward's shaft: Sunk 1 ft. 6 ins.; total, 176 ft. 4 ins. The 144 ft. cross-cut reef, driven 7 ft.; total, 119 ft. Skull tunnel, driven 4 ft. 6 ins.; total, 115 ft. 6 ins. Skull tunnel stopes: Ground stoped north 5 ft.; south, 5 ft. Koorumber tunnel No. 1: 3 ft. 6 ins. have been driven; total 421 ft. 6 ins. Koorumber stopes: 27 ft. Koorumber tunnel No. 2 has been driven 10 ft.; total, 209 ft. No. 9 tunnel south: 10 ft.; total, 332 ft. No. 9 tunnel north: 3 ft.; total, 317 ft. No. 11 tunnel: 2 ft.; total, 515 ft. In consequence of Mr. Campbell Johnston having been engaged in cleaning up the mill, and also attending to other required duties, no assays have been made this week. Machinery working well.

INDIAN CONSOLIDATED (31st Dec.)—Phœnix section: The midway tunnel has been driven 3 ft.; total distance 146 ft. We have no improvement here, consequently it will be suspended, and the same men will be employed in driving two cross-cuts east and west to see if there is any more lode standing in the side of level. South drive in the end of stope: The lode is not quite so large as when last reported, being now 3 ft. wide, but the quality is looking a trifle better, yielding a little more pyrites; should this lode last shall open up more stoping ground. We have not altered the number of stopes or the number of men working in back of the tramway tunnel, and the lode is still 14 ft. wide, but mixed a little more with blue rock; this we shall pick out to keep up the quality as much as possible. Midway stopes are looking pretty good at the present time for pyrites, and also a stope in back of No. 1, and taking it all round the stopes have an improved appearance. In some places in the mine there is a long reach of side hanging, to secure this we intend to build pillars of stone instead of timber, this being the cheapest, having the material in the mine. Prospecting: We are now prospecting in the vicinity of the stamps, and the Korrumber as usual can give us fair washes of gold on the board, but I am unable to give you the name of the lode he is washing from at present.—J. Williams.

— (31st Dec.)—Colar section—No. 5 shaft: The 360-ft. level driving north of shaft has advanced 9 ft., or 14 ft. 6 ins. from shaft; lode at present small, and poor. The 360-ft. level driving south of shaft has advanced 10 ft., or 20 ft. from shaft; lode fully 3 ft. wide, showing a little free gold, and assaying 2 ozs. 17 dwts. 11 grs. per ton stone. The 300-ft. north level has advanced 3 ft., or 70 ft. 4 ins. from shaft; lode disordered. The 300-ft. level driving south of shaft has advanced 3 ft. 2 ins., or 64 ft. 7 ins. from shaft; lode of mixed character, assaying 2 dwts. 14 grs. Stope in the bottom of the 300 north level: Stoped for the month, 25 ft.; lode 2 ft. wide, assaying 6 dwts. 13 grs. Stope in the bottom of the 300 south level, stoped 32 ft.; lode 2 ft. 6 ins. wide, assaying 16 dwts. 4 grs. Stope in the back of the 300-ft. level south, stoped 22 ft.; lode varying in size from 6 ins. to 1 ft. 6 ins. wide, assaying 12 dwts. The 230-ft. level driving south of shaft has advanced 9 ft., or 55 ft. 2 ins. from shaft; lode 2 ft. wide; poor, assaying 1 dwt. 7 grs. per ton stone. The 230-ft. level driving north of shaft has advanced 12 ft. 8 ins., or 93 ft. 8 ins. from shaft; lode 2 ft. 6 ins. wide, showing good walls, but only giving a trace of gold per assay. The winze sinking below the 230 north level sunk 6 ft.; lode full size of winze 4 ft., assaying 12 dwts. per ton. The winze sinking below the 156-ft. level north sunk 4 ft.; lode large, 4 ft. wide, low grade stone. The 156 south drive has advanced during the month 7 ft. 6 ins., or 82 ft. 11 ins. from shaft; lode 3 ft. wide, assaying 7 dwts. 18 grs. The 156-ft. level east of shaft has advanced 3 ft. 8 ins., quartz low grade, assaying 2 dwts. 14 grs. Davey shaft: This shaft has been sunk 14 ft. 6 ins., or 159 ft. 1 in. from surface. Since my last report the body of quartz has again enlarged, and is 1 ft. wide in the north end of the shaft, but is of no assay value. Trial shaft, south of main, has been sunk 23 ft. for the month, or 80 ft. from surface; the quartz has further fallen off, and only shows occasional stones. I purpose putting out a cross-cut east and west at the present depth. Trial shaft, north of main: During the month we have advanced the trial level 42 ft. 6 ins. from shaft, and have not struck any old workings or quartz to value. Surface battery is in good condition, and working well, as also all the other machinery.—T. R. Davey.

JAVALI.—The directors are in receipt of letters from the manager, dated 5th December.—431 tons of ore had been crushed during the month of November, producing 178 ozs. of bullion, valued at 496*l*. The cost at the mine was 326*l*. The stuff was taken principally from the old Nispero workings; its average value was 8 dwts. 7 grs.

KILKIVAN (2nd Dec.)—Assay of copper from Shamrock lode, by D. E. Reid, 28.90 per cent., no gold, no silver. Of course, this sample was picked, but there seems to be a fair quantity of it of similar quality. Slags and furnace bottoms at Mount Coora (of which there some hundred tons) are not equal in quality to those at Mount Clara, and am doubtful if they would pay cost of removal and other charges. Work delayed for want of sawn timber and pulleys, and gearing, from Messrs. Walker and Co., and I am prevented from completing battery. During last two days have had thunderstorms, which have given us sufficient water to make a start with when ready: Although the dam does not contain one-twentieth of its holding capacity. Shamrock mineral lease and machine site, application for same approved by Warden. Black Snake eastern cross-cut now in 44 ft.; western cross-cut, 27 ft. In the former I thought it desirable to continue driving another week, there being still lode stuff in the face, but have now discontinued. Before opening out on lode, will put a bore in a few feet ahead to ascertain what the country is like. The lodestuff alluded to is evidently a dropper from the eastern reef. In western cross-cut have also passed through a vein of quartzite, carrying mundic, which looks like a dropper from some lode ahead. Before striking this vein we had quantities of mundic, but beyond it none. The underlay of the vein is east, consequently it rises west, so that should it prove as I surmise, we are sure to cut it carrying in the cross-cut. Mariners bailing and putting in temporary skids, shaft being in a bad state and dangerous. Terrible shaft sunk to a depth of 18 ft. Have put a galvanised iron shed over shaft; ground harder. Shamrock lease: Total depth of level now 6 ft. Have had several small bunches of ore; now come to a change much harder, and of a different character to anything we have ever had before, which I hope will prove favourable for the lode, making more productive. Shamrock freehold: Have marked out shaft; two good miners commence here to-morrow.—Brown.

MADRAS PRESIDENCY.—Report for the fortnight ending the 31st December :—I am glad to be able to report that the winding

engine has been started and is working very well. I shall now be able to get on quicker with the sinking of the shaft. The stuff I am going through is very hard in some parts of the shaft, and will require blasting. This I will do as soon as I get a license from the collector of the district; depth from surface, 23 ft. The washing machine is being erected, and I hope soon to have it at work. The bore hole is still in blue ground, and down 103 ft. 6 ins. I may mention that all the people that have been here have told me that I ought to put through the washing machine every bit of stuff that comes out of the shaft, and all the surface soil on the property. And all say that diamonds must be here, but want finding. Several very fine ones have been found here lately. Labour employed on the above and miscellaneous work. This being the festive season we have been taking a little rest.—R. B. SMYTH.

MESQUITAL DEL ORO.—Mine captain's report, dated 21st December.—Work done in the mine during the week was as follows:—Acerada level, Sans shaft: Six men cutting station. Sans shaft, 137 level east: Cutting station. The 85 level east: Driven 4 ft.; total, 525 ft. 6 ins.; poor. The 137 level east: Driven 3 ft.; total, 527 ft. 6 ins. No alteration during the week. The 137 level east, winze C: Sunk 3 ft. 6 ins.; total, 26 ft. The reef still continues of an average ore. The 190 level east: Driven 4 ft.; total, 356 ft. Still looks well and shows free gold. The 256 level east: Driven 4 ft.; total, 203 ft. 6 ins. No alteration at this point to notice. The 255 level west: Driven 4 ft.; total, 130 ft. 6 ins. A little improvement during the week. The 190 level west: Driven 4 ft.; total, 270 ft. 6 ins. The reef looks well and shows a little gold. San Miguel tunnel: Driven 11 ft.; total, 1,624 ft. 6 ins. Stope, 137 level east: The reef still continues on an average ore.

MESQUITAL DEL ORO (29th Dec.)—Work done in the mine during the week was as follows:—Acerada level: Completing station at Sans shaft. 85 level east: Driven 7 ft. 6 ins.; total, 533 ft.; very great improvement during past week. 137 level east: Driven 5 ft.; total, 532 ft. 6 ins.: reefs still looks well, and shows visible gold. 137 level east, winze C.: sunk 3 ft. 6 ins.; total 29 ft. 6 ins.; no alteration since my last report. 190 level east: Driven 4 ft.; total, 360 ft.; still looks well, and shows free gold. 190 level west (south part): Driven 4 ft.; total, 274 ft. 6 ins.; the reef at this point looks very promising. 256 level east: Driven 6 ft.; total, 209 ft. 6 ins.; no alteration since my last. 256 level west: Driven 6 ft.; total, 136 ft. 6 ins.; this reef shows well for the western ground. Sans shaft, 137 level: Completing station. San Miguel tunnel: Driven 18 ft.; total, 1,642 ft. 6 ins. Stope B., 137 east: Ten men on day work; stope still continues a very fair average ore.

MOUNT MORGAN EXTENDED.—The following report, dated Rockhampton, November 30th, has been received from the Queensland Local Committee:—I want you to ship immediately a Marsden 6 by 1½ new patent fine crusher for sampling special ores, so as not to interfere with our main mill, thus testing the untried ores before the larger treatment. The contractors are proceeding economically with the erection of our engine and boiler. The engine is already fixed on its bed plates, and the boiler in its place; no easy matter has it been to get it up the side of the mountain to the site. The works referred to in my last report are progressing well. The dray road to the mill is finished. The bye-wash, incline roads, &c., are also going on with vigour, but the granite rocks in the bye-wash and incline roads are frightfully tedious and costly to deal with. I am breaking through cut of No. 5 tunnel down winze F reef into No. 2 tunnel. When they have done they will proceed to drive north from No. 4 tunnel 20 ft., then sink a staunting winze from No. 4 tunnel down into No. 1 tunnel. The object of the above is to connect No. 5 tunnel with No. 2 tunnel, and No. 4 tunnel with No. 1 tunnel, so as to facilitate the working of the ore out of the different tunnels as required up the same incline road to the mill. All vigour possible will be exerted in the erection of the power and pumping machinery, also of the machinery for breaking and pulverising the ore.

MYSORE (1st Jan.)—Mining operations: The 46?-ft. level north of Taylor's shaft: Men with one rock-drill are now employed opening the levels from the cross-cut to the north end; when this is completed, the end will be driven north in a lode 3 ft. wide, worth about 2 ozs. to the ton. The 466-ft. level north of Taylor's shaft, driving south on the west branch; the lode in this end has improved; it is now 3 ft. 6 ins. wide, assaying 13 dwts. 1 gr.; it is to the west of Taylor's shaft, and to the west of Plummer's shaft; will be resumed at some future date. Driving south of the north cross-cut in the 466-ft. level on the wide lode, 22 ft. 4 ins. were cut; the lode is 3 ft. 6 ins. wide, estimated to be worth 15 dwts. Driving the 400-ft. level north of Taylor's shaft, 54 ft. 11 ins. were cut, making a total of 490 ft. 7 ins.; there is a fine looking lode in the end 2 ft. 6 ins. wide, assaying 4 ozs. 4 dwts. 22 grs. Driving below the 400-ft. level north of Taylor's shaft, 42 ft. were cut, making a total of 52 ft. 8 ins.; the lode is strong and healthy, 2 ft. 6 ins. wide, assaying 1 oz. 6 dwts. 3 grs. The 296-ft. level north of Taylor's shaft, 49 ft. 4 ins. were cut, making a total of 542 ft. 8 ins.; the lode is small but rich; it is 1 ft. wide, assaying 8 ozs. 3 dwts. 8 grs. Driving below the 296-ft. level north of Taylor's shaft, 41 ft. 11 ins. were cut, making a total of 54 ft. 7 ins. The drift is suspended, and the men with the drill are put to stope in the bottom of the level. Driving the 296 ft. south of Plummer's shaft, on the west branch, 14 ft. were cut, making a total of 66 ft. 6 ins.; the lode is 3 ft. 6 ins. wide, assaying 15 dwts. 16 grs. The 236-ft. level north of Taylor's shaft was driven 49 ft. 6 ins.; total, 330 ft. 7 ins.; there is a good improvement in this end: the lode is 4 ft. wide, assaying 2 ozs. 13 dwts. 14 grs. The drift below the 236 ft. has been extended 12 ft. 6 ins.; total, 31 ft. 6 ins. The drill from this working has been removed to the back of the 400. There is nothing new to report from the 236 south of Plummer's, and the 173 ft. south of Williams'; 12 ft. 4 ins. were cut in the former place, making a total of 201 ft. 10 ins., and 8 ft. 6 ins. in the latter, making 182 ft. 6 ins. Tennant's shaft: The 180-ft. level north was driven 12 ft. 2 ins.; total, 43 ft. 2 ins.; the lode is 10 ins. wide, assaying 14 dwts. 9 grs. Driving the 180 south of Tennant's shaft. 10 ft. 1 in. were cut; total, 46 ft. 1 in.; the lode is 1 ft. wide, assaying 13 dwts. 1 gr. Driving the 152 ft. south of McTaggart's shaft, 30 ft. 6 ins. were cut; total, 294 ft. 8 ins.; the lode is 1 ft. 4 ins. wide, assaying 15 dwts. 16 grs. Schaw's: Driving the 220 north of Schaw's, 4 ft. 7 ins. were cut, making a total of 59 ft. 10 ins. The south end was driven 7 ft. 10 ins., making a total of 40 ft. 4 ins.; the lode is 2½ ft. wide, assaying 18 dwts. 7 grs. Driving in the 160 ft. south of Schaw's cross-cut east, 2 ft. 4 ins. were cut, making a total of 80 ft. 8 ins.; this cross-cut is resumed; we anticipate it will intersect the lode in the 152 south of McTaggart's shaft. Stopes: Stoping in the back of the 400 ft. north of Taylor's shaft, 12 fms. 3 ft. 8 ins. were cut in a part of the month with rock-drills. Italians were employed hand drilling during the remainder of the month cutting 3 fms.; total, 15 fms. 3 ft. 8 ins.; the lode is 6 ft. wide, assaying 2 ozs. 2 dwts. 3 grs. Stoping in the back of the 400 south of Taylor's shaft on the west branch, 3 fms. 4 ft. were cut; the lode is 4 ft. 6 ins. wide, assaying 19 dwts. 14 grs. Sinking: Taylor's shaft was sunk 17 ft. 2 ins., making a total depth of 527 ft. 6 ins. Sinking the incline below the 400 north of Taylor's shaft, 28 ft. were cut; total, 163 ft. 8 ins.; this is gone down on the part known as the wide lode; the quartz is about 4 ft. 6 ins. wide, and it will assay about 15 dwts. Sinking a winze in the bottom of the 296 south of Plummer's shaft, 10 ft. were cut in a lode 3 ft. 6 ins. wide, assaying 1 oz. 21 grs. Tennant's shaft was sunk 9 ft. 6 ins.; total, 199 ft. 2 ins.; there is a nice-looking lode 14 ins. wide, assaying 3 dwts. 6 grs. Sinking Schaw's shaft below the 220 ft., 13 ft. were cut; the lode is 2 ft. wide, assaying 16 ozs. 6 dwts. 12 grs. Sinking a new shaft north of Taylor's, 35 ft.; it is timbered to the bottom, and this work is going on in a satisfactory manner. All things considered, everything is going on in a very satisfactory manner. Tailings machinery: The engineer is getting on very well with this work, and I think in about two months part, or if not the whole, of the new pans will be running. Assay of weekly samples from the mill:—19th, 1 oz. 14 dwts.; 22nd, 1 oz. 7 dwts. 10 grs.; 28th, 1 oz. 0 dwt. 21 grs.—B. D. PLUMMER.

MYSORE REEFS (1st Jan.)—Harvey's shaft has been sunk 9 ft. in two weeks, which makes a depth of 72 ft. 10 ins. below the 250-ft. level. We have brought down the air pipes and commenced to drive at the 320-ft. level, 2 ft. have been driven north, the level being in trap-rock. Cross-cut west at the 250-ft. level from the plat has been extended 20 ft., now 78 ft. 9 ins. from plat. The rock is still extremely hard and difficult to blast. Rise and stope in back of 250-ft. level north: The quartz in the back is very much intermixed with trap-rock, and is therefore poor. An average sample gave only a trace of gold, but a picked sample of pyrites assayed 6 dwts. 14 grs. of gold a ton. We shall cut into the east a little to ascertain if any more quartz remains in that direction, and then clear the débris and commence to stope the bottom. Taylor's trial shaft: Stope south of winze, the quartz is become very small and poor, and, therefore, will not pay to take away. Stope north of winze: The leader of quartz is about 6 ins. wide and assays 3 dwts. 6 grs. of gold a ton. Taylor's engine shaft has been sunk by hand labour 16 ft.; total depth 116 ft. 6 ins.; patches and stringers of quartz are intermixed with the trap-rock, which gives a trace of gold in the assay. Having struck water shall forthwith complete the timbering of the shaft to the bottom near the poppet heads and get the winding engine to work as early as possible. The 110-ft. level north of shaft has been extended 17 ft. 3 ins., which makes a distance of 54 ft. 6 ins. from cross-cut; the lode is 8 ins. wide and worth from 3 to 4 dwts. of gold per ton.—M. SCANTLEBURY.

NEW EMMA (5th Jan.)—I have to report work carried on at the mine for the week ending to-day as follows: Level running east from No. 1 advanced 14 ft.; total, 94 ft.; rock is changing, is a little softer, showing more oxide of iron and manganese. Seam in face 4 ins. wide, filled with iron, manganese, and decomposed limestone, with occasional small nodules of ore. The appearances are certainly very encouraging. Level north-westerly from No. 1 advanced 11 ft.; total, 110 ft.; continues in caved ground, from which we are extracting low-grade ore for concentrating. Level No. 3 easterly advanced 9 ft.; total, 263 ft.; not any change to report. The rock continues seamy, and, although hard, is heavily stained with iron. Cross-cut from No. 3 toward footwall advanced 7 ft.; total, 32 ft.; the rock is the same character as in No. 3 level. Level running north-westerly from uprise from Attwood winze advanced 10 ft.; total, 40 ft. There is no change to report in this level; the seam continues about 6 ins. wide, filled with iron, decomposed limestone, and some little ore, but not enough to save as first-class. We have, therefore, mined only low-grade ore for the mill from this level. The ground on either side of same is heavily mineral-stained, and gives great encouragement of opening into ore again.—H. C. WALLACE.

NINE REEFS (1st Jan.)—Mining operations—Malleson lode, main shaft: The 310-ft. level north, driven by one miner and six coolies, advanced 2 ft.; total advance, 68 ft. The vein is 5 ft. wide; the assay, 16 dwts. 7 grs. gold per ton. Morrison's shaft: Sinking by one miner and eight coolies, has during the past fortnight been sunk 4 ft. 5 ins.; a total depth under the 185-ft. level of 8 ft. 5 ins. The portion of vein carried in the shaft is 6 ft. wide, the assay being 4 ozs. 14 dwts. 9 grs. gold per ton. The 185-ft. level north Morrison's shaft, driven by six coolies, advanced 2 ft. 3 ins.; the total advance from shaft being 131 ft. 3 ins. The vein is 3 ft. wide; the assay 3 dwts. 6 grs. gold per ton. Baynard's shaft: The 310 ft. level north, driven by one miner and six coolies, advanced 2 ft.; total distance from shaft, 26 ft.; the portion of vein carried 5 ft.; the assay, 2 dwts. 14 grs. gold per ton. The 310-ft. level south, driven by one miner and six coolies, advanced 2 ft. 3 ins., a total distance from shaft of 27 ft. 6 ins.; the portion of the vein carried is 5 ft. wide; the assay, 1 dwt. 21 grs. per ton. Six coolies have also been employed in blasting out the side of this level, preparatory to stoping the back of the level. Stopes: No. 1 stope, in the back of the 185-ft. level north of the main shaft, worked by one miner and eight coolies; vein, 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 2 stope, in back of the 185-ft. level north of main shaft, by eight coolies; vein, 6 ft. wide; assay, 2 dwts. 7 grs. gold per ton. No. 3 stope, in the bottom of the 185-ft. level south of Baynard's shaft, by 12 Moplahs; vein, 3 ft. wide; assay, 3 dwts. 6 grs. gold per ton. No. 4 stope, in the bottom of the 185-ft. level south of main shaft, by 16 Moplahs; vein, 4 ft. 6 ins. wide; assay, 2 dwts. 21 grs. gold per ton. No. 5 stope, in the bottom of the 185-ft. level north of main shaft, by 16 Moplahs; vein, 5 ft. wide; assay, 1 oz. 14 dwts. gold per ton. Champion lode, Vyvyan shaft: 145 ft. level south driven by one miner and six coolies, advanced 6 ft., a total distance from shaft of 266 ft. 6 ins. The vein is 14 ins. wide; assay, 2 ozs. 2 dwts. 10 grs. gold per ton. Champion lode, Vyvyan shaft—Stopes: North stope in back of the 145-ft. level north of Vyvyan shaft by eight Moplahs: The vein is 1 ft. 2 ins. wide; the assay, 1 dwt. 7 grs. gold per ton. South stope in the back of the 185-ft. level south of Vyvyan shaft by six coolies: Vein, 1 ft. 8 ins. wide; assay, 3 ozs. 8 dwts. 14 grs. gold per ton. Owing to the Christmas holiday we shall not clean up the gold at the mill before to-morrow morning. The yield will be cabled you in due course.—Capt. BENNETTS.

NUNDYDROOG.—Mining operations: Webb's shaft is now 390 ft. 6 ins. deep; the rock is not quite so hard for sinking, and we hope

that better progress will be made. Taylor's shaft is down 346 ft.; there is no improvement, the rock continues to be very hard. In the 300-ft. level north of Taylor's shaft the ground remains without change. All the other places are producing rich gold quartz. The stope between the 300 and 370 south of Webb's shaft shows a lode 4 ft. wide, assaying 1 oz. 12 dwts. 8 grs. The 300-ft. south end has been driven south 79 ft. 9 ins.; the lode in the end is 2 ft. 6 ins. wide, assaying 2 ozs. 6 dwts. 12 grs. The intermediate level has been driven south 58 ft. 4 ins.; the lode in the end is 2 ft. 6 ins. wide, assaying 1 oz. 12 dwts. 12 grs. The 230-ft. level has been driven south 116 ft. 3 ins.; it is getting near to the south boundary; the lode in the end is 1 ft. 8 ins. wide, assaying 1 oz. 10 dwts. 6 grs. In the rise in the back of the 230-ft. north of Webb's shaft the lode is 2 ft. wide, assaying 2 ozs. 9 dwts., and in the middle level between the 166 and the 230 it is 1 ft. 8 ins. wide, assaying 3 ozs. 17 dwts. 18 grs. The 166-ft. level has been driven 107 ft.: the lode is 1 ft. 8 ins. wide, assaying 1 oz. 12 dwts. All the work at surface is going on in a satisfactory manner. Stamping: We are cleaning up the mill to-day, and we think the result of the past month will be satisfactory. Assay of weekly samples from the mill:—Rough quartz (through stonebreaker), 1 oz. 18 dwts.; smalls, 1 oz. 6 dwts. 6 grs.—B. D. Plummer.

OSCAR (19th Jan.)—Oscar lode: The sinking of the shaft progresses most favourably, averaging about 7 ft. per week. The matrix is mixed with strings of quartz and carbonate of lime, with some iron pyrites. We have not seen any visible gold, but present indications are identical with those seen where it has hitherto been found, hence we hope soon to report being in richer stuff. The 400-ft. levels are not advancing as fast as we would wish, as the rock is much harder than hitherto. The lode in the eastern level contains a good deal of quartz, but in the western it is somewhat stringy. No. 3 lode: No alteration to note. Daw's lode: No alteration to which to call your attention in the shaft or bottom, and 300-ft. levels. The quartz in the stopes has slightly increased in width, producing some good stones with visible gold. The 170-ft. level north is producing less quartz than when last reported on, but we believe it to be only temporary, and that it will soon improve. The weather has been rather severe the last few days, but not sufficicut to cause any difficulty in our mill or surface work.—J. Daw, jun.

POTOSI (26th Dec.)—New lode, No. 2 tunnel: The total length of this to date is 87 ft., showing, therefore, it has been extended during the past fortnight 18 ft. I am pleased to say the lode at this point maintains its size and promising character, in fact, in the immediate end it is somewhat larger than usual, being at present 2½ ft. wide of solid quartz. A slight improvement in the nature of the ground is also observable. No. 3 tunnel has been extended since my last another 27 ft., which makes the present length of same 104 ft. The lode here is 1½ ft. wide, of fairly good quality ore, and appears to be increasing in size as we progress eastward. Past developments and present prospects we consider most favourable in regard to the future of this lode, which can be inexpeusively developed for a long time to come. No. 2 new lode—In the adit level: Upon this we continue to drive south-west by four men in a lode 3 ft. wide, with quartz of a most promising nature, which, from samples, shows that it carries about the same quantity of gold to the ton as when last reported on. Four men are also driving north-east upon the footwall part of this masterly lode. Only 4 ft. of the lode is being carried, and 2 ft. of this is producing good quality stone. The appearance of the lode in this end is very encouraging. Having within the past three days intersected this lode in the most southerly of our prospects sinks, where there is a strong, healthy, and well-defined lode, we shall now be enabled to locate the spot for driving up another level upon this lode at a depth considerably below the above-mentioned one. We attach much importance to the development of this strong lode in depth. Potosi Viejo—Zeiler's shaft: This is now down 16 ft. below the bottom level, and the lode therein, I am pleased to say, continues to be of the same size and value as when last reported upon. We are led to believe, from all appearances thus far presented, that this lode will continue in size and productiveness to make in depth, and therefore no time will be lost in completing the present sink as soon as possible, as well as to extend a level both east and west therefrom. The hoisting engine is doing its work well, but we have been compelled to make a new skip, which answers admirably. Socorro lode: Having completed two surveys in connection with these workings, one from Potosi Viejo and the other from Socorro Valley, we purpose commencing to drive a deep level under this part of the mine soon after the men return from Christmas holidays. Since my last the bottom level hereon (No. 3) has been driven south another 8 ft., which makes the present length of same from shaft 116 ft. This last drivage has shown but little if any change in the lode, which continues to be 2 ft. wide, and worth 1 oz. of gold to the ton. There is no further change throughout our points of exploration worthy of remark, the general appearances of which I am glad to be able to say are most encouraging with which to close the year.—J. Pryor.

ROCKY BAR WIDE WEST.—Report for week ending 2nd January:—The general appearance of the mine is about the same as last reported. The ore throughout continues to average from ½ to ¾ oz. per ton. All mining and milling machinery is in good working order. Everything in and about the property in a satisfactory condition.—H. U. Thomas.

RUBY AND DUNDERBERG CONSOLIDATED (30th Dec.)—Dunderberg: There has been no ore shipped from the mine for some time owing to both the furnaces here being closed down. There is no change to report. Eagle's mines: In the upraise from the Eagle drift we have advanced 7 ft. during the week, making a total upraise of 59 ft. Owing to the holidays during Christmas time this work has been delayed a little. We have 29 tributers and six contractors at work in the mine. Lord Byron: We have now two lots of tributers at work in this mine upon small streaks of ore.

SANTA BARBARA.—Advices from Mr. T. S. Treloar are dated 4th, 18th, and 21st December:—The mineral delivered on the spalling floors from the mine during the month of November amounted to 1,584 tons, of which 289 tons were rejected as refuse stone, and 1,295 tons treated at the stamping mills. The total produce obtained was 4,135 oits. of amalgamated gold, or equal to 3.193 oits. per ton stamped. This produce of 4,135 oits. of gold, valued at 8s. 6d. per oit. amounts 1,757*l.* 7s. 6d. sterling, and the estimated working cost for the month, at exchange 27⅛d., being 1,438*l.* 14s. 7d., leaves an estimated profit of 318*l.* 12s. 11d. during November. The output of stone from the mine is 2,242 waggon loads. The number of waggon loads per man is 49.12, and the total number of holes bored in the mine during the month 2,559*l.*, of which 2,095 were bored in the No. 3 stope, 379 in the new shaft and 85 in the 58 end.

SOUTH-EAST MYSORE (25th Dec.)—Mining operations:—Lavelle's shaft—Winze: During the past week we have been still lengthening and cutting down the western wide, consequently our actual sinking is not great—2 ft. only; length of winze, 26 ft. We have now erected windlass, and put in pump. For the future we shall be able to sink with greater speed. The lode continues about the same size, and assaying 19 dwts. per ton. Now this work has been completed, much better rock will be sent to the stamps, and a steady increase in our returns. The lode in the winze appears to be dipping very fast north, and, so far, every foot we advance in that direction we get better class stone. End north: Ground cut in last week, 7 ft. A decided improvement has taken place here since I wrote you last. Last week I reported the lode to be 2 ft. wide. This week we have several more branches scattered throughout, the end giving indications of a bigger lode shortly. Should all these branches become part and parcel of the main part of the lode we shall have a very fine lode. The distance from shaft is 91 ft. We are in advance of the winze sunk in the level above, but how far the old works extend away north from that winze I cannot say. Assay this week, 2 ozs. 10 dwts. Rogers' shaft: I informed you in my last letter we were going to put out a cross-cut west from the bottom of the shaft to intersect the lode. In consequence of that we have only sunk 1 ft. Preparatory to driving the cross-cut I have been cutting north for a plat; distance from shaft 6 ft. By Wednesday the cross-cut west will be commenced. We are 94 ft. deeper than the first cross-cut. Thomas' shaft—Big stope: During the past three weeks the rock has been low in value, yet the lode keeps to its size. I am positive the falling off is only temporary, and that ere long a better-class quartz will again be met with. There are signs of an improvement, and, shortly, I hope to see the stone again resuming its former quality. Machinery is working very satisfactorily indeed.—J. M. Rogers.

SOUTH-EAST MYSORE (1st Jan.)—Mining operations—Lavelle's shaft, winze: The depth of this is now 27 ft. by 26 ft. long. The lode for the full length will average from 3 to 5 ft. wide. In the western end it shows very much better than ever it did. We are opening up very good stoping ground. The lode continues in depth, improving in value. End north: Distance from shaft 97 ft. 6 ins. During the past three weeks we have cut 31 ft. 6 ins. For the last 30 ft. we have gone on the course of a very good lode indeed; assay this week 2 oz. 5 dwts. 17 grs. I have to-day commenced a stope in back of the level, at the same time continuing the end with rock-drills. The stope will be continued up until the old workings are struck, then a hole put through to the first level for ventilation. Roger's shaft: Total depth from surface, 260 ft. The shaft is being continued by coolie contractors; the ground is becoming more mineralised, giving the appearance of a lode not being very far away. Cross-cut west: Ground cut, 10 ft. I am in hopes 30 ft. will see the lode, and I calculate in three weeks to do it. The cutting of Lavelle's lode at this depth, and between 200 ft. and 300 ft. further north, must be watched with great interest, seeing that all the quartz is dipping so fast north. Thomas shaft: Big stope: The quartz just at present is of a very low quality. I firmly expect an improvement again soon. The lode is as large as ever it was, in the north breast 5 ft., and the other part of the stope from 2 ft. to 4 ft. Notwithstandiug the falling off we must go down through it, and try to discover some better-paying quartz, of which I have not the slightest doubt. Stope south: I have restarted this stope; lode, 4 ft. wide milling quartz. As soon as the lode is cut in Rogers' shaft, preparations will be made to resume sinking Thomas's shaft.—J. M. Rogers.

TRANSVAAL.—The following particulars are from the manager's advices, dated 17th December:—Bullion: A shipment of two bars of melted gold weighing 198 ozs., value 720*l.* was forwarded through the Standard Bank of South Africa, Limited, on the 12th December. Brown's Hill Mill: The battery was at work for 57 hours during week, and in that time crushed 76 tons of ore from Delta and Eta veins mixed, assaying 1 oz. 10 dwts. per ton. A clean-up of the plates only was made on Saturday, which yielded 109 ozs. of amalgam. Pans: The pans were at work for 104 hours during week, and treated 49 tons of mixed concentrates, assaying 1 oz. 7 dwts. per ton. A clean-up was effected, and 160 ozs. 10 dwts. of amalgam produced. Ophir Hill: Zeta Vein: We have extracted during week 9 tons of an assay value of 1 oz. 8 dwts. per ton. A small vein averaging about 3 ins. thick has been traced along the face of the hill to the north-west of Zeta vein. Columbian Hill: Preparations are being made at this place for the commencement of boring operations.

VISO (9th Jan.)—Manager's report for December; In sending you my usual report, I am pleased to be able to remark that, both as regards our prospects and the working condition of the mines, there has been a decided improvement during the past month. On the back of two lodes in the Mi Amor and Flora Mines we have discovered good paying tinstuff of better quality than we had before; and as, according to present outlook, it evidently exists in large bodies, we expect it to give good returns of tin. We have also extended our dressing machinery and arrangements for washing the alluviou and extracting the tin ore on the dressing-floor, insomuch we are now treating double the quantity of tinstuff we could do a month ago, and all is done more efficiently and completely. We have put up more machinery for cleaning the fine tin, which the jiggers failed to do satisfactorily; so that at present all is going on well, and we shall now proceed to extend the whole system yet further on these lines. For want of the machinery just referred to, we have been unable to clean the fine tin as we expected to have done, and thereby our sampling has fallen behind; we have, however, two nice parcels of tin ready for shipment, and in future I see no reason to doubt our being able to send you regular and satisfactory returns.—R. R. Nancarrow.

We understand that Mr. C. Algernon Moreing, F.G.S., of the firm of Bewick and Moreing, Civil and Mining Engineers, who has only just returned from the Argentine Republic, leaves this country in the course of two or three weeks for the Transvaal to carry out professional engagements. Mr. Moreing's somewhat lengthened residence in South Africa a few years ago cannot but be of material assistance to him on this occasion. The past experience investors have had of Mr. Moreing's mining views, will induce them to place the greatest reliance upon his judgment.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

REDUCTION OF THE BANK RATE.

SINCE the 10th inst. the Bank rate has been 4 per cent., but as the open market quotation has sank to 2¼ per cent. the Bank directors, to keep within touch, have reduced the rate to 3½ per cent., supported by a better Bank return. Although it was not only generally admitted, but expected, that the influence of the Revenue collections would have given the Bank the control of the market by this time, the quotations have day by day, on the contrary, shrunk, owing to the pressure of supplies and the small demand. The Bank has gained considerably on the fortnight in both assets and liabilities, and the weeks' Bank return shows a return of notes and coin from circulation equal to over 800,000*l.*, the reserve showing a total of 14,000,000*l.*, or about the same as last year. As regards the liabilities, the public deposits and private deposits have fallen off half a million and 600,000*l.* respectively, while the Government Securities have decreased over one and a-half millions, and the private securities over 200,000*l.*, showing that the Treasury has repaid the Bank money borrowed for the dividends out of the revenue payments. The proportion of reserve to liability has risen from 41¾ to 45¾ per cent. In consequence of the reduction in the rate bills have declined to 2⅛ per cent., and money has been freely offering at 1 to 1½ per cent., and discounters have reduced their deposit rates to 1¾, and 2 per cent. for money at call and notice respectively. The New York exchanges have improved, and shipments of gold have been made from New York. Meanwhile, gold has gone to Rio and the Cape again this week, although the former was compensated by a supply from Copenhagen. The Bank of France has reduced its rate from 4 to 3½ per cent., and that of Austro-Hungary from 4½ to 4 per cent. On 'Change bills on France have been in exceptional request, and the rate has moved with others against us; roubles have, however, declined.

Money continued to-day over abundant, and as business was extraordinarily quiet, rates were weaker, at 1¼ per cent. for short loans, 1¾ for advances into February, and 2 to 2¼ for bills of all kinds, those maturing in three months being more frequently quoted at the former figure.

At the Bank this afternoon a purchase of 92,000*l.* in gold was notified. Bar silver was firmer, at 42½d. per oz., and the India Council specially allotted in cable and transfers on Bombay and Calcutta, 90,000*l.* at 1s. 4 1/16d per rupee.

Political affairs, during the past week, have been in a state of abeyance, in fact, beyond the pending Boulanger election in France, there has been nothing calling for particular comment. The state of affairs in France is causing a more or less uneasy feeling, and even if Boulanger should be defeated, this feeling is likely to continue. Under these circumstance it is not at all surprising that dealers should prefer to wait rather than increase their commitments, but at the same time but few selling orders of any magnitude have been reported. The reports of the various railway companies already issued show an increase in the expenditure, when it had been generally anticipated that decreases would be shown, and this is causing some slight apprehension respecting the dividend announcements of the lines not already published. The cheaper value of money and the reduction of the Bank rate here and on the Continent had the effect of giving a little more tone to the market, but the upward movement was very trifling. The Funds have risen a point or so, while India Three-and-a-Half per Cents. have improved ¼. In the Foreign Market the changes were trifling from day to day, and on the week there has been a reduction of ⅛ to ¼, with a fall of ½ in Uruguay Bonds. The most important alterations in the Home Railway Market, were a rise of 2 to 2½ in Brighton issues, 1½ to 2 in Sheffield, and 1 in Great Eastern. North Eastern at one time touched 164, or ½ above the highest point last year, but have since given way to last week's levels. Hull and Barnsley rose ¾ on the revival of the usual amalgamation rumours, but soon lost this, as nothing official transpired. The Chatham Company's dividend was at the rate of 4½ on the Preference, with 27,000*l.* carried forward, the South Western at the rate of 7 per cent, with 10,000*l.* carried forward. The North Eastern dividend was at the rate of 7¼ per cent., as against 6½ per cent. last year. American Railway Securities were inactive, dealers here and in New York seemed as if they had arranged a policy of masterly inactivity, and in consequence prices have shrank ¼ to ¾, with exceptional falls of 2 to 3 in Illinois, St. Louis, and San Francisco Preference; and Texas and Pacific issues. The investment descriptions were depressed by the reduction of 2 per cent. in the Illinois dividends, or at the rate of 5 per cent. The only bright spot in the markets was the rapid advance in Grand Trunk Stocks on a traffic return showing an increase of 6,000*l.*, and the First Preference stands 2½ higher. Miscellaneous Securities participated in the prevailing dulness, but several closed higher on the week, but Mexican stocks were lower.

The Stock Markets to-day have been dull and unsettled, due principally to the unsettled state of the Paris Bourse, where the public have been heavily selling Rio Tinto Shares. The election in Paris on Sunday next has also been a disturbing feature, and the near approach of the fortnightly settlement here has not encouraged buying, so that an almost general fall has been established in Public Securities. The Funds have been dull, and the New Two-and-Three-Quarters per Cent. Consols fell ⅛ to 98⅞, 99 for money. Foreign Government Bonds were steady during the earlier hours, but Egyptian, Greek and Turkish Bonds being sold by Continental operators caused a decline in these stocks, and a sympathetic movement in other international issues, the closing prices, however, exhibited a little more firmness, but Greek Bonds still show a loss of ¾ to 1; Uruguay Bonds, ¾; and the rest ⅛ to ¼ per cent. The gold premium at Buenos Ayres has advanced to 52.35 per cent. Home Railways were favourably affected by the North Eastern Company's dividend, and the stock of that company rose to 165, but reacted to 164¾, or a rise of 1⅜ on the day. The passenger lines, however, were weak, and left off with a fractional decline. Very little was doing in American Railway Securities, and prices closed dull with a loss in the most active speculative descriptions. Grand Trunk of Canada Railway Stocks were again buoyant, and the guaranteed issue advanced over 1, and the rest ¼ to ¾ per cent., Mexican Stocks were also higher. Miscellaneous Securities were dull and the Nitrate Group gave way and closed weak.

Annexed are the final quotations to-day:—Consols Account, 98⅞, 99; Egyptian Preference, 102¾, 103; Egyptian Unified, 83 3/16, 83 5/16; French Four-and-a-Half per Cents., 103, 103½; Hungarian, 83¾, 84; Italian, 91½, 91⅝; Mexican Six per Cents., 91¼, 91¾; Peru Five per Cents., 14¾, 14⅞; Peru Six per Cents., 16¾, 16⅞; Russian, 1873, 101¾, 102; Portuguese, 63¾, 64; Spanish, 73, 73½; Turkish, 1871, 84¼, 84¾; Turkish Defence, 96½, 97; Caledonian, 116⅞, 117⅛; Great Eastern, 70, 70¼; Great Western, 152¼, 152½; Brighton "A," 136⅞, 137⅛; North-Western, 175¼, 175½; Metropolitan, 74¾, 75¼; Metropolitan District, 33½, 34; Midland, 138, 138¼; North British, 57¼, 57½; North-Eastern, 164⅝, 164⅞; South-Eastern "A," 108¼, 108½; Hull and Barnsley, 34¾, 35; Mexican Ordinary, 40, 40¼; Grand Trunk, 11 3/16, 11 5/16; Ditto First Preference, 70⅜, 70⅝; Ditto Second, 49⅜, 49⅝; Ditto Third, 28, 28¼; Canadian Pacific, 53⅝, 53⅞; Denver, 16¾, 17; Erie, 28¾, 29; Milwaukee, 65½, 65¾; Lake Shore, 104½, 104¾; Louisville, 58⅜, 58⅝; Atlantic First, 33¼, 33½; Ontario, 15⅝, 16; Ohio, 21¾, 22¼; Norfolk and Western, 52¾, 53; Reading, 24⅜, 24⅝; Union Pacific, 64¼, 64½; Wabash Preference, 25½, 25¾; Ottoman Bank, 11⅛, 11¼; Anglo-Telegraph, 50, 51; United Telephone, 14⅜, 14⅝; Hudson's Bay, 19½, 19¾; Suez Canal, 87, 87½; Guinness, 31⅜, 31⅝; Allsopp's 8⅜, 8⅝; Bryant and May, 13, 13¼; Nitrate Railways, 25⅜, 25⅝.

REVIEWS.

OPHIR, by J. M. Stuart, C.E. London: Peter Thomson, Printer and Stationer, 2, Monument Station Buildings, E.C.

THE precise locality of the kingdom of the Queen of Sheba, with whose visit to Solomon we have all been made familiar, has occupied the minds of many persons for a number of years. Poor Mr. Abbott had the idea that it was somewhere in the Mysore, though facts were against him; but still, as he would say, so much the worse for the facts. Mr. J. M. Stuart, C.E., has, however, taken up his parable, and he fastens it in Eastern Africa, and he leaves it to his readers to decide for themselves whether there is not good reason to believe that the ancient Ophir of the Bible is to be found in the land of Manica. He finds there the remains of vast mining enterprise, and of people who have since vanished—probably as the result of injudicious investments. He anticipates the time when this land—perhaps the "veritable land of Ophir" may become once more the Eldorado of the world. The pamphlet is certainly one of deep interest, and there is an absence of dogmatism on the subject the author has at heart, which is much to be commended. We commend its perusal to our readers.

GOLD AND DIAMOND MINES OF SOUTH AFRICA. D. Swift and Co., 105, Hatton Garden, London, E.C.:

Mr. Smith has issued a useful volume which traces the progress of South African gold and diamond mines from the commencement of 1888 to the present time. In this work he admits that the wonderful gold mines of the Transvaal form even a greater attraction than the four great mines which have already produced diamonds to the value of over 50,000,000*l.* sterling. He inclines to the belief that buyers of gold shares should purchase in those companies whose shares are not at a high premium. He thinks the De Kaap district will attract considerable attention this year, and gives a variety of information of a useful kind. His book, however, will be chiefly valued for the excellent map it contains of the Witwatersrand goldfields.

Messrs. John Taylor and Sons have been appointed consulting engineer to the Mexican Santa Barbara Mining Co., Limited, and the registered office of the company is now at 6, Queen Street Place, E.C. Mr. J. F. Sandeman has resigned the office of secretary to the company, and Mr. Henry Ward has been appointed in his place.

Messrs. Morton Rose and Co. state that the definitive bonds of the Province of Santa Fé Five per Cent. Loan for 2,000,000*l.* are ready to be delivered in exchange for the fully-paid scrip certificates, the scrip having been previously left three clear days for examination.

For the preparation of dividend warrants the transfer books of the Continental Metropolitan Tramways Co., Limited, will be closed from January 24th to January 31st.

The Alagoas Railway Co. will pay, at their offices, the coupons due February 1st on their Six per Cent. Debentures.

The second batch of letters of allotment and regret to applicants for shares in the Wolverand Klerksdorp, the Notre Dame des Victoires (Transvaal) Gold Mining Co., have been posted.

Messrs. Blake, Boissevain and Co. notify that they are authorised to pay the sterling coupons of the City of Fall River Five per Cent. Loan, due 1st February, on and after that date.

Messrs. Lonis Cohen and Sons announce that the definitive bonds of the Province of San Paulo Five per Cent. Sterling Loan of 1888 are now ready, and will be exchanged at their office for fully-paid scrip.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be fonnd in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, ir Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes, and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

TO READERS AND CORRESPONDENTS.

W. E. (Nottingham).—We advised you to wait, as we were of opinion the shares would improve in priee.

J. S. L.—The report will be found in our present issue. It is eertainly a good one.

P. E. Q.—As we have already stated, we do not condemn the movement as wholly unsonnd; but there are undoubtedly dangerous features connected with it which it would be very unwise to shut out of sight.

P. Easy.—You are quite right. About 50,000*l.* worth of gold has been extraeted from the mines, and the costs of working have very nearly been met

A. Paul.—We certainly believe that the company will meet with the sueeess to whieh our remarks last week pointed.

Praise.—The last rush took place in 1872, but then diggers contented themselves almost exclusively with alluvial (surfaee) washings, and operations in no ease were carried to a greater depth than 100 ft., while, in the neighbouring colony of Vietoria, operations have now reached a depth of nearly 2,500 ft.

The Mining World.

LONDON: SATURDAY, 26TH JANUARY, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

WHAT THE SOUTH AFRICAN MINES SHOULD DO.

If the South African companies wish to obtaiu a larger measure of attention from investors in this country than they have hitherto received—in other words, if they do not wish the boom in their shares to be confined to the cliques whose rendezvous lies within the precincts of Hatton Garden and the Viaduct, they should at once comply with the reasonable requests of the public, aud register themselves as English companies, and have London as their head centre. They should hold meetings here, and publish reports like those of other well-managed concerns that are not afraid to let the light of day fall upon their proceedings. In this way investors could judge of the bonâ fide character, or otherwise, of the concerns in which dealings are now taking place, sometimes without much knowledge, and generally with a disregard to ulterior consequences. Against the new companies that have been started, we, of course, have nothing to say, except that there is too much disposition to keep the good things in the hands of syndicates, and allow the indifferent ones to pass into those of the public—a policy that is in the first place selfish, and, in the second place, impolitic. The ultimate appeal in all cases must be to the public, and they should have the chance of making some response to the original one. As regards the South African Companies, without any London office, with no known directors, with managers who have never before been heard of in this country, and with properties, the exact geographical position of which it is difficult, if not impossible, with our present information, to trace; without reports from the mines, and with no meetings to inform the shareholders of what is going on; without persons to hold responsible for bad management, or to reward for good management —such companies offer to pure gamblers a congenial sphere for their operations, but from them the prudent and clear-headed investor will hold aloof. The danger of dealing in these shares at all was pointed out by us on December 22nd, and it has since received apt illustration by what has taken place on the Stock Exchange in regard to the well-known case of the Spes Bona Company and other concerns, to which prominent attention has been called. On December 22nd we published:—"A Dealer's objections to going into South African Share Market. A well-known and highly respected member of the Stock Exchange then sent us the following important communication, which embodies the objections generally felt to dealing in South African shares:—

1st. Instead of registered shares, transferable by deed of transfer with a London office, most of the companies are script to bearer, and there is nothing to prevent unscrupulous people from forging the scrip and selling it on the London market, in which case some innocent person would be saddled with the loss, and it would take months to ascertain from Barberton whether or not scrip was false or genuine.

2nd. Shares are dealt in for forward delivery instead of for the ordinary account, thereby greatly increasing the risk. A dealer may find himself middleman with a very large account open having to take shares at 1*l.* or so, when they may be at the time of settling many pounds.

3rd. But little is known in England as to the status of the directors of the various companies.

4th. The companies are registered under foreign laws, the conditions of which investors know nothing of.

5th. It is difficult for investors to know, from time to time, what is the capital of the company being dealt in, as the directors abroad can water the stock at their discretion by fresh issues."

To objection No. 5 might have been added this, that when a block of shares, say 500, has been bought, it has been found impossible to "split" them into smaller lots to suit the requirements of purchasers. "Oh you must send to South Africa to do that" has been the reply received by the unlucky individual thus saddled with a larger number of shares than he wants, and unable to deliver to his client that which he has bought. The inconvenience of this alone can be better imagined than described. Brokers have been going about with large parcels of shares which they cannot divide, and though the voice of their lamentation has been loud, the comforting response has been absent. We venture to think that out of the dealings in South African shares without a registered office in London there will come a crop of litigation that will be exceedingly refreshing to Lincoln's Inn, but cause a good deal of head-shaking about Old Broad Street. In fact, the boom of South Africa will probably lead to a boom in the law courts—lawyers being at a premium, and Queen's Counsel in high demand.

The Stock Exchange has refused hitherto to recognise these transactions, and when appealed to by disputants, has left them, in vulgar parlance, "to fight it out." The committee have been urged to recog-

nise these shares, but, in our judgment, they have wisely declined to do so until the companies are registered here, and until they have offices at which the ordinary transfer of business can take place. Were they to recognise these unknown companies, registered under Dutch law, and away in the Transvaal, a precedent would be formed which they could hardly refuse to follow in other cases where it might be even more objectionable. The committee of the Stock Exchange are quite right and we hope they will persist in their decision. We hope also that the public will insist upon these companies being either one thing or the other—being, as until lately, South African companies pure and simple or English companies registered under the Joint Stock Acts. The public must also insist upon the issue of regular reports from the mines, and of periodical meetings being called in London for the transaction of the business of these companies, in order that the shareholders may, at least, have a chance of seeing the persons who are conducting their affairs, and that they may not be flooded by fresh issues of capital of which they have no cognizance, and of which they do not approve.

ALTURAS RE-CONSTRUCTION SCHEME.

THE committee appointed at the meeting of shareholders on December 28th, the chairman of which is Mr. J. H. A. Smith, have issued a business-like report, and one which cannot fail to commend itself to the shareholders. Reading between the lines, we gather that the charges brought against the directors by one of their former colleagues are not proven, and the committee, apparently having satisfied themselves on this point, proceeded to the real business in hand, viz., that of putting the company upon a solid financial basis. To do this, they recommend re-construction and the provision of adequate capital by that means. All this time the directors have been more sinned against than sinning. They have been ground between the upper millstone of indifferent managers, and the nether millstone of shortness of capital. The directors have had a struggle, common to many a household within these happy realms — that of making both ends meet, or to put it in the vernacular, "raising the wind" when there was no wind to raise. The Israelites making bricks without straw were in an enviable position compared with Mr. Forman and his colleagues endeavouring to finance Alturas without money. The present minimum capital requirements are 26,000*l*., but the scheme of the committee, which is also that of the board (with whom they have been working in harmony) will provide 45,000*l*. The scheme may be briefly summarised thus :—The new company will have a nominal capital of 300,000*l*. in 300,000 shares of 20s. each. Each shareholder in this company will be entitled to take up in the new company a similar number of shares to his present holding. The new shares will (as before stated) be of 20s. each nominal value, credited with 17s. paid and bearing a liability of 3s. per share. A deposit of 6d. per share would be payable on application and such amount as may be necessary (probably 6d. per share) on allotment. This scheme will commend itself to the shareholders, and we believe at the meeting to be held next Friday, it will be adopted unanimously. If, at that meeting, the shareholders part without expressing their thanks both to the directors and to the committee for the manner in which they have worked in their interests, they will be guilty of that ingratitude which Queen Elizabeth never failed to describe as a deadly sin.

THE NITRATE INDUSTRY.

EARLY in the week there was a slight check in the almost uninterrupted upward movement in the group of nitrate companies which owe their origin to Col. North, and there was, in consequence, a good deal of chuckling among those who have been predicting a collapse ever since the nitrate industry came into prominence. These prophets of evil are generally spoken of as "bears;" but they are, in fact, nothing of the kind. They are "willing to kill, yet afraid to strike," for though they affect to be quite certain that the present range of prices cannot be maintained, they are too sensible to back their protestations by selling for the fall. The check was of short duration, and there has since been a general recovery; so that the fulfilment of the prophecies of these would-be Cassandras is indefinitely postponed. For our own part, we feel that Col. North and his friends are well deserving of the good fortune which has attended their efforts to promote and carry on an industry which promises to have far-reaching results in the world's agriculture, and in these circumstances we have not hesitated to record with satisfaction the continued growth of the nitrate enterprise, in the face of persistent opposition and misrepresentation.

That the industry has progressed with enormous strides is scarcely disputed by those who are most envious of its success. A few years ago guano was the great fertiliser used for the production of crops; but guano has steadily gone out of favour among agriculturists, in consequence of the greater merits of nitrate of soda. This has been the case especially in connection with land which has become more or less exhausted by a continuous succession of crops, for it is found that the fertilising properties of nitrate are greater than those of any other article that has ever been discovered. It is not surprising, therefore, that in Europe alone the consumption of nitrate of soda last year, mainly for agricultural purposes, amounted to about 650,000 tons, which, at the average price realised, represented a cash purchase of about six and a half millions sterling. So far, the United States have taken a comparatively small quantity of nitrate for agricultural purposes; but our American cousins seem to be waking up to the fact that they are, in this matter, behind the times, and the prospect seems to be that in the current year they will take a much larger quantity of the article, especially for use in the older States. In Europe, in South America, and in the British Colonies, consumption is enormously increasing; and though the output of nitrate goes on expanding at a rapid rate, stocks never accumulate, for the demand is always in excess of the supply. This being the case, it seems reasonable to expect that at least the present price of about 11*l*. per ton will be maintained. Indeed the prospect is that an advance will take place, for it is to be remembered that the present quotation is 6*l*. or 7*l*. per ton below the prices realised a few years ago. Meanwhile, the companies are increasing their production and lessening the proportion of costs, so that the prospects of increased dividends are exceedingly cheerful, especially to those who have held shares all along. It may be of interest to give here a list of the companies served by the Nitrate Railways Company, and with which the name of the Nitrate King is identified, showing the amount of capital, par value, current quotation, and acreage possessed by the several companies. The list is as follows :—

	Capital £	Par £	Price this week.	Acreage.
Liverpool	110,000	5	29	1,537
Colorado	160,000	5	10¾	1,812
Primitiva	200,000	5	3⅜	1,595
London	160,000	10	30	1,400
San Pablo	160,000	5	13¾	1,500
San Jorge	375,000	5	13¾	1,957

From this it will be seen that the prices stand at a premium of from about 160 to over 600 per cent. Undoubtedly, the range of quotations is very high, but so also are the earnings. Thus the pioneer company, the Liverpool, between March, 1885, and November last, paid 126*l*. in dividends upon each 100*l*. subscribed; the Colorado Company, from May, 1886, to November last, returned 38 per cent. to the shareholders; the Primitiva Company, which commenced work in April last, paid 10 per cent. in September, and has just announced an interim payment at the same rate, due on Monday next; while the London Nitrate Company paid 20 per cent. out of the profits of its first year's working; and the San Pablo Company will, on February 21st, pay another quarterly dividend at the rate of 20 per cent. per annum. The Nitrate Railways Company, too, in the past year paid 15 per cent. in cash, and 15 per cent. in scrip, and the shares, which in the old form once stood at 10*l*. for the 100*l*. stock, now stand at about 27*l*., or 270*l*. on the old basis.

It is not surprising that with such a record as this Col. North's name should have become a sort of household word, and that his movements and intentions should be industriously chronicled, though not always quite accurately. Nor is it to be wondered at that the Colonel's enormous good fortune should have given rise to a great deal of envy, and to a host of flatterers and sycophants. But from what we know of Col. North, he is as little likely to be affected by envy as by flattery. To use a vulgar, but expressive phrase, he "holds the pieces," and having won, he can afford to laugh at those who predicted that he would lose. The nitrate industry has, no doubt, attained prominence very rapidly, but that is because it is inherently sound, and because, in hackneyed phraseology, it supplies a long-felt want in agriculture, which, after all, is the most vital factor in the world's progress.

A LAME CONCLUSION AND A PRACTICAL SUGGESTION.

THE directors of the West Moodies Gold Exploration Company, Limited, profess to be "pained and disappointed" at the present position of affairs. But their pain and disappointment appear to be only the result of that past neglect and incompetency, from which the shareholders have terribly suffered. The committee appointed at the last meeting can only recommend, in the present state of affairs, that the company be promptly wound up, and that the remaining assets, assuming there are any, be divided. A petition for this purpose has been put upon the file. No wonder that one of the shareholders, writing on the subject, expresses the opinion that "the whole proceeding is doubtful!" The shareholders are by no means satisfied that a proper trial has been given to the property, and we mistake them very much if they are not indignant to find that a petition has been put upon the file without consulting them before that important step was taken. Now, before winding up, our suggestion would be that an expert, to be chosen by a firm like that of Messrs. John Taylor and Sons, should be appointed to inquire in the bona fides or otherwise of the concern as a mining property. Whilst the inquiry was proceeding a similar one might go on into the conduct of the directors in London. By the time the report of the expert was ready, the committee in London would doubtless be prepared to exonerate or blame the directors; but in any case we can scarcely see how, if fresh capital is provided, the present board can expect the shareholders to entrust its expenditure to them, when the fruits of their past management have led to no better result than that of putting a petition upon the

Chancery file. Whilst upon the subject, it occurs to us that Mr. Edgar Taylor is about to proceed to South Africa. If he could be induced to visit the West Moodies property, and report to the shareholders, and if the firm we have named could be persuaded to take the management, we venture to think there would be a chance for the shareholders of getting back their money—a chance that may be postponed to the Greek Kalends if the affairs of the company be left in the hands of the present administration.

PROSPECTUSING WITH A VENGEANCE.

It is with some satisfaction we learn that Mr. Moore, who figures as promoter to Allan and Co., Limited, will have to pay all expenses up to allotment, should ever matters procced to such a goal. The persons who have been entrusted to do the "prospectusing" of the concern have done their work not wisely but too well. One of our readers writes to say he has received nine copies of this document, but that one has been rather more than he can digest. The case of another reader is not so bad. He only received seven, but five of them came by the same post. The business offered scarcely seems worth the expenditure of so much useful paper and so much black ink, not to speak of the postage stamps.

NITRATES IN SOUTH AFRICA.

THE ZOUT KOM PROSPECTUS.

No student of nature will own for a single moment that she has exhausted the capacity of producing nitrates when she threw from her lap the treasures that are to be found in the Tarapaca, Taltal, and a few other choice districts, with the names of which we have of late been made so familiar, and to which special attentiou is called in a leader in our present issue. South Africa, rich in diamonds, rich in gold, and abounding in mineral wealth of every description, may be believed to be not destitute of nitrate grounds, and the fact that she possesses them has been abundantly proved by the exhaustive report of Prof. Branford, who has inspected and reported upon the particular properties which this company has acquired. Prof. Branford, who has been employed as an expert by the British Government, describes it as one block of about 7,000 acres in the Calvinia district of Cape Colony. He says that water is plentiful, that the ground is rich with nitrate and sulphuric acids found in combinations which produce the valuable salts known as nitrates and sulphates of soda and potash. The raw material lying on the surface varies from 1 ft. to 4 ft. in thickness on about 2,000 acres, and exists in less quantities on the remainder of the land, and is easily worked. Assayed by Prof. Aitken, of Edinburgh, the samples showed over 50 per cent. of manurial products. The prices of nitrate and sulphate just now are 11*l.* and 8*l.* 5s. per ton respectively, but the cost of production, transport, dressing, &c., it is thought will not exceed three farthings per lb. f.o.b. at Cape Town. On a production of about 20,000 tons it is estimated the net profit will be 25,000*l.* The title of the property is clear, and direct from the Government, and the deeds are at present in London.

It is important to bear in mind that that the climate of Calvinia is exactly the same as that of Chili, and to this point emphasis was given by the well-known physiciau to the Brompton Consumption Hospital, Dr. E. Symes Thompson, who, in a lecture delivered in the City only a week ago, alluded to the nitrate deposits of Calvinia (which lies on the course of a projected railway), and to the fact that the rainfall was on an average only 2 ins. per year. Those who understand the market best, declare there is no chance of exceeding the demand for nitrate, which is rapidly on the increase both here and abroad. The shares of all the nitrate companies now before the public are at a premium—some of them at what we might almost call a fubulous premium—and there is no reason why these shares should not follow suit, particularly (as we were reminded at the Transvaal meeting yesterday) now that everything is "booming" in South Africa, and subscribers have in this case that which they have not had in very many others—a guarantee that their applications will be considered in their pro rata order, and that the shares will not be divided among a certain coterie or clique. It only remains to say that a good working board has been formed, that the capital is 125,000*l.*, and that the share lists will promptly close on Tuesday at 4 p.m. We are informed that last night the shares were quoted at a heavy premium.

MOUNT SHAMROCK AFFAIRS.

Upon every point the disputants at the Mount Shamrock meeting differed save one, which we beg the shareholders specially to note—the value of the property. Some persons censured the mauagement; others praised it; various processes for extracting gold received commendation, or were blamed as the humour or prejudice of the speaker dictated; but all were agreed that Mount Shamrock is a most valuable property, and that at one time it was regarded as second only to the great Mount Morgan Mine itself. If the mine be good, the property is worth saving, and we appeal to sensible shareholders to support the directors, as distinguished from the Stanlake Lee party, in making the attempt. Ad captandam speeches, such as those delivered by Mr. Rankin and Mr. Walker, are all very well in their way; but they do not restore to shareholders their lost sovereigns—they are only likely to render that prospect indefinitely remote. Mr. Rankin's speech was within the bounds of fair criticism, but that of Mr. Walker—a gentlemanwho looks a good deal wiser than he really is—was only what one might expect from a person who spoke as though he had never made a mistake himself. To wind up an address by saying that the directors have proved themselves incompetent to manage anything was insulting to gentlemen who deserve well of the shareholders for the exertions they have made on their behalf amidst difficulties which persons of the mental calibre of Mr. Walker cannot grasp, and which gentlemen like Mr. Stanlake Lee have helped to increase. It has been agreed to postpone all pending matters until the return of Mr. Woodyatt, and without foreshadowing what that gentleman may have to say, we believe that as regards the directors he will present a clean bill of health, and advise the shareholders to trust persons they know rather than throw themselves into the arms of the Stanlake Lee party, whom they do not know.

THE MEXICAN COMPANY OF LONDON, LIMITED.

The highly influential character of the board selected for the management of this company will doubtless be the first feature of this prospectus that will attract the reader. Two of the members of the well-known and highly respected firm of Messrs. Haggard, Hale and Pixley, of Austin Friars, have identified themselves with the concern as directors, and their colleagues are gentlemen well known in business circles. The capital of the company is one million sterling, of which the present is an issue of 500,000*l.*, and it now remains for us to enquire what the directors will do with this money when they get it. They propose to take over the successfully established business of the London, Mexican Prospecting and Finance Company, Limited, which is chiefly that of acquiring Government and public contracts in connection with the drainage of the city of Mexico, the exploitation of mines and the issue of public loans. They take over several important contracts which were secured by the former company, including the City of Mexican 7 per cent. loan of 400,000*l.*, which was successfully issued in London, and the stock of which now stands at a premium. In fact, the magnitude of the contracts secured, and the necessity of capital to utilise them, have, together, led to the issue of the present prospectus, and to the opportunity to the public of joining a concern of apparently a lucrative character. Mexico has now a more enlightened and stable government than it has previously enjoyed, and the capital has now been attracted to it, which its mining and commercial prospects abundantly warrant.

VISO TIN, LIMITED.

ENCOURAGING PROSPECT.

The improvement which we noted when we last wrote in regard to the affairs of Viso Tin, Limited, has continued, and the report which we publish in our present issue, dated January 9th, is the most encouraging, in our view, that has yet been received. The manager, a gentleman whose antecedents are well known to us, and in whose reports we can place reliance, states that "there has been a decided improvement during the past month." And this, it should be remembered, follows in natural sequence upon reports of a similar nature that have been previously received. The lowest produce of tin yet found upon the mine will pay well to work, provided it can be dealt with in quantity; but itis worthy of note that recent developments point also to an improvement in quality. Most distinctly so does the tinstuff found on the backs of the two lodes, in the Mi-Amor and the Flora Mines. The dressing floors and machinery have been so extended that double the quantity of ore is being dealt with that would have been possible even a month ago; and on the same lines the machinery can be extended as the exigencies of the output demand. The returns henceforth, in the opinion of the manager, will be "regular and satisfactory." This encouraging condition of Viso Tin, Limited, should be remembered in connection with sundry other facts, which must have upon its future an important bearing. In the first place, the mines are only three days from London—in other words, from the market of the world. Many a fine mine we have known has been ruined, because of its distance from the coast; and it is a mockery to be told you are wealthy if you have no market in which you can realise your riches. Viso is not in this position, but in regard to markets, is practically "on the spot." The property is in a climate subject neither to excessive droughts on the one hand, nor to floods on the other. Labour is cheap and docile, and those who knew the manager in Cornwall will be the first to say that he has both the skill and the patience to train it with the best effect. The motive power is water, and that cannot fail, because it is supplied from the river which runs hard by. There will hence be no heavy outlay on coal, which strangles many a mine in its original efforts to become rich. When first taken over, Viso was a waste, howling wilderness; it is now instinct with life and action. Excellent photographs in the company's office, which we have had the opportunity of examining, show clearly the nature of the difficulties which have retarded the company's progress, and delayed the hopes of the more sanguine shareholders. Water-courses have had to be made, tramways constructed, machinery bought and placed, and the whole of a new establishment,

and a new industry, to be created. The engineering difficulties alone would have taxed the capacities of most men, but, as we have intimated, Capt. Nancarrow has overcome them by that dogged pluck and obstinacy which is characteristic of his countrymen in general, and of those of his native county in particular. The harvest having been sown, the shareholders have now to await the crop, and (pursuing the simile) the sickle having been put in, the first instalments are expected daily in the shape of two parcels of tin, now on their way. The recent upward movement in the shares is justified by the facts as they at present stand. We do not know of any more promising tin share than Viso, and we shall be surprised if they do not quickly advance to par (£1) each. There are only 60,000 shares in the company, and the present market price means little more than 30,000*l.* for the whole concern, with its machinery erected and at work returning rich tin. If the property were in Cornwall it is not too much to say the shares would command a very large price indeed.

THE "EDWIN BRAY" GOLD MINING CO., LIMITED.

A PROPERTY OF MERIT.

AFTER a careful examination of the prospectus of this company we have come to the opinion that it well merits attention, both from the investment and the speculative side. To the investor it appears to open the prospect of large dividends, and to the speculator that of a substantial premium. The De Kaap Goldfields are not so much talked of at this moment as those of the Witwatersrandt, but they will be in the course of the current year, unless South African opinion is wholly at fault. It is in the De Kaap district that the six claims of the original Sheba block of 25 claims lie, which this company has acquired. The claims are between the centre of the rich Sheba reef and the Oriental Company's property, and are only a few miles from Barberton. To a large extent they have been already opened up, and are now in a position to commence yielding quartz. No. 3 adit is held by mining experts conclusively to prove that the Sheba reef enters the Edwin Bray property, and strength is given to this conviction by the similarity of the stone from the two properties. The prospectus largely relies upon the reports of Mr. Alfred Woodhouse, late consulting engineer to the Sheba Company, who, on examining the shoot, 60 ft. wide and 6 ft. long, found it worth by fire assay from 3 ozs. to 12 ozs. per ton. He adds, "I do not think this will prove to be the only shoot of gold in the claims, but that others will be found as the ground is proved to the westward. I have a high opinion of this property, which is likely to prove of great value."

Similar testimony is borne by Mr. J. W. Abbott. A week ago we reported the meeting of the Sheba Gold Mining Company, which we can only hope our readers perused, for its remarkable results throw much light upon the probable future of the Edwin Bray property. With only 20 stamps working, and in spite of delays and stoppages, the returns from October, 1887, to August, 1888, were 2,680 tons crushed, 9,685 ozs. produced, value 37,904*l.*, or an average of 3 ozs. 12 dwts. 7 grs. to the ton. Again, from April, 1888, to August, 1888, the tons crushed numbered 2,197, the ounces produced 8,412, the yield 32,800*l.*, or an average of 3 ozs., 16 dwts. 13 grs. to the ton—not taking into account the blanket concentrates, valued at nearly 4,000*l.*

In connection with this company it should be remembered that the capital is unusually small — 65,000*l.*, of which only 23,000*l.* is offered for subscription. Considering the large body of quartz, and considering also the smallness of the capital, it would not be an unusual experience in mining, if the annual profit of nearly 50 per cent on the capital should in this case be realised. The estimates appear to have been conceived in moderation, and the details of the prospectus go to show that the property acquired is one of considerable value. A strong board has been formed to act in London, and they will have two colleagues at Barberton. The lists will open on Thursday morning, and close at 4 p.m. on the same day, but in this case due time is given for the previous consideration of the prospectus.

CORTEZ MINES, LIMITED.

WHEN the prospectus of this company was issued about the middle of last September we referred to it in terms of commendation, and predicted that its shares before many months were past would be at a substantial premium. We were led to this belief because the property for two years previous to its purchase by the present company had been producing bullion of the net value of $60,000 per month, whilst the expenses were under $12,000, but notably because it had been reported upon by Mr. Moreing, of the firm of Messrs. Bewick and Moreing, whose testimony we were prepared to receive as that of a mining expert upon whose judgment perfect reliance might be placed. The 1*l.* shares were dealt in to-day at 37s. 6d., and the general opinion of the market is that they will see a much higher price. It will be seen by a paragraph in another part of our present impression that Mr. Moreing is about to proceed to the Transvaal to to fulfil professional engagements.

THE ASTYRA MINING CO., LIMITED.

THIS company is formed to acquire the right to develop and work the gold mines of Astyra, in Asia Minor, situate about 18 miles to the east of the port of the Dardanelles. Classic writers speak of these gold mines as being worked about 3,000 years ago, and Strabo says that the wealth of Priam was derived from them. The established fact that these mines were worked for some centuries before the discovery of iron, when progress through the hard rock must have been necessarily slow with the primitive means at command, and the great extent of the ancient works, lead to the conclusion that the ore must have been very rich. That they were considered of immense importance may also be gathered from the fact that the ruins of a pre-historic fortress, and of an enormous wall or walls, surrounding the mountain of Astyra, which have evidently been so placed to protect them, are still in evidence. The property covers an area of nearly 4 square miles, and it is said to possess gold-bearing reefs in many directions. Mr. Henry Morris obtained an option of purchase, at a fixed price, over a prolonged period, on the condition that he should make a thorough examination of the property, and make any researches that he thought necessary. With a view to this examination, the Astyra Mining Syndicate was formed, and a considerable sum of money has been expended by them in prospecting and developing the property. Further capital, however, being necessary, this company has been formed with a capital of 180,000*l.*, in 1*l.* shares. The following are the considerations to be paid by the company:—(*a*) 20,000 B shares, fully-paid, to the Astyra Mining Syndicate, or their nominees, representing the 20,000*l.* in cash they have already provided. (*b*) 37,500 B shares, fully paid, to Mr. Henry Morris, the vendor to the syndicate, or his nominees, as part consideration for the transfer of the concession to the syndicate. (*c*) So soon as the net profits of the company earned in any one year are equal to 15 per cent. upon the capital credited in the books of the company as paid up, but not before, then— (*d*) 40,000 deferred D shares, fully paid, to the Astyra Mining Syndicate or their nominees; and 40,000 deferred D shares, fully paid, to Mr. Henry Morris or his nominees, in further payment as above. The above D shares shall rank for dividend with the B shares. The company has an excellent prospect of success.

THE DELHI, UMBALLA, KALKA RAILWAY CO., LIMITED.

THIS company has been formed with a capital of 800,000*l.*, in 80,000 shares of 10*l.* each, for the purpose of acquiring the right to and carrying out (under the conditions of a contract with the Secretary of State in Council of India) the construction of a direct line of railway from the station of the East Indian Railway at Delhi, via Kurnal and Umballa Cantonment Station, to Kalka, at the foot of the Simla Hills. When completed, the working and equipment of the line, will be undertaken by the Secretary of State for India, the shareholders receiving 50 per cent. of the gross earnings. The present railway between Delhi and Umballa takes a somewhat circuitous route. By the new direct line, however, the distance will be shortened by about 40 miles. Taking the very low estimate of traffic at 15*l.* per mile per week, under the proposed working agreement, a return of practically 6 per cent. upon the estimated cost would be assured. The distance from Delhi to Umballa is 122 miles, and from Umballa to Kalka 35½ miles, making a total of 157½ miles. The sum of 6,500*l.* per mile, the prospectus states, may be taken as a full estimate, including the cost of the formation and preliminary expenses of the company, the construction of the railway, maintenance for one year, and interest during construction at the rate of 4 per cent. per annum. It is calculated that three years will be sufficient for the completion of the works. The sum of 220,000*l.* has already been subscribed by the directors and their friends, and for the balance, 580,000*l.*, Messrs. Matheson and Co. invite subscriptions.

SUTHERLAND REEF, LIMITED.

THIS company has been formed to acquire, direct from the owners, the Harmony Proprietary Company, Limited, the lease of a section of the main or Sutherland Reef, in the well-known Murchison Range Goldfields, Harmony Estate, Zoutpansberg, Transvaal, equal to 40 gold mining claims, each measuring 150 ft. long by 400 ft. wide—in all 1,500 feet along the line of reef, and 1,600 ft. wide. The property has been inspected and reported upon by a number of experts of the highest authority on Transvaal gold mining. Mr. Thomas Button, a most experienced miner, and Mr. James Sutherland, a miner of 20 years' experience in California, New Zealand and Australia, after whom the reef is named, found the quartz so rich that by simply crushing it between two stones they were able to pan off the gold; and "French Bob" (a most experienced Transvaal miner), who commenced working on the reef last year in the interest of a Barberton syndicate, got splendid results, the quartz containing gold at the rate of 112 ozs. to the ton, and the latest returns state that the shaft he was sinking showed that the quality of the quartz fully maintained the high value obtained nearer the surface. The formation is remarkable from its regularity, it is at least 5 miles wide, and runs right through the estate. The capital of the company is 100,000*l.*, in shares of 1*l.* each. The vendor receives 80,000*l.*, payable 50,000*l.* in fully paid shares, 5,000*l.* in cash, and the balance in cash or shares at the option of the directors.

Mr. J. H. COLLINS, F.G.S., leaves Liverpool in the Arizone on Saturday for New York, en route for Mexico. Letters addressed Terrazas Station, Chilmahua, Mexico, will find him for the next six weeks.

Notice is given that the share transfer books of the San Pablo Nitrate Company will be closed from the 18th to the 21st February inclusive, for the payment of dividend on the latter date.

Mr. B. B. Trench requests us to announce that he has decided to retire from the board of the Sheba Gold Mining Co.

The traffic receipts of the Lombardo-Venetian Railway from the 8th to the 14th inst. amount to 696,000fl., showing an increase of 1,000fl. as compared with those of the corresponding period of last year.

REPORTS OF MEETINGS.

THE TRANSVAAL GOLD EXPLORATION AND LAND CO., LIMITED.

NO DIVIDEND, BUT A VERY ENCOURAGING FUTURE—COMPANY PAYING EXPENSES—A GOOD REEF AND SOME VALUABLE TAILINGS.

THE third ordinary general meeting was held at the Cannon Street Hotel, yesterday, to receive the directors' report and statement of accounts to 30th September last, to submit for confirmation the appointment of a director in room of Mr. Samuel Crowder resigned, and to re-elect the auditor, and fix his remuneration—Wm. Mortimer Farmer, Esq. (chairman of the company), presided.

Mr. C. E. WELLS (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, in moving the adoption of this report, we have to first congratulate ourselves upon the position in which we are to-day. The directors are very pleased indeed to meet the shareholders and give them an account of what has been done during the last 12 months, and although the result is not what we all anticipate, yet I think the position is one that gives us

GROUND FOR EXPECTING A FUTURE.

One thing with regard to this company is the want of funds to properly develop it. If you turn to the accounts you will find that the cash balance now is, with the exception of the 1,000*l.* we have on deposit, 1,353*l.* Considering that we spend over 1,000*l.* a month in ordinary prospecting work this does not carry us very far, and we are not able to undertake any large development works. Therefore in your comments on the accounts will you just bear in mind that we are handicapped by want of funds to a considerable extent. The report deals comprehensively with everything that has been done during the year, and leaves the chairman very little to say. There is a supplementary statement which may be of interest to you, and which I will read. Since last year we have brought into use the grinding and amalgamating appliances which were lying on the estate since we first commenced operations. After considerable trouble we have now, by means of the turbine, been able to utilise this plant, which is already showing good work. The statement is as follows:—

SUPPLEMENTARY NOTES FROM MANAGER'S ADVICES, ETC.

Grinding and Amalgamating Pans: These were started to work, with motive power from the new turbine, on 29th August, and up to 31st December (4 months) their addition to the aggregate produce of gold was:—September, 130½ ozs., 61½ tons; October, 76¾ ozs., 131½ tons; November, 80¼ ozs., 86½ tons; December, 70 ozs., about 160 tons; total, 357½ ozs. from 439½ tons treated, equal to 16¼ dwts. per ton. The material treated was concentrated tailings and a small proportion of blanketings. In addition to the actual gold recovered, a quantity of the residues from base amalgam, which are found to contain a considerable percentage of gold, estimated at 80 ozs., has been collected, and will be sent to London for special laboratory treatment, in order that as much of the gold as possible may be saved. Ore available and in sight: At 31st December the estimated stock at that date was 658 tons. This weight includes about 160 tons of rich ore from the Zeta vein at Ophir Hill, which assays about 3 ozs. per ton, and is expected to give a good yield. The remaining sources for future supplies at present opened out are the Beta vein, at Peach Tree Creek, from which over 1,900 tons have already been obtained. Work was stopped here in January, 1888; the cause of suspension being the scarcity of Kafir labour. But the manager now writes that he will resume mining operations very soon. From the Zeta vein, at Ophir Hill, it is expected that a further supply of ore will be got, but the vein is not extensive. The Theta vein, the latest discovery, has, according to a telegram received and published last week, yielded 60 tons of very rich ore. The latest written advices received this week date from the discovery of the vein, and it was not then sufficiently opened out to enable the manager to form an opinion as to its extent, but the miner in charge is confident that we will get a large quantity of payable ore. A piece of quartz from a boulder in the trench, when tested, gave a pan value of 2 ozs. 10 dwts. per ton. Labour: During the greater part of the year eight European miners and mechanics were employed, and the average number of Kafirs was 88. For the last half of the year Kafir labour has been very scarce, and still continues so, and increased wages had to be given to induce "boys" to remain. Staff: The staff remains the same in number as in previous year, and consists of—Manager, 600*l.*; assayer, 350*l.*; amalgamator, 250*l.*; and accountant, 150*l.* Pilgrim's Rest, Limited:—This company has cleaned up its boxes several times since the commencement of hydraulicing operations in June, 1887, and the net result in gold has been as under:—1887: October 8th, 3.1 ozs.; 1888: April 26th, 53.17 ozs.; June 30th, 24.2 ozs.; July 30th, 25.12 ozs.; August 31st, 16.8 ozs.; September 27th, 22.2 ozs.; total, 145.2 ozs., our percentage on which was 7 ozs. 5 dwts. 1 gr. The number of diggers holding claims on the company's property during the past year was four, and their gross finds 353 ozs., as compared with five in 1886-7, gross finds, 537 ozs., and 16 in 1885-6, gross finds, 1,426 ozs. The falling off in the returns is due to the occupation of the ground by the Pilgrim's Rest, Limited.

To the foregoing statement the chairman added these comments: All this was lying on the ground previously, and if you refer to the report you will find that we have about

5,300 TONS OF TAILINGS

and concentrated tailings. If we get the same average from the whole as from the sample already treated we shall have pretty nearly 5,000 ozs. of gold to present you with in the accounts of next year. With regard to this Theta vein, that is at present the point of great hope for the future. Our manager is very cautious, and never says more than he can help, but he is becoming enthusiastic about this vein and the very large body of ore that he sees before him; and if he is right in his report this time I think we shall have something to reward us for the trouble and anxiety we all have had during the last year. In the report very little is said about the Theta vein, but since the report was issued letters have come to hand which give us the hope that we will be rewarded by having a good return. So far it has realised 60 tons of very rich ore. The scarcity of labour arises from the counter attraction of the Witswatersrand district.

STATE OF JOHANNESBERG.

Labour there is in great demand. I have just paid a visit to the goldfields and was impressed and astonished with what I saw. I went on the top of one of the hills and for a distance of nearly 32 miles you can see the continuous workings of the different companies on those reefs as they run along. These mines are drawing no end of labour to Johannesberg which, during the last two years, has become an immense town, and will, before long, be the centre of industry and energy in South Africa. Johannesberg is altering altogether the condition of things in the Transvaal. There is no predicting what that place will be in five years time. We naturally regret that the same thing is not going on in the Barberton District.

BARBERTON TOOK THE START ABOUT FIVE YEARS AGO,

and we were in hopes that the El Dorado would be there. Towns have formed around it, but owing to the peculiar nature of the ore, and the patchiness of the reefs and leaders the companies that were formed could not be made to pay. They all suffered from the want of water to drive the mills, and the cost of fuel was very great. Then, too, the absence of locomotion made it difficult to get the ore down to the river—on the banks of which they are going to erect their mills, and these mills will be driven by water power, for until the tramway is constructed even rich Sheba will not be able to pay. We have not a Sheba reef on our property, but we have a good many reefs. There is no doubt in my mind that, notwithstanding all our disappointments,

THERE ARE SOME RICH VEINS ON OUR PROPERTY

if we can find them. Whether we have to go down with shafts, or go on prospecting over the whole country is a matter for ourselves. For my own part I should say if money were provided we would go more extensively to work, but with the funds we have at present we can only go on as we are doing, and the success we have had is very satisfactory. Our shares are not at 25*l.* premium but we are doing very well. We are paying our expenses which is more than a good many companies whose shares are selling at 15*l.* or 20*l.* are doing; so if there is a possibility for those companies that are not paying expenses we do not know what prosperity there may not be for this company, and I think we may take a hopeful view that things will turn out better than they seem to promise at present. As to the accounts—the capital account has been increased a little by the payment of some outstanding calls. There is still a sum of 2*l.* 1s. 6d. outstanding, due by people in South Africa whom we cannot get at.

DEBENTURES—PRINCIPAL AND INTEREST REDUCED.

The debentures have been reduced from 28,000*l.* to 18,725*l.* For the debenture bonds now issued, we have passed a first mortgage in the Transvaal, by which they are made secure. Because they are so secure and negotiable the interest has been reduced from 8 per cent. to 3½ per cent. (Hear. hear.) This mortgage bond is a preference bond on the whole of your property in South Africa. During the year we have reduced sundry creditors from 1,653*l.* to 607*l.* The suspense account is 1,667*l.* Last year the balance was 2,323*l.* During the year, owing to the collapse or breakage of the water wheel, we were thrown out of work for four months, and as we were getting about 1,000*l.* from the earnings of the mill, that represented nearly 4,000*l.* in our revenue account. Notwithstanding that stoppage, we have paid off 1,000*l.* to creditors in open account. We have added to the assets 1,340*l.* in a new turbine, and we have written off on depreciation 1,081*l.* and the consequent expenses of the new and old wheel, and sundry other affairs, which have to be done consequent upon the smash. Therefore, although we have this year a smaller amount of cash apparently, yet we have paid the expenses of the year, amounting to nearly 12,000*l.* We have paid 2,100*l.* towards the new turbine, and 1,000*l.* off creditors' account, and have nearly the same amount of money in hand that we had last year; but if we had worked all the time we should have been in a much better position. I think all things taken into account the shareholders will agree that

THE DIRECTORS HAVE DONE WELL,

and that we have worked the company to advantage. We regret there is no dividend, but we must look to the future for that. The general charges have been reduced, and we have obtained 8,864*l.* worth of gold, against 3,144*l.* last year. Since the accounts were published, we have a statement of the working for the three months to the 31st of September. It works out in this way: In October the deficit was 171*l.*; in November the surplus was 504*l.*, and in December the surplus was 240*l.*, leaving a total surplus of 572*l.* (Cheers.) Hence we are still making money in a small way, and I trust the new reef will be the means of doing so even more. Mr. Crowder, since the last meeting, has resigned his seat, which we very much regret, and in his place we have invited Major-Genl. Bruce, whose appointment we have to ask you to-day to confirm. I should mention that we shall have probably to renew our water races, and this will be done in the course of three or four months, at an expense of between 400*l.* or 500*l.* We are looking forward with hope to the future.

EVERYTHING IS BOOMING IN SOUTH AFRICA,

and there is every prospect of the railway from Delagoa Bay being taken into Pretoria. A railway now contemplated will run close to our property, in which case for agricultural purposes alone it will increase its value 100 per cent. I beg to move the adoption of the report. (Cheers.)

Mr. WILLIAM JOHNSTONE STEELE seconded the motion.

QUESTIONS.

Mr. LEVERSON: Will you tell us what has become of the hydrogen amalgam plant.

The CHAIRMAN: What did very well in the laboratory would not do out there. I do not regard the money spent on it as lost, but at present we had better say nothing about it. The plant has come back and been re-delivered to the makers. We had a man trained by them sent out with it, so that they might not say it was worked by

people who did not understand it. There was a heavy royalty attached to it while out there, which we did not pay, so we had it sent back.

Mr. LEVERSON: What process are you adopting for gaining the gold?

The CHAIRMAN: My colleague, Mr. Brown, will give you all information on that point. In reply to further questions, the chairman said that the fee of the auditor was 20 guineas, which elicited the remark from the meeting that it was very moderate. The transfer fees alone had realised 265*l*., which at 2s. 6d. per transfer would show the enormous nature of the share transactions that had taken place.

HOW THE ORE IS TREATED.

Mr. NICOL BROWN (director): The quartz is treated by the ordinary Cornish method. The gold is obtained by passing the ore under stamps and over copper plates, &c. The tailings are concentrated and ground in pans, and we find by grinding them in the pans that the gold is brightened and burnished, and rendered easy for the mercury to attack it, and we get a larger percentage by that process than by any other. These pans were in use at first, but we found the cost of fuel too expensive. Then a water-wheel was put up, but it was not sufficient in power to drive both the stamps and the pans. Then when we saw we were getting some results we sent out a turbine, which develops 35 h.-p., which is sufficient to drive both the stamps and the pans. We are now getting very much better results, but they have only been obtained during the last month or two, and not from any specific quantity of ore, so that we do not like to say much about them. I think you will find that the percentage has been considerably increased—from 50 to 70. The quantity of stuff treated has been so small that these percentages are not very reliable at present, but we are sanguine that the pans will give a much better result than the highest I have spoken of. The variation in the ores renders the question of machinery difficult. It is very unfair to condemn a process tried on one kind of ore without success, and also unwise to commend a process as suitable for all ores that has been successful on one class. The best process is that which is more suitable for the greatest variety of ores. (Hear, hear.) I hope we will raise the percentage to 75, and gradually creep on as near as we can get to 100. (Cheers.)

ROUTINE BUSINESS.

The appointment of Major-Genl. Bruce was then confirmed.

The auditor, Mr. Charles Lee Nichols was re-elected in complimentary terms, at a remuneration of 20 guineas.

The meeting closed with a vote of thanks to the chairman.

NEW COOK'S KITCHEN.

CALL OF 3s. PER SHARE.

A MEETING of the adventurers in New Cook's Kitchen was held on the mine, on Thursday, under the presidency of Mr. Walter Pike. The accounts showed that labour costs during the 16 weeks had been 964*l*. 13s. 4d.; merchants' bills, 219*l*. 10s. 10d.; bank charges, 35*l*. 13s.—total debits, 1,219*l*. 17s. 2d. There had been four sales of tinstone, realising 559*l*. 5s. 9d.; discounts and sundries, 2*l*. 12s. 1d.; leaving a loss of 657*l*. 19s. 4d. The balance against the mine last time was 874*l*. 10s. 5d. There was then a call of 3s. 6d. per share, and the balance against the mine at the present time was 737*l*. 5s. 5d.

Mr. PIKE said everything was charged up close in the accounts. The various points were valued at 82*l*. per fm., more than he had ever known in the mine before. He proposed that the accounts be passed, and that a call of 3s. per share be made, producing 710*l*., which would more than cover the loss.

Mr. J. VIVIAN seconded, and the resolution was carried.

SOUTH CROFTY.

LOSS OF £1,855—CALL OF 6s. PER SHARE.

A SIXTEEN WEEKLY MEETING was held on the mine on Thursday—Mr. H. J. Lean, purser, was in the chair.

The labour costs for the 16 weeks had been 2,308*l*. 16s. 2d.; merchants' bills, 1,331*l*. 18s. 11d.; the total debits being 3,659*l*. 4s. 4d. Arsenic sold had produced 23*l*. 14s.; tin, 30 tons 11 cwt., 1,767*l*. 19s. 6d.; sundries bringing up the credits to 1,803*l*. 5s. 1d. Thus there was a loss on the 16 weeks of 1,855*l*. 19s. 3d. The balance against them at the last account was 1,193*l*. 4s. 6d.; while now it was increased to 1,876*l*. 15s. 8d.

Mr. VIVIAN observed that they ought not to make less than a 6s. call.

The CHAIRMAN: That would cover the loss within 10*l*. or 15*l*.

THE GOLDFIELDS OF URUGUAY, LIMITED.

PROGRESS OF THE WORKS—FINAL CALL.

IN forwarding the accompanying notice of the final call of 2s. 6d. per share (making the shares fully paid), I am instructed to state that not only is all the machinery for the 40-stamp mill at the mine, but good progress has been made in its erection, and it is expected that it will be completed and at work in March. The directors have considered that it would be of advantage if one of the directors would visit the mine, and Mr. Hansen has, at the urgent request of his co-directors, undertaken this duty. He will probably return in April, and it is intended to hold the annual meeting immediately afterwards. A concession has been granted by the Government of Uruguay for a railway from Paso de los Toros (the present terminus of the Central Uruguay Railway) to Rivera, passing within a short distance of the mines. A company (the Central Uruguay Northern Extension Railway) was formed here in November, to construct this line, and we understand that work will shortly be commenced. This railway will give greatly improved access to the mines, and be an advantage to the company in many respects.—H. AKERS, Secretary.

ALTURAS GOLD, LIMITED.

INTERIM REPORT OF THE CONSULTATIVE COMMITTEE.

YOUR committee found at the commencement of their researches into the present position and past history of the company, that the matters claiming their attention divided themselves into two branches, both of extreme importance, but standing in different degrees of urgency. The first of these matters was the financial position, and the measures necessary to maintain the company in possession of its properties, and to enable it to properly develop them. The second, to ascertain, if possible, what had been the cause which had in the past militated against the success of the company; what were the frauds and peculations referred to by Mr. Kyshe at the meeting of 28th ult.; and who were the persons guilty of the alleged malpractices. The financial position proved on investigation so very serious that it was extremely probable, unless prompt measures were taken for meeting the exigencies of the case, the properties would pass from the possession of the company; and this part of the questions before your committee would be solved in a manner as decisive as disastrous. Of the matters coming under the second head, your committee found that a very considerable amount of time and labour would be necessary to investigate the accounts, correspondence and papers which must be examined to arrive at definite conclusion, while Mr. Kyshe's statement, which he has been kind enough to commit to writing for the benefit of the committee, although containing but a rough summary of the 50 charges he brings forward, occupies 16 pages of closely written foolscap. Under these circumstances your committee are of opinion that they will best protect the interests of the company by requesting the board to at once convene an extraordinary general meeting of shareholders, and by laying before the shareholders at such meeting the interim report which your committee have now the honour to present. From the facts brought before your committee it appears that to the end of December last the debts due by the company were 10,000*l*. for money borrowed, 5,000*l*. unpaid balance of purchase of Tip-top property, and about 5,000*l*. floating liabilities in the United States, say 20,000*l*. The home liabilities and assets were unimportant. The mine superintendent was pressing with the utmost urgency for remittances to avoid summary proceedings by local creditors, and the plan of operations for developing the property proposed by him necessitated a capital outlay of about 1,000*l*. per month for six months, bringing the minimum capital requirements to 26,000*l*. After consultation with the board your committee were informed that if re-construction were decided upon, the board were of opinion that the financial pressure might be so far relieved as to give time to the shareholders to carry out a re-organisation of the company, and your committee have consequently prepared the re-construction plan contained in the accompanying notice. The scheme may be briefly summarised thus:—The new company will have a nominal capital of 300,000*l*. in 300,000 shares of 20s. each. Each shareholder in this company will be entitled to take up in the new company a similar number of shares to his present holding. The new shares will (as before stated) be of 20s. each nominal value, credited with 17s. paid and bearing a liability of 3s. per share. A deposit of 6d. per share would be payable on application and such amount as may be necessary (probably 6d. per share) on allotment. Before dealing with any shares unapplied for by the shareholders of this company entitled to apply in the new company, the liquidator will be directed to offer such shares to those who have subscribed to the new company. This scheme, if adopted, would produce a sum of 45,000*l*., an amount which it will be seen is considerably in excess of the estimated requirement. Your committee deem it advisable to recommend this amount being raised in view of the almost unvarying rules that estimates of mining costs are always exceeded by the actual expense of operations. Should Alturas prove an exception to this rule, there will, of course, be no necessity to call up the whole amount of the capital created. It may be added that the board are in thorough accord with your committee on the matter, and many of the largest shareholders of the company, it is understood, approve and will support the plan. As neither the requisite time nor funds to obtain an independent report on the mine by a first-class mining expert are at the disposal of your committee, they have to base their opinion of the proper operation to be undertaken at the mines on the reports of the various mining superintendents of the company, and the special reports which have been published from time to time. Your committee, have however, instituted some enquiries in the United States as to the reliability of Mr. Watson, the present superintendent, and trust shortly to have replies to these. Mr. McDermott's recommendations and those of Mr. Watson being mainly in agreement with those of the late Capt. Eddy, your committee think the board will exercise a wise discretion in adopting Mr. McDermott's advice. Without going into details, your committee have already learned sufficient from their study of the company's past history to enable them to express their opinion that the difficulties of the company have mainly arisen from the unfortunate condition under which it commenced, and for so long continued its operations. The board apparently have had constantly before them the necessity of conciliating creditors, and securing financial assistance, and thus have been unable to display that firmness which was essential for a proper conduct of the company's affairs. To these causes alone can your committee attribute the retention of officers against whom the board received the most serious complaints. To place the control of affairs for the future in the hands of the shareholders, your committee recommend that, should the re-construction scheme be adopted — The number of directors be reduced from five to three, provision being made for a maximum of five should additional directors be hereafter desired. That the whole of the directors of the new company retire at a meeting of the new company, to be held within two months of the first allotment, and that at such meeting the shareholders shall have a privilege they have not yet enjoyed, of electing their own directors. That the remuneration of the directors be reduced to, say 100*l*. per annum each director, any further remuneration being contingent on profits; and that the articles of association of the new company be subject to the approval of the liquidator of this company. As this official must be elected by the shareholders, the latter will thus secure the revision of the existing articles of association, which is necessary. Your committee have pleasure in directing the attention of the shareholders to the very encouraging returns advised by Mr. Watson, under date January 22nd, as follows:—

"Rocky Bar, January 22nd, 1889.—Ten days' run produced 670 ozs. gold. Milled 490 tons ore.—Watson."

Your committee have to acknowledge the very full and frank explanations which have been offered to them by the directors, secretary, auditors, and other officials of the company, during the course of this enquiry, and the readiness with which all concerned have offered their assistance when required. In conclusion, your committee express their earnest hope that, under the control of a board freed from financial embarrassments and impervious to extraneous influence, discipline may be enforced among the local staff, honest and capable management secured, and the company brought into a dividend-paying state, which may recoup the losses sustained by the shareholders, and repay your committee for their exertions.—J. H. A. Smith (chairman), J. W. Biggs, Jos. Harding, T. H. Leak, Percy Wells, Shareholders' Consultative Committee.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the Mining World and Engineering Record.

Sir,—I shall be glad if you will publish the enclosed letter, which I have addressed to the Sheba Company, and state that not only is the determination at which I have arrived irrevocable, but that I finally determined on it before the meeting of the new board on the 21st inst.—I am, &c.,

B. B. Trench.

18, Birchin Lane, Lombard Street, E.C.,
22nd January, 1889.

18, Birchin Lane, Lombard Street, E.C.,
19th January, 1889.

The Secretary, the Sheba Gold Mining Company, Limited.

Dear Sir,—The shareholders, at the adjourned meeting, held yesterday, very kindly pressed me to remain on the board. I hastily agreed to do so if it were the unanimous wish of the directors; but I feel, on re-consideration, that I ought to abide by my original decision to retire, and this I now do, without ascertaining the opinion of my colleagues. I shall, however, be glad if I can give the benefit of my experience to the new board.

Yours faithfully,
(Signed) B. B. Trench.

THE YURUARI CO., LIMITED.

Sir,—As an old employé of the late company, I feel an interest in everything relating to the property of this company in Guayana. I was in the company's service during the first manager's time, and as your correspondent "Pro Bono Publico" speaks of No. 1 shaft, usually known as the water shaft, perhaps you will allow me space to state that during my time we struck here very rich quartz, so rich in fact that every precaution had to be taken to prevent stealing, not only underground, but also at the pit month. The yield, I remember, of 1,000 tons, when passed through the mill, was 2,700 ozs., and for months continuously the results averaged from 2 ozs. to 3 ozs. to the ton. This much for the westward side of the property, referred to by your correspondent.

With reference to the Cenicero, or No. 4 shaft, while the lode pinched away to the eastward from No. 6 down to No. 8 levels, on the westward side (that is, in the direction of the water shaft) very rich quartz was found in the 6½, 7, 7½, but especially No. 8 levels. The lode improved in richness as it approached the boundary of what was then the Potosi property.

With reference to the Potosi property, referred to by different correspondents, perhaps I may be allowed to state in explanation that the purchase from the Potosi Company by the late company consisted of a tract of land lying between the water and Cenicero shafts. This had been a fertile source of disputes between the two companies, which were fortunately amicably ended by the purchase of the ground by the late company. On this ground, which has been well prospected, there are four shafts, known as the trespass, main, water and air shafts. From the trespass shaft, the one which gave rise to the disputes on the ground of encroachment, very rich pockets of gold were obtained.

From a letter I have just received from Venezuela, it would appear that the present manager contemplates proceeding with the water shaft, so as to connect the No. 4 level, water shaft, with the No. 8 level, Cenicero shaft. This will open up ground of, I should say, 500 to 600 ft. in extent. There is a very large amount of unworked ground lying between the above-named shafts, and from the lay of the lode cut in the trespass shaft, I estimated when there that this lode should be found in the water shaft at a depth of about 400 ft., so that with 40 ft. to 50 ft. additional sinking this lode would be cut in the shaft, and enable drivages to be made both east and west. In the westward of No. 1 shaft, operations could be carried on for more than a mile in extent—in fact, to any extent until, on the grounds of economy, it was found desirable to sink another shaft on the lode.

I could write a great deal more on a subject with which I am well conversant, but fear that space would forbid; but, in conclusion, I am pleased to note that so much interest is now being taken in Venezuelan mines, and that the public are becoming alive to the fact that this district must sooner or later be opened up by means of such civilisers as railways, telegraphs, &c.—I am, &c.,

Squatter.

23rd January, 1889.

THE NEW ZEALAND ANTIMONY COMPANY.

Sir,—As the report of the annual meeting of the New Zealand Antimony Company, which appeared in your last issue, does not contain a complete account of the remarks I made, and thereby places me in an unenviable light before the shareholders, I ask you in common fairness to allow me to set myself right.

In the first place, anyone reading the report would, naturally, conclude that the "Mr. Simpson" who addressed the meeting was the Mr. Charles Simpson who failed to obtain the office of secretary to the company, and would consequently think I was animated with some personal feelings of hostility. Such, however, is not the case, and, personally, I bear neither the chairman or the secretary any ill-will. I do, however, as a shareholder holding between 800 and 900 shares in the company, and having friends and relatives holding many thousands, most strongly object to the way in which the affairs of the company have been managed.

As regards the opportunities shareholders had last year of obtaining information, I will at once admit that so far as the chairman is concerned, I found him at all times ready to give me any information I might require. But a chairman is not always accessible, and almost every shareholder I know has complained to me of the little information obtainable from the secretary. In justification of the remark I made at the meeting, I wish to point out that the chairman, in his speech on Wednesday last, stated, "It has been an instruction to the secretary all through to give the fullest information to the shareholders." In the face of that I ventured to complain that when I asked the secretary to tell me how much ore had been shipped in fulfilment of Messrs. Cookson's contract, he refused to do so. I think it will be generally admitted that under any circumstances such a question was one any shareholder might naturally expect to have answered, but more especially considering the fact that the secretary had received instructions from the chairman to give "the fullest information."

So much for my complaint. Now for my questions. In addressing the meeting, I first quoted from some letters I received from the chairman in March last, in which he stated that the reports from the mine as to the *quantity and quality* of the ore, were all that could be desired, and I went on to quote from the manager's reports to show that, so far back as May and June last, there was a great length of lode in both No. 3 north and No. 3 south drives ready for stoping. The question I then asked was not only what became of the ore from these stopes, but how it was, in the face of the chairman's admission in his opening speech, that there were between 300 and 400 tons of marketable ore available when the company took possession, coupled with the fact that such a great length of lode was ready for stoping in May and June last, only between 300 and 400 tons had been shipped to meet the contract. The chairman at first took no notice of this portion of my question, and then, on my pressing for a reply, he evaded it. Upon that I observed that the only conclusion that could be come to was that the ore was not of a sufficiently high quality to meet the contract. This the chairman practically admitted.

Later on I asked the chairman to explain how it was that the seven directors had received 1,800*l.* for their services, seeing that, according to the articles, they were only entitled to 200*l.* a year each. The chairman, in reply to that question, intimated that the directors had voted the extra sum to the managing director in the colony. This is so much at variance with my own private information as to the member of the board who received the greater portion of the extra sum, that I was not a little astonished at the reply.

There were many other questions that I had intended to put, but the shareholders had been so carried away by the chairman's glowing anticipations of the proposed sale of the gold mine, and had become so impatient to see the meeting at an end, that it was useless to attempt to go further into details, although I think anyone who has been carefully through the report and statement of accounts must admit that there is much that requires explanation. It seems to me that, apart from the sale of the gold mine, which I believe rests to a very large extent upon the result of the crushing of the 10 tons of ore now on its way to the country, the success of the company will depend very greatly upon the newly-discovered process for converting low-grade antimony ore into crude, because it seems to me very evident that the directors have contracted to deliver a higher class ore than the mine will at present produce in any quantity. Had it not been for the fortunate discovery of this cruding process, the company would have been in a fix, and I consider the announcement of the discovery, coupled with the fact that Messrs. Cookson are bound under the contract to accept crude (I conclude, of course, in lieu of ore), the most satisfactory information the shareholders received at the meeting.

I fully believe that the mine will produce a large quantity of low-grade ore, and if the cruding process turns out a success, I firmly believe that this mine alone will, with economical and judicious management, pay the company well, independently of the splendid chance that exists of valuable gold and antimony mines being discovered on its extensive property.

I might say a good deal more about matters in connection with the company with which I am conversant, but I feel I have already trespassed too far on your space, and I will, therefore, conclude with the hope that the next report to be presented to the shareholders will be of a far more satisfactory character than that submitted to the meeting on the 16th inst.—I am, &c.,

Geo. Simpson, Jun.

Devizes, January 23rd, 1889.

PAHANG CORPORATION.

We learn that the Sultan of Pahang has become a shareholder in the Pahang Corporation, Limited, and that he holds a large number of shares in it. The importance can scarcely be overrated of the Ruler of the country having thus identified himself with the interests of the Corporation, which his power and authority will give him so many opportunities of promoting. The recent appointment, by the Secretary for the Colonies, of that very able representative, Mr. Rodger, as British Resident at Pahang, not only points to the importance which the country is assuming in the eyes of the Home authorities, but it will give to this rich and interesting state that stability of government which in past times it has been somewhat lacking. The career of the Pahang Corporation, possessing as it does two or three thousand square miles of some of the finest mineral and agricultural land in the world, promises to be a brilliant one, a fact which appears to be rapidly becoming appreciated generally, judging by the way in which the shares are being sought after by investors in all parts of the country.

The first batch of letters of regret to applicants for shares in the Ziervogel Gold Mining Co., have been posted.

THE YURUARI CO., LIMITED.

THE assistant secretary advises receipt of the mid-monthly mail from the mine, dated Chile, 25th December. In it Mr. Aikman states that the men have, as usual, suspended work over the Christmas holidays, but that he hopes they will return to work in a few days. The agents advise despatch of about 500 ozs. of gold, of the value of 2,000*l*., to the company's address in London, as customary.

Mr. Aikman states, with regard to the mine:—Since my last I am pleased to say that a great improvement has taken place. The winze from No. 9 to No. 10 east was holed last Wednesday, opening up a large amount of good stoping ground. Samples of quartz have been brought to surface, showing throughout free gold. I will advise you by next mail of the result of the mill test. No. 12 stope east is also looking better, and I am in hopes of opening up in these levels quartz giving as good results as that obtained in No. 11. No. 8 rise west looks very promising, and is being prospected with the greatest energy. We have had some difficulty with the men here, owing to the great heat, but this we are neutralising by means of the air compressor after each blast. We are pushing on the mine the more vigorously, as I am anxious to reach the bottom of Potosi old shaft, where we expect to find the rich lode referred to in my previous letters. I intend to start driving No. 4 level from the water shaft, to connect with No. 8 in Cenicero, which I believe will open up a large amount of good paying ground, and when connected will dispose of the question of ventilation. 20 stamps are now fitted with double cams, and we now only await pulley flanges to complete the remaining 40 stamps. Shortly after receipt of this you will receive nine bags, weighing about 500 lbs., of tailings, and herewith please find plan, showing the places on the company's property from which the various samples have been taken. Further particulars will be sent by next mail, when the assays are finished. The advices throughout are most satisfactory.

MESSRS. JOHN TAYLOR AND SONS.

WE understand that Mr. Edgar Taylor starts for South Africa early next month on behalf of Messrs. John Taylor and Sons. We are also informed that the firm have retained the exclusive services of Mr. W. Bell Davies, who will in future act with and assist them in their London office.

BEJA COPPER MINES, LIMITED.—We alluded in terms of commendation a few weeks ago to the prospectus of this company. We learn that the brokers are Messrs. Pym, Vaughan and Co., and that the auditors are Messrs. Cooper Brothers—names which will give additional confidence to investors as proving the bonâ fides of the concern.

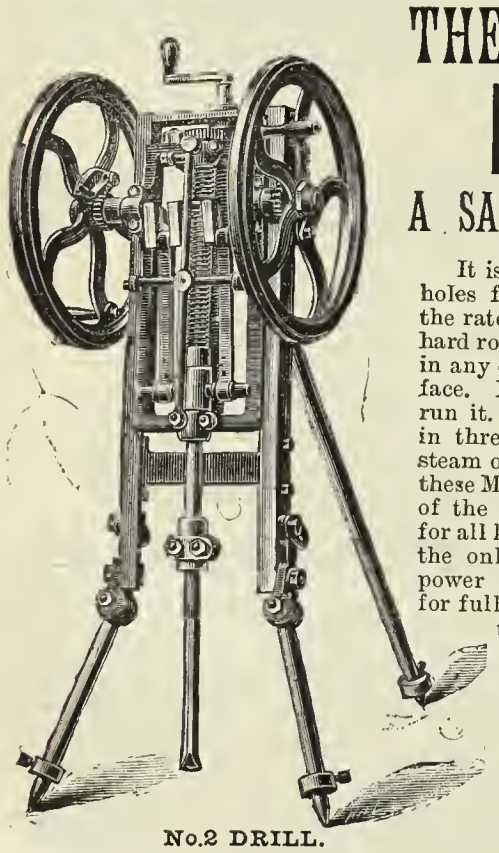
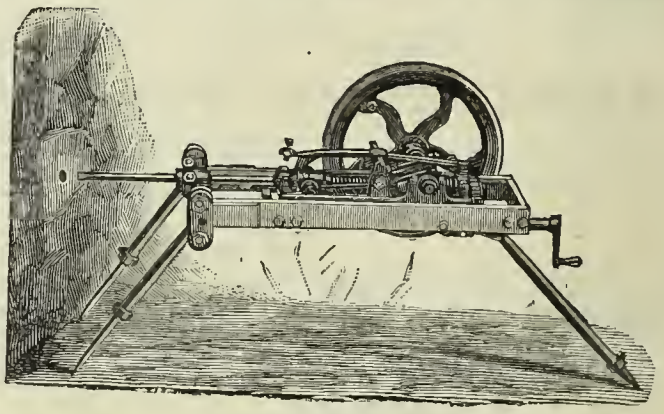
THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.



No.2 DRILL.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to



No. 1 DRILL.

REPORTS OF MEETINGS.

THE DICKENS CUSTER CO., LIMITED.

DIRECTORS AND SHAREHOLDERS AGREED TO SAVE THE COMPANY —THE COMPANY TO BE PROVIDED WITH WHAT IT HAS NEVER YET HAD — WORKING CAPITAL — POOR SHAREHOLDERS CONSIDERED.

AN extraordinary general meeting of the members of the company was held at Winchester House, on Monday, to cousider, aud, if approved, pass the following resolutions as special resolutious :—

(1.) "That the capital of the company be reduced from 420,000*l*., divided into 420,000 shares of 1*l*. each, to 105,000*l*., divided into 420,000 shares of 5s. each, and that such reduction be effected by cancelling paid-up capital to the extent of 15s. per share upon each of the 400,118 shares of 1*l*. each (fully-paid), which have been issued, and are now outstanding, and by reducing the nominal amount of all the shares in the company's capital from 1*l*. to 5s. per share." (2.) "That article 14 of the articles of association of the company be altered by inserting after the words 'all new shares shall' the words '(unless otherwise determined by a general meeting of the company.)'" (3.) "That articles 82, 97, and 98 of the articles of association of the company be struck out, and that the following articles be substituted therefor:—82. The directors shall be paid their travelling and other reasonable expenses incurred in the execution of the business of the company, and shall receive by way of remuneration fees at the rate of 500*l*. per annum until a dividend shall have been declared and paid, when the directors shall be entitled to and shall receive by way of remuneration fees at the rate of 1,000*l*. per annum, and such fees to be divided in such proportions and in such manner as the directors may themselves determine, but such remuneration as aforesaid shall not be payable to the managing director, if any be appointed, and (in addition) in every year in which nett profits of the company, derived solely from working and disposing of minerals, or from sales of the company's mining rights or other property, shall amount to 1 per cent. on the nominal capital of the company for the time being, the directors shall receive 100*l*. for every 1 per cent. of dividend declared, until the remuneration shall have amounted to 2,000*l*. for that year, beyond which no further remuneration shall be payable to the directors for that year, and such remuneration shall be divided among the directors in such manner as they shall determine. (98.) The directors may, from time to time, at their own discretion, pay to the members in anticipation of a dividend expected to be declared at the expiration of any one year, and on account of such dividend, interim dividends at the expiration of every three months of such year, or any less or greater period of a year. Any interim dividend, which has been declared. may be specifically satisfied by the issue or transfer of any shares, debentures, or other securities, which may have been acquired by the company, in the ordinary course of its business."

Edward Wolseley, Esq. (chairman of the company), presided.

Mr. C. T. GLADSTONE (secretary) read the notice calling the meeting, and the various circulars previously sent to the shareholders were taken as read.

COMPANY TO BE PLACED ON A SOUND BASIS.

The CHAIRMAN : Gentlemen, we meet here to-day for the purpose of considering a scheme drawn up by a committee of shareholders formed for the purpose of raising working capital to place the Dickens Custer Company upon a perfectly sound basis. You have had this scheme in your hands for the purpose of consideration for some days, but before proceeding to discuss its merits I wish, on behalf of my co-directors and myself, to say how much we feel and how warmly we protest against the uncalled-for accusations and comments that have been made by certain shareholders in the financial papers with regard to the management of directors. To these we should have replied earlier had we not been aware that by so doing we should have injured the general body of the proprietors. (Hear, hear.) It will be in your recollection that when the re-construction of this company took place, rather more than one year ago, the Charles Dickens Company was in default with its debentures. We have been doing our utmost, ever since the re-construction took place, to redeem those debentures. When the re-construction took place—in order to facilitate it, and make it as easy as possible to the old shareholders of the Charles Dickens Company -it was found necessary to double the capital of the company, and the American holders declined to fulfil their promise of exchanging their debentures for shares, and, therefore, we had to commence our negotiations anew. We had been doing our outmost to purchase these on reasonable terms, and had almost succeeded in so doing, had not certain sharcholders taken the unusual course of writing to the financial papers, and exposing their great anxiety about them—all which communications were promptly forwarded to Salt Lake City to the parties interested, and caused them to refuse to come to terms, as they felt convinced they could make the shareholders pay a higher price.

TRAITORS IN THE CAMP.

This was bad enough in itself, but when I called upon the representative of the debenture-holders in Salt Lake City, with a cash offer of 7,000*l*. to purchase their debentures, I was shown a letter sent by a shareholder, who had gone behind the back of the board, offering for those debentures 9,000*l*. (Shame.) No wonder our offer was refused, and, without loss of time, notice of foreclosure was given. We employed the ablest counsel available for the purpose of defending our interests, and. I believe, it is owing to the action we then took that we succeeded in obtaining a definite price for their redemption. Your directors then called upon such shareholders, upon whose discretion they thought they could rely, and proposed to them means to collect the necessary amount. If this had not been done privately, the same shareholders, who had done so much to injure the company before, would have again shown their "wisdom" by writing to the financial papers, and instead of having to pay 12,000*l*. we should have had to pay 20,000*l*. We, therefore, refrained from defending ourselves in any way until this most important object had been obtained. It has now been accomplished—thanks to your directors, to some of the largest shareholders, and, I am bound to add, to Messrs. Billett, Campbell, and Co., to whom your acknowledgments are largely due. (Cheers.) As soon as these resolutions are carried into effect you will have the Charles Dickens Company free from the incubus which has been so long upon it.

WE UNDERSTAND THAT THE SHAREHOLDERS OBJECT TO THE PURCHASE OF THE LUCKY BOY,

and we therefore bring forward this scheme, although we are convinced that had we become purchasers of that mine, we should not have had to wait for the development of the Charles Dickens or the Custer for a dividend, but have been placed on a dividend basis at once. As it is your wish that we should depend on our own mines and not on the Lucky Boy, we have put before you this scheme—the committee scheme—on this basis, and in order to work the Charles Dickens on the most economical basis, there are two courses open—the one is to proceed with the deepening of the shaft 100 ft., and construct a tramway from the Charles Dickens Mine to the Custer mill, which would cost about 4,000*l*. ; or the second is (which we should urge more strongly) to purchase the Pilot and Ward Beecher claims, drive a tunnel right into the Charles Dickens at the foot of the mountains, and thus save the expense of building a tramway, and also hoisting and pumping the water out of the mine, both items of very considerable expense. (Hear, hear.) It is probable that we should strike the lode in this tunnel, seeing that on the other side of the creek and immediately adjoining it they are working the Washington Mine with $300 ore. The Pilot is the key to the Charles Dickens, and I will not fail this year to recommend the purchase of these two claims, as I did last year in the case of the Lucky Boy, which I do not hesitate to confess that I ought to have recommended the purchase of while it could have been had at a low figure, and I now say I lost you a valuable property, which at that time could have been had for under 5,000*l*. If we strike rich ore in the Charles Dickens the price would at once run up to 40,000*l*., or 50,000*l*., as in the case of the Lucky Boy, which you were recommended to purchase. Very little work has been done on the Pilot, but from the dip and strike of the lode there is no doubt that the vein runs right through these various properties, and if it does so we might run the tunnel in pay ore from the start. It will take some months to thoroughly open out the mine, and you must not get impatient because you do not get returns at once ; for it will be useless to run the mill on Charles Dickens ore until these mines are developed to produce 25 or 30 tons per day. We propose to continue work in the Custer Mine at the Vigus tunnel, and from the indications already seen we may strike ore at any time, and if we do so the profits will be enormous, for you will have a veritable mountain of silver to take away. Before any money is expended, we think,

IN JUSTICE TO MR. TREWEEK,

that a thoroughly experienced mining engineer should be sent to report on how he has handled the property, on its value and future development work, and we also suggest, to prevent future miscouceptions and mistakes, that a reliable mill and mining engineer be sent out to reside at Custer who will report direct to the board in London. In reply to the charges that have been brought against Mr. Treweek, I do not think I can do better than read you the letter he has written in answer to our demand for an explanation as to why he worked the Lucky Boy without having previously informed the board.

MR. TREWEEK'S DEFENCE AND CHALLENGE.

Salt Lake City, November 20th, 1888.

Dear Sir,—In your letter of October 23rd you say you are instructed by your directors to ask me to prepare a statement accounting for, as well as I can, the difference between the state of the mine at the time I addressed the shareholders at the statutory meeting and now.

At the time I addressed the shareholders the Continental ore

averaged from $20.00 to $30.00, as reported to me by Mr. M. L. Crafts, then metallurgist and superintendent of the Genl. Custer mill, and the showing then was excellent. Since then this ore has been cut off by a porphyry dyke, which has faulted the vein.

This dyke was encountered in running our westerly drift, also in the westerly extension of all the other workings. The quartz in going to the deep became poor, which was an occurrence entirely unexpected, as I fully expected that this long ore shoot would have maintained its grade to the deep. Sufficient work, however, has not yet been done to demonstrate that it does not.

I fully realise the position that I am placed in answering this great discrepancy in the amount of ore extracted and the amount stated by me to be in sight in the month of February last.

That I was deceived in the Continental mine, as also was Mr. Crafts, I will candidly admit. In extenuation of this fact I will say that it is not the first time a mining engineer has been mistaken in estimating the value of the ore in sight in a mining property. Great stress is laid by dissatisfied shareholders, that whereas the ore-body in the Continental has not come up to my expectations and statements, made to them February last, that it naturally follows that the whole Custer purchase is a swindle.

Now, let us look into the facts connected with that purchase. The prime object in the purchase of the Custer property was to acquire the Custer mill for the purpose of working the ores from the Charles Dickens Mine. Admitting, for the sake of the argument, that the mines owned by the Custer Company were worked out, which is not the fact, the mill and appurtenances we acquired were well worth the price paid, viz., $185,000.

It is a well known fact to the shareholders of this company, that no work has been done on the Charles Dickens Mine since the organisation of this company, for the reason that the 18,000 in debenture bonds were still outstanding. It has been my aim, also the instructions of your board, to purchase these bonds at a reasonable figure, and would, no doubt, ere this have been accomplished only for the dissatified shareholders publishing their grievances, thereby bringing to the knowledge of the bondholders here the importance of our securing these bonds, and which has blocked my efforts in getting the same.

A great deal has been said and published derogatory to the management of this property. The particular grievance seems to be the fact that I did not inform the board that the ore-body in the Continental had been cut off by a fault, and the ore had depreciated in value as depth was attained; also the fact that I was working on leased property. My reason for not doing so was that I expected daily to again come into paying ore; pending this we kept the mill running by working the ore from the Lucky Boy and Anna Mines, and made a fair profit thereby, besides carrying on the development work at other points of the company's property.

Had I been successful in striking a bonanza in our property this matter would have been only too gladly over-looked by the dissatisfied shareholders, and I would then have been, no doubt, lauded as a prime manager, instead of a rascal, as I am now branded by them.

Again, let us see what the financial condition of the company was on my return from London in February last. After paying purchase price for the Custer property we did not have 1s. in the treasury. I tried very hard before leaving London to raise a few thousand pounds from the heavy shareholders in order to establish our credit at this end. Not a shilling was raised, and I came back and pledged my own personal credit for carrying on the affairs of the company. Have promptly met every bill that has been incurred at this end, and our company has a good financial credit here.

Have extracted about $200,000 in gold and silver bullion, and profit over and above all legitimate operating expenses, including dead work, is about $60,000. The balance has gone to betterments, buildings, supplies on hand, &c.

As you are aware, the title to these properties is vested in me, individually, as under the "Alien Act." No reality in the territories can be held by an alien, or an alien corporation.

Whether the trust is reposed in the right person or not, your committee, consisting of Messrs. Wolseley and Masters, can state. On this subject I desire to state that the property held by me for you is intact and free from all incumbrances, except for balances due for supplies for the winter season.

I earnestly solicit the appointment of any of your number to come here and examine, with a thorough accountant, into my books, and if one dollar of the company's funds has been mis-appropriated, I will pay all the expenses of such committee. Also would like an engineer to accompany said committee, to make a full examination and report on the company's property.

I have resided in this community for the last 18 years, and have had, and now have, the management of large mining operations, and have conducted myself as to maintain a good standing in the community in which I reside, and also enjoy the respect and confidence of my employers.

I now ask, in justice to myself and friends, that the dissatisfied shareholders will at once send out such a committee as I ask for, as they seem to discredit the reports made by myself and your committee. No doubt I have made some mistakes, and am not ashamed to say so, but they have been mistakes of the head and not of the heart.

Referring to the value of the Lucky Boy and Anna claims, I have gone into the same in extenso in my report to your chairman, under date of October 1st, 1888, and have nothing further to say on that subject.

Hoping that my request in regard to a committee will be considered, I remain,

Very truly yours,
N. TREWEEK.

CHAIRMAN COURTS FULLEST INQUIRY.

Now, gentlemen, I think I have gone through the whole of the principal points. I will only state, in conclusion, that if any shareholder has any complaints whatever to make of the management of the directors, we invite the fullest investigation possible, and shall be most happy to answer any questions that may be asked to the utmost of our ability. (Cheers.) I think, gentlemen, that as we have an eminent accountant on our board, it will come better from him if he gives you a statement of the financial position. He will also be able to explain any of the figures you may not understand, and I shall also be able to assist him in answering such questions as you may wish to put. Mr. Bolton, our colleague, will now make the financial statement. (Cheers.)

VIEWS OF AN ACCOUNTANT AND A DIRECTOR.

Mr. J. C. BOLTON: Mr. Chairman and Gentlemen, I should like to say, before commencing this statement, that your directors have a clear and full policy; that they were prepared to come before you to recommend the purchase of the Lucky Boy, provided that an expert, sent from this country, should recommend it, and to carry out all the works, including the opening up of the Charles Dickens Mine, adding more stamps, providing a supply of water, and doing all those other things that should make the Dickens, the Custer, and the Lucky Boy, combined, one of the largest mining properties in the world; but when the circulars were issued after the return of the committee from abroad, certain shareholders made such strong representations that it was utterly impossible to raise the money for the Lucky Boy, and we were constrained, as we felt, to give up our own views on the subject, and defer to the wishes of the committee, and let this portion of our scheme be brought before you in the form it assumes to-day.

LUCKY BOY MINE.

As you will see by what I shall read, if you have not, indeed, by what the chairman has already told you, the results of the Lucky Boy have been up to this time satisfactory, and you will be able to decide for yourselves as to whether the policy of the board, as a whole, was a good one or a bad. We give you a short sketch of what we have received and paid. We have received altogether upon shares very nearly 63,000*l.* since we came into office. Very nearly 800*l.* was received on premiums on those shares, out of which 4,000*l.* was paid for certain debentures, as you will remember, when the company was re-constructed, and 3,928*l.* was payable in the United States, so that the money that came into our hands really was 55,800*l.* We have sold bullion that has come to this country to the extent of 14,600*l.*, so that our total liability to account for is 70,457*l.* 7s. 2d. We had to pay for the purchase of the property (which you agreed to before most of us came to the board) 38,194*l.* 18s. 5d. In addition we had to pay for stores which were then estimated at about $50,000, or 10,000*l.*, but which turned out to be nearer $65,000—12,904*l.* 15s. We had to pay dissentients shareholders 993*l.* 16s. 4d., and debts of the old company to the extent of 2,278*l.* 6s. 4d. We remitted to the agent on the other side 10,701*l.* 18s. 8d. The entire expenses in London have been 3,060*l.*, including all charges, and there is a sum due to us by the syndicate of 500*l.*, and we have a balance at our bankers of 2,200*l.* You will find that these sums added make the total 70,838*l.* 8s. 9d. On the other side we have received for bullion sold in England 14,615*l.*, and this I can tell you was for bars Nos. 1 to 29, and Nos. 40 to 48. They realised 14,615*l.*, and the expenses of bringing them to this country were 276*l.* 3s. 9d.—or the expenses of selling them. In addition to this there have been realised by our agent, and retained in the States, Nos. 30 to 39 and Nos. 49 to 82, realising 26,709*l.* 14s. 3d., and the expenses against this were 265*l.* 13s. 3d. The first parcel of bars, 30 to 39, was experimental, and took a great deal of time, as, indeed, everything has done connected with the management of this company; but we were anxious to see whether we could do better by selling the bars in the States, or by having them over here. We had one parcel sold over here to enable us to judge, but before this time it appears that the Lucky Boy had begun to be worked upon, and the royalties had to be paid, and so from bar 49 to the present time they have all been kept in the States, because the larger portion of the earnings from that mine has been paid to the owner. Had the mine been bought by us, then the surplus would have gone to the credit of our revenue account, and, as our chairman has said, the company would have been placed in the dividend list; but inasmuch as we have not bought the mine—at the present time the receipts are being paid to Mr. Hannaway, so that we are left on that mine with simply a nominal profit. If I have not made things clear, I shall be happy to add any further explanation to that I have already given. (Cheers.)

VIEWS OF A STOCKBROKER.

Mr. CAMPBELL (of the firm of Billett and Campbell): I have been asked by Mr. Gladstone, our secretary, to move these resolutions which have been so ably explained by Mr. Wolseley. I desire to say a few words in explanation of why I wish to move these resolutions myself. First of all, you will be rather surprised to have seen and heard from time to time my name coming forward so much in connection with this affair. I have been more or less mixed up with the company from the very first—having been deceived with the whole of the rest of the shareholders as to the original Charles Dickens position, cost, and everything about it; but having once become a shareholder, and having put my clients into it, I was not going to stand by and see the thing come to grief if I could help it. So when the company was re-constructed, just a little more than 12 months ago, I thought things were going on all right. I thought we were starting with a fair balance-sheet. We had a man whom we could trust on the other side, and I thought that things would be satisfactory. Things went on, as far as I understood, satisfactorily until July.

A STOCKBROKER'S HOLIDAY.

In that month I went away for my holidays, and returned in October. (Laughter.) I then found that two of the board had been out to the mine, and returned, and had found that we were not working our own property, but another—the Lucky Boy. I, for one, was utterly astounded at the position of affairs. (Hear, hear.) I could not understand it. I daresay if I had looked into things a little more closely, I might have understood them better. When I understood that this Lucky Boy Mine had been offered to us for 50,000 sovereigns, and that it was the intention of the board, after having had it inspected, to purchase it, I concluded the shareholders would never do it.

DIRECTORS SHOW A FRIENDLY SPIRIT.

I called upon them; they met me in the most friendly spirit. They said, "We consider it the best thing for the company." I replied, "Best thing, or not best thing, you won't carry it through, and it is no use attempting it." I said that just before we had raised, I think, 60,000*l.*, or about that sum, in a re-construction scheme. We had made calls of 3s., and in less than 12 months we were going to ask for 100,000*l.*, and I felt certain the shareholders would not raise it. I know there were certain accusations made against the board as to participating in profits, but with these I am not going to deal. I went myself to investigate matters greatly prejudiced against the board, but personally, and I may say it for the satisfaction of the

meeting, I am convinced the directors were not to participate in any such profit. (Loud cheers.)

AN ASPERSION REPELLED.

If the general body of shareholders do not agree with me, it is for them to investigate matters for themselves. As far as I am concerned, having done so for my own benefit, and that of my clients, I am convinced that the board were not going to benefit in the purchase of this Lucky Boy in any way—but that is aside. Then they said, "What is the best thing to be done? We must do something. We have only about 2,000*l.* in the till." After consulting with them for some time I agreed with them that the best thing to be done was to adopt a portion of their scheme (as they call it), and that was to let the Lucky Boy purchase drop altogether, for the time at any rate, and to develop all the properties we had, and I consider that the body of shareholders as a whole—I being one of them—have every assurance and belief that the

CHARLES DICKENS IS A VALUABLE PROPERTY.

(Hear, hear.) We have never worked it systematically for any length of time since we have had it, and why? Because the company, first started as the Charles Dickens Company, had only a few thousands, and so, worked from hand to mouth, it came to grief, and then we re-constructed. Then came the question of the mortgage—18,000*l.* Originally it was 38,000*l.*, and I think the board did very well in getting so much of it paid off, or exchanged for shares. Anyhow there was 18,000*l.* (or 20,000*l.* with interest) in default on the property. I was prepared to come forward with my proportion to work our own property. What are the facts? We have a mill. All we want is a little money to develop the mine, and to buy certain small claims that would enable us to keep the key to the position, and work the property cheaply. (Hear, hear.) We do not intend to give big sums for these claims, but only small ones, which will eventually be far more than saved to us by the economy that will be effected in the working of the Charles Dickens Mine. (Cheers.) But we could do nothing whilst this 20,000*l.* remained on the property.

A HAPPY RESOLUTION FOR THE SHAREHOLDERS.

The board and myself agreed to work together to raise that money. They went amongst their friends, and I went among my clients. And to show the opinion of the Stock Exchange had of our proposal, I got many of the jobbers to agree with me, and to help me to raise the money. (Cheers.) After a good deal of trouble in explaining matters to the shareholders, we raised the money, and remitted it to the other side, and the debentures, I understand, are now on their way coming home to our bankers. (Cheers.) Having got rid of the debentures, we naturally asked, What is the next thing to be done? The board said, "We must have money if we are going to work the property." It is an utter absurdity to go on working as we have done in the past, with 2,000*l.* or 4,000*l.* only to fall back on—we ought to have a round capital of 20,000*l.* We have the mill, and we have the property, and if we have 20,000*l.* as well, there is no fear of a re-contructiou every year. (Laughter.)

NOT A HARDY ANNUAL.

If we do not start with a fair capital, that is certainly the fate before us—a re-construction annually. Certain shareholders want to have a re-construction now—why, I cannot see. It seems to me that there must be this reason:—when we re-constructed the Dickens Custer the shares were about 1s. 6d. or 2s.; those gentlemen who want re-construction now, or some of them, bought very largely at 2s. and 1s. 6d.—30,000 shares they say—and when they got them up to 8s., with 3s. paid, they sold them and made a good profit, and now they want to repeat the process. (Cheers and laughter.) That is what it comes to. (Hear, hear.)

GIST OF THE SCHEME.

After considering how we should raise money so that the loss should fall the least heavily on the body of shareholders, we came to the conclusion that the best way was to cut down the shares, and we, the syndicate, agreed to take shares for the money we found for the debentures, and to continue that issue of shares to the shareholders all round, or to those who would take them. Those who do not wish are not bound to take them. If there are any shareholders who cannot pay up they will forfeit their shares, but in this case, if a man does not pay up he does not absolutely forfeit his right, and, therefore, those who can afford it, and choose to come forward, will find the money, and those who cannot do so will simply remain where they are. Why we adopted that course was this:—We felt that we did not want all the money, and that if we could place half the issue (and it would be hard lines indeed if we cannot place 50,000 of these shares), we could go on working the mine, and, as we did so, place the remainder of the shares. In that way it will not fall heavily on the body of the shareholders. If a shareholder cannot pay he remains in his present position, but if you re-construct he is forced to pay up, and, therefore, I thought this scheme would be far more acceptable to the body of shareholders than re-construction. (Cheers.) It is exactly the same to me, for I shall take my interest whether you re-construct or whether you do not, and I am certain the committee will do the same, but

OUR REGARD HAS BEEN REALLY FOR THE POORER SHAREHOLDERS,

who cannot afford to pay up. I do not want you to shirk your responsibilities, because we are trying to ease the burden as much as possible, but those who cannot pay will not be forced to pay, whereas if we re-construct there will be absolute pressure: loss will fall upon poor shareholders, and there will be arbitration and difficulty. I think you must know that it is very difficult for us to issue shares at a discount, so as to make them legal according to the latest decision, and therefore we considered that the only way in which we could do it was to cut down the existing shares. Supposing we remain with 1*l.* shares, and supposing we issue shares at a discount, they would be illegal, and people who subscribe for them might find themselves involved in an unpleasant liability, and therefore it seemed that, as we debenture-holders had agreed to take the face value of our debentures in 5s. shares, it was best to reduce the capital with the one denomination. Remember that the Custer shares are only 3s. paid, although they have a face value of 1*l.*, and therefore it will be better not to complicate matters, but to do what we are doing without any doubt being thrown upon its legality. At present, if we allow the existing shares to stand at 1*l.*, and issue shares at 5s., they would not be taken up; and even if they were they would not be good delivery. If, however, we put them all on the same denomination I think the shareholders will, and they certainly ought, to take them. The board and the committee (whose names you see attached to these papers) have been working hard to consider

WHAT IS BEST IN THE INTEREST OF THE SHAREHOLDERS.

We now stand in a strong position; we have the bonds, and if the shareholders say we do not want to pay you, and will not agree to give you shares, we must simply step in and take the mine. Now we do not do that, but say we will take shares for our bonds provided that you carry out this agreement. (Hear, hear.) We are shareholders. If we were not then we might aim higher and strike a better bargain; but we do not want to see our shares depreciated or our property wrecked in order to make a little better bargain at the expense of the whole body. (Cheers.) I want to see the thing carried through in a friendly way, and here let me say that

THE BOARD HAVE ACTED IN A VERY GOOD SPIRIT TOWARDS THE COMMITTEE.

(Cheers.) They have said, "If you do not think we are carrying on matters properly we will resign." We have said, "We think it would inspire more confidence if certain of you resigned, and we had some new blood and some fresh ideas"—and we have cast about to find good men. We have selected two gentlemen who have consented to act. They are mineralogists, and know something of mining. They can judge whether a letter from a manager is right or wrong, and whether he is playing fast or loose with them. Such an element on a mining board is very necessary. How many boards in this country talk about mining operations who know absolutely nothing about them.

MR. BULL EQUAL TO THE OCCASION.

Another point—Mr. Bull, one of the gentlemen who is prepared to become a director, is a large shareholder, and he also is a debenture-holder. I think I originally induced him to take shares, for he was a client of mine. He has now time at his disposal, and he says, "If you elect me I will go out, and remain at the mine for three months, to see that things are properly carried on." And it was part of the scheme that he should take out with him a mining engineer from this country, who should in no way whatever be under the control of any man out there, but report directly to the board. Accusations have been made against Mr. Treweek. Those accusations may be true or false. I think, in the position we now occupy, it will be exceedingly unwise—I say this after having looked into the matter—to throw mud, and to say to Treweck, "You are a rascal, get out."

MR. TREWEEK'S POSITION.

If certain gentlemen go out and investigate affairs (as he challenges them to do) they will prove him to be honest or the reverse, and if he is not honest, then it will be time for him to give an account of himself, but if we say at once and without investigation, "We consider your statements have been erroneous; we have no confidence in you; please leave our service"—if we do that without considering what we are about, we shall be doing what is both unwise and unjust. (Cheers.) There are important reasons why we should not do an unwise act into which I cannot enter, and, therefore, I say, let us await the verdict of these gentlemen who are prepared to go out along with the mining engineer, who has no connection on the other side whatever, and who will soon be able to see if things are straight or not. If they are not straight, Mr. Treweek will be delighted to clear out of his own accord, and if they are there is no harm in retaining him.

MR. TREWEEK'S SERVICES.

It is undeniable that he has done the company an immense amount of financial good—if no other good. I think it would be exceedingly unwise to do anything rashly, for it would only damage our property, which is thousands of miles away. When the present board took office, and when the company was re-constructed, they had only 2,000*l.* to work with after paying the debts; therefore, in reality it was our fault in not placing a larger working capital at their disposal.

JUSTICE TO THE BOARD.

But even as it is we have a larger balance than when they took office 12 months ago; and although events at the mine had given some of the shareholders want of confidence, and put things in a very awkward position, which causes us to meet to-day to raise more money, I think it would be very unwise to do anything that would cause a disturbance in the company. Therefore, I, for one, have great confidence that if we put this scheme through we shall succeed, though we may have to wait six months before our position, as a mining company, is thoroughly secured. For these reasons I propose the resolutions as read to you by the secretary. (Cheers.)

Mr. JOHN OGLE: I second the motion.

MR. MALLORY NOT HEARD.

Mr. MALLORY—who had seen the property, but who was not allowed properly to express his views—was understood in the uproar to say—I quite agree with the chairman as regards Charles Dickens and Custer. I have been all over the properties, and have known them for years. The Dickens Custer, properly handled, is a splendid concern, but I think the management has been bad.

Mr. WAINWRIGHT: Are we working the Lucky Boy, or is it in the hands of the original holders?

The CHAIRMAN: We are still working the Lucky Boy, and shall be up to February 1st. We have been trying, in order not to stop the mill, to get an extension of the lease, which ends on that date. Up to to-day we have been unsuccessful, but yesterday morning a cable came to say that they would grant us an extension monthly, if so desired by the board.

Mr. WAINWRIGHT: Are you working at a profit?

The CHAIRMAN: A small profit. The royalty was explained by Mr. Bolton. It has amounted to nearly 15,000*l.* since they first took it, but now that we are reducing the number of men employed at the mines we shall make a little larger profit than we have done in the past, but I cannot tell you the exact figures.

MR. LOTT'S GRAVE OBJECTIONS.

Mr. LOTT: I think there are very grave objections to this scheme as put forward. It first involves a reduction of our capital by 75 per

cent. That is most uncalled for, and why should it be done? It is a deliberate and unnecessary sacrifice. The second objection is that it increases the number of shares. I see the total increase is 200,000, so that it strikes me as milk and water, with a good deal too much water. What will the market be like when we come to deal in 200,000 extra shares? You will say, "We have reduced the capital," but that is never taken into account in dealing in the shares. My third objection is that this scheme—and this objection I consider fatal—is that it will not provide us with sufficient capital, and the company will be in liquidation, or in re-construction, within 12 months. Do let us consider this upon its merits, and not be led away by clamour. (Hear, hear.) I say this scheme will not provide sufficient money. If we get all the money we want by these 200,000 extra shares, it will provide 25,000*l*. With that we propose to buy the Ward-Beecher and the Pilot claims, leaving us with not a very large sum in hand, after our former experience of the cost of carrying on this affair.

TOO TRUE.

The whole of the difficulties this company has had to contend with, and the actual cause of our meeting here to-day is the want of money, and I do not want to run that risk again. The Ooregum has spent about 400,000*l*., and is only just beginning to pay, but I do not think this concern has yet had 30,000*l*. actually put into its mine to bring the ore out. If we think we are going to work the Custer mill, develop the Dickens Mine, and buy the two claims for 16,000*l*. we are mistaken, and the end will be liquidation. When you have come to the end of your tether you will have to re-construct—if, indeed, that course be still open to you as it is now. Gentlemen who talk of re-construction have been rather abused, but I like to base my arguments upon figures. The lowest price the shares went to when re-coustruction was proposed was 3s. 1½d.—they never went below it.

Mr. Campbell: I bought for less than that.

MR. LOTT'S ALTERNATIVE PLAN.

Mr. Lott: Let gentlemen go and ask their dealers to verify it and they will find they never went below it, but the action of the committee—who have done the best they could, I admit—has been to lower the price of the shares. I venture to think that if the company were re-constructed share for share, keeping the capital as it is—instead of 600,000—we should have only 400,000 shares, and let the liability be a sum that will put the company beyond the pale of want for some reasonable time to come. Supposing one shilling were called (20,000*l*.) —that would pay off the gentlemen who have advanced the money to clear off the debentures, and we should then have a free hand with the balance to work the property. Nobody knows much about the Lucky Boy. Now, we, as business men, ought to have that point decided by a competent mining engineer. If decided favourably, let us make a reasonable bid for it, and if not accepted let us hold our hand. I was astounded when I heard the sum of 50,000*l*. named. Owning the mill and the commanding claims they would ultimately have to come to us, and we might buy it on our own terms. I believe, from information I have of a private kind, that we have a very valuable piece of ground, and with capital in hand to carry us on for two or three years we could calmly await the issue of events. I have talked to mining men, and they believe Custer to have a true fissure vein. If it is worked conscientiously, as it ought to be, we shall eventually make a strike that will reward us all. If we go on with this scheme I am certain, as that I stand here, that our money will be lost. I propose the adjournment of the meeting for another scheme to be put before the shareholders—the largest of whom are not present to-day. (Cries of "No.")

Mr. Christopher seconded the motion.

VOICE OF EXPERIENCE.

Mr. Arthur Heiron: I rise for the purpose of supporting the resolution proposed by Mr. Campbell, which has the sanction of the board. We are in a dilemma, and the question is—How are we best to get out of it? Although a young man, I have had sufficient experience in these matters to warrant me in saying that had I been consulted I should have counselled a different course. I am connected with a good number of companies, but my experience has been this: That if you desire to purchase on the other side, and you let that desire been known, the price immediately goes up, and you have to pay very dearly for it. The Yankees had the debentures, and, unfortunately, as the chairman has explained, got wind of our desire to buy them. Now, in my opinion, the proper policy was to have allowed them to retain them, and to have simply raised sufficient money to pay the interest. (Cheers.) The mortgage is only on the Dickens property—not on the Custer. They could not have put the property on the market, and they could not have erected a mill. The debentures would have come back to us in time for 5,000*l*., and in the meantime, all we need have done would have to have raised about 10,000*l*. to develop our own property, which has no lien upon it—I mean the Custer. (Cheers.) That is the property of which the chairman has spoken—I trust he is prophetic—and said that if we strike ore there,

WE HAVE A MOUNTAIN OF SILVER AT OUR FEET.

(Cheers.) If that be so, we can surely dispense with the aid of the Charles Dickens for a year. If we were only to find 10,000*l*. for developments, we should soon strike something good. With a little bit of profit coming from the Custer to improve the market and encourage the shareholders, then would have been the time to have dealt with the debentures. They were no incubus upon the Custer Mine, and they could not have sued you for that property even had you failed to pay the interest.

A Shareholder said he merely wished to remind the speaker that all this was now past and gone.

Mr. Heiron: I am sorry that is so. If the whole of these shares are not taken up (as they should be) then there will be no alternative but re-construction. We might then raise 10,000*l*. to work the Custer property, and allow Dickens to remain in abeyance for some time. By buying these two new properties, and doing what you propose, you will absorb far more than the amount you now wish to raise. Work the Custer property alone is my advice.

Mr. Francis, of the firm of Messrs. Francis and Johnson, solicitors to the company: Do you propose any resolution embodying your views?

Mr. Heiron: No, but I support the original resolution, with the desire that if you do not raise all the money you want you will work the Custer property alone.

AN APPEAL TO SUPPORT THE COMMITTEE.

Mr. John Ogle: I think the last proposition not reasonable, and I support the motion of Mr. Campbell. Certain gentlemen have examined the property and reported upon it, and they have shown their confidence by finding the money to pay off the American debenture-holders, from whom we might have expected little or no mercy. To leave them in the lurch now would be a very unreasonable proposition, and also unjust. The matter is done, and if we have gentlemen who have taken the trouble of going out, and afterwards finding the money for us, the least we can do is to support the plan they now propose to us. (Cheers.)

Mr. Lott: What is the feeling of the board about my amendment?

The Chairman: I think I have shown you that our wish is to carry out the views of the shareholders. We place ourselves entirely in their hands. Whatever their wishes are we will do our best to carry them out. I will now put the amendment, "That the meeting be adjourned, in order that an alternative scheme may be subsequently laid before the shareholders."

BUSINESS.

The amendment was lost by an enormous majority.

The Chairman then moved the resolutions seriatim, as given at the opening of this report.

Nos. 1 and 2 were carried—the first with one dissentient, and the second unanimously.

On resolution No. 3, Mr. Ealden proposed a modification in the payment to the directors, but met with no support.

The original resolution was carried all but unanimously.

The Chairman: As soon as the necessary formalities have been gone through there will be a meeting to confirm these resolutions, of which due notice will be given.

A Shareholder: I beg to propose a vote of thanks to the chairman for his able explanation of the company's affairs, and also to Mr. Campbell for his well-conceived scheme.

The motion was seconded and carried amidst cheers.

The proceedings were brought to a close with Mr. Wolseley's brief acknowledgments.

LATEST CABLEGRAM.

Cables have been received from Mr. Treweek, stating that during the month of December 675 tons were crushed, and the bullion clean up amounts to $33,330.

ALLIANCE BANK, LIMITED.

A SUCCESSFUL YEAR, AND A GOOD DIVIDEND.

The thirty-sixth half-yearly general meeting of the shareholders in the Alliance Bank, Limited, was held on Monday at the City Terminus Hotel.

The Right Hon. Sir Lyon Playfair, K.C.B., M.P., presided, and in moving the adoption of the report congratulated them on the position of the balance-sheet. Every item of their accounts showed increased activity in the bank. He was sure they would all have been gratified at the abundant proofs afforded last year that trade was reviving. They recommended

A DIVIDEND AT THE FORMER RATE OF 7 PER CENT. PER ANNUM,

and the addition of 10,000*l*. to the reserve fund, leaving 6,200*l*. to be carried over to the next account. In the past year they had added 15,000*l*. to the reserve fund, which now amounted to 250,000*l*. If they added in the current year as much to the reserve fund as they had put to it in the past 12 months, it would amount to one-third of the paid-up capital—the point which used to be aimed at in the old traditions of banks. That tradition, however, had been given up by all the old and prosperous banks, who now held that they should increase their reserve fund as they increased their business. He regarded that as a very wise policy. The reserve fund was the great bulwark between the shareholders and any possibility of a call, and that bulwark should be as high and solid as was consistent with the payment of good dividends. Moreover, the larger their reserve fund, the larger was their credit with the public. When the profits admitted it the directors would be extremely glad to pay a higher dividend if they saw reasonable ground for believing that the increased rate could be maintained, for it was of essential importance that the dividend should not be a fluctuating one.

Mr. William Dunn seconded the motion.

A brief discussion followed, entirely in regard to

THE RESERVE FUND,

which some shareholders argued should be further increased, while others considered that it had now reached a point when it need not be further added to, the profits being used, instead, for increasing the dividend.

In reply, the Chairman repeated that the directors would be most happy to pay a higher dividend when they could do so with the prospect of continuing the increase. He differed from some of the shareholders in saying that the increase of the reserve fund benefitted only the next generation of shareholders. By adding stability to the bank, they increased their credit with the public, and thus improved their position, increasing the market value of the shares. In that way the present shareholders were benefitted. If Mr. Jackson's views were carried out, and the reserve fund were placed in the hands of trustees, independent of the directors, what would be the use of such a reserve fund on a Black Friday? The interest on the amount of the reserve fund last year at 6 per cent. was 14,200*l*., and the amount transferred to the reserve fund had been 15,000*l*., so that the interest of the reserve fund had been practically added to it. They were following the practice of almost all banks in using their reserve fund as part of their investments.

The report was adopted, and the dividend having been declared, resolutions were passed confirming the election of the Right Hon. H. H. Fowler, M.P., as a director, and of Mr. Thomas A. Welton and Mr. J. F. Clarke as auditors (in consequence of the death during the half-year of Mr. William Quilter and Mr. John Young).

THE ANGLO-SAXON GOLD MINING SYNDICATE, LIMITED.

SHARES ISSUED AT A PREMIUM—WHAT IS TO BE DONE WITH THE PREMIUM?

AN extraordinary general meeting of the company was held at the Cannon Street Hotel, on Tuesday, when the following resolutions were submitted as special resolutions:—

RESOLUTIONS.

(1.) "That the capital of the company be increased to 40,800*l.* by the creation of 6,800 new shares of 1*l.* each." (2.) "That the said 6,800 new shares be offered, at a premium of 1*l.* per share, to the persons on the register of shareholders of the company at the date of the confirmation of this special resolution, in proportion to the existing shares then held by such persons respectively. Such offer to be made by notice specifying the number of shares to which the person to whom the offer is made is entitled, and limiting 10 days from the date of such offer as the time at the expiration of which the offer, if not previously accepted, will be deemed to be declined, except as to shareholders residing in Australia, in whose case the limit shall be 30 days from the issuing of the offer by the colonial directors." (3.) "That after the expiration of the time so limited as aforesaid, or on the receipt of an intimation from the person to whom such offer as aforesaid is made that he declines to accept the shares offered, the shares so declined, or deemed to be declined, may be disposed of by the directors at their discretion, but at a premium of not less than 1*l.* per share." (4.) "That out of the money raised by such increase of capital, the sum of 6,000*l.*, being the amount temporarily paid out of the profits of the company derived from the proceeds of sale of gold already produced out of the company's mine for the purchase of the adjoining claim, called Number One East, be applied in adjusting the capital and income accouuts of the company by re-placing such purchase money, and that the said sum be credited to the company's income or revenue account accordingly."

Charles C. Colley, Esq. (chairman of the company), presided.

Mr. E. A. REEVES (secretary) read the notice calling the meeting.

SHARES WHICH MAY REMAIN UNALLOTTED.

The CHAIRMAN: The resolutions, as you are aware, are quite of a formal nature, and do not require any introductory remarks from me. I shall therefore proceed to propose the first of them as it appears on the notice paper.

Mr. GILL seconded the motion, which was carried.

The CHAIRMAN proposed the second resolution.

Mr. HARBORD seconded the motion, and it was carried.

The CHAIRMAN, in proposing the third resolution, said this occasioned the directors some amount of consideration as to what they should do in the very improbable event of anybody declining to take up these shares. They thought that so extremely few would be left, that it would be hardly possible to allot the shares pro rata to the other shareholders, and they were of opinion that you would not mind them dealing with them, as they thought best in the interest of the company.

A SHAREHOLDER: Would not the better plan be to ballot for them?

The CHAIRMAN: We are quite open to suggestions, but remember we have the Australian shareholders to deal with. It will be a long time before we can get communications from them as to whether they will want any of these shares. We, as directors, have no desire to allot the shares to ourselves. We do not want to treat ourselves better than the shareholders, but we see a considerable difficulty in formulating any manner in which those shares can be dealt with, although there is almost the absolute certainty that none of them will be rejected.

A SHAREHOLDER: We are quite satisfied that the matter be left in your hands.

Mr. HARBORD seconded the motion, which was carried.

The CHAIRMAN then proposed the fourth resolution.

Mr. MAYNARD seconded the motion.

A SHAREHOLDER: This 6,000*l.* being taken from revenue earned, it will be divided amongst the shareholders.

THE PREMIUM AND ITS DISPOSAL.

The CHAIRMAN: It is the idea that it will be available for dividend. The 6,000*l.* is what they have a right to receive.

A SHAREHOLDER: What will the directors propose to do with the remaining 6,700*l.*?

The CHAIRMAN: To buy machinery and employ the rest as working capital.

AN AMENDMENT.

Mr. LAING (solicitor): I have to move an amendment, which will give sequence to the course we propose to adopt. To make it clear, what I suggest is that this fourth resolution be amended in this way:—Instead of saying that "out of the money raised by such increase of capital"—I propose to put in the words, "Out of the money raised by way of premium the sum of 6,000*l.* be returned," and that will leave our capital intact, and the 6,000*l.* to be distributed amongst the shareholders by way of dividend.

Mr. LYON seconded the amendment, which was carried.

The CHAIRMAN: We ought to have had a telegram with some information from the mine, but it has not yet arrived. A meeting will be called to confirm these resolutions, aud to avoid expense we will summon it at our own office.

A vote of thanks to the chairman closed the business.

IQUIQUE SILVER CO., LIMITED.

A FORMAL MEETING.

AN extraordinary general meeting of the shareholders of the Iquique Silver Company, Limited, was held on Monday at the Cannon Street Hotel, for the purpose of considering and, if approved of, of confirming as a special resolution, under the Companies Act, 1862, section 51, the resolution passed at the extraordinary general meeting held on the 3rd inst.—Mr. George Bush (the chairman) presided.

The SECRETARY (Mr. Alfred Kiver) having read the notice calling the meeting,

The CHAIRMAN proposed the confirmation of the resolution above referred to, which was as follows:—"That the articles of association of the company be altered by omitting from article 81 the words, 'except in the case of the first directors,' and by omittiug from article 83 the words, 'notwithstanding any rule of law or equity to the contrary."

Mr. W. A. WHITING seconded the resolution, which was unanimously confirmed.

The proceedings then closed.

ANGLO-AMERICAN EXPLORATION AND DEVELOPMENT CO., LIMITED.

A HOPEFUL AND ENCOURAGING PROSPECT.

THE statutory general meeting of the shareholders was held, on Wednesday last, at Mr. J. Y. Watson's Offices, 5, Copthall Buildings—Mr. Philip B. Marshall in the chair.

The SECRETARY (Mr. George Jessop) read the notice convening the meeting.

ACTION OF THE BOARD.

The CHAIRMAN: This meeting is called to comply with the Companies Act, and as the company was registered on the 3rd of October, 1888, we are well within the four months allowed by that Act. We have no accounts to render as it is not necessary; and all I should like to tell you of is exactly what has been done up to the present time. The first issue, as you will see by the prospectus, was 15,000 shares, 5,000 of which were to be registered at once as fully paid-up shares, and to be handed to Messrs. Crespie and Smith, the promoters of this company, and our present agents and responsible servants out there, in exchange for the various properties which will be handed to us. It was understood that this company would spend as little of their capital as possible beyond the law expenses of our people travelling there, and the assaying and sundry expenses like it. The money is raised for the purpose of promoting, working, or launching any mines or concerns that we may be advised to take by our agents. Although I personally have every confidence in Mr. Crespie and Mr. Smith, yet it was thought advisable to seud out an individual from this side who was well known to such men as Mr. W. Gundry, and we decided, after considerable consultatiou, to send out Mr. Craze, from Cornwall, who has travelled very often for Mr. Gundry in his service, and in whom he has every confidence. Mr. Craze left on the 1st of November, and arrived at San José about the end of the month; in fact, I heard from him on 1st December. We have remitted since he left on account of the company 1,250*l.*, which, of course, will accrue to the credit of the concern out in San José, while the rest has been necessary to defray Mr. Craze's expeuses. It will be necessary in San José to have assaying plant, to thoroughly examine and assay all ores that are sent to them from differeut mines and concessions. We have also sent out a power of attorney to Messrs. Craze and Crespie to deal with the properties there they should meet with, but we have thought it necessary to restrict them in a measure not to spend more than 500*l.* on any oue concession, or more than 3,000*l.* in the aggregate, until reports of such a character reach your directors that would justify them in lauuching further capital into thosc concerus.

NO TIME FOR DEFINITE RESULTS.

Of course, we hardly have had time yet to have any definite results from any of these properties, but from letters we have received there is no question about it that our representatives there are negotiating for some properties. Perhaps it would be undesirable for me to refer to them here, in so far as what I might say would be made public, and as I also see that in New York other development companies have been started for the purpose of opening up the mining ihdustry of Costa Rica. Mr. Cyril Smith, who is here to-day, assures us there is one "placer" gold mine within a few miles of San José, which he thiuks will astonish the natives here, and if South African gold shares are warranted to stand at the present price, I think in Costa Rica, which means "rich coast," what we shall be able to show the public here will beat even South Africa. We have the advantage also of having Mr. Horne, who is not here to-day, but who has several times visited Costa Rica, and is acquainted with the Finance Minister and others out there. He has written to the Finance Minister and begged him to assist Mr. Crespie and Mr. Craze in any endeavour to secure properties on the best terms, and stating that they will be backed by the directors here in anything they may conscientiously advise us to look into. Mr. Cyril Smith is here, and he will be happy to answer any questions that may be put to him. The last letter received from Messrs. Crespie and Craze, dated December 21st, stated that the assaying place is finished, and assaying commenced. They also said that in a few days they would start out to conclude arrangements of the properties for the compauy. We have, fortunately, succeeded in finding coal in Costa Rica. In San José the people burn kerosine, and the engines use wood, there being no coal to be had. We have discovered coal not only in the neighbourhood of Nicoya, but also in the neighbourhood of San José. We had a cablegram the other day from Mr. Craze, asking us to send out at once 2 tons of coke for the purpose of smelting copper, and we sent the coke, which cost us over 13*l.* to get to the port alone. A considerable consignment of coke went out in the same steamer. The discovery of coal is, therefore, important, as regards saving our money. I have refrained from making some points we have knowledge of with regard to some of the assays which you would hardly believe, but we happen to know it is so, and therefore we believe them. A gentleman at Puntarenas saw the samples Mr. Crespie had before he brought them here, and he assayed them, but would hardly believe they were the genuine article, but they assayed here a little more than he got out of them. (Applause.) There is also a letter about a mine we are offered in Nicaragua, which we are in negotiation for.

A VIEW GENERALLY TAKEN.

Mr. RHODES thought the statement of the chairman a most hopeful and encouraging one.

In reply to a question,

Mr. CYRIL SMITH stated that no coal was, at the present time, worked in Costa Rica.

The meeting closed with a vote of thanks to the chairman and directors.

THE MOUNT SHAMROCK GOLD MINING CO., LIMITED.

AFTER AN ANIMATED DISCUSSION THE MEETING IS ADJOURNED —DIRECTORS DEFEND THEMSELVES FROM MR. STANLAKE LEE, AND HIS FRIENDS ALL AGREE THAT THE MINE IS GOOD.

AN extraordinary general meeting of the company was held at Winchester House, Old Broad Street, on Thursday, in pursuance of a requisition to consider, and if thought fit, to pass the following resolutions, that is to say :—

1. "That the articles of association be altered in manner following, viz. :—(*a*) That article 29 be amended by substituting the number '7' for the number '14,' and the number '14' for the number '21'; also by adding after the word 'meeting' the words 'or meetings'; also by adding at the end of the article the words 'nor exceeding in the whole 30 days in each year.' The amended article reading 'The directors shall be at liberty to close the register of transfers during the seven days immediately preceding the ordinary general meeting or meetings in each year, and also at such other times as may be determined by the directors, not being more than 14 days at one time, nor exceeding in the whole 30 days in each year.' (*b*) That article 67 be amended by striking out the words, 'Every original shareholder and every shareholder by transfer, whose transfer shall have been duly registered for three months, shall be entitled to vote at any meeting of shareholders, and upon a poll shall have one vote in respect of each and every share so held by him in the company,' and inserting instead thereof the words following, viz., 'Every shareholder shall have one vote for every share held by him.' (*c*) That article 83 be amended by striking out the words, 'No person (except in the case of the first directors) shall, without the assent of the board, be eligible to be elected as a director unless he shall have been the registered holder of 500 shares for at least three months,' and inserting instead thereof the words following, viz., 'No person shall be a director who is not the holder of 500 shares in the company, on which all calls shall have been duly paid.' (*d*) That article 85 be amended by striking out the words '(Except in the case of the first directors and any director elected with the assent of the board),' the sentence as amended, then reading, 'A director shall ipso facto cease to be a director upon his ceasing to hold the number of shares required by article 83,' provided, nevertheless, that this article shall not apply to the present directors or either of them if they or he shall acquire the number of shares necessary to qualify them as such within six months of the date of the confirmation of this resolution. (*e*) That article 86 be amended by striking out the words 'together with a sum equal to 5 per cent. upon the amount available for dividend in each and every year.'"

2. "To consider the circumstances attending the floatation and issuing of the company, together with the management of the mine from its transfer to this company to date, and to consider, and, if thought fit, pass a resolution to remove Messrs. Mace, Clark, Rumball, and Cockburn from being directors, and to appoint other persons in their place."

J. H. Mace, Esq. (chairman of the company), presided.

Mr. C. C. RAWSON (secretary) read the notice of the meeting.

AN EXPLANATION.

The CHAIRMAN : I desire to refer to a paragraph reported in the MINING WORLD AND ENGINEERING RECORD of 22nd December last, headed "Newbery-Vautin Company—Strange Negotiations," particularly as an interpretation might have been put upon my language, and has, I believe, from some people, which I never intended. From the latter part of such paragraph it has been inferred, but it was never my intention to so express it, that the Newbery-Vautin Company had no particular method or patent for adapting chlorination for the extraction of gold, and, further, as to the success of the Mount Morgan Mine being due to their invention. I have a copy letter from one who, I am informed, was originally employed in laying down the plant for Messrs. Newbery and Vautin's invention and process, and is now in authority as engineer at the mine, and of the late chairman of the mine, Mr. T. S. Hall, and Mr. A. W. Robertson, who, I am informed, is a director and large shareholder in that mine. These letters I only think it proper should be read, and I will read them accordingly :—

EXTRACTS FROM LETTERS.

Melbourne, January 17th, 1887.

DEAR SIRS,—In reply to your inquiries I have to state the treatment of the Mount Morgan ore is by process of calcination and chlorination recommended by you.

Yours truly,
T. S. HALL,
Late Chairman Mount Morgan Gold Mining Company, Limited, Rockhampton.

Messrs. Newbery and Vautin, Melbourne.

Melbourne, January 20th, 1887.

MY DEAR NEWBERY,—I have written to him (Hon. D. Gilles, Premier of Victoria) to say that the process is the most perfect known at the present day.

That we get all the gold at Mount Morgan now, whereas previous to adopting your process we lost one-half and in some cases 70 per cent. of the gold.

I added you both deserved every encouragement.

Yours obediently,
A. W. ROBERTSON,
Now Director and large Shareholder.

Cosmo Newbery, Esq., C.M.G., &c.

Melbourne, October 25th, 1886.

DEAR SIRS,—The process now at work on the mine is your process, and I know of no other by which the gold of the above mine could be so perfectly extracted.

HUGH NEILL,
Engineer to the Mount Morgan Gold Mining Company, Dee River, Queensland.

Messrs. Newbery-Vautin, Melbourne.

As to the cost of the chlorination plant referred to by me in my speech, costing 225*l*., at Rockhampton, I did not intend to imply that such plant was that used under the patents of the Newbery-Vautin Company. In regard to the proposed articles of association, so far as the directors are personally concerned we see no objections to the alterations, and are quite willing to accept 500 shares as the qualifications of the directors, if in our case you will allow us time to communicate with the Queensland directors in order that they may become duly qualified. I will ask the requisitionists to state their case.

DROPPING PART OF THE CASE.

Mr. RANKIN : In the exercise of our discretion, and having given great attention to these matters, we, the requisitionists, have come to the conclusion that as the whole of this controversy really centres in the second resolution we will not to-day proceed with the first, that is, with the articles of association and the alterations which are proposed. I intend, therefore, to proceed with the discussion of the second resolution.

Mr. THOMAS HAZLEDEAN : I have never attended one of these meetings before, and am here only for the purpose of being straightforward. On receiving this circular from yourself and Mr. Staulake Lee, I was induced to take the view I then did, but I regret I ever signed any circular in your favour. (Cheers.) I think your object is

INIMICAL TO THE INTEREST OF THE SHAREHOLDERS,

and I do not see why, having put these proposals before the meeting, and I having come at great inconvenience some 20 or 30 miles to be present, you should suddenly say, "Let us drop them, and let us proceed to something else." I say let us proceed with the business as in the order upon the paper.

Mr. GREENIP (of the firm of Snell, Son and Greenip), solicitor to the company : I may save the time of the meeting, and some discussion, by stating that if the requisitionists did not move these resolutions the directors themselves would do so. (Cheers.)

Mr. HAZLEDEAN : I am very glad to hear that. I am an original shareholder in the company, and paid my money, and believe it will be a good thing if it be properly worked from all the information I can get, both publicly and privately.

Mr. RANKIN : I am in possession of the house. (Laughter.)

The CHAIRMAN : Please hear Mr. Rankin. I may tell him that if he does not propose these resolutions, I shall do so on behalf of the board. (Cheers.)

NR. HAZLEDEAN HITS THE NAIL.

Mr. HAZLEDEAN : The fact is, the Rankin party is in a minority, and they do not wish to go on—that is the English of it. You cannot carry your way, and that is plain enough to be understood. (Cheers and laughter.)

Mr. RANKIN : I have no remarks at all to make on the first resolution, but will proceed to the second.

The CHAIRMAN : Will you move the first resolution ?

Mr. RANKIN : You can move it yourself.

The CHAIRMAN : I will do so.

Mr. CHARLES CLARK (director) : I second it.

The CHAIRMAN : It is to give the Queensland directors the opportunity of explaining matters.

Mr. HAZLEDEAN : We will take each division separately.

The CHAIRMAN : I am quite in the hands of the meeting.

Mr. THOMPSON : The first paragraph I do not see any objection to, but in the second (*b*) it would be a great mistake for the shareholders to allow others to come in and thus suddenly to swamp a meeting. I think the article as it originally stood was much better, and that shareholders before voting should be obliged to hold their shares for three months. I move that the original article remain.

Mr. HAZLEDEAN seconded the motion, and it was carried.

The SOLICITOR : I wish to state for the information of the shareholders who did not notice the vote, that Mr. Stanlake Lee and Mr. Rankin have voted against the motion. (Laughter.)

A POLL.

Mr. RANKIN : I beg to demand a poll.

Mr. THOMPSON : I think this is simply trifling with the meeting. A gentleman comes forward with resolutions cut and dried. The first he drops, he proceeds with the 2nd, and when the first is carried he demands a poll against his own resolution. (Hear, hear.)

The SOLICITOR : The demand for a poll is insufficient ; it has only been made by two persons—Mr. Rankin and Mr. Lee.

The CHAIRMAN : I invite the requisitionists now to proceed to deal with resolution No. 2.

After a long pause,

Mr. HAZLEDEAN said : Get up and move your resolution, or for ever hold your peace. (Laughter.)

CASE FOR THE OPPOSITION.

Mr. RANKIN : I wish to call attention, first, to the purchase of the property, for these are grave matters. There is no doubt that our directors bought a different property from what they intended, namely, a property having the refractory ore, instead of a property with free milling ore. They also bought it upon a report not independent, and paid 235,000*l*. more for it than the selling price was in Queensland. (No, no.) For the price they bought it it was comparatively worthless, and if it is found to be rich now it is no thanks to them. They say they did not know the ore to be refractory. Their defence is that they did not know the character of the ore. They also say that Mr. Smyth, the vendor, said it was a cheap mine. They said in the prospectus, that from every test made it was one of the most valuable mines in Australia, having regard to the rich and uniform character of the ore. They expressed their own personal belief to this effect. (Hear, hear.) Therefore, they cannot say that they did not know.

THE ORIGINAL PURCHASE.

It is evident they did not make sufficient inquiries. Mr. Smyth was their informant, and he was the vendor. I had an interview with him, and he told me that he was seriously thinking of taking this property back to Queenslaud, because they (I presume the promoter) wanted him to water the capital. It is not a cheap mine for what it is bought for. In the prospectus you will find 220,000*l*. was the estimated profits, whereas the actual profits for the year was 2,263*l*.—about 100*l*. less. If rich now they have discovered it to be so since they bought it. You must add 12,000*l*. to the purchase fund, which has been spent on machinery. Then, as to the issue of shares :—They issued to the vendor 242,500 shares, but the nominal issue to the public 37,500. The Stock Exchange require two-

thirds of the nominal capital to be allotted to the public before it will grant a quotation, and stamp a company with its approval as thoroughly good; that will have been 187,000*l.*, but they only issued to the public 37,500*l.*, and actually only allotted 27,500*l.*, or one-sixth of the whole capital of the company. Now, as to the allotment—the public applied for 32,840 shares; they allotted to the public 27,680, and refused to allot to the public 5,160—that is to say, they allotted less than one-tenth instead of two-thirds of the nominal capital. What is the result? That having issued 37,500 shares, 4,660 were unapplied for by the public. They refused 5,160 of those that were applied for, and adding the two together we get a total of 9,820*l.*

COMPLAINT AS TO WORKING CAPITAL.

There you see at once a large proportion of our working capital. Under these circumstances I maintain their duty was to withdraw the mine altogether. (No, no, and hear, hear.) You ought not to start a mine crippled in the beginning for want of working capital. You asked for 15,000*l.*, and failed to get 10,000*l.* You had 27,500*l.*, and they paid away at once 22,500*l.* to the vendors and reserved 5,000*l.* for working capital. These are old facts, but they hinge upon a question of a vote of confidence to the directors. 15,000*l.* was allowed for working capital on the prospectus, but this was inadequate. I do not know a mining expert who would float a good company with less than one-third of its capital as working capital. They had no excuse therefore in refusing 5,000*l.*, when by taking it they might have had a fuller subscription. Why did they allot 1,140 shares and refuse 2,160 to the same five men? If they were good enough to have 100 allotted to them they were good enough to have 2,000 more allotted to them. They refused outright 3,000 shares to Messrs. Pritchard Morgan, M.P., and Mr. R. Sands. I suppose Mr. Pritchard Morgan's sovereigns are as good as those of other people. Having obtained the money by distinct letters and contracts, they were bound to keep 5,000*l.* as working capital: therefore being offered 32,840*l.*, why did they not reserve 15,000*l.*, working capital, and pay the balance (17,840*l.*) instead of 22,500*l.*? Why, if the vendor declined to accept his cash, did they not refuse to complete the purchase instead of starting us crippled. One casts about for a reason why they rejected 5,160*l.* shares.

AN ASSUMPTION.

Applications came already for 4,460 less than the amount issued. If not to rig the market, why was it? I can see no reason. This second allotment was made eight weeks after the ordinary allotment. Why? It is not common sense to call this one and the same allotment. The prospectus made all calls paid up by June 20th, 1887. Why did the company refuse bonâ fide applicants in favour of three gentlemen who did not and have not paid up? If 5,160 shares were not refused to rig the market, this allotment would presumably have been made the same date as the other, and the shares would have been paid up June 20th. The presumption is the directors waited for a premium, and when it failed the shares were allotted. That is a fair presumption—but I do not know it as a fact. (Hear, hear.)

The CHAIRMAN: It is not a fact.

Mr. RANKIN: The second point is allowing Mr. Webster to sell his shares. The defence of the directors is that they could not prevent him, but they could have marked the vendor's shares "not negotiable," and saved 42,000 shares coming on the market.

Mr. WEBSTER: Not 15,000 shares were sold on the market.

Mr. RANKIN: Then they say that no final process has been found for treating this ore—that is after 17 months. Why did not they use chlorination? Then Mr. Smyth says—and he is so quoted in the MINING WORLD—that, "with suitable machinery, we have a great future before us." But the *Colonist* of August 4th says, "What with the mess made in London with the attempted floating of an English company, and the indifference or neglect to get machinery or produce the best returns from the ore, it is not to be wondered at the public do not inquire after its shares." The chairman said in his last speech that the plant would cost at least 1,000*l.*, and also mentioned the circumstances why the agreement could not be entered into, but the inference is that they had not working capital. The directors also promised in the prospectus net annual profits with the present battery and appliances, 22 000*l.* per annum. For the failure in this case, some excuse may be made, for people may be over sanguine, but I say for the other promises broken, there is no excuse whatever.

THEY ARE DISTINCT BREACHES OF FAITH.

My last point is the articles, which allow the directors methods of treating shareholders unfairly in several respects. First, there was the misrepresentation of Mr. Lee; then there was the misrepresenting of the petition of Mr. Wood as a hostile petition; then there was told a falsehood about the private meeting.

Mr. JENKINS: I want to know who has told this falsehood. I am an original shareholder, and I wish to know about these matters, although I think that such language is unparliamentary.

A GENERAL CONTRADICTION.

The CHAIRMAN: You will consult the interests of the company by allowing Mr. Rankin to speak. Many of his statements are altogether wrong, but in making them, I hope he will use proper language. (Hear, hear.)

Mr. RANKIN: I withdraw the word falsehood. Another statement, which I must not characterise, was that about 10,000*l.* working capital which they did not have. I ask you—do these methods commend themselves to you? and I fail to understand how gentlemen claiming to represent you should use them. Hitting below the belt is bad, but stabbing in the dark is worse. Then, as to the removal of the office to Queensland—the memorandum of association gives power to do this. There are already local directors, and there is no obstacle. I propose the second resolution.

AN IMPORTANT QUESTION NOT ANSWERED.

Mr. HAZLEDEAN: Will you give us the names of the directors you propose in the place of the present ones?

Mr. RANKIN: Certainly not.

Mr. LEE: I have passed a week in bed, and at the present moment am suffering excruciating pain from abscesses in my ear. I shall therefore not trouble you long. I do not think ill motives can be imputed to a man who has placed 2,000*l.* in hard cash in this mine. I believe at the present time I am about the largest shareholder in England (a Queensland shareholder), and feel certain that I am more pecuniarily interested than any other man in Australia.

The CHAIRMAN: Oh, you are quite wrong, Mr. Lee.

Mr. LEE: The only difference betweeu you and me, gentlemen, is that I preferred buying in the cheapest market, and the cheapest market in this case was Australia, not London. When I find, as manager of an Australian company, that in Australia shares are to be bought at a certain sum which cost nearly double that sum in London, I consider the proper thing is to clear out at the London price, and to buy in at the Colonial price. Is that honest or dishonest? (Hear, hear.) I did not buy on the strength of the prospectus, except in regard to one particular clause. I telegraphed to Australia for information, and I

HAVE BACKED THE MINE THROUGH THICK AND THIN.

I have had faith in it when the vendor himself has begun to lose confidence, and I still think there is a great future before us, but that future is very much in the future on account of the management. When I got my excellent report from Australia from two experts, I went to Mr. J. Y. Watson, and he said: "It is good enough to buy on, but be very careful; mind you ascertain that the working capital is there." Mr. Watson has very often reminded me of this conversation since. I said, "You need not have the least fear of that: I am able to get the best information. I was assured on the floatation of this company that the working capital was there, and that they had enough. When I came to find out that there was no working capital, and an absolute collapse in the market. In April last you will find that that was the first time my name was heard in connection with the mine.

GROUND OF MR. LEE'S ACTION.

I do not think the directors will impute to me the previous fall of 50 per cent. in the value of the mine. I began to inquire, and I called a private meeting to advocate the adoption of extra machinery. At that meeting I said nothing about the charges I have since made, because I had not the information. Mr. Tancred had told me nothing, because no one had told him. (Laughter.) Therefore, I was unable at the meeting to give any of this information which I have since found out. I was at a loss then to know why nothing was done, seeing that they had working capital 15,000*l.* Feeling very uneasy in my mind, I wrote out to Australia again, and got a friend of mine, who is in the very best position to know, to get information, and he said:—"If the shares go to 1s., buy more." This bad management must come to an end somehow or other, and even if they have to start with a limited amount of working capital, of 2,000*l.* or 3,000*l.*, the only effect will be that they will make a little bit of a profit, and get more working capital from that source, and in the course of 20 years they will be able to find the right process, raise 10,000*l.* to erect suitable machinery, and get what is foreshadowed in the prospectus. If anybody thinks we have no cause to complain, I am at a loss to understand it. Knowing that working capital is of vital importance in almost every business, and believing that this company had it, I have bought on the strength of that, and finding that we have not got it, I have taken my present action. My motives have been stigmatised as bad. It has been stated that I wanted to be a director; but when a man is the largest shareholder it is not right to conjecture that. What would be the interest of a director's fees on my capital. I think the directors should have a substantial holding in companies, far more substantial than that of the gentlemen now before us. I second Mr. Rankin's resolution.

MR. WALKER'S COMPLAINTS.

Mr. WALKER commented on the vast amount of information that had been distributed—emanating alike from directors and shareholders, and in the last received from the Board, dated 23rd January, there occurred these words: "With reference to the late shareholders' meetings, the directors invited, as they had a right to do, some of the shareholders to meet them at the office of the company." We strongly objected to the directors getting a few of their friends together, and wanted to know if the articles allowed it, because, if they did, he would receive with mistrust any report they might make. Then he thought the directors had been lenient in not forcing certain people to pay their calls. He estimated a sum of 9,433*l.* was due, which would be working capital in itself. He came to the conclusion that some of the shares were those of the directors themselves. (No, no.)

The CHAIRMAN: You are entirely wrong. I am sure you do not wish to make wilful misstatements.

MR. WALKER'S LAST SHOT.

Mr. WALKER: I have no wish to impute anything to the directors. I believe that the directors have done their best for the company, but they are perfectly incompetent to manage anything. (Cries of "Order" and laughter.)

Mr. THOMPSON said he was an original shareholder, having had allotted to him 100, and subsequently he bought 400 on the open market. The fact of his not getting his full allotment inspired him with confidence. He had made inquiries, and had been to a certain extent satisfied with the explanations. They had numerous reports from Mr. Stanlake Lee and the directors, and last night he put those reports side by side, and carefully considered them. He attended the private meeting held in Mr. Lee's office, and also a subsequent one in the company's office. He thought the directors had as much right to call a meeting as Mr. Lee, and he certainly did not go prejudiced in their favour. Mr. Lee evidently believed in the mine, for if he had not done so, he would not have allowed a relative to apply for shares. Was he right in saying that the directors ought to make enquiries, or was he wrong in not making them for himself. He thought the two were in about the same position. The chairman said that he and his colleagues would forego their fees until a dividend was paid, but he thought that if a man did work for them he ought to be paid, and that they were wrong in working for nothing. (Cheers.) Mr. Thompson then went through the various other circulars that had been issued and disclaimed knowledge of the directors, except that of the chairman. If now questioned on the subject he could not tell their names, but he felt bound to give them the fairplay which everyone deserved. The directors said it was the intention of the Queensland shareholders to remove the company to Queensland, but if that were done there would not be so good a market. He had seen a private letter from Queensland, which expressed this intention.

A SHAREHOLDER: Then it is for their benefit, and not for ours.

JUSTICE TO THE BOARD.

Mr. THOMPSON denied that he was making any statement for the board, but he wished to ask what is the best thing to be done for the company. Where they to turn out the present directors, and to put in others? He thought they ought to look at the past, and that was the reason he had endeavoured to place the circulars side by side. Would they be in a better position by electing fresh directors whose names at present were unknown? They must not destroy this company because they were aggravated by the present loss of their money. Would it not be better for them to wait until they heard what Mr. Woodyatt had to say? He wanted more information before he could decide, and therefore he moved the adjournment of the meeting for four weeks.

Mr. HAZLEDEAN: A great deal of matter has been introduced which is not to the benefit of the original shareholders, and we ought not to overlook the real point which is—what we can do best for the company. Let us endeavour to amend the mistakes that have been made, and I should like to see the man who in business has not made a mistake. I hold shares in other companies where the mistakes made have been far more grievous than here. I have considered the matter, as I have been here, and think it would be

MOST UNWISE TO ALTER THE MANAGEMENT

just as we seem to be on the point to be coming to something good. A large quantity of ore has arrived here, which will be treated, and we shall probably then know the best method of treating. If we push the present board out we shall go without a head, and the tail will wag itself to death. (Laughter.) To turn the directors out now would be detrimental to the best interests of every man who has paid his money. You are not prepared with new directors, and even if you were, you do not know that they would be carried by the shareholders. Better stand by the directors that we know somethiug about, than throw ourselves into the arms of others we know nothing about. The directors do not dispute that they have made mistakes, but they will rectify them, and show us in their future conduct that, although they have made mistakes of judgment, they deserve our support.

VIEWS OF ONE WHO HAS SEEN THE MINE.

The Hon. A. H. WILSON, M.L.C.: I have seen Mount Shamrock Mine. It is a good mine. (Cheers.) Had it been started at 60,000*l.* it would have beeu considered one of the riehest in Queensland—if not in Australia. It has been increased to a very large share issue, but that is past. There is any amount of ore in the mine. It only requires proper machinery. Mr. Woodyatt was one of those who discovered the mine. He has been connected with it, and has taken great interest in it from the first. He visits it once a week, and knows thoroughly its capabilities. He will be here to give you full particulars, and show you what you ought to know. I think it would be very wrong if you were to take the action that is intended to be taken to-day until you see Mr. Woodyatt, who will be here in a fortnight. I beg to second the resolution Mr. Thompson has proposed. I have heard experts from Gympie and Charters Towers, the two leading mining towns in Queensland, and I have also heard from other quarters that the Newbery-Vautin process is not adapted to the ores which you get from this mine. Perhaps Mr. Woodyatt may say something different; I am merely telling you what I have heard from other experts. There may be some other process, which is on the spot, which may be more clearly to your advantage, but I hope, in the present state of your information, you will not be so unwise as to oust the present directors from office, who may have done good or may not. So far as I can hear, in Queensland they have not given satisfaction, but you do not know what another board may do for you, and you may rush from the frying pan into the fire if you elect a new board of directors before you have heard what Mr. Woodyatt says.

A SHAREHOLDER: Who is Mr. Wilson?

The Hon. Mr. WILSON: I am a member of the Legislative Council of Queensland.

VIEWS OF A VERY LARGE SHAREHOLDER.

Mr. WEBSTER, on being appealed to, said: I think the meeting ought to be adjourned. I still hold 15,000 shares, all of them fully paid, apart from my liability on those in respect of which I have paid my money into court. After such advice as we have had from Mr. Wilson, and all parties acknowledging that the mine is good, I think we should adjourn the meeting for the purpose named.

The CHAIRMAN here introduced Mr. Maddoek to the meeting.

Mr. MADDOCK: My remarks will be few, and would come better on the adjournment than now. I wrote a letter to the secretary because the statements made about the value of the mine appear to be rash, and calculated to injure not only Mount Shamrock but Australian mining on the whole. In April, 1887,

MOUNT SHAMROCK WAS LOOKED UPON AS ONLY SECOND TO MOUNT MORGAN.

All the original promoters consider themselves on a par with the Halls. They considered their mine cheap at half a million, and would not have sold a share in it. If the gold has not been turned out well that is no fault of the mine. It does not come out at once. Look at the Florence Nightingale; it was at work 14 years before it became so wonderfully rich, but Mount Morgan has been rich almost from the start. That was a mine that had been hawked about considerably before Tom Hall bought it. At Shamroek difficulty has been found in extracting the gold, but if you send it to a large firm in Swansea, whose name I could give you, they would very soon tell you the best and cheapest process. They do not waste time, and they are authorities on this subject. I cannot see you have any fault to find with the directors because they cannot make gold. They are only in the position of most directors, and are not able to pay the dividends which the shareholders expect at a few moments' notice. I am convinced you have a good property, and that you will act unwisely if you change the management. Let us wait and see what Mr. Woodyatt has to say.

SOPHISTRIES DISPELLED.

The CHAIRMAN: I can only say a few words in reply, because the patience of the meeting has wholly gone. Mr. Rankin said we bought this mine for free milling ore, and that is true, but the character of the ore has changed as we have gone down. Surely you will not blame us for that. We had bismuth in blocks, but now it is mechanically mixed. With regard to Mr. Tancred's interest, you have been told we have no knowledge of it. If anyone can give us information we shall be much obliged, beeause we can make use of it. If any shareholder has that knowledge, it is his duty to give it us. It was said that I stated Mr. Smyth alleged the mine to be cheap, but what I really said was that the people out there wanted to stop Mr. Smyth selling, because they said it was going too cheap. Mr. Rankin bought shares. Did he buy them after that statement, or before it? It is nonsense to say the Stock Exchange stamps a eompany as good—it simply sees that its various rules have been eomplied with, and then gives a quotation if it sees fit. Nowhere in the prospeetus was it stated that 15,000*l.* working eapital was wanted. Mr. Smyth said: "You do not want eapital, and you will not need to send any out," and he firmly believed it. A miue usually gets better in depth, but ours has gone worse. However, mineral is eoming home, and we will have it tested. Mr. Lee says that all companies have oue third of their capital as working capital.

BOARD ASSURED NO CAPITAL WAS WANTED.

Gentlemen, if you read prospeetuses, you will find that they do not. (Cheers.) Mr. Lissner also said we do not want money, and we were bound to listen to these gentlemen. We have not been crippled for working capital, but have had 2,500*l.* on deposit for a long time. Mr. Rankin says that Mr. Simpson spoke of a large quantity of machinery being wanted, but I defy him to point out any such passage in his communication. We believe that they are going to put up a chlorination plant for which the estimate is 225*l.* It was no recent invention. This resolution does not toueh the local directors; it is only against us. The Queensland Smelting Company, who are erecting large works convenient to us, are sending out one of the ablest dealers with refractory ores that can be engaged. We are on excellent terms with this company, and hope to have the advantage of his opinion and help. As to the calls, we have reason to believe we shall get some of this money in directly. I can tell you we had a perfect right to ask the large shareholders to meet us if we wished to consult them. (Cheers.) I can show you the list, and you will see that the meeting was not composed of our friends. In fact, we selected some of our opponents because they were large shareholders, and also beeause they lived near London. (Cheers.)

MEETING ADJOURNED.

I will now put the motion "That this meeting be adjourned for four weeks."

The motion was carried by a very large majority.

The proceedings then closed in the usual way.

MARKE VALLEY MINING CO.

ENCOURAGING REPORT—CALLS REDUCED MATERIALLY—SALES OF TIN INCREASED.

A GENERAL MEETING of the adventurers was held at the Wheal Grenville Office, 7, Union Court, Old Broad Street, London, E.C., on Wednesday, for the audit of the accounts, for making a call, if necessary, and for the general business of the mine. Notice was further given, that at the conclusion of the general business the meeting would be made special for the purpose of submitting for forfeiture all shares on which two calls should remain unpaid.—Francis G. Lane, Esq., presided.

Mr. JOHN HARDING (secretary) read the notice calling the meeting, and also the minutes of the last meeting.

The statement of accounts from October 24th to January 23rd (13 weeks) showed that the sales of tin had realised 1,515*l.*; the labour costs, including sinking of shaft and all exploratory work, 1,903*l.*, while the balance in favour of the mine was 228*l.*

MANAGER'S REPORT.

In again handing you our quarterly report we beg to say Bellingham's engine shaft having been sunk 24 fms. below the 60, the men are now engaged in cutting a plat at the bottom, and when eompleted the shaft will be divided and cased from the 60 down, and the ground penthouse at the 60 taken out preparatory to resuming the sinking for bearers and cistern below the 84, where it is intended to fix a plunger and dispense with the present drawing lift now at work. We reported at the last meeting the shaft was entirely free from the elvan and in granite; since then there has been no change, the shaft being still in granite. The 15 east has been resumed during the quarter, and driven 4 fms. 4 ft., where the lode has been somewhat changeable; for a short distance it produced very good stamping work, and gave promise for a good improvement, but under the influence of the elvan it has beeome disordered, a change we consider only temporary, as we still maintain the utmost confidence that on reaching the junction of the two lodes and beyond a more profitable run of ground will be met with. This junction may be expected, assuming the two lodes maintain their present bearing, soon after if not by the time of your next quarterly meeting. The 15-fm. level has been driven west 7 fms. 2 ft., where from 5 ft. to 7 ft. of the lode has been carried, which has been worth from 4*l.* to 6*l.*, while the present end is worth 8*l.* per fm. There are three stopes being worked iu the back of this (15-fm. level), worth respectively for the width carried 6*l.*, 10*l.* and 12*l.* per fm. The midway level has been driven east on the south part of the lode 9 fms. 2 ft., worth from 5*l.* to 7*l.* per fm. In the midway level west we intersected a small cross-course, which hove the lode out of its regular course about 3 fms., where it has been again intersected, and the driving west just resumed on a very promising lode; present value, 6*l.* per fm. There are two stopes being worked in the back of this western drivage, each worth for width carried 10*l.* per fm. The adit level has been driven west 3 fms. 2 ft. on a very promising lode, but at present it is only producing some low-elass stamping work. There are two stopes in the bottom of the adit, each worth 8*l.* per fm. Before concluding we would remark that while we do not see our way to report any considerable increase in the reserves available for stoping, we see no reason to doubt being able to make a similar return of tin for the ensuing quarter, with still encouraging prospects for the future.—W. GEORGE, F. RENALS.

THE POSITION EPITOMISED.

The CHAIRMAN: Gentlemen, the accounts as read show you that our returns have improved this quarter upon the previous quarter,

but our costs in obtaining those returns have also increased. The increase principally has been owing to the exceedingly wet season we have had, and to the consequently extra quantity of coal consumed ; otherwise my prediction at the last meeting, that our loss would not amount to 150*l*. per month, would have been fulfilled. In fact, I may say that I was thought to be very sanguine in stating that a call of 1s. per share would be sufficient to meet the requirements of the quarter, but I am glad to say that in consequence of an increase of a little over 1 ton of tin during this period, we have been enabled to pay our way without trenching upon the balance in favour of the mine. We brought forward a balance of 230*l*., and it is now 228*l*., so that our position as regards finances is not materially altered. On the other hand, you will see by the report we are

NEARING POINTS OF GREAT INTEREST.

The junction of the main lode and south lode going east, the captain informs us, will be met with between this and the next meeting. If so, and if it is, as we naturally expect from what we have seen of the south lode, and from what we know of the main lode, we may expect a very great improvement in the position of our mine. We are now meeting our costs from our returns in the shallow levels. The loss we are incurring is really in sinking the shaft. Our shaft costs us over 100*l*. per month in sinking, with the necessary materials required to place it in such a position as will enable it to pump our water, and draw our ore, by the time we are down sufficiently deep to drive a cross-cut to intersect the lodes we shall meet with. We are carrying out development work, and are doing all we can to make the mine support itself even while doing it. We consider that

THE POSITION OF THE MINE IS VERY MUCH IMPROVED,

and that its prospects are highly favourable. (Cheers.) Were we to stop all our developments we could make a very fair profit, and could stop the calls upon you also ; but that would not be good policy, as we know our reserves have not considerably increased. Capt. George has worded his report very cautiously. I asked him before the meeting whether our reserves had increased, because we had driven a considerable distance in the various levels, but he says, "No, they have not considerably increased." Well, gentlemen, we must take it—as Capt. George has informed us—that our reserves have not considerably increased. At the same time, I think if you put it to him now he will tell you that our mine is in a very different position from what it was 12 months ago, when we were making calls of 4s. per share per quarter. Our loss having been met by the call made at the last meeting, we are in, financially, the same position, only with this difference, that the position of our mine has improved by the developments that have been carried out. There is nothing more for me to say but to ask you to pass these accounts as now presented, and also the agent's report, and to give us the means of continuing our operations at this mine.

MARKE VALLEY MINE IS A MINE OF GREAT NOTE.

It has done wonders in days gone by for copper, and I believe, and, in fact, it is the general opinion, that Marke Valley as a tin mine will develop into a profitable concern, and in a short time from the present. Capt. George is present, and will answer any questions you may choose to ask him. He will give you a full and explicit account of the workings, and also their prospects ; but in the meantime I beg to propose, "That the statement of accounts now presented to this meeting be passed and allowed, and that a printed copy of the same be forwarded to the adventurers."

Mr. WILLIAM BELLINGHAM (director), in seconding the motion, said : Perhaps Capt. George will explain whether the reserves will be increased or not.

VIEWS OF THE AGENT.

Capt. GEORGE : I cannot say there will be a considerable increase, but we certainly hope that there will be. We never sold so much tin in any quarter before as we have sold last quarter. If our produce had only been a little better our financial position would have been stronger. We stamped 3,400 tons of stuff during the past quarter, and any gentleman will see that with our average we could not make a very big return. I suppose that very few mines are working on a lower produce, but there is this hopeful feature about it, that it has certainly increased upon what we had during the July quarter. Our produce is increasing, and I hope, as we continue to open out the ground, it will still further improve. The ends have been driven several fathoms now, but we have no rises put up, and consequently we cannot stope the ground at present.

Mr. READ ; Has the water given you much trouble ?

Capt. GEORGE : We have had to use more coal. If we do not meet with the junction of the lodes by the time of the next meeting it cannot be delayed long afterwards. If the lodes continue their present bearing I think we should come to the junction about the time of the next meeting. In sinking the shaft the two lodes are coming together—with granite on either side. The elvans are wearing out, and the granite is following as the lodes come together.

The report was then unanimously adopted.

THE RELINQUISHED SHARES.

The CHAIRMAN : I think, looking at the position of the mine which has so much improved, that you cannot do other than furnish us with the means of continuing to develop this mine. I might say that the relinquished shares, according to resolution, were again offered to the persons who relinquished them, but have not been taken up to the extent we anticipated. All of them have been taken up excepting the shares belonging to one gentleman, and he declined for various reasons (very just and honourable) to take up his holding. Therefore they are still in the hands of the company. We are, consequently, without money for the present, but I consider the asset valuable, and although the calls upon those shares will be continued to be placed to their debit, and the amount of arrears will appear, in consequence, larger, still I believe it is a good asset, and one that will hereafter prove valuable. We do not propose to do anything with these shares at the present moment ; they are in the hands of the company to the number of 680. Perhaps by the next meeting we shall offer them to the shareholders, or give notice that they will be offered for sale. By that time our mines may show such an improved position that the shares may realise more than the calls now due upon them ; therefore, we do not propose to deal with them at the present time. I calculate that the loss during the forthcoming three months will be about the same as last quarter—that is, about 150*l*. a month, and it may be a little less. The sum of tin estimated in the accounts at 850*l*. will realise a little more. (Cheers.) An estimate previously made by Capt. George was thought to be sanguine, but I find that the company realised 42*l*. 18s. 1d. more than he predicted, and I think, working out the amount of tin, it comes out at about 854*l*. It may be that we may sell a trifle more tin ; at the same time we will not enter into that calculation, but will take our costs as during the past quarter, and our returns as the same.

RETURNS CAN BE MAINTAINED.

Capt. George says that he can maintain the returns, and therefore the loss will be about the same. I propose that we make a call of 1s. per share, which will meet that loss, and that a discount of 5 per cent. be allowed to those who pay forthwith.

Mr. PEGLER : I will second that resolution. I thought, when you proposed 1s. last time, it was not sufficient, but your judgment having been much better than my opinion, I think it will do so this time. With regard to the 680 shares, in making this call we shall lose 34*l*. We shall not get the exact money, but if the mine continues to develop, as there is good ground for believing it will, I think we may look forward to the time when we shall not want a call at all. A year ago the call was 4s., but, having got down to 1s., we may expect to see that wiped off very soon.

The motion was carried.

REDUCED ARREARS.

The CHAIRMAN : I do not think we have taken a sanguine view of the future, either in relation to the mine, or in relation to the relinquished shares. If we get 10s. a share, that is only 4,500*l*. for the mine and for machinery, which, along with development work, has cost us over 20,000*l*. If the mine is not worth 10s. a share it is worth nothing. Shareholders should know who do not pay their calls as the others do, that we propose at the next meeting to forfeit those that are two or more calls in arrear, and the secretary will be instructed to give due notice. The amount of arrears is 260*l*., but this has been lessened by a payment of 53*l*. since, so that our arrears are less than they were at the last meeting, 219*l*., instead of 293*l*. (Hear, hear.) I will propose a resolution giving notice of forfeiture at next meeting.

Mr. FAWCETT seconded the motion, which was carried.

CHEERED UP BY MR. LANE.

Mr. PEGLER : I should like to propose a vote of thanks to Mr. Lane for presiding, because he always cheers me up. I come up a little depressed, but Mr. Lane has somehow or other the knack of infusing into my mind at least a spark of the enthusiasm which fills his own, and I go away again believing in Marke Valley. (Cheers and laughter.) I am one of the largest shareholders, and if, in the end, I do make something out of it I should feel that Mr. Lane has always encouraged me. I rise to propose a most hearty vote of thanks to him, not only because he comes to preside at these meetings, but because he is frequently on the spot, and knows as much about Marke Valley underground as anybody, excepting Capt. George himself. Therefore, it is not to-day only that we have his services, but at intervals between the quarters. I hear when he has been down looking over matters, and he always comes back like a giant refreshed.

Mr. READ : I can endorse every word that the former speaker has said, and I second the resolution with very great pleasure.

The motion was carried unanimously.

A GREAT FUTURE FOR MARKE VALLEY.

The CHAIRMAN : I thank you for your continued confidence in me. I assure you I am doing my best for the interests of the mine, and I know my brother committeemen are doing the same. We all look upon Marke Valley as a mine that should receive attention from us, because we believe that great results will be obtained by and by. I believe that it is only a postponement of good results that rapid development, such as we are now carrying on, will bring us nearly to success by the next meeting.

AGENTS THANKED.

Mr. FAWCETT proposed a vote of thanks to Capt. George, who, he said, was doing everything he could to make this a profitable mine.

The CHAIRMAN, in seconding the motion, said : I am quite certain of that. I am sorry to say that our finances are such that we cannot reward the agents, as we should do, with increased salaries. They are working very hard, and I think we pay them about as badly as any mine in the country.

Mr. PEGLER : Let them get us a dividend and then they will find we will be liberal.

The CHAIRMAN : We should be happy to recognise their services in a more substantial manner, but I am afraid we must continue to pay them as we do, and look upon them as doing their best for the company—hoping that the future will be better for them and also for us. We certainly look forward with hope to be able to substantially recognise their exertions on our behalf.

The resolution was carried.

LOCAL SHAREHOLDERS SATISFIED.

Capt. GEORGE : Your interests are our interests, and we are doing our best to carry on the mine well. I think, as far as the new concern goes, there is not a mine in the county that has a better prospect. Our local shareholders are very much encouraged by the present state of the mine and its prospects. I believe that there is a great future before Marke Valley.

The proceedings were then brought to a close.

HOLLOWAY'S PILLS.—In the complaints peculiar to females these Pills are unrivalled. Their use by the fair sex has become so constant for the removal of their ailments that rare is the household that is without them. Amongst all classes, from the domestic servant to the peeress, universal favour is recorded to these renovating Pills ; their invigorating and purifying properties render them safe and invaluable in all cases ; they may be taken by females of all ages for any disorganisation or irregularity of the system, speedily removing the cause and restoring the sufferer to robust health. As a family medicine they are unapproachable for subduing the maladies of young and old.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

Telegraphic Address—"NOSMOTH, LONDON."

TELEPHONE No. 509.

Mr. THOMPSON transacts business in all classes of Securities, Bonds (Foreign and Colonial), Banks, Railways, Insurance, Telegraph, Tramway, Gas, Water and all Miscellaneous Shares.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

MR. THOMPSON would suggest to his readers that it appears hardly fair that those taking advantage of the advice contained in this Circular should transact their business through other Brokers. Should the recommendations contained herein proved unprofitable, it is certain that the writer will be blamed, whereas, should they turn out well, he will gain no advantage from those doing their business elsewhere—possibly not even the bare credit of having given good advice.

THE PAST.

(From Mr. Thompson's Circular, January 8th.)

1889.—A New Year commenced, and it seems a prosperous one, too! But before proceeding to consider the future, let us follow the example of most of those engaged in the mercantile world and make out a balance sheet for the year gone by. The writer finds *his* by no means unsatisfactory, and in looking at the balance of profit which he finds standing to his credit, he has experienced a somewhat natural curiosity as to the position of his friends, and especially as to that of those who may have perused this circular and acted upon his advice. With a view to satisfying this curiosity he has lately devoted a spare day to looking through back numbers of this circular, and making out a Table showing his recommendations and how far these may have proved, by the light of subsequent quotations, successful or otherwise. He finds the result so far satisfactory that he is now tempted to place this Table before his readers and friends, and would here only remark that, as it was made out at first only for his own guidance, it has been put together as fairly as he has found possible. It will be observed that where shares have been recommended for purchase or otherwise, the date is given of the circular in which such recommendation has been published, as also the price which has subsequently been reached, and the date of the circular in which such price may be found. Thus, those who have kept by them the circulars sent to them can check this Table for themselves. Shortcomings may doubtless in some cases be found, but against these the writer would point out that there are many shares which were recommended by him some time ago, and which can hardly be mentioned as having risen only this year. Thus, in 1887, as his friends will remember, the writer was a strong advocate of Kimberly Central Diamond Shares at about £8, while he a little while previously recommended Colombians and Oritas at 5s. and 6s. respectively, the writer being, he thinks, their only supporter at that time. Kimberley Centrals last year touched 49, and Colombians and Oritas each 42s. 6d. —a rise in the former case of FIVE HUNDRED PER CENT., and in the two latter of SEVEN HUNDRED PER CENT.

* Against the Writer.

From the above it will be seen that had purchases been effected upon every recommendation published in this Circular, they would have resulted forty-nine times in a handsome profit, and only fourteen times in loss. The losses, too, it will be observed would have by no means been large, while the profits in some cases may have reached hundreds per cent. On the other hand, had holders of shares acted upon the recommendation given to sell, they would in twenty-two cases have saved a considerable proportion of their capital; while in two only would they have been better off for holding on. Upon the whole, the writer cannot but come to the conclusion—one in which he trusts his clients and friends can fully bear him out—that his Circular must have proved nearly as useful to others as it has been to himself. That it has proved successful to himself is shown by the fact that, originally only four pages, it now covers 28 pages. In gratitude to his friends and clients, without whose support, of course, he could have done nothing, the writer feels the least he can do is to leave no stone unturned to make future Circulars as reliable as possible, while trying to put all such information as may be afforded into as readable a form as circumstances will permit.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

Telegraphic Address: "NOSMOTH, LONDON."
Telephone No. 509.

THE ASTYRA MINING COMPANY, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1882 TO 1886.

CAPITAL £180,000, in 180,000 Shares of £1 each.

As follows:—42,500 Ordinary A Shares; 57,500 fully paid B Shares; and so soon as the net profits of the Company earned in any one year are equal to 15 per cent., as more particularly set forth in the Prospectus, but not before then, there shall be issued 80,000 fully paid Deferred D Shares. FIRST ISSUE of 100,000 Shares, whereof 57,500 will be allotted as fully paid, in part payment of the purchase money, and 42,500 are now offered for subscription, payable 2s. 6d. on Application, 5s. on Allotment, and the remainder as may be required, but no call to be payable until the expiration of three months from the date of Allotment.

OFFICES.
LOMBARD CHAMBERS, 46, BROWN STREET, MANCHESTER.

ABRIDGED PROSPECTUS.

THIS Company is formed to acquire from the *Astyra Syndicate the right to develop and work the gold mines of Astyra, in Asia Minor. The property covers an area of nearly four square miles in extent, and the rights are held for 99 years under and by virtue of an Imperial firman granted by the Sultan, dated the 11th day of July, 1878, subject to the payment of a royalty equivalent to 5 per cent. on the value of the gold extracted. The Company will also acquire the plant and appliances already provided in connection therewith.

The property, which is situated about 18 miles from the port of the Dardanelles, and within six days of London by express, is fully described in a statement issued by the Astyra Syndicate, and report by Mr. J. B. Ross, mining engineer, attached thereto, both of which are to be taken as embodied with the prospectus.

The directors venture to believe that a careful perusal of these documents will lead to the conclusion that the scheme is bonâ fide and deserving of support.

The title of the property has been carefully examined by the counsel and solicitors to the Company, and the directors are advised by them that such title is satisfactory.

The Astyra Syndicate have already expended during the last three years £7,500 in respect of preliminary inquiries, and obtaining reports as to the property, acquiring plant, and opening up and exploring the mines, with the result that, whilst admitting that an amount of risk must be run by all investors in gold mining, they themselves are so satisfied as to the value of the property that they have recently, in addition to the above sum, provided £12,500 in cash to secure the concession.

The following are the considerations to be paid by the company:—(*a*) 20,000 B shares, fully paid, to the Astyra Mining Syndicate, or their nominees, representing the £20,000 in cash they have already provided; (*b*) 37,500 B shares, fully paid, to Mr. Henry Morris, the vendor to the Syndicate, or his nominees, as part consideration for the transfer of the concession to the Syndicate; (*c*) so soon as the net profits of the Company earned in any one year are equal to 15 per cent. upon the capital credited in the books of the Company as paid up, but not before then, (*d*) 40,000 deferred D shares, fully paid, to the Astyra Mining Syndicate, or their nominees; and 40,000 deferred D shares fully paid, to Mr. Henry Morris, or his nominees, in further payment as above. The above D shares shall rank for dividend with the B shares.

It will thus be seen that the Syndicate have not received, nor will they receive, any monetary consideration whatever, but simply the fully-paid shares above mentioned.

The capital which is now offered for subscription—42,500 shares of £1 each—is required in order to provide crushing and other machinery, plant, and working capital, and also for the further development of the property.

The Company is liable for the repayment of the sum of £700, which has since its registration been advanced by the members of the Syndicate to meet necessary expenditure.

Particulars of the contracts or agreements relating to the objects and business of the Company and the property to be acquired, will be found in the full prospectus, which, together with copies of the statement already referred to, and forms of application for shares, can be obtained from the bankers, Messrs. Cunliffes Brooks and Co., King Street, Manchester; or at the offices of the Company, Lombard Chambers, 46, Brown Street, Manchester.

* THE ASTYRA SYNDICATE
(formed in 1885) consisted of the following gentlemen:—
Charles Moseley (the late), chairman,
Samuel Armitage,
J. J. Armitage,
Charles J. Galloway,
John Galloway, jun.,
John Haworth (the late),
A. Worthington Topp,
W. Barton Wright.

THE SUBSCRIPTION LIST WILL CLOSE ON SATURDAY, FEBRUARY 2nd.

AT the half-yearly ordinary general meeting, held at the Cannon Street Hotel, London, on Monday, the 21st January, 1889, the Right Hon. Sir Lyon Playfair, K.C.B., M.P., in the chair, the following report was presented :—

The Directors have to report that the net profits of the Bank for the past half-year, after making deductions for interest on deposit accounts, current expenses (including subscription to life insurance fund), bad and doubtful debts, and rebate on bills not yet due, amount to 37,407*l.* 19s. 4d., which, added to 7,405*l.* 5s. 5d., the balance brought forward from the previous half-year, makes a total of 44,813*l.* 4s. 9d. now to be disposed of.

Out of this sum it is recommended that 28,000*l.* be appropriated to the payment of a dividend at the rate of 7 per cent. per annum, free of income tax; that 10,000*l.* be added to the reserve fund, which will then amount to 250,000*l.*; that 610*l.* be placed to the credit of redemption of premises fund, and in reduction of furniture account; and that the remainder, 6,203*l.* 4s. 9d. be carried forward to the credit of the next account.

Since the last meeting, the directors have elected the Right. Honble. Henry H. Fowler, M.P., to a seat at the board, and this election the shareholders are now asked to confirm.

The directors regret to announce the deaths, during the past half-year, of both the auditors of the bank, Mr. William Quilter, and Mr. John Young. To fill the vacancies thus caused, they have provisionally appointed Mr. Thomas A. Welton, of the firm of Messrs. Quilter, Welton and Co., and Mr. John F. Clarke, of the firm of Messrs. Turquand, Youngs and Co., and they recommend that these appointments be now confirmed by the shareholders.

By order of the board,

Bartholomew Lane, E.C., 15th January, 1889. THOS. J. SCOTT, Secretary.

N.B.—The dividend will be payable on and after Friday, the 1st February.

We have examined the foregoing accounts in detail, with the books and vouchers of the Bank, and find them to be properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs. Further, we have ascertained by actual enumeration the correctness of the items of cash and bills of exchange in hand, and have inspected the securities representing the Bank's own investments in Government stocks, &c., and also those held on account of advances and loans, as well as those belonging to customers, and we find them to be in due accordance with the books and accounts of the Bank.

THOS. A. WELTON (Quilter, Welton & Co.),
J. F. CLARKE (Turquand, Youngs & Co.), } *Auditors.*

The Secretary read the notice convening the meeting.

The Chairman authenticated the "Register of Transfers" by impressing thereon the Common Seal of the Company.

The report and accounts having been taken as read,

It was proposed by the Chairman, seconded by Mr. Dunn, and resolved unanimously, "That the report and accounts, as presented, be received and adopted."

The Chairman then declared a dividend for the half-year ending 31st December, 1888, at the rate of 7 per cent. per annum, free of income tax, payable on and after Friday, the 1st February.

It was proposed by the Chairman, seconded by Mr. Mackenzie, and resolved unanimously: "That the election of the Right Hon. Henry H. Fowler, M.P., as a director of the company, be confirmed."

It was proposed by Mr. S. Jackson, seconded by Mr. W. Machell, and resolved unanimously: "That Mr. Thomas A. Welton, of the firm of Messrs. Welton, Jones and Co. (late Quilter, Welton and Co.), and Mr. John F. Clarke, of the firm of Messrs. Turquand, Youngs and Co., be appointed auditors of the Bank for the current half-year, in the places respectively of Mr. William Quilter, and Mr. John Young, both deceased."

It was proposed by the Chairman, seconded by the Right Hon. Henry H. Fowler, M.P., and resolved unanimously: "That the thanks of the meeting be given to the managers, the branch managers, the secretary, and the other officers and the staff of the Bank for the care and diligence with which they had performed their duties during the past half-year."

It was proposed by Mr. J. W. Lomas, seconded by Mr. J. Sangster, and resolved unanimously: "That the thanks of this meeting be also given to the chairman and directors for their careful attention to the business of the Bank during the past half-year."

(Signed) LYON PLAYFAIR, Chairman.

THE DELHI, UMBALLA, KALKA RAILWAY COMPANY, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS OF 1862—1883.

CAPITAL, £800,000, IN 80,000 SHARES OF £10 EACH,

WITH POWER TO CONVERT INTO STOCK WHEN FULLY PAID UP.

With further power to create and issue Debentures for £300,000. Of the above £800,000 the sum of £220,000 has already been subscribed by the Directors and their friends, and will be allotted in full.

Messrs. MATHESON & CO. now invite Subscriptions for the Balance of the £800,000 Share Capital, viz., £580,000—10s. payable on Application; £1 10s. payable on Allotment. Further Calls not to exceed £2. Each Call to be made at intervals of not less than Three Months.

Interest, at the rate of Four per cent. per annum, will be paid half-yearly by the Company during construction, as hereinafter mentioned. After the opening of the line throughout, the Shareholders will receive Fifty per cent. of the gross earnings under a working Agreement with the Secretary of State for India, thus practically securing, as explained below, an adequate return on the Capital.

BOARD OF DIRECTORS.

OFFICES.

170, GRESHAM HOUSE, OLD BROAD STREET, E.C.

PROSPECTUS.

THE Company has been formed for the purpose of acquiring the right to and carrying out (under the conditions of a contract with the Secretary of State in Council of India) the construction of a direct line of railway on the Indian broad gauge standard (5 ft. 6 ins.) from the station of the East Indian Railway at Delhi, via Kurnal and Umballa Cantonment Station, to Kalka, at the foot of the Simla Hills, as shown on the map accompanying the prospectus.

When completed, the working of the line will be undertaken by the Secretary of State for India, in terms of the above contract, by which the Secretary of State engages to provide all necessary rolling stock, and to work and maintain the line for 50 per cent. of the gross receipts. The East Indian Railway Company have undertaken to work the line under a contract with the Secretary of State for India.

The present railway between Delhi and Umballa takes a circuitous route, via Meerut and Saharunpur (crossing the River Jumna twice), a distance of about 162 miles. The new direct line which is carried up the west bank of the Jumna with no crossing will shorten this distance by about 40 miles, and will become an integral part of what will be the main line from Calcutta to Peshawur.

Taking the mileage rates as equal, the new and shorter route will naturally attract the bulk of the through traffic between the late Scinde, Punjaub and Delhi Railway (now part of the North Western State Railway) on the north, and the East Indian and lines connected therewith on the south, which at present passes over the loop line via Meerut, and likewise that between Bombay and the north of India. There is no water competition for the through traffic, and, only to a limited extent, for local goods traffic on the southern portion of the route between Kurnal and Delhi.

The amount of the through traffic can be safely computed from the receipts of the above-mentioned lines, of which the new line will be the connecting link. The average gross receipts of the late Scinde, Punjaub and Delhi Railway were about £25, and of the East Indian Railway £40 per mile per week, while a traffic of only £15 per mile per week will, under the proposed working agreement, practically assure a return of 6 per cent. on the estimated cost.

The traffic on the route to Kalka, which has for many years past been continually progressive, calculated on the returns of the road traffic in 1885, when last published by the Government, is shown to be equal to £13 per mile per week of railway traffic, equivalent to about 5½ per cent. on the estimated cost of that portion of the line. This part of the line will take travellers and goods to the foot of the Himalayas, near Simla, the summer residence of the Viceroy of India, the Supreme Council, and the Lieutenant-Governor of the Punjaub; and the Head-Quarters of the Army in India. It will also take the traffic between the plains and the Military Hill Stations of Solon, Kussowlie, Subathoo, Dugshai, and Jutogh.

The line from Delhi follows very closely the present Grand Trunk Road, and independently of through traffic, it will secure the local traffic from the rich agricultural districts of Delhi, Kurnal and Umballa, and the great numbers of pilgrims who annually flock to the sacred shrines of the Kurukshetra district, which numbers should be largely increased by the facilities the railway will afford.

The cost of the East Indian Railway, including equipment, has been about £22,000 per mile, and of the Scinde, Punjaub and Delhi (now part of the North-Western State system) about £16,000 per mile. The cost of the new line, exclusive of rolling stock, for which provision is made under the above-mentioned contract with the Secretary of State for India, as estimated, will not exceed £6,500 per mile. If the average receipts of the two lines which the new line will connect are realised it will pay 9 per cent. on the share capital.

The distance from Delhi to Umballa is 122 miles, and from Umballa to Kalka 35¾ miles, making a total of 157¾ miles. The sum of £6,500 per mile may be taken as a full estimate, including the cost of the formation and preliminary expenses of the Company, the construction of the railway, maintenance for one year, and interest during construction, at the rate of 4 per cent. per annum. It is calculated that three years will be sufficient for the completion of the works.

There are no engineering difficulties of importance on any part of the line. From Delhi to Thaneswar, 98 miles, the country is almost a dead flat through the rich agricultural districts of Delhi and Kurnal, irrigated by the Western Jumna Canal.

The work will be carried out entirely by the Company's engineers, and by native contractors for labour, which will effect a considerable saving, of which the Company will get the full benefit.

Power has been taken to create and issue £300,000 debentures. From this sum will be defrayed the payment of interest during construction, the expenses of issue and other preliminary expenses, and the cost of completion of the line, if required. The balance will only be issued in case increased traffic requires additional accommodation, or to meet unforeseen contingencies.

The Company is to receive 50 per cent. of the gross receipts, under the provisions for working the line included in the contract with the Secretary of State. This arrangement has been adopted in concert with the Secretary of State for India owing to the policy of Her Majesty's Government ceasing to give specific guarantees of interest. By this plan interest on capital will be practically secured.

The principal provisions of the agreement are as follows:—

(*a*) The Government provides, free of cost, all land shown to the satisfaction of Government to be necessary for the construction of the proposed line.

(*b*) The Government enters into an agreement with the Company, providing for the working of the line, through the agency of the East Indian Railway Company, on the following terms:—

(1.) Of the gross receipts to be derived from the traffic on the railway, or any part thereof, the Government shall retain 50 per cent. in full satisfaction and remuneration for the use of all necessary rolling stock, and for working, managing and fully and efficiently maintaining the line.

(2.) The remaining 50 per cent. of gross receipts to be paid over to this Company, subject to the deduction of income tax.

(*c*) The maxima and minima mileage rates for freight and passengers on the line between Delhi and Umballa to be the same as those on the East Indian Railway, but increased rates, not exceeding three times the maxima rates in force on the East Indian Railway, may be charged on the section between Umballa and Kalka.

(*d*) The Government to have the power to take over the line at any time, after the expiration of 25 years, from the 31st December, 1891, and at intervals of 10 years thereafter, on giving the Company 12 months' previous notice of its intention so to do, and paying a sum equivalent to 25 times the average amount payable without deduction during the preceding five years by the Secretary of State for India.

(*e*) By the memorandum of association of the Company power is taken to pay interest on capital during construction at a rate not exceeding 4 per cent. per annum. The Secretary of State by the contract assents to this arrangement.

This Company on their part undertake:—

(*a*) That the line shall be constructed throughout on the 5 ft. 6 in. gauge, and similar in every respect to the standard of the East Indian Railway, and maintained by the Company in good repair and condition for 12 months after the opening of any part for public traffic.

(*b*) To provide all funds required for additions to block (as distinguished from rolling stock) to meet development of traffic or to meet public requirements, and also to construct any branches that may be mutually agreed upon by the Company and Secretary of State, or to meet any extraordinary casualty chargeable to capital.

The following agreements have been entered into:—

(1) Between the Secretary of State in Council of India and John Johnstone Jardine Keswick, Esq., dated 24th January, 1889.

(2) Between John Johnstone Jardine Keswick, Esq., and Henry Adams Adkin, Esq., as trustee on behalf of the Company, dated 24th January, 1889.

(3) Between the Company and Messrs. Matheson and Co., dated 25th January, 1889.

Copies of the memorandum and articles of association of the Company and of the above-mentioned agreements, with forms of contract between the Secretary of State for India and the Company, may be seen at the office of the Company, and of the solicitors of the Company, and of Messrs. Freshfields and Williams, the solicitors of Messrs. Matheson and Co.

Messrs. MATHESON and Co., 3, Lombard Street, E.C., will RECEIVE APPLICATIONS FOR SHARES on the form enclosed with prospectus, accompanied by the required deposit.

SUBSCRIPTION LISTS will OPEN on Saturday, the 26th inst., and CLOSE on or before WEDNESDAY, the 30th inst., both for London and country.

Should no allotment be made, the amount deposited will be returned in full; in case of a partial allotment, the surplus of the deposit will be appropriated for or towards the payment due on allotment, any remainder being refunded to the applicant.

In case of the deposit being insufficient to cover the amount due on application and allotment, the balance required must be paid forthwith.

London, 25th January, 1889.

The Subscription Lists Open to-day and Close on or before Tuesday next for Town, and Wednesday for the Country

16, GREAT WINCHESTER STREET, E.C.

PROSPECTUS.

THIS Company is formed to acquire, direct from the owners, the Harmony Proprietary Company, Limited, the lease of a section of the main, or Sutherland reef, in the well-known Murchison Range Goldfields, Harmony Estate, Zoutpansberg, Transvaal, equal to 40 gold mining claims, each measuring 150 ft. long by 400 ft. wide—in all 1,500 ft. along the line of reef and 1,600 ft. wide.

This prospectus is based upon the statements and reports made by men of the highest authority on Transvaal gold mining, including:—

Mr. Edward Button, a Government Gold Commissioner, a most experienced miner, and one of the early prospectors and discoverer of the Button Reef and of the celebrated Eersteling Gold Mine.

Mr. James Sutherland, a miner of 20 years' experience in California, New Zealand, and Australia, after whom the reef is named.

Mr. W. Henry Penning, F.G.S., Memb. Soc. Arts, &c. (late of H.M. Geological Survey of England).

Mr. W. C. Mockford, M.E., F.R.G.S.

Mr. Thomas Baines, F.R.G.S., author of "The Gold Regions of South-Eastern Africa."

Mr. Charles Hancock, M.E.

Mr. H. Mockford, M.E., F.R.G.S., and Mr. F. Pemberton Mockford, M.E.

Messrs. Thomas Button and James Sutherland found the quartz so rich that by simply crushing it between two stones they were able to pan off the gold; and "French Bob" (a most experienced Transvaal miner), who commenced working on the reef last year in the interest of a Barberton Syndicate, got splendid results, the quartz containing gold at the rate of 112 ozs. to the ton, and the latest returns state that the shaft he was sinking showed that the quality of the quartz fully maintained the high value obtained nearer the surface. The formation is remarkable from its regularity, it is at least five miles wide, and runs right through the estate.

ESTIMATED RESULTS.—A light 5-stamp battery is already under order to be forwarded to the mine, so that the engineer will be able to commence crushing immediately on his arrival, when it is intended he shall forthwith arrange for the erection of a 20 stamp mill to be driven by water power, which should crush about 10,000 tons per annum: from the extreme richness of the reef and the cheap rate (estimated 10s. to 12s. per ton) at which the quartz can be obtained and crushed, the directors anticipate being able at an early date to commence paying very considerable monthly dividends (estimating the yield of gold at 8 ozs. to the ton only, shows a net profit sufficient to pay monthly dividends of 20 per cent., equal to 240 per cent. per annum). As the mines are further developed, the number of stamps will be increased.

LABOUR.—Kaffirs can be hired in any number, including experienced hands who have worked at Kimberley, Barberton, and Witwatersrand, as thousands of them live on the estate, where they prefer working at a lower rate than they would demand elsewhere.

WATER.—Many rivers run through the estate, including the Silati and Makudge—from which power can readily be obtained to practically any extent for milling and other purposes.

TIMBER.—Exists in great abundance on the estate in the immediate vicinity of the section to be acquired by this Company, suitable for fuel and for mining purposes.

TRANSPORT.—Fifty miles are by railway, and the remaining, about 130 miles, by bullock waggons.

The only contract entered into is that dated 25th January, 1889, and made between the Company of the one part and the Harmony Proprietary Company, Limited, of the other part, by which the Company acquired the lease for £80,000, payable as to £5,000 in cash, as to £50,000 in fully-paid shares of the Company, and as to the balance, £25,000, in cash or shares, or partly in cash and partly in shares, at the option of the Company, at the usual rental of £1 per claim per month and a royalty of 2½ per cent. upon the gold obtained. This contract, with the memorandum and articles of association, plan of the Harmony Estate, maps showing the situation of the Murchison Range, and full reports from which the extracts hereon are taken, can be seen at the office of the Company.

Prospectuses and forms of application can be obtained at the offices of the Company, and of the bankers, brokers, solicitors, and auditors.

Should a less amount of shares be allotted than is applied for, the surplus paid on application will be appropriated towards the amount due on allotment. Where no allotment is made, the amount paid on application will be returned without reduction.

London, 19th January, 1889.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Sutherland Reef, Limited.

Gentlemen,—I enclose remittance of £ , being the amount of the deposit of 2s. 6d. per share on shares in Sutherland Reef, Limited, and I hereby apply for that number, and agree to receive the same or any smaller number that may be allotted to me, and I authorise you to place my name upon the register of members in respect of the shares so allotted.

PROSPECTUS.

THE Mexican Company of London has been formed in order to take over and extend, under the same directorate and management, the business which has been successfully established in Mexico by the London-Mexican Prospecting and Finance Company, Limited.

The business which especially engaged the attention of the old company was the acquisition of Government and public contracts in connection with the drainage of the City of Mexico, the exploitation of Government mines which under the constitution of the country the Government is not permitted to work, and the issue of public loans.

Amongst the contracts obtained by the late company are—

A contract for the issue of the City of Mexico Seven per Cent. Sterling Loan of £400,000.

A contract with the Drainage Board of the Valley of Mexico for the construction of the Tesquisquiac Tunnel.

A contract for the acquisition of the Mexican Government Cerro de Coronas mining properties, in the district of Zacualpan.

The issue of the City of Mexico Seven per Cent. Sterling Loan for £400,000 has just been most successfully made in London, and the stock now stands at a substantial premium.

The construction of the Tesquisquiac Tunnel is the first step necessary for the efficient drainage of the Valley of Mexico, and, as a consequence, will render possible the proper drainage of the City of Mexico itself, which, were it not for its position in a land-locked valley without natural outlet for the drainage, would present a situation probably unequalled in the world both for salubrity and beauty.

As to the Cerro de Coronas, a translation of a memorandum from the Minister of Public Works of the Government of Mexico, addressed to the Company's Managing Director in Mexico, at the express request of the President, General Porfirio Diaz, accompanies the prospectus, and shows the high opinion entertained by the Government of these properties which are under contract, and are amongst the assets to be taken over by this Company. But the terms of the contract since entered into are of an even more favourable character than those contained in the accompanying memorandum.

Extracts from the report of Mr. R. J. Frecheville, who, at the request of the Company, proceeded to Mexico and made an exhaustive examination of the Cerro de Coronas, also accompany the prospectus, and the full report can be inspected at the offices of the Company.

The Company have also in view, and under negotiation, several other public undertakings and enterprises of great promise.

In view of the success of the late company, and of the important contracts already obtained and in contemplation, it is apparent that a larger amount of capital will be required, and that with the strong position and business connections already established, a prosperous future may reasonably be anticipated for this Company.

The rapid development of the material interests of the United States of Mexico under the enlightened government of the President, Genl. Porfirio Diaz (who has just been elected to a further term of four years), is attracting the attention of all business communities, and there is little doubt that a new field for commercial enterprise has been opened of a most profitable character, where such can be conducted by those having experience and knowledge of the country and people.

Two of the directors, accompanied by the secretary, spent some months in Mexico during the past year, engaged on the business of the Company, which afforded them an opportunity of becoming personally acquainted with the chief officers of State.

The old company have been specially fortunate, both in its representatives as well as its professional advisers in Mexico; and it may be anticipated that the career of the Mexican Company of London in the future will, under like conditions, be as successful as that of the old company in the past.

The goodwill, undertaking, assets, property, estate, and effects of the old company, to be acquired by the Mexican Company of London, on the night of the 3rd of January, 1889, are set out in the report of Messrs. Monkhouse, Goddard and Co. (chartered accountants), which accompanies the prospectus, from which it will be seen that the balance of the cash assets, bonds, &c., and deposits in Mexico, after deducting liabilities, amounts to the sum of £43,301 12s. 9d., exclusive of the beneficial contracts already referred to.

The consideration to the shareholders in the old company for the acquirement by the new Company of the assets of the old company will be the allotment of 163,670 fully-paid up shares in the new Company, or, at the option of the new Company, the same amount wholly or partly in cash for distribution amongst the shareholders of the old company, who would also be entitled to participate in the surplus of a sum of £10,000 set aside for payment of expenses of issue, should there be any such surplus.

The following contracts have been entered into:—

One dated the 21st day of January, 1889, between the London-Mexican Prospecting and Finance Company, Limited, and George Field Tavenor, Frederick Charles Debonaire Haggard, Reginald Northall-Laurie, Charles George Hale, William Crookes, and Albert Macklin, liquidators thereof of the one part, and this Company of the other part.

One dated the 31st day of March, 1888, between the Valley of Mexico Drainage Board, and John Gladwyn Jebb, as the representative of the London-Mexican Prospecting and Finance Company, Limited, for the execution of the Tesquisquiac Tunnel.

One dated the 10th day of March, 1888, between General Carlos Pacheco, Minister of Public Works, as representing the Government of Mexico, and John Gladwyn Jebb, as representing the London-Mexican Prospecting and Finance Company, Limited, for the exploitation and development of all kinds of minerals and mines in the district of Zacualpan.

One dated the 25th day of July, 1888, between the London-Mexican Prospecting and Finance Company, Limited, of the one part, and William Auld, as trustee for and on behalf of the Mina Grande (Queretaro) Mining Company, Limited, of the other part, for the sale of certain mines in the State of Queretaro belonging to the London-Mexican Prospecting and Finance Company, Limited.

In addition to these contracts, there are other contracts and arrangements in existence with the old company, the benefits and obligations of which will be taken over by the new Company.

It is believed that such arrangements and contracts do not come within the 38th Section of the Companies Acts, 1867, but should they do so all applicants for shares shall be deemed to have waived the insertion of the dates and names of the parties to any such arrangements or contracts or other contracts, if any, not set out, and to accept the above statements as a sufficient compliance with that section, and applications for shares will only be accepted subject to this provision.

If no allotment is made the deposit paid upon application will be returned in full.

Prospectuses and forms of application can be had at the bankers, solicitor, and at the offices of the Company.

Copies of the articles of association, and of the before-mentioned contracts, also the accountant's report and valuation, may be inspected at the offices of the solicitor.

Telegraphic Address—
"NICHS," LONDON.

"KAPANGAS."—Those interested in these shares should at once consult Mr. Nicholls. The company has considerable funds in hand to vigorously prosecute the important trials recommended by Capt. Hodge. The balance available for distribution or otherwise at the date of the last balance-sheet (July, 1888) was about £16,000, since which time profits have been earned amounting to about £7,000, so that, after deducting the dividend just paid of 6d. per share (£4,725) from these two amounts, there remains a good round sum. THESE ARE FACTS, AND THE FIGURES CAN BE AUTHENTICATED.

Mr. Nicholls is in a position to afford trustworthy information and advice to intending investors and others in the selection of Mining Shares either for Investment or Speculation. Orders by letter or telegram promptly attended to. Send for Price List.

MINING CIRCULAR ISSUED BY

JAMES V. TURNER & COMPANY,

5, COPTHALL BUILDINGS, LONDON, E.C.

Telegraphic Address:—"EQUANIMITY, LONDON." Bankers:—LONDON AND SOUTH WESTERN BANK, LIMITED.

BUSINESS TRANSACTED IN ALL DESCRIPTIONS OF STOCKS AND SHARES. Having made Mining Shares a special study J. V. TURNER & CO. are prepared to advise intending Operators what Shares to Buy and what to avoid.

MORUYA GOLD & SILVER MINING Company, Limited. £1 Shares, Fully-Paid.

In recommending the purchase of shares in the above Company, we would first draw attention to the advice contained in our last circular, in which we strongly suggested an investment in Luipaards Vleis. The latter could have then been bought at 22s. 6d. per share, the quotation now being 45s. to 50s. Our information regarding Moruyas is, if possible, more reliable, and our readers will admit that the undermeutioned official particulars are sufficient without any further animadversions on our part.

In the first place, the capital of the company is only £85,000, an amount considerably lower than that of the majority of Australian mining companies.

Further, the extent of the property is so great (being 80 acres, held direct from the Crown), that there is room for the formation of many subsidiary companies, which should mean a return to the existing shareholders of the Moruya of four or five times at least or the amount they have subscribed.

In addition, the expenses of the existing Company are reduced to a minimum, inasmuch as the property is plentifully supplied with timber and permanent water; at the same time, the sea port town of Moruya (co. Dampier, N.S.W.) is only 4 miles distant, therefore the cartage of the silver ores is reduced to the smallest possible sum.

We would mention that the estate has been exceedingly favourably reported on by Mr. Lamont Young, geologist to the New South Wales Government, whose assays from over 100 tons of ore show au average of 5 ozs. of gold per ton. A further assay made at the Government Mint at Sidney yielded 4 ozs. 3 dwts. per ton.

We must not forget to point out that the report of Mr. Young was made *solely for the guidance of the New South Wales Government.*

The eminent mining engineer, Mr. T. Collingwood Kitto has also surveyed the property, fully corroborating the statements of the Government Surveyor.

The Company possesses a thoroughly good working, Directorate (the guinea-pig tribeibeing conspicuously absent) uen, who are all well experienced in the management of mining companies; and the board in Australia is composed of leading local men, Mr. R. D. Adams, of Messrs. Ford, Adams and Co., the well-known Colonial firm, being the chairman.

The latest advices from the property amply confirm the reports of Mr. Young and Mr. Kitto, and every efforts are being used to develop the existing openings as quickly as possible. Besides the 500 tons of ore at grass, the reef at 70 ft. in No. 2 shaft is 5 ft. broad, and immense quantities of ore are available.

A 10-stamp battery with a 25 h.-p. engine is at the mine, and it is intended to increase the number of stamps as soon as possible.

Pending the crushing of the gold ores, the shipment of the crude silver ores (which have yielded very remunerative prices) to Messrs. Vivian and Sons, of Swansea, will be continued.

The prospects of the Moruya Company have been favourably mentioned by all the leading financial papers during the past mouth, aud we strongly advise all our clients to have an interest.

There not many shares on the market, therefore purchases should be made at once, as we auticipate a very substantial rise very shortly. The price for the moment is 13s. 6d., 14s. 6d. An immediate wire would be advisable.

Call options expire 28th January.

Options can be renewed for successive accounts at half the original cost.

Shares sold for one, two, or three months forward delivery on receipt of usual deposit of 20 per cent.

We can with confidence say that we offer more facilities for dealing in mines and miscellaneous securities than any other brokers or dealers in London.

We invite correspondence from shareholders in any Company (whether business is done through us or not), and we are at all times happy to afford the fullest information in our power on matters connected with stocks and shares.

For the accommodation of holders of unquoted, or stocks or shares that are not easily marketable, a short time back we opened a special register, the success of which has been proved beyond our expectations, as by its means buyers and sellers are brought together, and a vast amount of trouble and expense saved to both parties.

We shall be pleased to receive particulars of any stocks or shares to be placed on this register, for which no charge is made, except a small commission when business is effected.

We are at all times prepared to buy or sell mining shares for cash, account, or one, two, or three months forward delivery on the usual deposit of 20 per cent.

OPTION dealing has lately come into vogue, and we can recommend the system, as by its means an operator knows the exact amount which he has at stake, and very often large profits are made which could not otherwise have been obtained without risking large sums.

It is, of course, the small operator who benefits by the Option system, as he is on exactly the same footing as the man who buys and pays for his shares.

For the benefit of those who do not understand this method of dealing, we offer the following short explanation.

We will first deal with a "Call Optiou."—An operator wishes to buy or have a call of certain shares, we will say Almada's, the present price of which for argument sake is 3s. to 3s. 3d. He cannot afford to buy 100, 200 or 300 shares, as the case may be, but he gives 3d. a share for the right of buying them in a fortnight's time at 3s. 3d. If the market goes to 5s. to 5s. 3d. he sells the shares and takes the difference, which would be, on 100 shares, £7 10s. Should, however, the information on which he acted turn out contrary to what he expected, and the market falls to 2s., the whole amount at stake would be only £1 5s., which cannot, under any circumstances, be exceeded.

The "Put option" is just the reverse, and is useful when an operator has reason to think a certain share is going to fall.

The "Double Option" gives the right to either buy or sell at a given price in a fortnight's or a month's time. as the case may be.

For numerous and obvious reasons, therefore, the above system must find favour with those who only wish to risk a certain amouut and get as many shares as possible with the money.

For the capitalist who can afford to buy his shares and pay for them the above is seldom used, as by taking up his shares off the market he helps to lessen the floating supply, and necessarily keeps the market firm.

We are prepared to sell shares outright for cash or delivery in, say, one month, on deposit of cover with us (as security against loss), and at the end of that perrod to deliver the shares on receipt of balance less the deposit.

We transact business in every description of stocks and shares, whether for speculation or investment, and all enquiries for information will receive our utmost attention, although sometimes frou the nature of the questions asked it is not possible to reply by return of post, but enquirers may rest assured their communications are being attended to, and they will receive a reply in course.

In the event of business (we seud wires immediately when necessary), the same is effected free.

We charge no commission on mines, all bargains being done at nett prices as we are dealers.

We beg to inform the public that, being in direct cable communication with the best firms of brokers in the Witwatersrand and De Kaap Gold Fields, we have exceptional facilities for dealing in shares in the above districts.

CONSULTING ENGINEER.
DAVID LEWES, Esq., M.E., Johannesburg.

SECRETARY AND OFFICES.
C. F. HILDER, Esq., 32, HOLBORN VIADUCT, E.C.

THIS Company is formed for the purpose of acquiring and working a property comprising 50 contiguous claims, each measuring 150 ft. by 400 ft., two deep, along the Conglomerate reefs or banket on the famous farm Elandsfontein, Witwatersrandt, about six miles south-east of Johannesburg, South African Republic.

Reports on the property have been made by two well-known mining experts of Johannesburg—viz., Major Robertson of the Royal Engineers, now practising as Surveyor and Mining Engineer, and Mr. David Lewes, M.E., Consulting Engineer to the Globe Mill Company, the Stewart Estate and Gold Mining Company, &c. The statements in this prospectus are taken from these reports, copies of which, and a map and plans, accompany the prospectus.

The following well-known mines are situated on the northern part of the same farm—viz., "Simmer and Jack," "Moss Rose," "Geldenhuis," "Stanhope," and "May," and, having regard to the facility it possesses for cheap working, it is expected that the property acquired by the Company will yield as good results as those mines in the same district, the shares in which stand at the high premiums set out below.

There are three reefs of gold-bearing conglomerate or banket, running nearly east to west through the length of the property on which the out-crop is shown from end to end.

The first or north reef is 10 ft. in width, the middle one 2 ft., and the third or south reef is 4 ft. 6 ins. in width, all being well defined, and accompanied by numerous leaders, and by micaceous sandstone, forming a good roof, and thus, to a great extent, dispensing with the use of timber for supports.

A good deal of developing work has been done on the two northern reefs, and which have been proved to be of lasting value. It is believed that all the reefs will improve considerably both in volume and richness in the deeper levels.

The following is the result of assays made by Messrs. Johnson, Matthey and Co., of the banket taken from the reefs on the property by Mr. Lewes :—

	ozs.	dwts.	grs.	
A ...	10	0	6	Per ton on conglomerate or banket.
B ...	9	7	0	
C ...	6	7	0	
D ...	7	16	0	

The water-right has a fall of 46 ft. 9 ins. in a total length of 1,112 ft., and has a present volume of 11,160 gallons per hour, and, when a dam is constructed at the point shown on the plan, it will give a sufficient supply to work 40 stamps throughout the year.

From the lay of the property, the reefs can be worked from adits, which can be put in close to the battery site; and Major Robertson, R.E., says—"I calculate that upwards of 110 ft. of stoping can thus be obtained from each reef without either hauling or pumping gear, giving upwards of 2,329,250 tons of ore, or sufficient for 40 stamps (at 2 tons per stamp) per day for a period of 93 years."

Major Robertson estimates the cost of working at 14s. per ton, and taking as a basis of calculation the small return of 10 dwts. per ton, which is even lower than that obtained from a crushing of 50 tons of mixed surface stuff, he concludes his report with the following expression of opinion :—

"I consider the property will be found to be a very valuable one.

"That it will give a yield quite equal to the results of the trial crushing, and this with 40 stamps, working 312 days per annum, will equal an output of not less than 24,960 tons, which, if calculated at 10 dwts. value, gives £43,680, or, after deducting working expenses, a balance of £25,208 per annum.

"It must, however, be remembered that the trial crushing was from surface workiugs, and that the above is calculated thereon. I am inclined, however, to believe that the reefs will be found more valuable at the lower levels, and that the annual balance will exceed the above estimate by not less than one-forth.

Taking into consideration the probable high value of the reef as it goes deeper, which is found to be almost universally the case in the Witwatersrandt district, and considering that the ore can be worked at so small a cost, the directors confidently believe that the statement made by Mr. Lewes in concluding his report—"That the 40-stamp battery can be kept continually at work with excellent returns and a certain monthly dividend"—will be fulfilled.

The following is a list of the *whole* of the mines in this district (Witwatersrandt) as given by the *Financial News* of 31st January inst., and the prices show the appreciation in which the £1 shares of these mines are held by investors.

The price to be paid for the property is £58,000, of which £25,000 will be in fully-paid shares and the balance in cash.

The contract of purchase is dated the 25th day of January, 1889, and made between Charles Frederick Hilder, as agent for and on behalf of the Aurum Gold Mining, Prospecting, and Developing Syndicate, of Johannesburg, of the one part, and Robert Spence, as trustee for the Company, of the other part.

The vendors will provide all the preliminary expenses of the formation and bringing out of the Company, and the issue of its capital, and they have reserved to themselves the right to enter into, and have entered into contracts and arrangements with third parties for this purpose, and for guaranteeing the subscription of part of the capital of the Company, and there are also other arrangements between part owners and parties interested in the property and the purchase-money, to none of which the Company is party. As these contracts and arrangements may, technically, be contracts within the meaning of section 38 of the Companies Acts, 1867, applicants for shares shall be deemed to have notice thereof, and to have waived any fuller compliance with such section with reference thereto.

The memorandum and articles of association, the agreement of purchase, the maps and plans of the property, and the reports by Major Robertson, R.E., and Mr. David Lewes, M.E., and the other documents referred to in this prospectus, may be seen at the offices of the Company.

Application for shares should be made on the accompanying form, and forwarded to the bankers of the Company, together with the amount payable on application.

Allotments will be made as far as practicable, pro rata, but where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than that applied for, the surplus will be credited to the payment due on allotment.

Prospectuses and forms of application for shares can be had from the bankers, the brokers, and at the offices of the Company.

London, 31st January, 1889.

THE MINING MARKET.

City, Friday Evening.

SOUTH AFRICANS BOOMING—INDIANS SHOW AN ACTIVE MARKET—COPPER SHARES FLUCTUATE, BUT CLOSE FIRM—HOME SHARES UNSTEADY.

The Mining Market has again been eventful, chiefly from its South African side, but to some extent Indian shares have attracted notice, and, according to the tone at the finish, seem likely to do so still more next week, when important crushings will be announced. South Africans have advanced by leaps and bounds. However one may admire the courage of people who are buying De Villiers upon a rise of 10*l.* on the week, one would speak with all reserve as to their prudence. No speculator in mining seems to consider himself happy whose quiver is not full of these shares, and of those of Ferreira, Heriot, Johannesberg, Pioneer, Jumpers, Salisbury, and Stanhope. Remarkable to state that South Africa has become so great a centre of attraction that speculators from all sides of the house and notably from the American department, are joining in the wild gamble which is the astonishment of all who have not quite lost their heads. The day of reckoning is spoken of, but prices, as they close to-night, show that it is yet far off. We give below the remarkable advances that have taken place in these shares, as compared with which the few declines that are to be noted, sink into insignificance.

The flow of new companies has not been quite so pronounced this week, though the tendency to "rush" the public is as great as ever. It is not fair to ask the public in a few hours, before even the application form has reached them, to make up their minds as to the merits of the properties offered, and the shares for which they will apply.

In an article in another column the general position of the Indian mines is discussed, and need not, therefore, be reverted to here.

There has been a great deal of activity in copper shares, principally of a downward kind. Rio Tinto receded at one time to 19, but partially recovered. The price of the metal fell 4*l.*, but closes to-night at nearly its old price—78*l.* Events in France during the past few days have unsteadied commercial affairs, and it was not to be expected that the syndicate could entirely escape. It is a noteworthy feature, however, that strength is always given to it at the opportune moment, so that it holds on its way, despite much misrepresentation and a great deal of false prophesying. The sales of Rio Tinto Shares were principally made by French speculators. The general position of the Copper market is discussed in an article we devote to the subject.

In the Queensland market there have been no special features.

Foreign shares have moved unevenly, but the general tendency has been to firmness, particularly in those of the low-priced class.

Home shares have been shaky and prices have not been well maintained, notwithstanding the firmness of tin and lead. We are glad to report an important discovery in Devon United Mines. In sinking the engine shaft a deposit of copper has apparently been fonnd which a correspondent describes as "the most important discovery that has been made in Devonshire for many years." It is not far from Devon Consols where enormous riches were found years ago, which advanced the shares of that mine from 1*l.* to 800*l.* Devon United shares certainly appear to be worth watching.

Africans.

The cry of the South African market is upward! as regards prices. De Villiers (Robinson) have touched the highest prices this week they have ever been, viz., 70*l.*, but do not close so good. Jumpers have been dealt in at 18, but close at 17¼. 17⅜. Salisbury have changed hands at 39, but close 37, 38. All of the above are, in our opinion, far too high, and it might be judicious to take profits. The lower priced shares, however, are worth attention, such as Goldfields, Crown Reefs, Van Ryn, Mainreef, and Moss Rose.

The following have risen :—Orientals, ⅛; Pigg's Peak, ½: Horo Explorations, 1/16; Aurora, ¾; Bankets, ¼; Bothas, 3/16; Central Langlaagte, ⅜; City and Suburban, ¾; Crown Reef, 1½; Crœsus, ¼; Dornkop, ¼; De Villiers (Robinson), 10*l.*; Durban Roodepoort, 1*l.*; Ferreiras, 3½; Geldenhuis, 1⅜; Goldfields of South Africa, 3/16; Golden Kopje, ¼; Heriot, 3*l.*; Henry Nourse, 1¼; Johannesburg Pioneer, 2½; Jubilee, 1¼; Jumpers, 2⅛; Knights, ⅜; Mainreef, 13/16; Ditto United Roodepoort, ⅛; Mays, 20s.; Modderfontein, 3s.; Moss Rose, ⅝; Nabob, ½; Oosthuizen, ¼; Royals, ¾; Salisbury, 3½.; Simmer and Jack, 1¼; Spes Bona, ⅝; Stanhope, 3⅛; Star, ⅜; Van Rhyn, 5/16; Vogelstruis, ⅛; Wemmers, 1⅝; and Wolhuters, 20s. The only fall being in the following :—Shebas, 1/16; Moodies, partly paid, ¼; Ditto, fully paid, ½; Great Britain, 5/16, and Morkel, 1/16.

The closing prices are as follows :—

Diamonds.

There has been very little business doing in Diamond Shares this week, and prices generally remain the same as carried over on Tuesday last, the exception being that De Beers have risen, and, after being 17⅜ buyers, to-day close 17⅛, 17⅜.

The following are the making up prices :—Anglo-African, 4⅜ ; Bulfontein, 4¼ ; De Beers, 16¾ : Gordon, 1 ; Griqualand, 6¼ ; London and South African Exploration, 17 ; New Jagersfontein, 14½.

The closing prices are as follows :—

Anglo-African	4¼	—	4½
Bultfontein, new shares—	4¼	—	4⅜
Central Dorsfontein	8	—	10
De Beers Consolidated	17⅛	—	17⅜xd
De Beers Consolidated Five-and-a-Half per Cent. First Mortgage Debentures	97	—	98xd.
De Beers Options end February	1⅛	—	1¼
end March	1⅜	—	1½
end April	1⅝	—	1⅞
Gordon Diamond	19/	—	21/
Griqualand West	6¼	—	6½
New Consolidated	23/6	—	24/6
New Jagersfontein	14½	—	14¾
South African (Pullinger)	17/	—	18/
Spes Bona (Bultfontein)	6/6	—	7/6
United	2⅜	—	2⅝
United Jagersfontein	18/	—	19/
London and Orange Free State Explor.	6¾	—	7
London and South African Exploration	16¾	—17	x rights xd
Read's Drift Land Co.	2¼	—	2¾

Indians.

There has again been a considerable amount of business done in the Indian mines during the past week. The account has shown a good sound investment business, and a shortness of stock amongst the dealers, the result being that several of the shares have had a rise in price. For instance, Goldfields of Mysore have risen ¼, Mysore Gold, ⅛ ; Nine Reefs, 3s. 6d. ; Ooregum Ordinary, 1/16 ; Ditto Preference, 3/16 ; South-East Mysore, 2s. ; and 6d. in Glenrock, Indian Consolidated, and Mysore-Wynaad.

The market closes very firm, and there is every prospect of higher prices ere long.

Foreign Shares.

There have been considerable dealings in low-priced foreign shares, and, taken all round, the tone of the market has been more healthy than for some time past. In a number of instances quotations have advanced. For example, a rise has taken place in Balkis of 1s. 6d. ; Barretts, 6d. ; Colombian, 2s. ; Don Pedro, 1/16 ; El Callao, ½ ; Montana, 3/16 ; New Hoover, 6d. ; Organos, 9d. ; Orita, 1/16 ; and Tetuan, 1s., whilst a fall of 6d. is shown in Callao Bis, Carlisle, Dickens, New California, Viola, and West Argentine, ⅛ Old Lout, and ¼ Richmond.

Copper.

There have been very considerable fluctuations in the prices of Copper shares this week, the lowest quotations being touched on Tuesday and Wednesday. Rio Tinto changed hands at as low as 19½, and other shares fell in proportion. There has, however, since been a decided recovery, and on the week a rise of ⅜ is shown in Cape Copper, ¼ Copiapo, ½ Libiola, ½ Mason and Barry, ⅛ Namaqua, ⅛ Panulcillo, and ⅜ Rio Tinto ; the only fall being in Quebrada, of ¼.

Australians.

This market is for the moment simply a dead letter, hardly any shares changing hands : hence quotations are without variation. The only changes of note are a slight rise in Livingstone and Mosman, and a fall in Cumberland and Day Dawn P.C.

The following list shows the principal changes in the mine which have taken place :—

	Last Week.		This Week.	
Carn Brea	11¼	11¾	12	12½
Cook's Kitchen	10	10½	11¼	11⅜
D'Eresby	¼	⅜	⅜	⅝
Dolcoath	102	103	102½	103½
South Crofty	7¼	7½	7¾	8¼
West Frances	8½	9	9	9½

LATEST FROM THE MINES.

Indian Mines.

Balaghat Mysore.—The company have sold to Messrs. N. M. Rothschild and Sons the gold produced at the mine during December, 1888 (295 ozs.) for 1,117*l.* 11s.

The Indian Gold (Glasgow). — Following cablegram :—"Crushed 300 tons 57 ozs."

Colonial Mines.

Disraeli.—Cablegram from the manager at the mine :—"We have struck lode 790 level ; looking well ; ore in winze is improving ; prospects are encouraging ; will give particulars in letter."

Gympie Great Eastern.—A cablegram from the mine, dated January 31st, gives the result obtained during the past month, viz. :—24 days crushing, 580 tons, 960 ozs. ; value 3,360*l.* ; profit, 2,400*l.*"

MOSMAN.—The directors have declared an interim dividend of 1s. per share, payable on and after the 15th inst. The transfer books will be closed from the 9th to 15th inst.; both days inclusive.

HOME MINES.

CARN BREA.—The accounts for the 16 weeks showed a profit of 49*l*. There was a balance in favour of the adventurers at the last account of 788*l*., now increased to 837*l*.

TINCROFT.—The accounts for the 16 weeks showed a total credit of 11,400*l*., showing a profit on the 16 weeks' working of 1,831*l*., which was increased by a balance of 1,423*l*. at the last account to 3,254*l*. A dividend of 5s. per share was declared.

FOREIGN MINES.

CONSOLIDATED ESMERALDA.—The superintendent reports, by cablegram, received 30th ult., that he is just cutting into the ledge, 120 ft. south on the 375-ft. level. The delay in striking the ore chute has been caused by a fault in the ledge of 23 ft. It has the appearance of a good body of ore.

DON PEDRO.—Telegram (January 23rd): "Sinking progressing very satisfactorily."

NEW RUSSELL.—The returns for the fortnight ended January 26th are as follows:—Tons crushed, 256; gold produced, 30 ozs., the result of 15 stamps only.

PINOS ALTOS BULLION.—The out-turn for the week ending 26th inst. was $12,000.

UNITED MEXICAN.—Telegram:—"Negotiation of San Cayetano. Gross returns week ending 19th January $10,500; net returns week ending 12th January, $3.070. Negotiation of El Cuba: Gross returns week ending 19th January, $3,160; loss week ending 12th January, $2,510. San Cayetano property: Gross returns week ending January 26th, $11,500; net returns week endiug January 19th. $2,420. El Cubo property: Gross returns week ending January 26th, $2,210; loss week ending January 19th, $3,600."

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES SEE PAGES 184 AND 185.

METALS.

COPPER has been unsettled. On Monday the syndicate brokers were buyers of g.m.e. at 77*l*. 5s., cash; and business was done at 77*l*. 6s. 3d. On Tuesday they declined to buy, and business was done from 76*l*. to 73*l*. On Wednesday they again bought, and prices improved to 77*l*. 10s., which was the price yesterday. To-day, the syndicate brokers still offer 77*l*. 10s., cash; three months, quite nominal; no buyers. The visible supply to-day is given as 108,526 tons against 104,105 tons on the 1st January. Wallaroo and Burra nomiually, about 86*l*. We quote English tough at 77*l*. to 79*l*. Best selected, 78*l*. to 80*l*. Strong sheets, 83*l*. India sheets, 80*l*. Yellow metal sheets, 7¼d. Ore, regulus, &c., 14s. to 16s. per unit.

TIN is fairly active. Straits declined to 96*l*. 10s. cash, but has improved to 98*l*. 5s. cash and 99*l*. three months, closing with buyers at these prices. The arrivals in January were 2,470 tons, the deliveries 1,465 tons, and to America 140 tons. Stock, 5,379 tons. Visible supply, 14,373 tons, against 14,802 on the 1st January. English ingots, 100*l*. The Dutch sale went at an average of 58½fl.; parity, 97*l*. 15s. per ton.

TIN PLATES easier. 13s., 13s. 3d. quoted for ordinary coke, Liverpool.

SPELTER quiet. 17*l*. 17s. 6d. to 18*l*. for ordinary brands, ex ship here.

LEAD has been dull. Soft Spanish, 12*l*. 17s. 6d.; soft English, 13*l*. 2s. 6d., 13*l*. 5s.; L.B. China pigs, 14*l*.

QUICKSILVER.—Rothschild still quotes 9*l*. 10s.; seconds, 8*l*. 7s. 6d.

ANTIMONY dearer. Smelters quote 50*l*.; second hand lots, 46*l*., 47*l*.

LONDON METAL MARKET.

4.50.—Closing official report.—Copper: Chili bars, cash, 77½, 8; G. M. brands, cash, 77½, 8; best selected, 78, 9; strong sheets, 82; English tough, 77½, 8. Tin: Fine foreign, cash, 98½, 9; three months, 99, ½; Australian, 98¾, 9¼; English ingots, 101. Spelter, 17⅞, 16

GLASGOW PIG IRON MARKET.

3.14.—Business at 40s. 10½d., 40s. 10d., 40s. 10½d. cash; 41s. 1½d. one month; closing buyers, 40s. 10d. cash; 41s. ½d. one month; sellers, ½d. more. Market quiet, moderate business. Middlesbro' done, 33s. 9d. one mouth; closing buyers, 33s. 6½d. cash; 33s. 9d. one month; sellers, ½d. more. Hematite, closing buyers, 44s. cash; 44s. 3d. one month; sellers 1d. more.

COMMERCIAL NOTES.

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 4,154*l*.; Eastern and Midlands, 70*l*.; Great Northern, 3,025*l*.; Great Western, 7,500*l*.; Hull and Barnsley, 133*l*.; London and North-Western, 8,100*l*.; London and South-Western, 1,299*l*.; London, Chatham and Dover, 888*l*.; Manchester and Sheffield, 1,714*l*.; Metropolitan, 542*l*.; Midland, 2,663*l*.; North British, 3,956*l*.; North-Eastern, 13,056*l*.; and North Staffordshire, 574*l*.

The Brighton Railway traffic return for the past week shows an increase of 1,305*l*., and the South-Eastern an increase of 1,128*l*.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases: London Street, 84*l*.; Provincial, 665*l*.; London, 32*l*.; North Metropolitan, 563*l*.; Belfast, 212*l*.; Sheffield, 118*l*.; Calcutta, 44*l*.; Imperial, 39*l*.; Sunderland, 36*l*.; Swansea, 15*l*.; Continental Metropolitan, 31*l*.; Glasgow, 162*l*.; Gothenburg, 42*l*.; Bristol, 136*l*.; German, 48*l*.—Decreases:—Southampton, 8*l*.; London Southern, 21*l*.; Hull, 17*l*.; South London, 64*l*.; and Calais, 5*l*.

MISCELLANEOUS.

Ceará Harbour Debenture Bonds, with coupons attached, will be exchanged for fully-paid scrip on and after Feb. 1st, at the offices of the corporation, St. George's House, Eastcheap, London.

The numbers are published of the First Mortgage Debentures of the Borax Company drawn for repayment.

The letters of allotment in the Sutherland Reef (Limited) have been posted.

At the meeting of the shareholders of the Royal Exchange Bank, Limited, held on the 28th January, Sir E. J. Reed, K.C.B., M.P., in the chair, a dividend at the rate of 4 per cent. per annum was declared for the past half-year the same as was paid for the previous six months.

Messrs. Matheson and Co. are posting to-night the letters of allotment and regret in the Delhi, Umballa, Kalka Railway Company, Limited.

The numbers are anuounced of 27 Six per Cent. First Mortgage Debentures of the Borax Co., Limited, which have been drawn by lot, and will be paid off at the offices of the company, with a premium of 20*l*., on July 1st, 1889, after which date interest on them will cease.

Coupons of the Imperial Property Investment Co. and the House Property Co. of London, due February 1st, will be paid on or after that date at the Royal Bank of Scotland, Bishopsgate Street Within, E.C.

The numbers are published of bonds amounting to 4,400*l*. of the Norwegian 4 per cent. Loan of 1880, drawn for payment on the 15th of February at the counting house of Messrs. C. J. Hambro and Son.

The letters of allotment and regret in Elmore's Patent Copper Depositing Co. have been posted.

REPORTS OF MEETINGS.

ALTURAS GOLD, LIMITED.

RE-CONSTRUCTION DECIDED ON—MINE LOOKING BETTER—UNANIMOUS VOTE OF THANKS TO AND CONFIDENCE IN COMMITTEE—DIRECTORS IN HARMONY WITH COMMITTEE, AND ALL WORKING FOR THE GOOD OF THE SHAREHOLDERS.

An extraordinary general meeting of the members of this company was held at Winchester House, Old Broad Street, yesterday, for the purpose of considering, and if thought expedient, of passing, with or without modification, the following special resolutions :—

(1.) "That Alturas Gold, Limited, be wound up voluntarily."

(2.) "That the liquidator or liquidators be, and he is or they are, hereby authorised and directed to sell and transfer to a new company, to be incorporated with limited liability under the Companies Acts, 1862 to 1886—All and singular the lands, hereditaments, mines, mining rights and claims, buildings, plant, machinery, stores, ores, underground or at surface, bullion, and all other property and effects of this company of every description whatsoever, upon the following terms and conditions :—(*a.*) The name of the new company shall be such as the liquidator or liquidators may approve, and the nominal capital thereof 300,000*l.*, in 300,000 shares of 1*l.* each, with the usual power to increase and reduce the same. The memorandum and articles of association of the new company shall also be subject to the approval of the liquidator or liquidators. (*b.*) The consideration for the said sale and transfer shall be—(1.) The payment and satisfaction by the new company of the debts and liabilities of this company. (2.) The payment of the costs of and incidental to the winding-up of this company, and of and incidental to the formation and registration of the new company. (3.) The payment of the sum of 300,000*l.* by the allotment to the liquidator or liquidators, or to his or their nominees, of 300,000 shares of 1*l.* each in the new company, credited with 17s. paid thereon, and leaving a liability of 3s. per share, and no more."

(3.) "That the liquidator or liquidators be, and he is or they are, hereby authorised and directed to procure to be allotted to every member of this company requiring the same, one share in the new company with 17s. credited as paid thereon, for and in respect of every share held by him in this company. Provided always that to entitle the members of this company to an allotment of such new shares, application must be made for the same in writing, accompanied by a payment of 6d. per share on the number of shares applied for within 10 days next after the posting of a notice requiring him to apply for the same ; and, if no such application is received by the liquidator or liquidators within the time limited as aforesaid, the right of such members to an allotment of shares in the new company shall be absolutely at an end."

4. "The liquidator or liquidators shall have the right to dispose of any shares which the members may neglect or refuse to apply for or take as aforesaid (including the balance remaining after satisfying the claims of the members), to any person or persons at such price (if any), and upon such terms and conditions as such liquidator or liquidators may think fit. Provided always that the said liquidator or liquidators shall offer all shares not so applied for or taken as aforesaid in the first place to the shareholders of this company who may have previously subscribed for shares under the terms of this scheme."

5. "That the liquidator or liquidators be at liberty to continue the works and business of the company pending the completion of the sale to such new company, and to pay the cost thereof out of the assets of this company."

6. "That the liquidator or liquidators be authorised to enter into a contract in the form now submitted to the meeting, with or without modification, for the purpose of carrying the above arrangement into effect."

George Forman, Esq., chairman of the company, presided.

Mr. A. Harvey (secretary) was suffering from a bad cold, and

Mr. Shewell read the notice calling the meeting, and the report of the committee, which was published in extenso in last week's Mining World, was taken as read.

OBJECT OF THE MEETING.

The Chairman : As you are aware, this is an extraordinary general meeting, for this specific purpose, as set out in the notice convening the meeting. I think it as well that I should explain to you that there are some slight alterations from these printed resolutions, which the solicitor will hereafter read and explain. I cannot do better than commence by moving the adoption of the first resolution :—"That Alturas Gold, Limited, be wound up voluntarily."

AN HOUR'S ADJOURNMENT.

Mr. Brotherton : I must disturb you for a moment, Mr. Chairman, before we go further. My reason for doing so is that I feel it part of my duty, as one of the largest shareholders and also creditors of the company, to bring before the shareholders certain matters which I wish to have cleared away before proceeding to the business the meeting has been called to transact. The report of the committee, dated December 28th, has been in our hands something like a fortnight. This extraordinary meeting is called to transact the business set forth in the notice, and my wish is, and also my proposal, "That this extraordinary general meeting be adjourned for the period of one hour, or less, for the purpose of discussing the matters contained in the report of the committee, and also for the purpose of eliciting further facts from the committee which we have not yet been placed in possession of." You will no doubt remember that at the last meeting certain charges and allegations were made against the directors and officials of this company, and that a committee was appointed to investigate them. Now we find on getting their report we have no result of their labours, and I must, therefore, ask that this meeting be adjourned for the purpose of eliciting from the committee the information they were appointed to obtain.

Mr. Camell : I second the motion.

The Chairman : I will put that motion to the meeting.

The Chairman was about to put the motion when

Mr. Gretton said, what is the object of this motion ?

The Chairman : To enable the shareholders to discuss among themselves the report of the committee, and also this scheme for construction. If the shareholders desire one hour for this purpose I am quite at their service.

Mr. J. H. A. Smith : Will you say whether the directors have formed any opinion on the matter ?

The Chairman : I am entirely in the hands of the meeting, to do exactly as they wish.

A Shareholder : Is it the wish of the committee that we should have this determined ?

A DIFFICULT POSITION.

The Chairman : I should think that this idea of adjournment is as new to the committee as it is to me. I must, however, keep you in order. You must support me, (Cheers.) I have a very difficult task to perform to-day. (Cheers.) There are very conflicting interests, and I rely upon every gentleman here to assist me in my endeavour to conduct this meeting in an orderly and proper manner. (Cheers.) I must rule that there has been a motion proposed which has been duly seconded, and which I should have put to the meeting, before now if I had not been interrupted. I shall consider that motion carried ; and if you wish the board to retire while you discuss matters among yourselves, we will do so. (Cries of "No.") Otherwise, I am entirely in your hands.

A Shareholder : We do not wish to vote in the dark. We think we ought to hear some remarks from the committee.

AN EXPLANATION.

Mr. Brotherton : I will explain my reasons. The committee of shareholders was appointed to investigate charges and allegations made against persons connected with the company, and they have issued a report which they call "an interim report." The report does not attempt to give us information respecting the charges which Mr. Kyshe brought against the officers of this company at the last meeting. I have had the pleasure of attending before the committee twice or thrice, for the purpose of enlightening them on certain facts concerning which they wanted evidence. Whilst I was before them I also had the pleasure of meeting Mr. Kyshe, and hearing his allegations, a number of which were thrashed out in my presence. We got no result from this report as to what conclusion the committee have come to in respect to those

ALLEGATIONS AND CHARGES.

Now, I say that the stigma which was cast on the board of directors has been allowed to rest upon them for over five solid weeks, and it ought to be removed now, or stick to them for ever, and this committee have not done their duty to us by not telling us whether our directors are honest men or the reverse. I have taken my present course for the simple reason that I could not conceive it possible that gentlemen who have represented this company should sit behind this table with this stigma resting on them, and, therefore, I say it is wrong we should go to the special business until we have settled this business. I saw the committee yesterday afternoon. I represented to the committee that it would be most suicidal for them to come to this meeting and allow these things to pass by unanswered, and allow the directors to sit here without having a chance of being justified in respect of these matters. I elicited from them, however, that it was not their intention to say anything more than they have said in their report, and, therefore, if we spend an hour in getting at the truth, I think we shall have done justice to the directors, justice to the shareholders, and justice to the committee also. We are led to believe by this report that they have taken five solid weeks in settling this scheme of re-construction. Gentlemen, it would not take 48 hours, and yet we have no result as to their investigation. Do they want us to believe that the whole five weeks has been spent upon this scheme, because if so, the sooner we have done with this scheme, and also with the committee, the better. Why do not they tell us the full result of their investigation. We have an auditor, whose character and ability are at stake, and we have respectable gentlemen on the board whose honesty has been impeached, and it is too serious a thing to pass over ; when we have settled this matter then we can go with better heart to the re-coustruction scheme.

I AM ONE OF THE LARGEST CREDITORS OF THIS COMPANY.

A friend of mine has lent the company 10,000*l.*, and I have lent 5,000*l.*, and shall certainly oppose the voluntary winding up of the Alturas company as a creditor for the purpose set forth, unless the committee can give me some satisfactory statements as to their labours, and unless this waste of time comes to an end. On the other hand, I am perfectly willing, and so also is my friend, to show the company leniency, for which purpose we have extended our bills for nine months, if this thing is concluded quickly. But otherwise I shall put a petition on the file to wind up the company, and sell the property to pay the creditors. (Oh !) I do not wish to do any such thing. (Hear, hear.) And

IF I HAVE THE SUPPORT OF THE SHAREHOLDERS,

I will do no such thing, but I will not go on in the dark with a report of this description ; I therefore say that these gentlemen of the committee in justice to themselves and to us must give us more information before I will stand by them or by the directors or by the company any longer.

A Shareholder : Will not some member of the committee speak ?

Mr. J. H. A. Smith : We would rather hear what the shareholders have to say first.

Mr. John Gretton : It is not advisable perhaps to continue this discussion any further than absolutely necessary. But it is useful to remember that the interests of shareholders may not be the interests of creditors. The gentleman who has just spoken has been candid enough to inform us that he is a creditor, consequently you must consider that as a very important feature in the course you will be prepared to take. That gentleman has also made a challenge to the committee, and I must say if no member of the committee stands up now and gives some answer I must regard that as very ominous. I shall be only too happy to support the committee, because they were appointed by a meeting of shareholders legally and properly called, though on an inconvenient day. I am therefore prepared to receive their report to a certain extent as bonâ fide.

Mr. Brotherton : There is no report.

VIEWS OF A BARRISTER.

Mr. Gretton: I have received a report, so it is useless to say there is none. There is no necessity to go into quibbles; try to speak to the main point. There is a report, although you may qualify it by any adjective you thiuk proper. These gentlemen have made a statement that the position of the company is urgent, and that they have not been able to go iuto the matter of the charges and allegations. These can always be gone into at a later period, and much better by the liquitator than by the directors, because in the former case the report lays down certain rules by which the liquidator is bound. Therefore, the company, in the hands of the liquidator, is much more jealously guarded than in the hands of the directors, and he can go into details as to the past conduct of the company. I regard the past as open to great question, either from the point of view of frand or incapacity—I will not say which. The liquidator will also ascertain whether the claims upon the property are correct or not; and if you want to protect what you have, it seems to me the committee have arrived at a very sensible couclusion to this effect—that they had better settle with these creditors as soon as possible, or else they will take possession of your property, and your money will be lost. They will simply, for the sake of 5,000*l.* or 10,000*l.*, take possession of a property that has cost an enormous sum of money.

AMERICAN HABITS.

In America such things are not unknown. Only the other day, acting for a client of mine—I am a barrister—when some 10,000*l.* had been borrowed upon a company of which the capital was 200,000*l.*, there was a quiet phrase in the letter saying "Remember, gentlemen, we can re-construct the company if we like." On inquiry I found that that meaut that the creditors could come down upon the property, and confiscate the whole for the 10,000*l.* or 20,000*l.* that was borrowed. I know no one in this room, but I have sent letters to the secretary, always couched iu an amicable spirit. I have never attacked the company, but have invested my money in it—paying a large price for my shares. I think, as shareholders, the thing to do now is to act wisely. The committee have arrived at this decision, that in order to protect your property they require funds, so as to get rid of the creditors, but I should uot be at all surprised (because this is consistent with American habits) if those creditors endeavoured for the money they have lent to get back a property for which you have paid 300,000*l.* for debts of 10,000*l.* or 20,000*l.* That is a thing you must try to prevent, and

I THINK THE BEST THING YOU CAN DO IS TO ADOPT THE SCHEME,

and leave the matters in the hands of the liquidator. If you are dissatisfied with him you have only to go to the Court, and make a winding-up compulsory, instead of voluntary, and I will assist you, and you need not pay me any fees for so doing, for a barrister cannot recover his fees. The real question is, does the scheme of re-construction meet your wishes or does it not? If it does not let some gentleman get up and propose a better one, but bear this distinctly in mind that it does not follow that your interests and those of the creditors are identical.

Mr. Brotherton: My name is not unknown to the shareholders. They have to a certain extent to thank me that they have the title to their property. I am not the vendor.

A Shareholder: You are very much interested.

Mr. Brotherton: I was he who protected the shareholders in spite of the vendor, and if you want to know why the company owes me money, they owe me because it was legitimately lent to carry on mining operations. (Cheers.) I leave it with the board of directors to state whether they have any suspiciou as to my bonâ fides. (Cheers.)

A Shareholder: I must really ask a member of the committee to say a few words to us, and in doing so I think the speech of Mr. Gretton places us under an obligation. We may not have the details, but we certainly want a few general statements.

VIEWS OF THE COMMITTEE.

Mr. J. H. A. Smith, who was heartily received, said: Gentlemen, I have delayed speaking to you before because I thought it was necessary that we should gather, as far as possible, the precise points upon which information was wanted; and up to the moment of rising, Mr. Brotherton, who is smitten with a sudden tenderness for the reputation of the directors, which is not felt by the board, has alone intimated what information has not been given. We were in communication with the directors and with him yesterday afternoon, and had not the slightest information that anything of this kind was to have been proposed. The board have met us on all occasions with the utmost courtesy. They have given the clearest replies to our questions, and every book, paper and document have been placed before us, whilst all the information that we were able to ask for has been supplied. I had no wish to go into this question, but as it has been forced upon me. I must take it up. It was suggested that our report was not what certain people expected. Now, at the last meeting I made use of an expression that unfortunately "a trail of suspicion followed everything that was connected with the Alturas Company." Unfortunately or fortunately the latter I think—we have also been crossed by that same trail. We hear from Mr. Brotherton and another gentleman that there is grave reason to be dissatisfied with the bonâ fides of our reports, with ourselves, and with everything about us. I am pretty well-known to some of you. (Cheers.) And with those gentlemen

I AM PREPARED FEARLESSLY TO LEAVE MY REPUTATION.

(Loud cheers.) I do not know whether Mr. Brotherton intended to make a personal attack upon me, but if he did I am willing to be judged by the report which we shall ultimately issue, and allow the shareholders to decide upon any difference there may be between us. (Cheers.) Passing from these personal matters—and I hope they are the last we shall hear of to-day—I may remind the meeting that we were appointed on the 28th of December—Friday evening—the meeting finished about four o'clock, and at five o'clock I commenced my inquiries. My colleagues did me the honour to elect me chairman, and, therefore, if I use the personal pronoun very often, understand it is not from egotism, because the views I express are those of the whole of the committee, for we have acted together in perfect harmony. We then found that absolute action was necessary; that there was no time to lose. On Monday, December 31st, we held our first formal meeting. Let me read you the minute taken down from dictation and approved by the directors.

A CRITICAL POSITION.

"The directors stated the financial position of the company was that 15,000*l.* was due on loans to this company, and 4,600*l.* estimated in America—the assets being nil; that arrangements must be made by to-morrow, the 1st of January, for liquidating the American liabilities." I think the directors will confirm me that we were told unless they were paid on the following day our property was gone. It was nonsense in such a state of things to think of investigating the charges and allegations of Mr. Kyshe; we had to face the financial difficulty which threatened to overwhelm us. As business men we directed our attention to that which most earnestly demanded it. (Cheers.) It was evident that some steps must immediately be taken, or the property would be gone. The advices of the superintendent were urgent and positive that money must be remitted immediately. Pressure was brought to bear upon us, and we said that the board should have brought this matter before the shareholders at an earlier date. We at that meeting settled the lines of policy we would recommend, and asked that it should be placed in the hands of the solicitors.

AN ACTIVE COMMITTEE.

Thus you see that within three days of our being appointed we had considered the scheme of re-construction, and appointed another meeting, when we would attend to receive the draft, and approve the proposals to be submitted to you. Mr. Brotherton says we took five weeks—gentlemen, we did not take five days. Is it possible to have greater promptitude by a committee than that? (Cheers.) What delay has happened has not been on our behalf. I am not accusing the directors. Far from it. They have worked loyally, and been frank and fair in all their dealings with the committee. (Cheers.) I am quite sure the directors do not support this attack made upon us to-day. (Cheers.) If we were drawing large salaries, and taking our time over things we should come here and receive a vote of thanks, but because we are men of business who have sacrificed our own business in looking after yours, we come here and are told that we have delayed this scheme for five weeks. You will recollect that

MR. KYSHE MADE GRAVE CHARGES

against the whole board, the officials, and everybody connected with the company. We asked him to attend a meeting and give us definite details of what was the nature of the peculations to which he referred. We had a meeting with that gentleman of four hours' duration, and did not get very far. Fourteen or 15 persons were present, and as each individual wished to express his views time was occupied without any very definite result being arrived at. We directed ourselves to two points out of 50 subsequently submitted—(laughter)—and then suggested that it would be better for him to reduce his accusations to writing, when we would consider them at a future meeting. Mr. Kyshe did so, and here they are (holding them up) writing in a close hand, and occupying 16 pages of foolscap. You know, gentlemen, that it is easy to put in two or three lines matters which might take two or three volumes to contradict or explain. (Hear, hear, with laughter.) You may say, in a phrase, "the moon is made of green cheese," but it would take you a long time to prove it was not. (Laughter.) Meanwhile, were we to wait to investigate and report upon all the matters before us while creditors were at the gate? We found that the directors were placed in a very unpleasant position. Charges have been made against them, and, as Mr. Brotherton has said, a public stigma is resting upon them, and no doubt the sooner that is cleared off the better, but at the same time these

FINANCIAL MATTERS WERE OF THE UTMOST URGENCY,

and were placing the whole interest of the company in jeopardy, hence we had first to turn attentiou to matters of finance, and were constantly pressed to do so. Do not misunderstand me; do not think that I am saying for a moment that the directors came to us with a view to bury the enquiry, for it is not so; but we had to face the reality of the position. Mr. Brotherton came to one of our meetings, and was the loudest as to the waste of time that was going on, and said that the financial matter was the one that was pressing, and that the other matter might wait; otherwise we might wake up one fine morning with the unpleasant fact that

WHILST WE WERE DELIBERATING THE PROPERTY WAS BEING TAKEN FROM US.

On the 17th of January we got the draft resolutions and contract from the solicitor, but they were in such a state that we could not adopt them. We declined to go on, and after consultation with the directors, the matter was drawn up again, and on the 22nd January we held another meeting, at which the scheme was settled. I think that pretty well disposes of the question of delay—within three days of our having first seen these resolutions, we had considered them, revised them, and requested them to be given to the solicitors in the revised draft; and within 24 hours of our having had the matter settled we had held another meeting of the committee, and had agreed to draw up our report, which we signed and forwarded to you.

A Shareholder: Has the money been paid on the other side?

Mr. J. H. A. Smith: I was coming to that As to these charges—Mr. Brotherton was present whilst several of them were disposed of, and whilst several of them were not disposed of.

Mr. Brotherton: That is quite true.

POSITION OF THE COMMITTEE.

Mr. J. H. A. Smith: Let me tell you in as plain and positive a manner as I can—we are not going to put our hands to any report on these matter until we have investigated these charges, and seen whether they are true or not. We are not coming before you with a garbled report saying there are 50 charges, and we have investigated 41, but nine we have not gone into, because someone would at once say those nine contain the kernel of the whole. We did not seek this position, and we shall uot wait till you are asked to remove us, but our resignations are in your hands. Unless we are supported by this meeting thoroughly and unanimously I leave this chair to-day, and shall be only too glad to get away and attend to my own business. If there

is the slightest feeling inimical to the committee, or intimation that a better course than that which we have adopted could have been pursued, do not imagine that we shall be hurt—the committee will make their bow and disappear. We feel that the auditor's position is, especially, a most cruel one. He is a public functionary, and for auditor, like Cæsar's wife, should be above suspicion, because his reputation is his living. The shareholders pressed us to take this position, and although we heartily sympathised with officials who are probably (though at present I do not say they are so actually) guiltless of the charges brought against them, yet I think you will agree with us, that we should be failing in our duty to you, unless we came with a report which proved, or disproved the whole of these charges after complete investigation. I sympathise with gentlemen who naturally object and are exasperated at lying under this stigma, but the positions was not created by us. When you get our report it will be one founded upon investigations we have made which are complete—a report the best we are able to draw up. Mr. Brotherton has told us that he is a creditor. How is this? The Tip-top properties were purchased for 10,000*l*. The company was unable to pay for it. Mr. Brotherton agreed to accept 5,000*l*. in cash and 5,000*l*. by a bill. Mr. Brotherton has for the assistance of the company from time to time extended that bill, and it is now running; but I think our friend, Mr. Gretton, will corroborate me in saying that he has no locus standi, or legally is not a creditor until February 25th, on which date the bill becomes due. On that date you have to face this bill of 5,000*l*. and also one for 10,000*l*., and these are the reasons that have pressed the financial question upon us. Mr. Brotherton has been merciful, and he told us yesterday that he would continue to be so, but it is far better for a company to dispense with mercy, and stand on its own basis. We want you to put in the hands of the directors funds enough to enable them to say to any gentlemen, "Present your claim and we will pay, and if we do not owe you anything you can retire." Until you can take that position Alturas will do no good for the company. I think I have now answered all the points that have come before you, but if there are any others I will be only too happy to deal with them.

THANKS TO THE COMMITTEE.

The Rev. A. C. MOORMAN: I beg to move "That the best thanks of the shareholders be given to the committee for the very careful way in which they have gone into the matter under existing circumstances, and that this meeting requests them to continue their services." I felt there was much force in what Mr. Brotherton said until I heard the admirable speech which Mr. Smith delivered, and until I also heard what Mr. Gretton said, that the interest of creditors are different from those of shareholders.

Mr. BROTHERTON: As well as being a creditor I hold nearly 8,000 shares. (Cheers.)

Mr. MOORMAN: I hope, when we have passed this motion, we shall proceed to the business for which the meeting has been specially convened.

COMMITTEE COMPLIMENTED.

Mr. FRENCH: I must say that a more clear report was never submitted by a committee than that which we have received. They have judiciously put on one side all those matters which did not require urgent attention, and, therefore, in the most effective manner grappled with the financial difficulties. I think every shareholder is under a deep sense of obligation to them for what they have done to protect the property. Several gentlemen supported the resolution.

MR. KYSHE CREATES AN UNFAVOURABLE IMPRESSION.

Mr. WILSON: I voted against the adjournment because the matter was thoroughly discussed last time. We appointed these gentlemen as a committee, and I thought it was an insult to them to adjourn after they had presented their report. I know they are all independent gentlemen and would give us nothing but a fair and unbiassed report, and I am surprised that anyone should dare to say one single word derogatory to them. The mere fact of the adjournment being carried was one of the most disgraceful episodes I have ever witnessed at any meeting I have ever attended. The position now is that a few thousand pounds will clear us from debt, and get rid of these gentlemen who pose as our creditors. Let us pass this scheme as soon as we can. I believe the property to be good if we can only get it honestly managed, and in three or four weeks we will get enough gold out of it to pay the whole of the debts. The real point is we want money, and if you do not pass these resolutions to-day to get it your property will be lost. As for going into the past on the strength of what Mr. Kyshe said—I do not think he is a man who should be listened to for a moment—the impression he made upon me was decidedly unfavourable. Pass these resolutions, and let us get away.

Mr. WAKEFIELD: I shall go away thoroughly satisfied with the speech which Mr. Smith has delivered. I think the committee ought to be doubly thanked.

MR. FORMAN RESERVES HIS REPLY.

The CHAIRMAN: I shall have great pleasure in putting this motion. I desire to say very little myself. I am in a very painful position. I am somewhat sub judice. I might have said many things, and at one time I had almost decided to call attention to certain facts which are unknown to you, but thinking it of paramount importance to come at once to the matter of emergency, I have refrained. My friend Mr. Smith has forgotten to mention that if it were not for the mine itself making large returns, we should probably be suffering from very painful proceedings instituted on the other side of the Atlantic. I think it behoves you one and all to do what is essential to preserve your property.

The motion of thanks to, and confidence in, the committee was carried by acclamation.

MR. BROTHERTON'S DEFENCE.

Mr. BROTHERTON: As a shareholder holding something like 8,000 shares, and with reflections cast upon me sideways, I can afford to treat them with contempt, or explain them away just as the shareholders like. If they do not care to hear, I do not care to speak. It has been stated that Americans (and I happen unfortunately to be one of them) snatch people's properties for a few thousand pounds when they have paid large sums for them, but I want to state the facts as they are known to the committee. A year ago this company had no funds. They wanted to borrow money, and not a man would lend it unless I backed the bill.

A FRIEND IN NEED.

I did so. (Cheers.) And I have extended the bill for nine months for 5,000*l*., and got another friend to lend 10,000*l*. Can you tell me anyone else who would have done this. (Cheers.) The debts spoken of as urgent by Mr. Smith were not mine, but were incurred to the miners. I have, therefore, a perfect right to justify myself, and further to say that the gentleman who lent the money at my request to this company and myself, and to whom that money is due on the 25th of this month—we had not the slightest intention of pressing for payment until you can get money from the re-construction scheme. (Loud cheers.) This gentleman, in conjunction with myself, owns 40,000 shares in Alturas, and I ask, are my bona fides proved to the committee and the board of directors and the shareholders, or are they not. (Cheers.)

Mr. GRETTON: You stated that if your bill was not paid you would take the property?

Mr. BROTHERTON: I stated that unless we got something satisfactory with regard to the charges and allegations I would use my power as a creditor. The committee have acquitted themselves in the sight of this meeting, and that is satisfactory, I presume. I am perfectly satisfied as long as the shareholders are satisfied. (Cheers.)

Mr. GRETTON: Then you do not intend to foreclose?

Mr. BROTHERTON: I have already stated in as many words, that it was not in my intention to do so. (Cheers.)

SPECIAL BUSINESS PROCEEDED WITH.

The CHAIRMAN: You will now clearly understand that we are resuming the business of the meeting to which the notice which has been read refers. The solicitor will explain the alterations that have been made in the resolutions, which were principally of a technical nature.

Mr. VERDEN (of the firm of Kerly, Son and Verden, solicitors to the company) then read the following amended draft resolution, the changes in which, as compared with those embodied in the notice calling the meeting, can be seen on comparison.

AMENDED RESOLUTIONS.

1. "That Alturas Gold, Limited, be wound up voluntarily."

2. "That the liquidator or liquidators be, and he is, or they are, hereby authorised and directed to sell and transfer to a new company, to be incorporated with limited liability, under the Companies' Acts, 1862 to 1886 All and singular the lands, hereditaments, mines, mining rights, patents, locations, and claims, buildings, plant, machinery, stores, ores at surface or underground, bullion, debts due to, and all other property and effects of this company of every description whatsoever upon the following terms and conditions:—(*a*) The name of the new company shall be such as the liquidator or liquidators may approve, and he or they may assent to the adoption by the new company of the same or a similar name to that of this company, and the nominal capital thereof shall be 300,000*l*. in 300,000 shares of 1*l*. each, with the usual power to increase and reduce the same. The memorandum and articles of association of the new company shall also be subject to the approval of the liquidator or liquidators. (*b*) The consideration for the said sale and transfer shall be (1) The payment of the sum of 255,000*l*. by the allotment to the liquidator or liquidators, or to his or their nominees, of 300,000 shares of 1*l*. each in the new company, credited with 17s. paid thereon, and leaving a liability of 3s. per share, and no more. (2.) The payment and satisfaction by the new company of the debts and liabilities of this company, so far as the same shall not be paid and satisfied by the liquidator or liquidators out of the proceeds of any of the said 300,000 shares, which may not be required for distribution among the members of this company, so as to give each member a share in the new company for every share in this company, or out of the proceeds of shares to which dissentient members would have been entitled. (3.) The payment of the costs of and incidental to the winding-up of this company, and of and incidental to the formation and registration of the new company."

(3.) "That the liquidator or liquidators be, and he is, or they are, hereby authorised and directed to procure to be allotted to every member of this company requiring the same, as his or their nominee, under the contract hereinafter mentioned, one share in the new company, with 17s. credited as paid thereon, for and in respect of every share held by him in this company. Provided always that to entitle the members of this company to an allotment of such new shares, application must be made for the same in writing, accompanied by a payment of 6d. per share on the number of shares applied for within 10 days next after notice requiring him to apply for the same, shall have been given in the manner in which notices are required to be given to members under the articles of association of this company."

(4.) "That the liquidator or liquidators be, and he is, or they are, hereby directed to dispose of so many of the said 300,000 shares as shall be in excess of the number to which the members of this company would, if they all applied for the same, be entitled, and also of the shares for which applications are not made, within the time, and on the terms aforesaid, and to apply the monies received by him from the said surplus shares, and from the shares to which members who have dissented within the time prescribed by the Companies Act, 1862, would have been entitled in or toward payment, a satisfaction of the debts and liabilities of this company, and to hold the monies received from any shares to which members of this company other than such dissentients would have been entitled had they applied for the same as aforesaid after deducting all costs and expenses of realisation to the credit of such respective members, and in making such disposition of the said shares the liquidator or liquidators shall not be treated as trustee or trustees for, or in any fiduciary relation to the said members, or to the new company, but shall have full discretionary power of selling and transferring the same to any person or persons at such prices (if any) and on such terms and conditions as such liquidator or liquidators may think fit, but all such shares shall in the first place be offered to the shareholders of this company who may have previously accepted shares in the new company under the terms of these resolutions, and the new company shall be entitled to retain all shares not applied for and taken by the liquidators or their nominees within three months after the incorporation of the new company.

"5. That the liquidator or liquidators be at liberty to continue the works and business of this company pending the completion of the sale to such new company, and to pay the costs and assets thereof out of the assets of this company.

"6. That the liquidator or liquidators be authorized to enter into a contract, in the form now submitted to the meeting, but with power to concur with the new company in any modification of the same which he or they may consider necessary or expedient for carrying into effect the arrangement embodied in the aforesaid resolutions."

VIEWS OF THE SOLICITOR.

Mr. VERDEN: Most of the changes are of a purely formal character. One of them has been inserted for the benefit of those shareholders who have been unable to go into the new scheme. It often happens that shareholders are unable to join a new scheme of this kind, and are shut out from all participation in the distribution of profits or shares, and it is proposed to give to such persons any money which may be received by the company from the sale of the shares to which they would be entitled. There is always a considerable amount of doubt in the minds of shareholders as to the legality of transactions of this kind, but the contract and resolutions with the other papers had been submitted to Mr. Grosvenor Wood, and, in his opinion, the scheme is perfectly sound. He said my opinion is that if any question could be raised on the proposed scheme, the resolutions and accompanying contract, they would be held to be valid, and that none of the persons who take the 300,000 shares would be at all liable for any money proposed to be credited as paid up on those shares.

A SHAREHOLDER WISHES TO KNOW HIS POSITION.

Mr. RIDSDALE: I hold 1,000 shares, and am willing to subscribe my money to help the company, and even more than my proportion, but I do not wish to be held liable for more than 3s. per share. You have, of course, heard of the recent legal decision.

Mr. VERDEN: The difference between this case and that of the Almada Company is very great. In the Almada case, which was not one of re-construction, but a pure and simple issue of shares at a discount, the shares were issued 18s. paid, leaving a liability of 2s., and the contention was that the 2s. was the consideration for the allotment of a 1*l.* share. That case went before Mr. Justice Chitty, who referred it to the Court of Appeal. That Court upset his decision on the ground that 2s. was not a proper consideration for the 1*l.* share, and Mr. Justice Lindley pointed out this fact, which is the keystone to the whole question. Section 25, of the Act of 1887, declares that the shares shall be deemed to have been allotted in consideration of the payment of the full nominal value unless there is a contract registered otherwise affecting the arrangement. It has been held that under that section you must pay for shares either in cash or kind, and the reason for inserting that clause was to enable people to sell good properties to a company, taking payment in shares. It was, therefore, required that the contract should be registered, but in this case it was held that registration of a contract would not cure something which was bad in itself. Mr. Justice Lindley pointed out that where the payment was in kind, that the

CONSIDERATION WAS GOOD.

That is the fact here. We transfer a valuable property for 255,000*l.*, and you are taking the purchase-money in shares so that there can be no objection, and I have yet to learn that there is any difference of opinion among high legal authorities upon it. Mr. Grosvenor Wood led the argument in the Almada case, against the appeal from the decision previously arrived at by Mr. Justice Chitty, and he says that the Almada case does not touch this one. He has no doubt whatever that if any question were raised as to the validity of this decision it would be upheld in favour of those who hold the shares. (Cheers.)

SHAREHOLDERS QUITE SAFE.

Mr. GRETTON, as a barrister, was asked his opinion, and said: I I think our solicitor would do well to take the opinion of another barrister, and I consider Mr. Palmer or Mr. Emden should be consulted, though I think we are perfectly safe. The question before the Court would be one of bonâ fides, and in this case we are acting in a bonâ fide manner. I think also if you consult Mr. Palmer you will find that you will not have to pay the stamp fees.

The CHAIRMAN: Between now and the date of the confirmatory meeting we will take another opinion.

Mr. GRETTON: I am certain you are perfectly correct, but what I suggest is only an extra precaution. We shall have a confirmatory meeting, and in the meantime the solicitor can get this opinion.

The CHAIRMAN then proposed the first resolution, which Mr. GRETTON seconded, asking at the same time if the mine was of the value described in the resolution.

The CHAIRMAN said it was impossible to tell the value of a mining property, but out of less than one-eighth of the property gold to the value of upwards of 115,000*l.* had been taken taken by the company They could not do otherwise than take it as worth the sum specified.

The resolution was carried with one dissentient.

The CHAIRMAN proposed the other resolutions, as read by the solicitor, en bloc.

Mr. SMITH seconded the motion, and it was carried unanimously.

Mr. J. H. A. SMITH, in reply to a question by Mr. Gretton, said that two months after allotment the shareholders could meet and re-elect the directors or others in their place, as they might wish.

Mr. GRETTON proposed a hearty vote of thanks to the chairman.

SERVICES OF DIRECTORS ACKNOWLEDGED.

Mr. HARDING: As a member of the committee, I must say that I have great confidence in the chairman and his colleagues, for they have shown us every courtesy and every readiness to aid us, and have acted admirably under most trying circumstances. (Loud cheers.)

The proceedings of a protracted meeting were brought to a close.

WHEAL OWLES.

WHEN THERE IS A PROFIT OUGHT SHAREHOLDERS TO DIVIDE IT?—STRANGE DICTUM OF THE MANAGER—PECULIARITIES OF THE COST-BOOK SYSTEM.

A MEETING of this company was held yesterday at the Wheal Grenville Offices, No. 7, Union Court, Old Broad Street—Capt. Richard Boyns presiding.

THE ACCOUNTS.

The accounts showed that the labour costs had been 1,128*l.*; carriage, 63*l.*; merchants' bills, 169*l.*; coal, 139*l.*—making the total costs 1,500*l.* 19s. 5d. The receipts from tin sold (very nearly 26 tons) amounted to 1,548*l.*, and the profit shown on the accounts was 52*l.* 13s. 1d., but the total cash balance in favour of the mine was 1,795*l.* 11s. 4d., as per bank book which lay upon the table.

Capt. BOYNS, who read the report of the agent, said: We owe no man anything, and we have this substantial balance in favour of the mine. The present number of shares in the mine is 1,575.

The CHAIRMAN moved the adoption of the accounts, which Mr. WESTON seconded, and it was carried unanimously.

AGENT'S REPORT.

1st February.—Our having shown a small profit on the sale of only 26 tons of tin for the 16 weeks, and having sunk 8 fms. 1 ft., and driven in levels and cross-cuts 68 fms. 6 ins. in the same period, will convince any man of experience in mining that there has been no great waste of money. The prospects of the mine, I regret to say, have not improved since last general meeting, and our reserves are considerably reduced. Unless we meet with an improvement in some of our exploring points during the next 16 weeks, our returns will assuredly fall off. The 105 east, Cargodna, is in hard ground; lode 9 ins. wide, barely pay to stope. We hope soon to communicate with a rise in the back of the 115, which will improve the ventilation. The 105 west, Wheal Edward, is still unproductive, ground hard; lode 14 ins. wide. In the 115 east, Cargodna, since we have crossed the vein, now about 16 fms., the lode has been only 2 or 3 ins. wide, and quite unproductive. We had a poor bar of ground in the old mine just over this point. I suppose we must hope for better things ahead. In the back of the 115 we have seven kipses working, lode averaging 1 ft. wide, worth about 3*l.* per fm. We have driven 13 fms. east on the vein. For about 6 fms. the lode was tinny and would pay to work, but since has been disordered by granite. At the present time the lode is better defined, 16 ins. wide, producing a little tin. The 115 west on vein is slight for tin; lode 9 ins. wide, not to value. The 125 east has been vigorously prosecuted during the past 16 weeks. This level has been driven from the shaft through 40 or 50 fms. in poor ground. I am glad to say there is now an improvement; lode 1 ft. wide, worth 3*l.* per fm. We are putting up a rise behind this end; lode 14 ins. wide, worth 3*l.* per fm. The cross-cut north, 125 west, is still being driven by three men and boy, at 9*l.* per fm., but we have cut nothing since last general meeting. We have sold tin to the credit of current account amounting to 594*l.* 19s.—R. BOYNS.

DEVELOPMENT WORK.

The CHAIRMAN, in further elucidation of the foregoing document, said that a third of the men were employed in opening up new ground, the dip of the valuable portion being eastward. The bottom level had been driven about 35 fms., and he strongly advised the adventurers not to sink the shaft any further. The lode at present was not 6 ins. wide, and there was no tin in it. As regards the 115-fm. level, it had been driven 40 or 50 fms. in quite poor ground. The 115-fm. level (under the sea) he hoped would turn out in quality as good as the ground above. He generally took a gloomy view of the situation, but although the 115 had been quite poor, the 125 had improved since this account. Tin had been sold to the value of 594*l.* since the accounts were prepared.

Mr. JOHN BOYNS corroborated by sundry "hear, hears," and other ejaculations, his father's views.

TOO MUCH MONEY AT THE BANK.

Mr. BELLINGHAM said he by no means took the gloomy view that seemed to be entertained by Capt. Boyns and his son. But he principally wished to speak with reference to the balance at the bank, to a portion of which he thought the shareholders entitled. The bankers were giving no interest, and the money was not wanted for the mine. If they kept in hand 1,000*l.* and distributed 700*l.*, he thought they would be adopting a proper course.

Capt. BOYNS strongly dissented from this view, and urged that the shareholders in Cornwall were with him in the matter.

A DIVIDEND RESOLUTION.

Mr. BELLINGHAM said he nevertheless intended to move a resolution:—"That 5s. per share be paid to the shareholders." I do not think (he said) we ought to keep a large balance at the bank for the benefit of people who give us no interest. We have had a large balance there for two accounts, and it is not right to keep money on current account which might very fairly be distributed amongst the shareholders. It is not even just to put the money on deposit. After the 5s. dividend is paid, 1,200*l.* will still remain, and if at any future time a call is required, it will be paid as former demands of the kind have been.

The CHAIRMAN again expressed an opinion strongly hostile to Mr. Bellingham's resolution.

Mr. WESTON cordially supported it, and asked why the shareholders were to be called together if they were to be dictated to by the absentees.

Mr. BELLINGHAM said that the sum of 1,795*l.* was now in the bank, and at the last meeting that sum was 1,793*l.*, on which no interest had been received, and he must persist in his motion.

SUPPORTED BY HIS SON.

Mr. JOHN BOYNS strongly supported the views of his father, and declared that Mr. Bellingham's resolution was "fool's play."

Mr. WESTON requested Mr. Boyns to use proper language. He had come to calmly consider and discuss the affairs of the company. A resolution had been moved which commended itself to his judgment, and he had seconded it, and it was not for Mr. John Boyns or anybody else to call that resolution "fool's play."

The voting for the resolution was equal. Mr. Bellingham and Mr. Weston were in its favour; Capt. Boyns and his son against it. The resolution, however, was defeated by the proxy of an absent shareholder.

A sharp discussion followed upon the announcement of the result, and a request to hold more of the meetings in Cornwall was objected to by the London shareholders. On this matter no proxy was used.

The proceedings of a rather acrimonious meeting were then brought to a close.

SOUTH AFRICAN NOTES.

The Gold Estates (Transvaal) Company, Limited: Buttau's lode in No. 1 level has thinned to a mere thread, and is at present worthless. In No. 2 level there is a reef 4 ft. thick and ore of a lower grade. No. 3 level has also fallen off in value, but the ore continues of a fair thickness. The lode in No. 4 is still of great regularity, and bodes well to hold good as the hill is penetrated; in fact my opinion is from the character of the country rock, and the beautifully unbroken hanging-wall, that this section of the mine will yield a great mass of fairly good payable ore, and in itself will be an averaged sized mine. New reef: No. 2 level shows the lode thicker, now 1½ ft., and ore of a good grade. The lode in No. 3 drivage has diminished to 2 ft., but the ore of a high grade. In No. 4, finding the reef did not improve as we pierced the hill, I put in a cross drive (to the east) 8 ft., in the forebreast of which there is now a vein 1½ ft. thick, and worth 1 oz. per ton. Battery Reef and West Battery Reef Gold Mines: Mr. C. D. Rudd writing from Luipaards Vlei on December 26th, says that he has been all over the Battery Reef Mine and must say that it looks as well as anything he has seen. He took a fair sample all across the reef in three places in the 200 ft. gallery, and after thoroughly mixing the three got an average assay of 5½ ozs. per ton. He believes the other parts of the Battery Reef (on the West Battery Reef Company's property) will be just as good in depth, and Mr. Anderson, he believes, shares this opinion. The George Walker (Moodie's) Gold Mining Company, Limited: Mr. Clemes, the manager, who was recently sent out from England, reports his arrival at the property, and he will at once proceed to further develop the company's property on the Lester reef. The Walhalla Syndicate is working the adjoining claims on the west; the property on the east is part of "Moodie's Reserved," from which 91¾ tons was crushed during November, producing 152 ozs. 7 dwts. The capital of the Salisbury Gold Mining Company, Limited (Witwatersrand), has been increased by 3,000 shares; 2,250 have been allotted at 36*l.* 16s., while 750 have been reserved.

The Witwatersrandt "Venture Syndicate" Gold Mining Company Limited: The following is an extract from a letter received from Johannesburg under date 21st December, 1888:—Water Supply: You need have no fear regarding our water being insufficient; we have a splendid supply, in fact, more than the neighbouring company, viz.: the Stanhope, and will send you the document, signed by the Gold Commissioner at Boksburg, positively by next mail. I have had the forty claims amalgamated into one block, and have paid the license right up to 5th January, 1889. I still regret that you should have floated a company when a syndicate was only necessary. Forty claims is an enormous property, and should the syndicate discover the reef which Knox (and all of the present Venture Syndicate) is so confident runs through the property, the very least you could float on the ground would be three companies.

The Sheba Gold Mining Company, Limited.—The general manager writes on 22nd December last:—Mine: I have little to report under this head. The various drives still continue to intersect various veins of richer ore in the lode, but with the exception of those already noted nothing of lasting value has been met with. Reduction: The mill, plates, and concentrating floors are now in order, and a start has been made on the construction of the round setting pits. We trust to have the whole finished early in January. The only other work to be carried out will be the erection of such re-treatment machinery as can be obtained.

The inflation of South African gold shares is shown by the following approximate prices:—

Company.	Capital.	Shares.	Present Price.	Market Value.
Robinson	£50,000 ...	£1 ...	£60 ...	£3,000,000
Salisbury	32,000 ...	1 ...	30 ...	960,000
Ferriera	28,000 ...	1 ...	22 ...	616,000
Wemmer	33,000 ...	1 ...	15 ...	495,000
Jumpers	60,000 ...	1 ...	14 ...	840,000
Pioneer	21,000 ...	1 ...	14 ...	294,000
May	40,000 ...	1 ...	11 ...	440,000
Henry Nourse ...	50,000 ...	1 ...	11 ...	550,000
Sumner and Jack ...	75,600 ...	1 ...	11 ...	831,600
Jubilee	22,000 ...	1 ...	10 ...	220,000
Durban Roodepoort	90,000 ...	1 ...	10 ...	900,000
Langlaagte	450,000 ...	1 ...	7 ...	3,150,000
	£951,600			£12,296,600

The South African papers to hand by this mail have a great deal to say as to the gold mines in the Transvaal and elsewhere. A number of the Rand companies, which are working in a business-like way, and have got hold of good properties, are turning out gold in almost fabulous quantities. The crushings in some instances have produced from 1,000 to 4,000 ozs. in a month, and the more the reefs are opened up the richer they appear. The manager of the Salisbury Mine, for instance, submitted this glowing report to the shareholders at a meeting in Maritzburg towards the end of December:—"The total volume of all reef matter, so far as disclosed at first level, he estimated to exceed 80,000 tons, or equal to two years' supply for a 100-stamp mill. There was a decided improvement in the grade of all the reefs at the lower levels. The work of sinking to the second level was now being vigorously pushed downwards. With the present average returns with 70 stamps, it would be possible to mill about 2,650 tons, or say 6,600 ozs. of gold per mensem. The actual cost per ounce he estimated at 12s. 10d. With increased output stamping power this cost would be considerably reduced; but say 2,650 tons at 12s. 10d. placed the total cost of mining and milling at 1,700*l.*, against the value of 6,600 ozs. of gold at 70s., or equal to a sum of 23,050*l.*, giving a monthly profit of no less than 21,350*l.*, or equal to a monthly dividend of over 80 per cent. He could conscientiously predict that the 80 per cent. per mensem on a capital of 25,000*l.* would be frequently paid. The return for December of over 2,000 ozs. would permit them declaring a dividend of 30 per cent., thus proving to the world that with 20 stamps the Salisbury had paid a dividend of 75 per cent. in three months. The *Johannesburg Standard*, while pointing to the rapid increase in the returns from month to month, considers that comparatively little has been done when the extent and richness of the mines are taken into account. 'If genuine work had been attempted on three-fourths of the 100 properties floated instead of the people having to talk of booms, they would be congratulating themselves on securing shares even at prices far beyond anything which has yet been quoted. When the Salisbury, Wemmer, Wolsingham, Robinson, Langlaagte, and other companies have been able to do such great things with 10 and 20 stamps, what might not have been done by others had their mines been properly worked, and been able to keep as much milling power occupied! Then even the most successful of our companies might have done better.' Investors here are warned to be careful as to what they touch, but the same advice appears to be as necessary in the Transvaal. But little inquiry is made regarding individual stocks, and they are being taken up in the hope that in the general excitement they may be passed on with a profit. 'A large portion of the scrip at the present moment,' says the *Standard*, 'is held either directly or indirectly by stock jobbers and weak holders, whose only object in securing them is the off chance of their being able to conclude their bargains at a profit, without the necessity of using money. The fact of the matter is that, whilst we verily believe that nearly the whole line of main reef, and the black reef will, when in full operation, produce dividends not far short of being equivalent to market prices . . . until there are sufficient true investors to put their faith in the properties, and to purchase and lock up the scrip, in the anticipation of what they believe to be the future returning power of any company, there will be no security whatever for the prices being sustained in a large number of Rand stocks. Before very long the day of reckoning will have to come.'"

LATEST TELEGRAMS, ETC.

Durban-Roodepoort.—Cable:—"Since our last cable (18th inst.) we have crushed 270 tons of quartz, producing 582 ozs. of retorted gold; working nine days."

Port Darwin.—A cablegram from the mines states that a crushing of 2 tons has yielded 1½ to 2 ozs. free gold.

Wemmer.—Robert Whyte and Co. advise the receipt ex Athenian ss., from Cape, of 763 ozs. 12 dwts. native gold, on account of company; also 280 ozs. native gold, on account of the Wolsingham Gold Mining Company.

Mitchell.—A telegram from the Kimberley offices states—"Have received telegram announcing discovery two new reefs Mitchell property; one supposed extension Ida reef."

"Jumpers" Gold.—The capital of the above company has been increased at a general meeting of shareholders, held at Johannesburg, from 42,000*l.* to 50,000*l.*

South African.—The following particulars of work relate to the week ending December 29th:—Blue ground hauled, 3,595 loads; blue ground washed, 2,239 loads; diamonds obtained, 628 carats; estimated value, 635*l.*; reef hauled, 85 loads.

Central Langlaagte.—The company has opened a London transfer office at 29 and 30, Holborn Viaduct, E.C.

Forbes' Reef.—Letters from the mine manager, Swaziland, dated 1st January, received at the London office, give the result of trial crushing of 60 tons from the Avalanche reef as yielding 2 ozs. 3¼ dwts. per ton independent of blanketings. Trial crushing of Art Union and Evelyn reefs in progress. A new reef about 11 ft. wide has been discovered on the south boundary. Another very promising reef has also been found near the waterfall below the present mills, panning about 1 oz.

Crown Reef.—The offices, Warnford Court, will be opened for transfer and registration of shares on and after 1st February.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

MOUNT SHAMROCK AFFAIRS.

To the Editor of the Mining World and Engineering Record.

Sir,—Many thanks to the unknown sender of your journal of the 26th inst., in which the proceedings of the Mount Shamrock meeting of the 24th were marked. I have followed the different speakers through the whole proceeding, and come to the conclusion that Messrs. Stanlake Lee and Rankin had strong grounds for complaint against the promoters and directors of the Mount Shamrock Gold Mine. However, as a shareholder interested in the welfare of the mine I would not like to oust the directors at present, as I have every confidence that they will work with more energy and experience for the future for the welfare of the shareholders and for the sake of their own good names. The great difficulty with the mine is surmounted now. Shafts are sunk, and the railway to the ground is in pretty good trim. The Mount Shamrock Gold Mine is distant about 50 miles from the celebrated Gympie Mine. Having lived in Queensland for about six years, I have learned from old diggers that the Mount Shamrock Mine is one of the best claims in the whole of Queensland, if only properly worked. The ground all round is full of gold and bismuth; even the latter, if only extracted properly, would pay a handsome dividend in working the mine.—I am, &c.,

John O. Sullivan.

Cork, 31st January, 1889.

Globe Mill machinery of different sizes was taken forward for the Queensland Goldfields by the Chycbassa and Jumna, and we notice that the Ravenna, now loading at the Royal Albert Docks, will carry Globe Mill Machinery to Sydney.

The directors of the Law Union Fire and Life Insurance Co. have opened a branch for the City at No. 1, Royal Exchange Buildings.

TOLIMA.—The directors have received advices by the mail of the 26th January, from their mines, of which the following is an abstract:—Frias, November returns, $11,219.52½; Frias, November cost, $6,031.77½; difference, being profit, $5,187.75, equal in sterling to 1,037*l.* 11s. The underground agent reports 28 fms. 5 ft. of ground expended, of which 21 fms. 1 ft. 6 ins. were productive, leaving 7 fms. 3 ft. 6 ins. of unproductive ground.

THE PORT DARWIN GOLD MINING CO., LIMITED.

THE following circular has just been sent out by the secretary to the shareholders. We need hardly add that we would advise investors to give them their attention. The mundic found on this property, which has yielded large returns of free gold, is similar to that of the celebrated Mount Morgan Company in Queensland:—About three months ago the directors submitted to you their last report with the latest information received from the miues. They have now to advise the despatch last month of the amalgamating machinery for treating the tailings. You are aware that samples of mundic found on this property yielded—upon assays made by Mr. Harwood, assayer to the Adelaide banks—15 to nearly 20 ozs. per ton; while the tailings treated by the Newbery-Vautin process at Melbourne yielded nearly 2 ozs. per ton. As some delay has already taken place in receiving advice of crushing, the directors have decided, in accordance with the wish of several large shareholders, upon sending one of their number to the mines by next steamer. The gentleman in question (Mr. Leonard Welstead) has been connected with the company almost since its formation, is one of the largest shareholders, and is thoroughly conversant with all its affairs, besides which he has made himself acquainted with the working, not only of the machinery despatched a few weeks ago, but with that of several other systems, so that he will be able to render valuable assistance to the manager in the fitting up of this machinery, and the treatment of the tailings. The present manager, Mr. Salter, has been informed of the despatch of the machinery, and also that one of the directors was leaving by next steamer, so that he may hurry on arrangements for the erection of the Askham plant, now at Port Darwin, in conjunction with which it has been found that the amalgamator recently despatched to the mines has given the best results, as this pulveriser reduces all kinds of ore to a finer grain than the ordinary stamps generally in use. You are aware that there is a large amount of tailings on the property, so that all that will be necessary is the fixing of the two plants above-mentioned, when operatious can be commenced without further delay. As in the case of all the northern territory mines, when the water level has been reached, a large amount of pyrites has been invariably found with the gold, but which, when suitably treated, has given better results. The directors feel assured, from enquiries which they have instituted through various sources, that the two plants when working in conjunction will yield the highest results at present obtainable. The richness of the gold-fields on the northern territory is confirmed by a report of the Kohinoor property, near Pine Creek (further inland than the Howley mine, the property of this company), upon which a valuable reef has been discovered. The directors hope to be in a position to transmit further news to you by same medium in about two months time, and will meantime convey to you, through the financial papers, any information received from the manager with reference to the commencement of the crushing of the rock now on surface, promised about six weeks ago, and which the directors are now awaiting.—J. MONTAGU PATES, Secretary.

N.B.—Since the above was in print we have received the following most encouraging telegram from Mr. Salter:—"Crushed two tons, yield 1½ to 2 ozs. per ton; certain can strike big reef below." This, taken with the result obtained from the tailings, will show more than 3 ozs. per ton; which compares favourably with the richest mines in Queensland or Australia.

THE OSCAR GOLD CO., LIMITED.

January 26th.—Oscar lode: The sinkers are making fair progress, the shaft being about 45 ft. below the bottom (400 ft.) level. The quartz is stringy, without visible gold. As before reported, we are only taking about 5 ft. of the lode, but shall cross-cut through it after sinking another 20 ft. The men in the bottom levels have been making better progress this week. The ground is still hard and contains a good deal of hard quartz, in which the iron pyrites is increasing in quantity. The level which is being driven on the No. 3 lode makes fair progress, and we are able to report a slight improvement. We shall increase the number of miners from two to four next month, in order to push it ahead to effect the earliest possible communication with Croft's shaft. Daw's lode: The men have sunk about 14 ft. this month, but there is no alteration to report. The bottom level north is poor, but the southern level has considerably improved, the quartz being nearly a foot in width. This is an important improvement, as we have not had it so wide before at this distance from the shaft in the upper levels. No alteration to note elsewhere.—J. DAW, jun.

LATEST TELEGRAM.

The following telegram has been received from the manager at the mines:—"General improvement throughout mines. Small leader with visible gold bottom Oscar shaft. Milled from Daw's 161 tons, result 51½ozs."

YURUARI, LIMITED.—Mr. W. G. Wears writes to the *Financial News* as follows:—"My name having been so freely used in the correspondence relating to the above company, it has almost become my duty to have something to say on the subject, which I intend to do fully in a few days. Meanwhile, this is to express my indignation at the liberty taken with my name, and the onus thrown on me of disproving the frivolous and irresponsible statements which have given rise to the correspondence. I may state at the same time that my opinions remain unchanged concerning the Yuruari Mine and its prospects (working without interruption and under good management), and to my mind the statements of Mr. Fortescue are grossly exaggerated so far as I am concerned. I have nothing whatever to do with the market prices and quotation of the shares of the mine."

HOLLOWAY'S PILLS AND OINTMENT.—The attention of all sufferers is drawn to these well-known remedies, for they possess conspicuous advantages as a safe and reliable aid in all those emergencies to which travellers, emigrants and sailors are so especially liable. They have been largely patronised by wayfarers by land and sea, and, in fact, by all classes of the community, to their very great advantage. The Pills are beyond all doubt one of the most effective remedies ever discovered for cases of obstinate constipation, confirmed indigestion and colic, complaints which are engendered by exposure and irregular feeding. The Ointment will be found of the very greatest service in cases of piles, abscesses, erysipelas, and all kinds of local ulcerations.

NEW EMMA SILVER MINING CO., LIMITED.

GRATIFYING REPORTS.

12th January.—I have to report work carried on at the mine for the week ending to-day as follows:—Level running east from No. 1 advanced 17 ft.; total, 111 ft.; rock continues to improve as we advance, is getting much softer, and mineral increasing, which gives great hopes of cutting a body of ore at almost any time. On this level we have worked four men full time for the week. Some 15 ft. back from present face of level we cut a seam about 8 ins. wide, filled with soft limestone, manganese, and iron running north towards hanging-wall, which I am now following. Working one man on each shift have advanced 6 ft. I consider this a very important discovery, as it is developing entirely virgin ground. Level running north-west from No. 1 advanced 8 ft.; total, 118 ft. Not any change to report; still in caved ground, which requires close timbering. Progress is therefore slow; however, we continue to get some low-grade ore for the mill. Have worked four men in this level full time. Level No. 3 east advanced 10 ft.; total, 273 ft. Not any change to report; rock is very hard, but seamy, and highly saturated with oxide of iron. Have worked four men full time for the week. Cross-cut from No. 3 towards footwall advanced 9 ft.; total, 41 ft. Not any change to report, rock continues very hard, but highly mineralised. Have worked four men full time for the week. Level running north-west from uprise from Attwood winze advanced 8 ft.; total, 48 ft. Ground improving, is softer, seam widening, is now from 6 to 8 ins. wide, carrying a little more ore than a few feet back. Have worked two men full time.—H. C. WALLACE.

—12th Jan.—On the third inst. I received the following cable:—"If advisable employ 30 men." After a consultation with Mr. Wallace I found we could work that number to very good advantage, and I therefore directed the force to be increased at once. As you will see from Mr. Wallace's report there is general improvement in nearly all parts of the mine, more especially in No. 1 level.—G. CULLINS.

IMPORTANT TELEGRAM.

The following cablegram has been received from the manager at Salt Lake City: "Prospects are improving in level No. 1 cross-cut."

BELL'S ASBESTOS CO., LIMITED.

THE report submitted on Wednesday to the shareholders of Bell's Asbestos Company, Limited, was adopted. The large growth of the business during the past year has been continuous, the trade in each month showing an increase on that of the corresponding month of the preceding year. A dividend of 15s. per share was declared, making, with the interim dividend paid in July last, a total distribution of 22½ per cent. for the year. Several shareholders expressed their appreciation of the excellent manner in which the business of the company—which is of a difficult and technical character—has been managed, and special reference was made to the great services rendered by Mr. John Bell, the chairman, Mr. F. C. Bell, managing director, and Mr. H. A. Bell, one of the directors. The chairman held out hopes of even better results in the current year.

REVIEWS.

PRACTICAL ELEMENTS OF CONSTRUCTION. A reference book for engineers and builders. By Percy L. Addison, F.G.S., Assoc.-M. Inst. C.E. London: Elliot Stock, 62, Paternoster Row, 1888.

This work, illustrated with plates and diagrams, is intended for beginners to whom it is often a matter of time and great labour to obtain from books already published that clear comprehension of practical detail which is necessary, not only for the subsequent study of more advanced works, but for the exigencies of daily practice. The author may claim to have produced a very useful work.

SUTHERLAND REEF, LIMITED.

The letters of allotment and regret will be posted by this company on Monday next, instead of on Wednesday last as previously noticed. French Bob, by the last accounts, had reached a depth of 35 ft. upon Sutherland Reef, and at that depth was upon the solid reef, 3 ft. wide, which was giving 50 ozs. of gold to the ton of quartz, and there is sufficient water power for hundreds of stamps. The future of this company promises to be sensational, as figures show. A correspondent writes: "The estimate upon the prospectus is cautiously based on 8 ozs. of gold to the ton of quartz, and 20 stamps only, or a reduction to one-fortieth part of the above. In other words, if only one-fortieth of these figures is obtained, then even the company will pay 140 per cent. per annum upon its total share capital. We shall watch the progress of this, the first of the great Murchison Range Gold Fields Companies, and from time to time keep our readers informed.

DICKENS CUSTER CO., LIMITED.

RE-CONSTRUCTION SCHEME ABANDONED—NEW SCHEME TO BE FORMULATED.

I AM instructed to inform you that, owing to the fall in the market value of the shares, the proposed scheme for raising the necessary funds is not likely to meet with the active support of the shareholders, and the meeting called for Wednesday next, the 6th inst., has, therefore, been postponed. Another meeting will be held during the current month, when an alternative scheme for the re-construction of the company will be submitted. This decision has been arrived at by the board, in consultatiou with the committee.—C. T. GLADSTONE, Secretary.

MR. PETER WATSON IN A NEW CHARACTER.—Mr. Peter Watson has this week been elected a member of the County Council for one of, if not the largest electoral division in the county of Middlesex—by an overwhelming majority, in fact he obtained two to one votes in his favour. Mr. Peter Watson has been a long time resident in the Hounslow district, holding the important position of chairman of the Local Board Finance Committee, has done much in reference to the improved railway service to and from London on several railways, and is generally greatly esteemed.

The directors of the Upper Roodepoort Gold Mining Co. have proceeded to allotment; but, owing to the large number of applications, are unable to send out letters yet.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

INDIAN MINES—BETTER PRICES.

The Indian, with the South African market, has this week divided the attention of the stock and share dealers. The public appear to have woke up to a realisation of their strange neglect of what is, at the present time, perhaps the most promising goldfield in the world. We hear a good deal about the returns from South Africa, but, to a large extent, these are surface deposits, and it remains to be proved whether they exist in depth. We have no wish to pitt one goldfield against another, where the conditions are different, but for durability commend us to that of Indian even in preference to South African so far as the developments in each case have gone. To a large extent the outlook for deep sinking in South Africa is speculative, but this question in India appears to have been wholly set at rest by the remarkable experience of its gold mines. Deep sinking in these cases has resulted in greater riches, in proof of which we point to the remarkable results published from time to time by such concerns as Mysore, Ooregum, Nundydroog, Balaghat, Nine Reefs, and one or two other companies. The manner in which these concerns are, the one after the other, wheeling into line in the matter of crushings, preliminary of course to their entering the dividend list, is most gratifying to those who have prophesied in their name, and would have come as the balm of Gilead to poor Mr. William Abbott, who did so much to sustain the hearts of shareholders at a time when the final pangs of despair appeared to have come upon them. In our opinion we are only at the beginning of the upward movement in Indian shares, and our great surprise is that it has not occurred before. Next week the telegrams from these companies announcing the crushings for January will be received, and we have little hesitation in predicting that that of Mysore, for example, will be in excess of any it has hitherto published. We shall be greatly surprised and disappointed if such be not the case. Ooregum, considering the wonderful richness of its mine, ought also to give a good account of itself; and Nundydroog and Balaghat may be expected to sustain their past reputation. Mysore Gold have risen since Wednesday 15s.; Goldfields of Mysore, 5s.; Nine Reefs, 3s. 6d.; Ooregum Ordinary, 1s. 3d.; Preference, 3s. 9d.; and South-East Mysore, 2s.; whilst Eastern Mysore and Balaghat bid fair to advance upon quoted prices. The market closes extremely strong, and buyers at present prices appear to be wiser than sellers.

ALTURAS AFFAIRS

With the instinct of self-preservation the shareholders of Alturas, Limited, saw yesterday that their true interests lay in the adoption of the scheme of re-construction as submitted to them by the committee. These gentlemen, with Mr. J. H. A. Smith as their chairman and spokesman, thoroughly deserved the vote of confidence in them which was unanimously passed by the meeting, for they have devoted themselves to the Company's business with an energy that is praiseworthy, and with a true grasp of the kernel of the position that presents an example that should be followed. It is too much the fashion with committees appointed to look into the affairs of companies in temporary distress to at once open a laundry, in which all the dirty linen that can be collected may be publicly washed, and fully exposed to view on lines which they conceive it to be their next most importact business to hang up; but the Alturas Company has been far better served. As we pointed out last week, the committee had scarcely seated themselves around the company's board table before they saw that the key to the whole affair was one of finance, and the eyes of their understanding were opened to perceive the terrible difficulties Mr. Forman and his colleagues have had to finance a concern which has practically never had working capital, but has been obliged to seek loans from those, like Mr. Brotherton, who were good enough to make them. Mr. Smith struck the keyboard with forceful touch when he said it ill became a company like Alturas to be at the mercy of even the tender-hearted Mr. Brotherton, and still less so at that of his hard-hearted countrymen on the other side of the Atlantic, whose dealings with impecunious companies are not tempered by "the quality of mercy," but are a near approach to Shylock's model. The directors should be in a position to do their own financing, and not to be called upon to put their necks into the halter of debt directly there is any falling off in the returns. At the time the committee made their first inquiries the company was in a critical position, from which it was only saved by the augmented returns from the mine. The scheme of the committee will provide funds to pay off the advances kindly made by Mr. Brotherton and his friend, and a reserve

for future contingencies. As to whether the mine is worth working —we dismiss the subject as one requiring neither argument nor illustration. But stop—one illustration certainly should be given. Out of only one-eighth of the property, 115,000*l.* worth of gold has been taken under circumstances the reverse of advantageous, and under the direction of managers (formerly employed) who have made the word of promise to the ear, only to break it to the hope. We advise every shareholder who values his sovereigns to join the reconstruction, and to have confidence in the board. If they do these two things, we venture to promise them two more—better prices for their shares, and larger returns from the mine.

COPPER.

IN the discussions about copper in the journals, financial and otherwise, it is apt to be forgotten that the price of that metal is not abnormally high. Before 1873 it was rarely below 70*l.*, and even during the trying period of the Franco-German war it never fell below 65*l.* About 1873, when the Rio Tinto Company appeared upon the scene, the consumption per annum was about 100,000 tons, and at the present time it is about 220,000. Prices since 1873 had been forced down by the competition of the Lake Superior and other American mines with those of Europe. When the copper syndicate appeared, that is towards the end of 1887, the estimated stock was under 50,000 tons. The syndicate was the outcome of a desire between the various copper companies no longer to do each other to death, and its subsequent proceedings and hitherto conspicuous success are familiar to all our readers. The sudden rise in copper disturbed the conditions of trade, and every effort was made to utilise all descriptions of copper that existed, and thus a good deal of copper came into consumption that does not appear on the face of the statistics. The stock of old copper not estimated in the statistics is given at 80,000 tons. The copper consumption of 1888 was 248,000 tons, during the currency of which period the highest price realised was 105*l.*, and the average about 82*l.*, as compared with, in 1872, the year of the highest inflation, 118*l.*, and an average price of 100*l.*

Writers in the press have been far too prone to discuss the subject from purely the public point of view, and have almost wholly omitted to state the case of the producer. By this omission scant justice has been meted out to the shareholders whose money is invested in copper companies. Liquidation threatened most of these concerns in 1887, and as regards the industry in this country, the low prices killed it so effectually that the high prices have not been able to revive it. A writer in the *Times* of this week has truly said :—"It is too often forgotten that there is a law of supply and demand. There are producers and consumers ; and if one of these two parties is forced to extremes, the remedy is easily found—there must eventually be a reaction in order to bring about an adjustment. Both parties have a right to live, and they cannot exist one without the other. Copper is a necessity of civilised life. The progress of science and of mechanics alike demands a constantly increasing supply of this metal. Our century is justly proud of its discoveries and inventions ; and the science of electricity, which it is admitted is only in its infancy, is destined to play an important part in our future technical developments. Undoubtedly, it will be the mission of copper, as the best and cheapest conductor yet known, to facilitate the application of electricity to the purposes of man. This task cannot be fulfilled should the price of copper, on the one hand, be so low as to check the production, or, on the other, so high as to prohibit its employment by the consumer." The price of copper must be high enough to stimulate production, or it will not be produced. The companies suffered for five years from the exceptionally low price of copper, and if they have had a run of better prices during the past 15 months, it should not be grudged to them.

It is now stated that the syndicate is about to restrict the output of the mines, and to lower the contract price. The companies have so largely benefitted by its action that they will not seek to put unreasonable obstacles in the way, and the syndicate may naturally expect from them the help of allies rather than the opposition of enemies. That the syndicate is about to make shipwreck on the rock of fiuance we do not believe. There is a great deal more life in that body than enters into the philosophy of its detractors, according to whose unfulfilled predictions the syndicate should have shuffled off this mortal coil long ere this. The copper bank, or trust, whose advent we notified two weeks ago, will come to its assistance, despite any objections which can be urged against it. A somewhat lower price for the metal would apparently meet the exigencies of the syndicate, and also the requirements of the trade ; but the latter has not yet dismisssed the singular notion that copper should be produced at no profit at all, and copper at 40*l.* per ton is manifestly at a price at which few companies can raise it and live.

OUGHT A PROFIT TO BE DIVIDED ?

CAPT. BOYNS, the purser of Wheal Owles, apparently thinks not. If there is a loss he seems to be of opinion that a call should be promptly made upon the unfortunate shareholders, but that any balance, however large, or however unnecessary it may be for the working purposes of the mine, should be put into some Cornish bank at no interest. At the meeting of this company yesterday there were two things that struck the practical mind of Mr. Bellingham ; first, the gloomy and dolorous tale Capt. Boyns had to tell about the position of the mine ; and next, the large balance, of over 1,700*l.*, in hand. In regard to the first, he roundly declared that there was no warrant for the chop-fallen appearance of the manager ; and in regard to the second, he had a definite proposal to make—namely that some of the balance should be distributed amongst the shareholders who, for a long time past, have seen no cheques from their investment in Wheal Owles. In this view he was supported by Mr. Weston, a resident in London, apparently unaccustomed to the vagaries of Cornish mining finance. Mr. Bellingham's proposal went no further than to reduce this balance by 400*l*, which would allow of a distribution of 5*s.* per share amongst the few adventurers in the mine. This reasonable proposal, moved by Mr. Bellingham, and seconded by Mr. Weston, was defeated by Capt. Boyns and his son, with the added force of the proxy of an absent shareholder. This will give our readers a fresh illustration of the peculiarities of cost-book finance, as applied to Cornish mines, and will, at the same time, satisfy the inquiring mind as to why British capital goes to every conceivable part of the globe rather than into Cornwall, where it would have a fair chance, if dealt with upon principles which would commend themselves to business men and to common sense.

ETHERIDGE GROUP.

A PECULIAR MEETING.

THE nature of the opposition which the directors of the Etheridge United Company are meeting in their efforts to rehabilitate it in public favour can be gathered from the proceedings of the various meetings we have recently reported, and we need not therefore stop to characterise it. The meetiug called by the opposition party on Monday is likely still further to enlighten the shareholders as to the tactics pursued, and to lead to the withdrawal from them of the proxies of those who wish to see the mine doing well and the shares at a decent quotation in the market. Shareholders are far too ready to give proxies to irresponsible persons who set themselves up to be "somebodys," but are in reality "nobodys," and whose intrinsic interest in the company is in inverse ratio to the clamour they make. But for the opposition the directors have encountered we believe the shares would by this time have been at a substantial price, for the reason that the mine is looking extremely well, and that the enormous difficulties that have been experienced in getting the machinery to the spot have been overcome.

The proceedings on Monday would have been comic if the shareholders could have dismissed from their minds the serious interests of which sport was made. The meeting was called, as we have said, on behalf of the opposition. Mr. Bird was in the background, and Mr. Leverson, a gentleman who is less known in connection with the party, voted himself into the chair. But the shareholders had a different inclination, and they passed, by a large majority, a resolution asking Mr. Snell, the real chairman of the company, to act in his accustomed capacity. Mr. Leverson, however, ignored the wish of the majority, and thus the amusing spectacle was witnessed of two chairmen over one meeting, each vieing with the other who should assert his authority, and who should put the resolutions and declare them carried, or the reverse. On some points the powers of shareholders are uncertain, but surely this one is clear, that they have the right to nominate their own chairman. Mr. Leverson and his supporters thought differently, and thus it came to pass that there was a chairman at the top of the room and a chairman far away down towards the bottom. Both Mr. Snell and Mr. Leverson had come prepared to "speak a bit," as the Americans say ; but we are able from what they said to add little information to what has already appeared. The gist of the whole matter seems to be that the Leverson party (might we not call it the Bird party?) wish, at the cost of the general body of shareholders, to investigate certain matters which Mr. Snell declares have already been unfolded, and which he is quite prepared to go further into in any Court in the kingdom, provided always that the opposition party will pay their own expenses and not force unwilling shareholders to do this for them. The majority of the shareholders desire nothing more than peace, along with liberty, to develop a property they believe to be valuable. But an exceedingly small section of the shareholders appear equally resolved that this peace and this liberty shall be denied them.

Again and again, at meeting after meeting, the Bird party have been beaten by enormous majorities, sometimes amounting to all but the whole voting power present, and still the conflict is kept up, for reasons which our readers must seek in the full reports of these gatherings which we have from time to time published. The directors need no advice from us, but if we gave it, it would be that they should continue the path they have already traversed ; that they should set these persons at defiance, and bid them do their worst. The directors say they have nothing to conceal, and we thoroughly believe them. If this opinion needed strengthening, force would be given to it by the action of the committee, appointed at a meeting of the Bird party, to look into the company's affairs. The duty assigned to this committee was to enquire into certain allegations made by the Bird party, and the result was that the four gentlemen nominated had not gone far in their enquiries before two of them declared that it was unworthy of their time or attention to go further into the

matter. Mr. Roderick McKay, the accountant, was one of these gentlemen, and Mr. Frederick Thorn, of the New Explosives Company, was the other. These gentlemen are well-known and respected in the City of London, and it would be but doing them scant justice to say they are as well-known and as respected as the colleagues from whom they dissevered themselves. An attempt is now being made to upset the inexpensive liquidation which is being conducted under the experienced guidance of Mr. Lavington, whose name will give confidence to every person to whom he is known. Even Mr. Leverson, who of all the Bird party appears to be the most amenable to reason, voted—so testified several of the shareholders—on the last occasion for Mr. Lavington's appointment.

From all this it is clear that if the shareholders wish to see their shares continue almost valueless they will support the opposition; but if they wish to see the mine efficiently worked and the share market begin to stiffen, they will, by all the means in their power, aid the directors in whom they have every reason to feel the most entire confidence.

CARPUAN TIN MINE.

A PROMISING CORNISH INVESTMENT UPON A NOVEL BASIS.

This company is formed upon a novel basis, but one which must commend itself to the sound judgment and common sense. The property to be dealt with is a Cornish tin mine, which is known to possess a well-defined lode, discovered upon the Carpuan farm, in the parish of St. Neot. Upon this lode a trial shaft was sunk, and at a depth of 12 ft. it was found to be 4½ to 5 ft. wide, unusually rich in tin, and producing 56 lbs. of this metal per ton of lode stuff. Capt. R. Knott, who has made a personal inspection of the property, states that the famous lodes of the Phœnix and Caradon Mines traverse this set. All this is encouraging in itself, but when it is remembered that this particular district is one of the richest for tin in Cornwall, temptation to the judicious speculator to proceed becomes almost irresistible. A cost-book company has been formed in 12,000 shares, the price of which net is 5s., and it is at that low figure they will be issued. This is the sum which subscribers will be asked to pay, and after that 6d. per share per quarter will do all that is required, not to prove the lode, for that is already done, but to prove whether it is rich or not. This highly probable event coming off, it is then intended to form a limited company to purchase the property from the present cost-book company—the shareholders receiving two shares for every one they then hold. The sponsor of this mine is Mr. Alfred Thomas, of 10, Coleman Street, who has personally inspected it, and who intends to supervise the workings, assisted by a competent local expert, and by a committee of gentlemen who understand the business they have taken in hand—which is more than can be said of the boards of direction of all new companies. This committee will be appointed by the shareholders at their first meeting. The bankers will be "The Commercial Bank of Cornwall." Under Mr. Thomas's experienced direction subscribers may rest assured of two things—first, that the property will be intelligently developed; and secondly, that the funds will be economically administered.

MORUYA GOLD AND SILVER MINING CO., LIMITED.

AN ENTERPRISE THAT MERITS ATTENTION.

Some facts with reference to the Moruya Company may not be uninteresting to our readers in view of the active market that has now been maintained in the shares for several weeks past, and in view also of the prospect of those shares rising to a much higher price than that at which we quote them to-day. In the first place the property is in New South Wales, within 4 miles of a port, and possessing advantages for rapid development of quite an exceptional kind. These advantages include ample water power, plenty of timber, easy transport by good roads, and cheap labour—all which make for the working of a mine with the minimum of expenditure and the maximum of profit. Attention was first directed to this property by the report of Mr. Lamont Young, a report, which it should be carefully noted, was made, not for this company, but for his employers—the New South Wales Government. This document was so gratifying, that although no distrust was felt in the soundness of Mr. Lamont Young's judgment, yet the directors did not feel justified in accepting it until it was fully corroborated (as it has since been) by that of an independent expert from London. This gentleman found the estate to consist of 80 acres, which can be easily split up into subsidiary companies, with those advantages to shareholders of which mining history furnishes many pleasing illustrations. Samples from 300 tons of ore already at surface have assayed 4 ozs. 3 dwts. to the ton at the Sydney Mint, and the reports go to show that large reserves are in sight. On November 17th the depth of the No. 2 shaft was 70 ft.; the lode was 5 ft. wide, "with really first-class ore, and there are immense quantities, containing an ounce of gold and some silver to the ton." The manager has a good supply of plant now on hand, but in consequence of the satisfactory manner in which the mine is opening up, we are not surprised to find that he is anxious to increase it. The Newbery-Vautin process appears adaptable to this ore, and by its means 90 per cent. of the gold has been extracted. We have already published the circular of the board, dated the 25th January, which shows the vigorous way in which the directors are developing this property. The object of these gentlemen is not so much to draw their fees as to work the property for the benefit of the shareholders, and in this task they are assisted by an influential local committee. The capital of the company is 85,000*l*., which is much smaller than that of most of the colonial companies. The active market in the shares, to which we have already referred, we believe, will be maintained, and at advancing prices. Either as a cheap speculation or a promising investment the shares of the Moruya Company merit attention.

THE BELMONT (WITWATERSRANDT) GOLD MINING CO., LIMITED.

The lists of this company closed yesterday. The applications, we understand, were considerably in excess of the number of shares to be allotted. The public have doubtless been struck with the merits of the property as set forth in the prospectus, and with the fact that it is in the best part of the Witwatersrandt district. Add to this the smallness of the working capital, and the excellence of the working board that has been secured, and we appear to have all the elements which go to make up a successful mining concern. 51 claims are acquired, covering an area of 75 acres, situate only 13 miles west of Johannesberg. Sufficient work has been done to show the valuable character of the reefs. Three shafts have been sunk—one of them upon the Sydney reef, which is believed to be identical with the one at present yielding the extraordinary return of 9 ozs. to the ton. In fact, in the adjoining claim owned by the Consolidated Syndicate Company the yield has been as much as 7 ozs. to the ton, whilst on every side valuable mines are the Belmont's near neighbours. Even judging from the present shallow workings all three reefs, that is, the Sydney, the middle and the south reefs, are wide, and will pay to work. Every test, says Mr. W. Francis, yielded gold; and even at the surface—vide Mr. Dressel, the Government assayer—the value of the quartz is 17 dwts. per ton, but since then greater depths have been attained. Mr. R. J. Ockerse, the Government mines commissioner for the division, has certified that the reef will give at least 1 oz. of gold per ton, and a sample, assayed by Messrs. Johnson and Matthey, gave just over 2 ozs. per ton. About 200 tons of reef have already been extracted, according to the estimate of Mr. W. Francis, and will yield quite 2 ozs. per ton. The working capital will be applied to the deepening of the shafts, to the driving of an adit level, of which the conformation of the ground will permit, and to the erection of the necessary engines and plant. Proceeding first with the erection of a 50-stamp battery, the directors will increase the machinic appliances as the property is developed, and until they reach the goal set before them by Mr. Francis, which is the full employment of 100 stamps per day. This gentleman states that "assuming the reefs continue of the same average quantity and quality as at present shown, the amount of ore within a depth of 80 ft. only is estimated at 543,000 tons, giving a value of 1,426,425*l*." Of course, without facilities for working, a Golconda would not pay, and, therefore, we are glad to see that the company has secured a valuable water site sufficient to erect a 120-stamp battery at a distance of about a quarter of a mile from the mine, with a freehold site for the erection of mills, offices, &c.; and we also learn that there is coal to be had within about 20 miles off. Estimating the annual produce of the mine on the basis of the 50-stamp battery, the net profit is calculated to be 48,163*l*., which is by no means out of proportion to what the neighbouring mines are yielding. The position seems to be admirably summed-up by Mr. Woodford in his report, who says:—"Owing to the rich quality of the Sydney reef, and the great width of the south reef, combined with the proximity of the water and milling sites, and the admirable situation of the property, and general facilities for economical workings, I am of firm opinion that the property will prove a very valuable and highly remunerative investment; and I have no hesitation in stating that with careful management and economical working will yield handsome dividends." 70,000*l*. is the sum to be paid for the property, of which 10,000*l*. only will be in cash and 33,330*l*. will be in shares, and the balance in cash or shares at the option of the directors. The 33,330 shares given in the first instance will not be transferable for 12 months, so that the market will not be flooded with vendors' shares, but the prospect of those of the subscribers going to a premium will be increased to that extent. Of the capital, 30,000*l*. will then be left, but the estimate of Mr. Francis is that not more than 22,000*l*. will be required thoroughly to equip the property, and to produce the annual profit already named. The total capital is 100,000*l*. The prospects of the company certainly seem to be of the most hopeful kind, and we have rarely seen a property hailing from this quarter of the world which has been so exhaustively reported upon, and apparently by such reliable experts.

THE CALAVERAS CONSOLIDATED GOLD MINING CO., LIMITED.

This company has been formed to work the Calaveras Consolidated group of gold mining claims, amounting in extent to nearly 1½ miles. The property is located on the west branch of the Great Mother lode

of California. The company was originally formed in July, 1888, and with the proceeds of 30,000 preferred shares, subscribed by the directors and their friends. The purchase of the property was duly completed in September last, and operations were commenced. The claims are about 500 ft. above the Stanislaus River, and there is an ample water supply. The total cost of working is estimated to not exceed 7s. per ton of quartz. The property has been reported upon by Mr. Henry Louis, on whose report the statements in the prospectus are based. The cablegrams and letters received from the mine manager report that the mines are looking well, and the work going on satisfactorily. The subscription now invited is for 25,000 preferred shares of 1*l.* each, at a premium of 2s. 6d. per share. The subscription list will open on Monday next, and close the following day for town, and on Wednesday for the country. The managing director is J. MacDonald Cameron, Esq., M.P., F.G.S., F.I.C., &c., and he has associated with him gentlemen of high standing and undoubted ability.

AURUM CO., LIMITED.

THE property which this company is formed to acquire and work comprises 50 contiguous claims, each measuring 150 ft. by 400 ft., two deep, along the conglomerate reefs or banket on the farm Elandsfontein, in the Witwatersrandt district. Two well-known mining experts of Johannesberg, viz., Major Robertson, R.E., and Mr. David Lewes, M.E., who have examined the property, report that there are three reefs of gold-bearing conglomerate or banket running nearly east to west through the length of the property, on which the outcrop is shown from end to end. The first or north reef is 10 ft. in width, the middle one 2 ft., and the third or south reef is 4 ft. 6 ins. in width, all being well defined, and accompanied by numerous leaders and by micaceous sandstone, forming a good roof, and thus, to a great extent, dispensing with the use of timber for supports. The company appears to possess facilities for cheap working, the water-right having a fall of 46 ft. 9 ins. in a total length of 1,112 ft., and a present volume of 11,160 gals. per hour. When a dam is constructed it is expected that a sufficient supply will be obtained to work 40 stamps throughout the year. The capital is 75,000*l.*, in 1*l.* shares, of which 25,000 fully paid-up shares will be allotted to the vendor in part payment of the purchase-money, which has been fixed at 58,000*l.*

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FURTHER REDUCTION OF THE BANK RATE.

THE expected further reduction in the Bank rate has taken place this week, and the figure is now 3 per cent. Discount, however, is not worth more than 2 per cent., but this is the period of the year when the collection of the revenue gives the Bank greater control of the markets than can be depended upon at other period, and is, therefore, the opportunity for the directors to permanently strengthen the position of the establishment, in view of the usual, and possibly extra demands, of the autumn. So far the 3 per cent. rate is just as likely to be effective as the recent 5 per cent, as it is so much the nearer the ruling rate for money. A proof of this is to be seen in the result yesterday, as the quotation for discount, instead of falling, was rather strengthened, 2 per cent. being the minimum of brokers in place of 1⅞ per cent. The alteration has, of course, affected the exchanges adversely to us, but if the demand supports the rate it will have the desired effect in preventing any drain upon the Bank. The discount houses have reduced their allowances for deposits to 1½ and 1¾ per cent. respectively for money at call and notice. The Stock Exchange settlement temporarily improved the value of money. Loans for the account were granted at 2¾, 3 per cent., although 3½ per cent. was asked, but 3 to 3½ per cent. was paid, however, finally for advances to cover "pay day" or the close of the week. The Bank return showed a return of notes and coin, which increased the reserve by 550,000*l.* to 14,500,000*l.*, or 45¾ per cent. of the liabilities. The revenue payments are shown to have absorbed 1,486,000*l.*

Money has changed hands pretty freely to-day, it being the Consol settlement, and short loans have commanded, as a rule, 1¾, 2 per cent., while discounted rates were decidedly stiffer at 2⅛ for three months' bills. This firmness shows that the floating supply was none too large, although the Bank has, as a matter of fact, paid off a large proportion of its loans upon stock.

The Bank has purchased 11,000*l.* in gold, and bar silver was lower at 42½. Rupee paper, 4½ per cent., has also fallen, closing at 69⅞, 70⅛.

Europe has once more been plunged into mourning by the sad and unexpected death of Prince Rudolph, Crown Prince of Austria, who was popular throughout the dual kingdoms. At first the event was (politically) regarded as particularly gloomy, and prices on the Stock Exchange at once gave way, but when it was considered that the present Emperor was still in robust health, and with the probability of his living many years, operators regained confidence, and prices again advanced. Germany has declared war against the opposing chiefs in Samao, and now it is wondered what action the American Government will take in the matter. At the Stock Exchange business was interrupted by the arrangement of the fortnightly settlement, which was satisfactorily concluded, but a very fair amount was nevertheless recorded for the new account, and the rates for carrying over speculative bargains were decidedly easier than on the previous occasion. Prices at first were firm without important alteration, then gave way on the news mentioned above, and finally recovered, so that the changes for the week do not by any means represent the full extent of the variations. At the Election in Paris last Sunday, Boulanger was returned with an imposing majority, and although a vote of confidence has been carried by the Government, it is doubtful how long the present Ministry will be able to hold office. The Funds and other investment securities have benefited by the reduction in the Bank rate. At length some changes have been made by the public from Consols into Local Loan Stock. Colonial Inscribed issues were good, and Indian Government Stocks also improved. Foreign Government Bonds finally closed with an advance, the principal movement being in Greek Hungarian and Egyptian Bonds. Home Railways have shown a buoyant tendency, the traffic returns being very satisfactory. The Paris Exhibition also had some effect upon the market, but too much may be made of the anticipated traffic from this source. The heavy lines have risen 1 to 2, and the rest ½ to 1; South-Western being 3, upon an expected division of the stock. Mexican issues had a sudden and smart advance from rumours that the First Preference would be divided into "A" and "B" stocks bearing interest at the rate of 5 and 3 per cent. respectively, and the price of this issue has risen 5 per cent., with a proportionate advance in the others. Grand Trunk issues have also been buoyant, and show some very good advances, and American Railroad Securities were firm at an average advance of ½ to 1, although business was very limited. Miscellaneous Securities participated in the upward movement, but the alterations were not very important.

A buoyant tendency has characterised the whole of the markets to-day, and an almost general advance has to be recorded, partly in sympathy with the rise in the Funds and favourable advices from the Continent and New York. The Midland Railway dividend at 6 per cent. also caused a spurt in Home Railway Securities. The Consol settlement to-day has been of considerable magnitude, and large amounts of stock have been taken up by the Bank, and also by Messrs. Baring Brothers and Glyn and Co., which looks as if they were paying off the loans contiuued by them at the last settlement. Although closing below the best the Funds show a rise of fully ¼; several Colonial Inscribed, together with Indian and Local Loan Stocks, were also ¼ higher. Foreign Government Bonds were good throughout, apart from Peruvian Bonds, which were exceptionally weak. Egyptian, Greek, Spanish and Turkish Defence Bonds were specially enquired for, and rose ⅛ to ¾, the rest closing ¼ to ½ higher. Home Railways were in firm request, the increase of ¾ per cent. in the Midland dividend, with 52,000*l.* carried forward, gave a decided spurt. The Great Northern dividend of 5¾ per cent., also announced to-day, is at the same rate as last year, and caused a fall of ⅛ per cent. Midland, Hull and Barnsley, and the Southern Deferred Issues rose about 1¾, and the majority of the rest ½ to 1 per cent. The Railway Rates Act comes into force to-day, and the new schedules of rates have to be filed before the 10th inst. American Railroads were strong, with exceptional movements in Ontario, Lake Shore, and Wabash Bonds. The Nitrate Group recovered yesterday's fall, and most Miscellaneous Securities closed at enhanced values.

Annexed are the final quotations to-day:—Consols Account, 99 1/16, 99⅛; Egyptian Preference, 103⅜, 103⅝; Egyptian Unified, 85, 85⅛; French Four-and-a-Half per Cents., 103½, 104; Hungarian, 84⅛, 84⅜; Italian, 94¾, 95¼; Mexican, 91½, 92; Peru Five per Cents., 14½, 14⅝; Peru Six per Cents., 16½, 16⅝; Russian, 1873, 101⅞, 102⅛; Portuguese, 64⅛, 64⅜; Spanish Four per Cents., 73 15/16, 74 1/16; Turkish, 1871, 84½, 85; Turkish Defence, 96¾, 97¼; Caledonian, 116⅜, 117⅝; Great Eastern, 69⅛, 69⅜; Great Western, 155⅛, 155⅜; Brighton "A," 136¾, 137xd; North-Western, 177⅝, 177⅞; Metropolitan, 76¼, 76¾; Metropolitan District, 34½, 35; Midland, 140⅞, 141⅛; North British, 77, 77¼; North-Eastern, 166⅜, 166⅞; South-Eastern "A," 111⅜, 111⅝; Grand Trunk, 12, 12⅛; Ditto First Preference, 73⅞, 74⅛; Ditto Second, 54, 54¼; Ditto Third, 29½, 29¾; Canadian Pacific, 53½, 53¾; Denver, 16½, 16¾; Erie, 29⅞, 30⅛; Milwaukee, 67¼, 67½; Lake Shore, 106¾, 107; Louisville, 60, 60¼; Atlantic First, 35, 35¼; Ontario, 18½, 18¾; Ohio, 23, 23½; Norfolk and Western, 54, 54¼; Reading, 24⅞, 25⅛; Reading Preference Bonds, 88½, 89xd; Union Pacific, 66, 66⅛; Wabash Preference, 26¼, 26½; Wabash Preference Bonds, 43½, 44½; Ottoman Bank, 11 3/16, 11 5/16; Anglo-Telegraph, 50¼, 50⅜; United Telephone, 14⅜, 14⅝; Hudson's Bay, 20, 20¼; Suez Canal, 87½, 88; Guinness, 31⅞, 32⅛; Allsopps 8, 8¼; Bryant and May, 12⅜, 13; Bell's Asbestos, 18¾, 19; Tarapaca Water, 13⅛, ⅜; Nitrate Railways, 26¼, 26½.

MR. THOMAS THOMPSON'S MINING AND INVESTMENT CIRCULAR.

THE appearance of this circular will be welcomed by a large section of the public, who have come to regard it as the embodiment of much useful information and shrewd advice. Mr. Thompson does not profess to see further into the ground than other people, but his forecasts in respect to the probable advance of the shares he has recommended have been singularly accurate. Notably has this been the case with Tetuan shares, which from half a crown have advanced to half a guinea, and, in his opinion, look like rising still further. He takes up his parable again with respect to the Colombian Mines, which he was largely instrumental in introducing to the public, and specially mentions Orita—the December return from which is hourly expected. He does not forget Colombian Hydraulic Company and a new concern which will be out in a few days, and which is being syndicated in the House. Lengthened reference is made to El Cana Mines, which are being worked by the Darien Company, registered in 1887, and whose chief offices are at Liverpool. Of South African companies he gives in terse language a general synopsis of all the news that has come to hand since the issue of his last circular. He condemns the action of the committee of the Stock Exchange for not giving facilities to deal in these shares, which are now largely operated in on the Paris Bourse. He gives a map of the Witwatersrand mines, which must prove useful for reference. We quite agree with Mr. Thompson in his estimate of Indian mines, the improvement in which has not escaped his attention, and in order to impress this view upon the public he has quoted the list which appeared in our columns early in the year, showing the actual position of all the mines and what they have done from the commencement in the way of gold returns. Altogether the circular, apart from the recommendations which it gives to investors, and which are worthy of all consideration, should be read for the information it contains, which has been compiled with much industry and with commendable accuracy.

THE PAHANG-KABANG, LIMITED (SUB-CONCESSION FROM THE PAHANG CORPORATION, LIMITED).—We are requested to state that the publication of the prospectus of the above company is unavoidably postponed until Monday next.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (30th Jan.)—We are stripping down the main part of the lode in the 40-fm. level east, which appears to be of great width ; present value, 10 tons per fm. ; there is yet more lode before us. The stopes along the back of this level are producing their usual quantities of mineral, and of late have given more copper. Cook's stope below the 30 east produces 10 tons per fm. The lode in the 40-fm. level west produces 6 tons per fm. Lode in 40-fm. level east of junction at the old engine shaft produces 8 tons per fm. Stopes referred to in my last report above the 40 near the junction are producing fairly well for copper and arsenical ore, and opening some good paying ground.—T. Gregory.

BULLER AND BASSET (29th Jan.)—Copper Hill—Main shaft : The pitman during the week has dropped the forking lift a further distance of 9 ft. below the 84-fm. level, and the shaftmen are at present employed clearing the said 84-fm. level further eastward to let go some water which is kept back by a large head of débris at a point where the old level has caved in. As soon as this is cleared we will put the men to open on the lode at two or three different points, so as to ascertaiin its value. The machinery is working well throughout.—J. H. James.

D'ERESBY.—The lode in the No. 9 north of the Gors shaft is still opening out very well. There is a mixture of lead and spar for 9 ft. wide, which will produce 1½ tons of lead per cubic fm. The No. 9 south is now abreast of the No. 2 sump, and they have commenced to cut across the lode to reach the sump, which is being carried down on the foot wall. The new shares have been well applied for, and it is expected in the course of the coming week the allotments will be completed.

DEVON CONSOLS (31st Jan.)—Wheal Maria, eastern shaft, Capel Tor lode : During the past month the cutting of plat at the 86 referred to in previous reports has been completed, and a cross-cut north for intersection of the lode has been commenced, and so far as driven, 2 fms., the ground is of a most congenial character for the production of mineral and favourable for exploration. A distance of some 4 or 5 fms. will have to be driven to reach the lode. The 74 west has been driven 3.1 fms. ; the lode proving from 1 to 2 ft. wide, composed of capel and quartz, with peach and a little mundic and copper ores. This drivage is now suspended to admit of a rise being put up in the back thereof to effect a communication with the 62-fm. level. The 74 east has been driven 1 fm. 4 ft. 6 ins., the lode proving 2 ft. wide, of a promising character, and yielding small quantities of copper and mundic ores. The 50 west has beeu driven 1 fm. 1 ft. 6 ins., the lode proving 2 ft. wide, composed principally of capel with quartz, and small quantities of copper and mundic ores. This drivage has been suspended to admit of a winze being sunk in the bottom of 62-fm. level for the purpose of effecting a communication with the 74 as quickly as possible to secure good ventilation in the workings below. This winze is being sunk by the side of the lode for more speedy progress, and is now down 5 ft. below the level. Wheal Emma, railway shaft, new south lode : The cross-cut north at the 260 west of shaft on the middle part of the lode has been driven 2 fms. 0 ft. 8 ins. At about 3 feet from the farthest point reached a branch about 6 ins. wide has been intersected, composed of capel and quartz, with peach, carbonate of iron and a little mundic. The ground throughout this distance has been much as for some time past, killas with, in places, thin layers of quartz. At present, however, there is a larger proportion of quartz intermixed with the killas, which renders exploration difficult. Watson's engine shaft ; the cutting of plat at the 160 previously referred to has been completed, and a cross-cut north for intersection of the lode has been commenced, and extended 1 fm. 3 ft. The ground is killas of a close feature, and rather spare for exploration. Every effort, however, is being made to press forward as fast as possible. Lark's rise in the back of the 148 west has been risen 1 fm. 1 ft. 6 ins., the lode proving from 3 ft. to 4 ft. wide, of a very promising character, and yielding 3 tons of copper and mundic ores per fm. The 136 east has been driven 1 fm. 5 ft. 6 ins., the lode proving 3 ft. to 3½ ft. wide, very promising, and yielding for the greater part of the distance driven 3 tons of copper and mundic ores per fm. The 136 west has been driven 1 fm. 1 ft. 6 ins., the lode proving 3½ ft. wide, also of a promising character, and yielding from 2 tons to 3 tons of copper and mundic ores per fm. The adit level west has been driven 3 fms. 2 ft., the lode proving about about 1 ft. wide, composed of quartz, with a little prian and mundic.—I. Richards.

DEVON UNITED (31st Jan.)—In Willesford's shaft sinking below the 120-fm. level the lode has improved. It is now about 4 ft. wide, and is yielding 8 tons of good quality copper ore per fm., for length of shaft, 12 ft., and judging from its highly promising character a further improvement may fairly be expected. The cutting of ground for foundation of air machine at the 120-fm. level is completed, and the engineers will at once commence to fix the machine. In the cross-cut south at the 60-fm. level west of Watson's shaft the ground continues without alteration.—I. Richards.

DRAKEWALLS (31st Jan.)—The lode in the 147 driving east on the south part of the lode continues to produce 8 tons of mundic per fm. In the 147 east on the north part of the lode there is a little more capel mixed with the mundic. It has, however, a very masterly appearance, and will yield 8 tons of mundic per fm. The lode in the 147 west on the north part of the lode is still looking well, and will produce 12 tons of arsenical mundic per fm. There is no change in the 132 east ; the lode is still hard for exploration, and at present unproductive for mineral. The lode in the 132 west is producing 4 tons of copper and mundic ores per fm., and is looking exceedingly promising. We are very busily engaged about the new calciner, and hope to get it to work by the end of the week. All other surface work is being got on with satisfactorily.—H. Rodda.

EAST BLUE HILLS.—A general meeting will be held in the course of a few days, when a satisfactory statement of accounts will be presented, and a full and detailed report given of the very promising operations that are now being carried out. It is satisfactory to note that the improvement on the Baldhu lode, in the Blue Hills Mine adjoining, continues, which is of great importance to East Blue Hills.

GREAT FORTUNE.—The winze from the deep cutting having been communicated with the deep adit level, additional stopiug ground is thereby laid open, from which increased returns are now expected. The necessary pitwork is being obtained for following these branches down to the 10-fm. level, where it is expected they will be much richer than at the adit level, the most productive parts having hitherto been found below the adit.

HOLWAY UNITED (31st Jan.).—The only change in the mine is an improvement in the winze sinking below the 60 level west. We are this week engaged in making alterations in the pit-work, viz., substituting a 24-in. plunger pole for the 21-in.—H. Hotchkiss.

LEADHILLS (29th Jan.)—Monthly setting report.—Brown's vein : Eight men are set to drive the 145 level 65 fms. 5 ft. south of Jeffrey's shaft, at 110s. per fm. ; vein 4 ft. wide, of too dried a nature, as well as quartz and stone, being too dark for producing ore. Eight to drive the 145 level 16 fms. north of Wilson's shaft, at 100s. per fm. ; vein 7½ ft. wide, well mixed with quartz of a promising character, with ore worth 40 cwt. per fm. Nine to sink a winze below the 130 north of Wilson's shaft, at 107s. 6d. per fm. ; vein 4¾ ft. wide ; worth 20 cwt. of ore per fm. Four to drive the 130 level 27 fms. 5 ft. north of Jeffrey's shaft, at 100s. per fm. ; vein above 4 ft. wide, of too dried and dark a character for yielding ore. Four to No. 1 stope above the 130 south of Jeffrey's shaft, at 42s. 6d. per fm. ; worth 50 cwt. of ore per fm. Four to No. 2 stope, at 30s. per fm, ; worth 30 cwt. of ore per fm. Four to No. 1 stope above the 130 north of Wilson's shaft, at 33s. 6d. per fm. ; worth 45 cwt. of ore per fm. Four to No. 2 stope, at 33s. 6d. per fm ; worth 40 cwt. of ore per fm. Six to stope above the 130 south of Wilson's shaft, at 42s. 6d. per fm. ; worth 90 cwt. of ore per fm. Four to stope above the 115 south of Wilson's shaft, at 40s. per fm. ; worth 25 cwt. of ore per fm. Four to stope above the 100 south of Wilson's shaft, at 60s. per fm. ; worth 35 cwt. of ore per fm. Twelve to sink below the 85 north of Jeffrey's shaft, at 100s. per fm. ; worth 60 cwt. of ore per fm. Four to stope above the 35 south of flat rod shaft, at 40s. per fm. ; worth 25 cwt. of ore per fm. Four to stope above the 20 south of flat rod shaft, at 42s. 6d. per fm. ; worth 30 cwt. of ore per fm. George's roust vein : Four to drive Gripp's adit 326 fms. 5 ft. 6 ins. north of Muir's crosscut, at 110s. per fm., aud 20s. per ton of ore ; vein 4 ft. wide of quartz, with ore worth 15 cwt. per fm.—T. Newbigging.

MID-DEVON (26th Jan.)—Surface : The axle of pumping-wheel is, so far, going on satisfactory. The couplings appear to have a firm grip on it, and by screwing the bolts in couplings, whenever necessary, we are so tightening it on the axle that the motion in fractured end is but little. We purpose in early part of next week to connect the 80 buckets to shaft rod, and drain below that point. C shaft : The 60 east driven by nine men, 1 fm. 5 ft.; total distance from shaft, 24 fms. 1 ft. 6 ins. The strata until yesterday was very much easier, being chiefly comprised of friable garnet, chlorite, and axinite, when a crossing vein was intersected, which has somewhat altered the character of strata, it now being chiefly capel with a little garnet and chlorite intermixed ; occasional deposits of ore are met with in saving quantities. The 50 east : Stopes No. 2, 3, and point at extreme end of drivage, driven by six, six, and two men, are respectively worth 10*l*., 15*l*., and 9*l*. 10s. per fm. for copper ore.—J. Neill.

PRINCE OF WALES.—The pitwork and all other shaft arrangements having been now completed and made perfectly sound from surface to the bottom level, sinking will immediately be resumed, and it is hoped will be continued without interruption. The lode in the bottom level has been opened 5 ft., producing good tinstuff, but the north wall is not yet reached. The various points are valued in the aggregate at 55*l*. per fm. All surface work is proceeding satisfactorily.

PRINCE ROYAL.—The work of clearing the adit level is proceeding. A general meeting of shareholders will shortly be held, when a full report will be presented.

ROMAN GRAVELS (31st Jan.)—We have nothing new to report to you from the underground workings. The two stopes in back of the 135, one north the other south of new south shaft, are each worth 3 tons per fm. The footwall part of the lode at the 125 south has not yet been reached, but we are pushing on the drivage as fast as possible. The stopes in back of; this level are without change since last reported. At the 110 south we are cross-cutting, to cut that portion of the lode which is at present so productive in the stopes in back of the level. The lode in the 110 north of old shaft is 3 ft. wide ; worth 1 ton per fm. The lode at the 80 north-west ou Caunter is about 1½ ft. wide ; worth 1 ton per fm. The remaining stopes in the mine are producing ore in quantities stated in recent reports. The new shears for capstan is now fixed, and all work in connection would have been finished had it not been for the severe weather.—A. Waters and Son.

SOUTH CONDURROW (30th Jan.)—The lode in the 40 end east is letting out more water and looks promising to improve ; it is now yielding low tinstone. The 50 end east is worth 12*l*. per fm. Three stopes in back is worth 12*l*. per fm. each. Two stopes in back of the 60 is worth 10*l*. and 15*l*. per fm. respectively. We have communicated the winze below the 60 with the 70 on the north part of the lode. We are now stoping west of the winze, where the lode is worth 18*l*. per fm. The stope in back of the 80 is worth 8*l*. per fm. The back of the 93 east is worth 9*l*. per fm. We are having the drillers here to-day to set out the position to rise against Pendarves's shaft in the 66-fm. level west. The 108 west of Marshall's shaft is worth 6*l*. per fm. We are urging on the sinking of Marshall's shaft below the 108-fm. level.—W. Rich, W. Williams, H. King.

SOUTH DARREN (31st Jan.)—The 142 end is in a hard lode, with strings of lead through it. The 142 end west has improved a little ; worth 15 cwt. of silver-lead ore per fm. The lode in the 110 end east is worth from 6 to 8 cwt. of silver-lead ore per fm., and is increasing in size. In the 100 end west the lode is 12 ft. wide. We have stripped it down to the full width, and will proceed to drive on the north side, which is showing a good mixture of lead and copper. The stopes and pitches are without any change to note. The 25 tons of silver-lead ore sold on the 25th inst. realised 314*l*. 7s. 6d.—J. Mitchell.

TIN ERA (29th Jan.)—We continue to force on the deep adit end with all possible speed with a view to laying open the ground worked on in the level above for profitable working. The present end is, however, harder again, from which it will be seen it has been changeable of late, and which I think is a sign of near approach to the lode. The distance driven during the past month is 2 fms. 1 ft. 6 ins. ; present price for driving is 11*l*., 1 fm. stent.—R. Knott.

TREGEMBO (29th Jan.)—Pennick's shaft is down the required depth to meet the 42 east from sump, 13 fms. 2 ft. below the 30-fm. level ; the casing and dividing of the shaft is finished, and the men are now engaged cutting plat, this done, driving will go on both

east and west. The 42 east from sump is in a lode 3 ft. wide; worth 5*l*. per fm. Two stopes in the back of said level are worth, together, 10*l*. per fm. The other stopes, on the whole, are not looking so well. No other changes.—T. HODGE.

WEARDALE (26th Jan.)—Ore raised for the week, 68 tons; ore dressed for the week, 102 tons; ore, &c., smelted for the week, 117 tons, producing 75 tons of pig lead.—R. S. MACLARAN.

WEST CARZISE.—There is no particular change to report this week. The manager writes that he is daily expecting to cut a good lode in the 30 cross-cut south, and also in the 30 west. Not being satisfied with the appearance of the branches in the engine shaft, he has commenced to drive north, with a view of seeing the main part of the lode, which he expects to reach in a few feet.

WEST GODOLPHIN (29th Jan.)—The engine shaft is 10 fms. 3 ft. 4 ins. below the 107-fm. level. In the ends no change has taken place worthy of note since my last.—T. HODGE.

WHEAL CREBOR.—The 200-fm., or bottom level, both east and west, continues to look very promising, the lode being 4 ft. wide, producing stones of copper ore of good quality. In the 170-fm. level west the lode is also yielding good stoues of copper ore and arsenical mundic. The values of the different points are without change.

WHEAL GRENVILLE (31st Jan.)—The 165-fm. level is drained, and we continue to fork slowly. I hope by the end of this week to be able to draw from the levels. No change has taken place in the bargains now at work since my last.—T. HODGE.

WHEAL METAL AND FLOW.—The metal lode is improving, particularly in the eastern level, from which some beautiful stones of tin have been broken. Two samples sent to the office assayed 1½ and 2 cwt. to the ton of stuff respectively. These, of course, are selected stones, but the agent writes that the indications are exceedingly encouraging, and that he believes they are getting near the tin ground.

WHEAL UNY.—The manager reports that the 180-fm. level east has much improved, being now worth fully 30*l*. per fm., and it looks like a good thing. The 190-fm. level in the same direction is looking very promising, and it would seem that these levels are entering some rich tin ground.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR (12th Jan.)—76 men driving; aggregate value of ends per fm., 5 tons 15 cwt., 188 men stopiug; aggregate value of stopes per fm., 12 tons, 3 cwt., 16 men rising, 14 men cross-cutting, 172 trammers, labourers, etc. In Union level we have cut into a branch worth fully 1½ tons of rich silver-lead ore per fm. Should this continue to open out it will be a fine discovery.

BALAGHAT MYSORE.—Report for fortnight ending 8th January.—North engine shaft: In consequence of the Christmas holidays, and the fact of our taking advantage of the temporary suspension of work, to thoroughly overhaul our boilers, pumping and other engines, rock-drills, &c., we have not the usual fortnightly progress to report this week. I am, however, pleased to say most of the points of operation are again in full swing. I have just started a rock-drill at the bottom of the shaft, and commenced to take down the ground necessary for plat, &c., this will be pushed forward with all speed, and the new or 410-ft. level started as early as possible. The 330-ft. level north has not been driven since last report, the distance from shaft being 327 ft. 3 ins. In the present forebreast the quartz is about 1 ft. wide, assaying 2 dwts. 15 grs. per ton. Instead of extending the level, the drill has been employed in boring the necessary ground for trim out, also ground for new winze, and also in rising and stoping the back of the level to communicate with the No. 2 winze in the bottom of the 270. I am daily expecting to effect this; when accomplished it will enable us to more advantageously work this sectiou of ground. The 270-ft. level north has been advanced 4 ft. 3 ins., or 631 ft. 6 ins. from the shaft; the lode occasionally yields patches of quartz, but not of much value unless it improves shortly, I purpose suspending this point and drive on the other part of the lode standing to the east of us. The No. 3 winze in the bottom of this level has been sunk 6 ft., or 22 ft. 6 ins. below the level; the quartz is at present small, and not of much value. The stopes in the bottom of the level yield quartz of about 1 ft. wide, and assays 2 ozs. 3 dwts. 3 grs. of gold per ton. The No. 2 cross-cut east has been extended 5 ft., or 52 ft. from the level. The machine stopes in the back of the 270, produce quartz of about 1 ft. wide, assaying 3 dwts. 22 grs. this week. The Moplahs' stope continues to yield quartz of about 1 ft. wide, and worth 1¼ ozs. of gold per ton. The 165-ft. level north has been advanced 3 ft. 6 ins., or 447 ft. 6 ins. from the shaft; the lode is again improving. During the last week we cut a branch of quartz, it appears to be crossing the drive, but it is rather premature to say much of its importance, as we are not yet through it. Surface: The clean up for last month is as follows:—115 tons of quartz, yielding 295 ozs. of gold.—Capt. PRYOR.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 24th November. All machinery in connection with the mine in good order. Mill: As we anticipated, we have been successful in obtaining the St. George, Queen, and Victory Grand Junction Companies stone to crush. This company's property is one of the most prosperous on the field. We started on Wednesday last, the 28th ulto., with two batteries.

BRATSBERG (21st Jan.)—Hoffnung mine: No. 2 adit level has improved since last report, now yielding fully 1 ton per fm. The lode in the rise at the back of No. 2 appears to be making smaller, but contains, in proportion, as much ore as it has for some considerable time past; at present worth 1½ tons per fm. Fair headway is being made in sinking the winze in the bottom of this level; the lode is looking very well, and producing fully 1½ tons per fm. A greater constancy is observable in the lode at No. 3 adit level; in fact, it now has a very good appearance, and yielding about 1 ton per fm. The rise in the back of No. 3, for the time, is unproductive, but as the winze coming down from above is on a good lode, and but a few meters further west, we expect a change here daily. At Ball's shaft we notice a decline in the value and general appearance of the lode, and as we have had a good lode here for such a long time, we are not surprised to find this change. The lode is at present yielding about ⅓ ton per fm. No. 4 level is unchanged. No. 5 level west is producing about ½ ton per fm. At the same level east the lode still shows very favourably, but produces very little ore. The mid-level at Murchison's is improving; now worth ¾ ton per fm. At the rise in the shallow workings there is a large lode, but the ore-bearing part is only 6 ins. wide. 86 miners employed at this mine. Johannes lode: Nothing new to report at the cross-cut. The winze sinking at the shallow workings is poor. With a view of coming as near to the vertical line over the cross-cut going in below we had to start the winze as far east as possible, and at this point it appears the lode has not yielded much ore, it being the same with the Johannes as the Hoffnung, that it makes poor in places. As we go down we shall doubtless meet with a lode of an average value. 10 miners employed here. Næsmark Mine: About 2 metres have been sunk on Barker's shaft during the past week. There is but little change in the character of the lode since last report, but it is yielding saving stuff. Surface work and remarks: A portion of the machinery have arrived, but unfortunately it is not all the parts we require to begin upon.—J. D. HOLMAN.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 8th December:—General: During the past fortnight the machinery at Nos. 1 and 2 shafts has been overhauled and cleaned. The new hopper at No. 1 shaft to hold 300 tons will be completed during the coming fortnight.

— Mr. Thomas, engineer, writes:—New mill on Burdekin River: Since my report of November 24th the work here has been progressing satisfactorily. We have received and placed in position the two Brown and Stanfield's concentrators mentioned in my last report, and all other work is coming to a close. Last Saturday and Sunday we had two terrific gales here, but I am pleased to say that the company's property did not suffer in the least. Several of the workmen's humpies were blown down, and some of the tents rent to pieces. On Wednesday we had eight hours of the heaviest rain that has fallen in this district since my arrival here, and I am pleased to state that no damage whatever was done. All drains and water-courses answered their purposes very well in carrying off the storm water.

DEVALA-MOYAR (7th Jan.)—The pyrites winze is 16 ft. below the deep tunnel, and the lode is becoming wider; it is 2 ft. wide in the west end of the winze, and 1½ ft. in the east, and it will yield 2½ tons pyrites to the fm. The rock-drills are employed in cross-cutting the lode from the deep tunnel 100 ft. west of the winze; we are also cutting open the sides of the level running west parallel with the deep tunnel to ascertain the size and value of the lode. The lode in the deep tunnel east is likewise being cross-cut.—J. WILLIAMS.

GOLDFIELDS OF MYSORE (8th Jan.)—Fortnightly report.—The assays in the following report are for the past fortnight, and the measurements for the past month. Bridge shaft has been sunk 5¼ ft.; total depth, 166 ft. After sinking a few feet more we propose to cross-cut. The north drive at 105 ft. has been advanced 6½ ft., and the south drive 4½ ft., making these end 56¾ and 60¼ ft. distant from the shaft respectively. In the south end we have commenced to cross-cut to the west. Driving north of middle shaft at 175 ft., an advance of 10½ ft. has been made; distance from shaft, 50 ft.; the lode is about 4 ft. wide, and worth 13 dwts. a ton by assay. The south end at the same depth has been driven 9 ft.; distance from shaft, 47½ ft.; the lode in the end is pinched to a few inches, and of low quality. The north end at 108 ft. has been driven 8½ ft.; distance from shaft, 123½ ft. The lode in the end has turned to the west, and the drive, which is also being turned, is as yet only touching the footwall of it. The south end has been driveu 33½ ft.; distance from shaft, 262 ft., and is in old workings. The winze below the north level at 108 ft. is down 51¼ ft., an advance of 8¾ ft. About 3½ ft. in width of the lode is carried in the bottom; worth 9 dwts. a ton by assay. Champion lode: Coromandel shaft has been sunk 7¾ ft.; total depth, 162¼ ft. Driving south at 150 ft., the lode in the end is composed of schist, mixed with a few stringers of quartz of low quality. New Prospect shaft has been sunk 11½ ft.; total depth, 179¼ ft. We propose to sink to a depth of about 200 ft. before driving under the old workings. W. FRECHEVILLE.

GREAT SHE.—Extract from letter received from the manager of the Great She Gold Mining Company, Limited, dated Barberton, 25th December:—I am preparing sections of the Standard shaft and drive, and will complete and forward same on the 31st inst.; also detailed section of the shaft now in course of siuking on the Magnet block and section of shaft and drives on the Syndicate block from whence we are now taking the quartz, with visible gold referred to in late cablegram from Barberton office as rich strike. The reef is becoming now more defined, and continues to improve as we proceed with the level going west.

GYMPIE GREAT EASTERN (13th Dec.)—Fortnightly report: During the past fortnight we have broken through from the winze sunk on the Great Eastern reef at the 580-ft. level to the 634-ft. cross-cut, and started levels north and south on the reef, which is showing better gold than expected; the crushing stuff will average about 2 ft. The level going north is in 6 ft., and that going south is in 26 ft. The winze at the 580-ft. level in the eastern cross-cut to cut No. 1 South Great Eastern reef has been sunk 10 ft., total 40 ft., and timbered 14 ft., total timbered 34 ft. The country is slate, but very hard and bad to break. I hope it may get better soon, as the progress is very slow. The stopes above the 500-ft. level are all showing fair gold, and those above the 400-ft. level on the old eastern reef are all showing a little gold. There is also some fair gold showing in the old 364-ft. level going south, with a fair amount of crushing stuff. The 10-head of stampers that were crushing for the Nicholl's Lease Company have been hung up since the 12th inst. Everything about the mine and winding engine is in fair working order. There are 80 men employed, 70 at the mine and 10 at the battery.—J. JAMES.

LA LUZ.—A parcel of ore has been received in London from the mines, which has been assayed by Fred Claudet, Esq., assayer to the Bank of England, the result being:—Gold, 1 oz. 9 dwts. 12 grs. per ton of 2,240 lbs.; silver, 271 ozs. 2 dwt. per ton of 2,240 lbs. A telegram has also been received from the superintendent at the mines to the effect that the San Miguel tunnel is being continued, and the new shaft proceeded with. The directors, therefore, anticipate that within a very short period bullion may be received in London. This information should be satisfactory to the shareholders.

MONTE DEL ORO (19th Jan.)—Fortnightly report:—Taylor's engine shaft: Through the ground being very badly crushed, and the quantity of timber left in it by the ancients, great care and patience is required in spilling through the old workings in the 186-ft. level to the north of the cross-cut, consequently progress with this work is rather slow, although the end is within about 20 ft. of No. 6 shaft. From this place we are obtaining a fair quantity of good-looking

quartz, which is being saved. Very good speed was made in the last fortnight with the driving of the 186-ft. level south of the cross-cut, it being extended 14 ft., making its total length 134½ ft. The lode averages about 2½ ft. in width, and is composed principally of quartz, with a little hard blue slate and pyrites intermixed. In the cross-cut to the west of the shaft the lode mentioned in my last letter still maintains an average width of 2 ft., of which 1½ ft. is hard solid quartz. This lode is not, however, running quite parallel with the cross-cut, and, therefore, I shall slightly turn the latter, and drive it on the course of the former, as this will be cheaper, since it carries a nice fluccan. Being so good-looking, I consider the lode well worth proving, and the alteration in the direction of the cross-cut will only make a very small difference in its length. Shaft No. 5: Here there are as yet no signs of the bottom, although a depth of 123 ft. has now been attained. Winze No. 1: During the fortnight capital progress was made in sinking this winze, 21 ft. being sunk, making the amount for the month 41 ft. The depth of the winze from the bottom of the 76-ft. level is now 131 ft., and the lode in the present bottom is about 12 ins. wide, containing a seam of quartz having a width of only 2 ins.—J. Roberts.

MYSORE WEST.—Report for fortnight ending 8th January:—Walker's: We are timbering, casing, and dividing this shaft from 225 to 300, at the same time the 300 cross-cut is in progress. One of our Englishmen is ill of fever, which, if it continues, will somewhat retard this work, but I hope to complete this, and commence making ready for the new pitwork in a few days. The 300 east cross-cut: This has been advanced 7 ft., making 11 ft. from shaft. The reef has not yet been intersected, but there are strings of quartz and pyrites which produce a trace of gold; the rock is hard for cutting. The 225 north: This heading has been advanced 1 ft. 9 ins., making 108 ft. 10 ins. from shaft. The reef here is 4 ft. thick of quartz, producing a trace of gold in the assay. In addition to this there is a new body of quartz coming in from the west side, which may probably be the main body of the west reef, which has been shifted by the numerous faults. This quartz is of still more promising character than that we have been driving on, and as soon as we can resume work in this heading. I intend cutting into it and having a sample, this having been temporarily suspended to facilitate work in the shaft. The 225 south: This heading has been advanced 1 ft. 9 ins., making 98 ft. 9 ins. from cross-cut. The reef here is 2½ ft. thick, producing a trace of gold in the assay. The 159 north: This heading has been advanced 11 ft., making 333 ft. 1 in. from the cross-cut at Walker's: The reef here is 5 ft. thick, producing a little over 7 grs. of gold per ton of quartz.—Capt Tregay.

MYSORE-WYNAAD CONSOLIDATED.—Report for the fortnight ending January 8th:—Eugine shaft, 100 north: This heading has been advanced 14 ft., making 47 ft. from shaft. The reef here is without much change, 4 ft. thick of ferruginous matter and quartz. The water is very quick. Machinery: The winding engine is ready to work and the shaft tackle will soon be ready too. I hope this will enable us to cope with the water, and continue the sinking until the pumping engine shall be ready.—Capt. Tregay.

NEW LA PLATA (14th Jan.)—The quality of the ore in lease No. 4 has fallen off considerably, also lease 6. The new lessee on block 5 has struck pay ore, and is apparently doing well. Lease 3 is also improving. During the past week I have granted a six months' lease on the sulphide ore 5th level north. Royalty 25 per cent. of all ores netting up to $25 per ton, and 40 per cent. of all ores exceeding $25 per ton, extent from 30 ft. below 4th level to 30 ft. below 5th level. After January I expect the mine returns will steadily increase. Gnesen: The water from behind the dam has diminished.

NINE REEFS (7th Jan.)—Mining operations—Malleson lode, main shaft: 310-ft. level north, driven by one miner and six coolies, has advanced 4 ft., a total distance from shaft of 72 ft.; vein is 5 ft. wide; assay, 7 dwts. 3 grs. gold per ton. Morrison's shaft, sinking by one miner and eight coolies, has been sunk 3 ft., a total depth of 11 ft. 5 ins. under the 185-ft. level. Part of vein carried 6 ft. wide; assay, 2 dwts. 14 grs. gold per ton. The 185-ft. level north (Morrison's shaft), driven by three coolies, has advanced 2 ft., a total distance from Morrison's shaft of 133 ft. 3 ins.; the vein is 3 ft. wide; the assay, 1 dwt. 23 grs. gold per ton. Baynard shaft: 310-ft. level north, driven by one miner and six coolies, and 310-ft. level south, driven by one miner and six coolies, have not been measured, as the men have been chiefly employed at necessary work in and around the shaft in the 310-ft. level north; the vein is 5 ft. wide; the assay 7 dwts. 2 grs. gold per ton. In the 310-ft. level south the vein is 5 ft. wide; the assay, 1 dwt. 7 grs. gold per ton. Stoping: No. 1 stope in the back of the 185-ft. level north of main shaft, by one miner and eight coolies; vein 6 ft. wide; assay, 1 oz. 13 dwts. 1 gr. gold per ton. No. 2 stope in the back of the 185-ft. level north of main shaft, by eight coolies; vein 6 ft. wide; assay, 15 dwts. 7 grs. gold per ton. No. 3 stope in the bottom of the 185-ft. level south of Baynard shaft, by one miner and 12 coolies; vein 3 ft. wide; assay, 6 dwts. 12 grs. gold per ton. No. 4 stope in the bottom of the 185-ft. level, by 16 coolies; vein 4 ft. 6 in wide, assay, 1 dwt. 17 grs. gold per ton. No. 5 stope in the bottom of the 185-ft. level north of main shaft, by one miner and 16 coolies; vein 6 ft. wide; assay, 1 oz. 19 dwts. 4 grs. gold per ton. Champion lode, Vyvyan shaft: 145-ft. level south, driven by one miner and six coolies, advanced 4 ft. 6 ins., a total distance of 271 ft. from shaft; vein 1 ft. 2 ins. wide; assay, 5 dwts. 5 grs. gold per ton. Stoping the north stope in the back of the 145-ft. level north of Vyvyan shaft by eight coolies; vein 1 ft. 3 ins. wide; assay, 5 dwts. 5 grs. gold per ton. The south stope in the back of the 185-ft. level, south of Vyvyan shaft, by six coolies; vein 1 ft. 8 ins. wide; assay, 10 dwts. 19 grs. gold per ton. Milling: The stamps mill during the past month has run continuously and well. We have had a full supply of rock of fair quality. The quantity stamped has been—from main shaft, 626 tons 18 cwt.; Vyvyan shaft, 94 tons 12 cwt.; surface ores, 16 tons; concentrates, 6 tons 10 cwts.; total, 774 tons. The tailings and concentrates from the above have not been treated for the gold that can be utilised from them, but are laid aside for future operations. The yield of bar gold for the month of December, as cabled, is 148 ozs., which will be sent you from here on or about the 12th inst. In conclusion, I would say, in reference to the general appearances of the veins in the different workings of the mine, that they continue to look well, and whilst the assays from different points fluctuate, you will notice that the assay from the battery (10 dwts. 10 grs.), which is a tolerably fair average of the whole, continues to be nearly uniform.—Capt. Bennetts.

— The following telegram has been received from Capt. Bennetts:—"The cross-cut from Vyvyan shaft intersected; vein 2 ft. wide. A valuable prospect. Assay will follow later."

NO. 2 QUEEN (3rd Dec.)—Fortnightly report.—Mill: We have been crushing part of the time for the Great Britain Company, and part of the time for the Old Identity, so keeping 10 heads crushing public stone all the fortnight. For want of water I had to stop the other five that had been running on our own ore. I cleaned up to-day, however, 91 ozs. 17 dwts. 5 grs. from 120 tons (estimated) put through. The gold is worth 3*l*. 7s. 6d., some of the best we have ever had. There is now an abundance of water, as we have been almost inundated by a flood which has filled the reservoir, and we shall start 20 heads next week.—A. G. Charleton.

— A cablegram has been received as follows:—"Change in character of the rock; formation, 1 ft.; average thickness of quartz, 1 in. The country rock is unsettled below."

NORTH MEXICAN.—I am now 54 ft. above the drift and 37 ft below it. It will take very short time to connect the works, and then I will continue to sink at the bottom to go down as fast as possible.—R. S. Carlisle.

NORTH TOLIMA.—The superintendent writes under date 18th December: As under, please find report of operations at the company's mines for November, and herewith enclosed underground agent's report, and the accounts. The latter, including, exploratory work, &c., show an excess of expenditure beyond the receipts of 209*l*. 3s. Underground: Ground extracted for month—productive, 130 ft. 6 ins.; unproductive, 71 ft. 6 ins.; total, 202 ft.

NUNDYDROOG (8th Jan.)—Mining operations: There is nothing new to report to you from the different places in the mine. The bottom of Webb's shaft is in barren rock, and so is Taylor's, and the 300 end north of Taylor's; the other places are looking well. The 370-ft. level north of Webb's shaft has a band of quartz in it 4 ft. wide, but the value, according to the assays, is nil. What it may lead to it is impossible to say, it is not at all like the cross-course; the cross-course runs obliquely to the lode and contains a good deal of mica, while this band is running in the general direction of the productive reef. In the 370 level south of Webb's shaft we find pieces of quartz on the eastern side; men are put to blast it down, but as yet little has been done, and I shall not be able to offer an opinion until it is further explored. The 166 ft. south of Webb's shaft has gone into old workings, and the 230-ft. level has been driven to the south boundary. Seven places are under operation, containing fairly wide lodes, and yielding good quantities of gold. The width and assays of these places are as follows:—In the stope below the 300 the lode is 4 ft. wide, assaying 2 ozs. 12 dwts. In the 300 level, south of Webb's shaft, the lode is 3 ft. wide, assaying 1 oz. 7 dwts. 6 grs. In the intermediate level, south of the shaft, it is 2 ft. 6 ins. wide, assaying 1 oz. 11 dwts. In the rise in the back of the 230, north of Webb's shaft, it is 2 ft. wide, assaying 3 ozs. 1 dwt. 18 grs. In the middle level between the 230 and 166 it is 1 ft. 8 ins. wide, assaying 2 ozs. 6 dwts. 12 grs.; and in the 166, where stopes will be commenced, the lode is 18 ins. wide, worth 1 oz. 7 dwts. The air-compressor works steadily and well, so does the rock-drills; and the men are improving, and we hope will soon do fairly good work. Assay of weekly samples from the mill:—Rough quartz (through stonebreaker), 2 ozs. 3 dwts.; smalls, 1 oz. 5 dwts.—B. D. Plummer.

OOREGUM (8th Jan.)—Main shaft: The 250 ft. level, driving south on course of lode, 12 ft. 5 ins. have been done, or 133 ft. 6 ins. from cross-cut west; the lode continues the same, 2 ft. 6 ins. of quartz; the remainder 2 ft. wide of country rock, between the two branches of quartz; a sample was taken from it, which gives an assay of 18 dwts. 10 grs. of gold per ton of quartz. The 250-ft. level, driving north on course of lode, 9 ft. 9 ins. have been done, or 90 ft. 11 ins. from cross-cut west. The lode is 1 ft. 8 ins. wide, and gives an assay of 1 oz. 2 dwts. 21 grs. of gold per ton of quartz; the lode here has increased in size since my last report. Low's shaft: The 270-ft. level, driving south on course of lode, 4 ft. 5 ins. have been done, or 16 ft. 9 ins. from cross-cut west; the lode is 10 ins. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The rise in back of the 270-ft. level, south of shaft, 1 ft. 9 ins have been done, or 5 ft. 9 ins. above the back of level; the lode here is at present pinched, being 6 ins. wide; an assay made from it gives 1 oz. 13 dwts. 18 grs. of gold per ton of quartz. The 270-ft. level driving north of shaft, 4 ft. 6 ins. have been done, or 93 ft. 2 ins. from shaft. The rock is hard for driving. The 250-ft. level driving north of shaft, 6 ft. 2 ins. have been done, or 263 ft. 4 ins. from shaft. There is no change in the rock here; a little water still comes from the face of drift. The winze sinking in bottom of the 200-ft. level north of shaft, 3 ft. 3 ins. have been done, or 29 ft. 9 ins. below the level; no assay was made from here the past week. The stope in the intermediate level north of shaft looks well; the lode is 2 ft. 6 ins. wide, and gives an assay of 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The winze sinking in bottom of the 200-ft. level south of shaft at the end of cross-cut west, 4 ft. 10 ins. have been sunk, or 60 ft. 6 ins. below this level; the lode is small, 10 ins. wide, and gives an assay of 14 dwts. 4 grs. of gold per ton of quartz. The 200-ft. level driving south on course of lode, south of shaft, 7 ft. 9 ins. have been done, or 116 ft. 4 ins. from cross-cut west; the lode is 1 ft. 8 ins. wide, and gives an assay of 1 oz. 3 dwts. 22 grs. of gold per ton of quartz. The intermediate level driving south, south of shaft, 5 ft. 6 ins. have been done, or 111 ft. 2 ins. from old workings; this has been suspended on account of water from the present face of this drift; the old workings in battery have gone down below this point. The stope in back of the 100-ft. level south of old workings; the lode is 2 ft. wide, and gives an assay of 8 ozs. 14 dwts. 5 grs. of gold per ton of quartz; this has been holed into old workings since the assay was taken. The stope in back of the 100-ft. level north of old workings; the lode is 2 ft. wide, and gives an assay of 2 ozs. 14 dwts. 10 grs. of gold per ton of quartz. The stope in back of the 200-ft. level south of shaft; the lode is 1 ft. 6 ins. wide, and gives an assay of 15 dwts. 6 grs. of gold per ton of quartz; this lode will soon improve as we stope south on it underneath the battery old workings. Probyn's shaft has been sunk 4 ft. 9 ins., or 80 ft. 9 ins. below the 230-ft. level; the lode is 4 ft. wide, and gives an assay of 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. We have still the band of black rock at the north end of shaft. The 300-ft. levels were commenced last Monday. The level south has been driven 1 ft. 6 ins.; the lode is 4 ft. wide, looks well, and gives an assay of 3 ozs. 18 dwts. 9 grs. of gold per ton of quartz. The 300-ft. level north has been driven 1 ft. 6 ins.; the

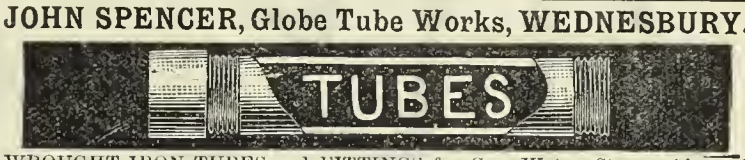
lode is 4 ft. wide, and gives an assay of 3 ozs. 13 dwts. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level north of shaft, 7 ft. 6 ins. have been done, or 27 ft. 9 ins. below the level; the lode is smaller than last reported on, now 1 ft. 6 ins. wide, and gives an assay of 2 ozs. 16 dwts. 14 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft, 6 ft. 3 ins. have been done, or 80 ft. 10 ins. from shaft. The part of the lode carried in the drift is 5 ft. wide, with no hanging-wall to the west, and gives an assay of 13 dwts. 2 grs. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level south of shaft, the lode is the width of winze carried, with more of it standing to the east on the footwall, and gives an assay of 1 oz. 17 grs. of gold per ton of quartz. The stope in back of the 230-ft. level south at the north end of winze sunk from the 166-ft. level above; the lode is 2 ft. wide, and gives an assay of 2 ozs. 4 dwts. 15 grs. of gold per ton of quartz. The 166-ft. level driving south of shaft, 6 ft. have been done, or 182 ft. 9 ins. from shaft; the lode is 4 ft. wide, and gives an assay of 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level south of shaft, 3 ft. have been done, or 13 ft. below the level; the lode is 3 ft. 6 ins. wide; and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The rise in back of the 166-ft. level south of shaft, 2 ft. 6 ins. have been done, or 19 ft. above the back of level, has been holed into old workings and suspended. The stope in bottom of the 166-ft. level north of shaft; the lode is 2 ft. wide, and gives an assay of 3 ozs. 14 dwts. 2 grs. of gold per ton of quartz. The stope in back of the 166-ft. level south of shaft at the north and south end of rise; the lode is 3 ft. wide, and gives an assay of 1 oz. 11 dwts. 14 grs. of gold per ton of quartz. Stamps: We have the two boilers at work with the alterations made in the fireplace, which was completed last Friday, and are now working full time with 20 heads of stamps. A fair amount of amalgam is being taken off the plates daily. We are getting sufficient quartz for the mill from the different points in operation. The 130-ft. level south at old battery works has been communicated with north battery shaft, and has let down the water; the lode is 2 ft. 4 ins. wide, and gives an assay of 4 dwts. 8 grs. of gold per ton of quartz.—W. MARTIN.

OURAY.—Extract from letter from manager dated January 16th:—We are running for the Calliope vein, which shows a solid 15 ins. of ore, milling from $350 to $500 per ton of 2,000 lbs. in gold, silver and lead. The old Dexter is also pushing for this vein, which, however, goes over their side lines, but I shall enjoin him as soon as ore shows on his dump, or at least get an order from Court for a survey, and ascertain if he is ou our ground. He soon will be, for some time ago he was within 65 ft. of it. When we cut the Calliope vein, and sink another 50 ft. on the El Madhi and Dexter, together with the low-grade ores we have now on the dump, should boom the mine as no other American mine in the London market has boomed. We have as good a property as there is in the State.

PRADENA (31st Jan.)—The following report has been received from the manager, Don Casto y Largo:—We have been disturbed during the week by the inclement weather; at the beginning snow fell abundantly, and then the thaw came suddenly; we have, therefore, been obliged to take a certain number of men from their work to contend with the consequent infiltration. Part of the water has been drained off to the Sn. Abel shaft, where we have made use of the pump on the 42-ft. level. Should the weather continue now as it is at present, everything will soon be in its normal state again. Although the infiltrations have necessitated extra work, yet the 262-ft. level has remained perfectly drained. Continuations of assays of ore, already raised, broken, classified and ready for sale. Second class ore.—No. 10: 220 ozs. 12 dwts. 2 grs. Third class ore.—No. 18: 59 ozs. 13 dwts. 24 grs.; No. 19: 61 ozs. 11 dwts. 20 grs. of silver per ton.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending January 6th.—Dunderbeg: We have about 70 tons of ore broken in the mine. With the exception of a slight improvement above the 300-ft. level there is no change to report. Eagles drift: In the upraise from here we have advanced 4 ft. during the week, making a total of 63 ft. Owing to the hardness of the ground and to the holidays, we have made small progress here during the week. We have two tributers at work in the Eagle drift upon prospects, as yet there are but slight indications of ore in sight. We have 30 tributers and six contractors at work in the mine.

JOHN SPENCER, Globe Tube Works, WEDNESBURY.



WROUGHT IRON TUBES and FITTINGS for Gas, Water, Steam, Air, and Hydraulic purposes, Galvanised, White Enamelled inside, or coated by Dr. A. SMITH'S process for preventing rust. Telegraph Poles, Boring and Mining Tools and Well Tubes. Tubes in Stock to 6-in. diameter. Iron and Brass Cocks and Valves, Tubes and Cylinders for Compressed Air, Ironwork and Tools for Mines.

"FINANCIAL CRITIC."

With the "FINANCIAL CRITIC" of the 9th February will be

PRESENTED GRATIS

A COLOURED DRAWING OF

Col. J. T. NORTH, the "Nitrate King"

(BY AN EMINENT ARTIST.)

Orders should be sent in not later than Thursday, 7th February.

PRICE THREEPENCE.

Offices: WARNFORD COURT, LONDON, E.C.

CAPT. FRANCIS RULE, Manager of the Santa Gertrudis and other Mexican Mines, and formerly Manager of the Real del Monte Company's Mines in Pachuca, and having a Mining Experience of 30 years in that country, Offers his Services to Inspect, Survey or Report on any Mining Properties in Mexico.

For references, apply to Messrs. R. B. Watson and Co., 15, Philpot Lane, London; Capt. Josiah Thomas, Dolcoath Mine; or Mr. William Rabling Parc Bracket, Camborne; or in Mexico, to the Bank of London Mexico, and South America.

Pachuca, Mexico.
November 1st, 1886.

MANAGER WANTED for Mines in Spain. Must be thoroughly experienced in mining and dressing lead ores rich in silver. Well acquainted with Spanish.—Apply, stating previous experience, testimonials, &c., to B. A. F., care of Bates, Hendy and Co., 37, Walbrook, London, E.C.

TO CONTRACTORS, COLLIERY OWNERS, &c.

BAR IRON.—Largest Stock in the Country. KIRKSTALL, BOWLING, STAFFORDSHIRE, and YORKSHIRE.

BESSEMER & SIEMEN'S STEEL BARS

RAILS IN STOCK.—IRON & STEEL from 8 lb. to 86 lb. per yard, Flat Bottom and Double Head Sections.

SWITCHES, CROSSINGS & ALL FIXINGS

ENGLISH ROLLED JOISTS, IRON and STEEL SECTION SHEETS, &c. PRICES QUOTED ON APPLICATION.

WILLIAM FIRTH, WATER LANE, and WILSON STREET, LEEDS.

HENRY WIGGIN AND CO., NICKEL AND COBALT REFINERS, BIRMINGHAM.

Patentees and Manufacturers of Rolled Nickel Anodes for Electro-Nickel Plating, Single and Double Salts of Nickel, Malleable Nickel Sheets Grain and Cube Nickel, German Silver, and other Nickel Alloys, Oxides of Cobalt, &c.

WANTED, a PRACTICAL MINE MANAGER, with experience in the handling of large quantities of low-grade Ores, to take charge of a Mine in Australia.

Write full particulars to "B. B.," care of Messrs. Street and Co., 30, Cornhill, London, E.C.

No.2 DRILL.

THE INGERSOLL DUPLEX HAND-POWER
ROCK DRILL.
A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to

ISAAC DIXON & Co. LIVERPOOL.

25th January, 1889.

To the

KAPANGA GOLD MINING CO., LIMITED.

WE caused an advertisement to be inserted in the *Financial News* of the 22nd and 23rd inst., which contained statements and insinuations adverse to you, as follows, viz. :—

That the returns lately have been miserable, 200 ozs. of gold for one month, that a dividend of 6d. per share had just been paid, which would take almost all the Company's available funds ; that the dividend ought not to have been paid, and that the £16,000 which was in hand in July, 1887, was by this time almost, if not quite, diminished.

Our attention has been directed to the facts, and as the result we have now to express to the directors and shareholders of the company our deepest regret at having inserted such advertisement, convinced as we are that the statements and insinuations it contained are wholly unjustifiable. We offer to your directors and shareholders our apology for any injury which may have been caused to them by reason of the advertisement.

We are satisfied that the dividend referred to was paid out of profits earned to the 31st December last, and that the £16,000 of capital above referred to has been in no way diminished by reason of the payment of such dividend, and is now intact.

We have instructed our Solicitors to consent to a perpetual injunction against the continuance of such or any similar advertisement, and to pay all the costs which have been incurred by you in relation to the matter, including the cost of inserting this apology twice in the *Financial News* and once each in the Mining World and the *Mining Journal* newspapers.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of havel quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.

"New Mill crushed 29,000 " 25 " " 8.60 fcs. per ton.

"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 2, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

ETHERIDGE GOLDFIELD.

A KNOT OF SHAREHOLDERS DISTURB THE HARMONY OF THE COMPANY—STRANGE MEETING—TWO CHAIRMEN—A MINE THAT HAS A GOOD CHANCE IF ALLOWED FAIR PLAY—ANOTHER DEFEAT FOR THE OPPOSITION.

A MEETING of this company, called by Mr. Leverson and Mr. Pixley, was held at the City Terminus Hotel, on Monday, and was largely attended.

From the outset it was obvious that the proceedings would be of a lively character, and such, in fact, they proved to be.

RIVAL CHAIRMEN.

Mr. BLADON, rising on the stroke of four, said: A meeting has been summoned of the Etheridge Gold Company at four o'clock, and I think we should commence at once. The proper person to preside on this occasion is Mr. Frederick Snell, and I propose "That he should take the chair."

Mr. LEVERSON: You are out of order. This meeting was not called by Mr. Snell, or any official of the company.

Mr. BLADON: That does not matter. Mr. Snell is chairman, and I move the resolutiou.

A SHAREHOLDER: I second it.

Mr. LEVERSON: I rule that you are out of order.

Mr. BENNETT (solicitor to Mr. Leverson): This meeting is called at the instance of Mr. Leversou and Mr. Pixley; Mr. Leverson will occupy the chair.

Mr. BLADON: I will put the resolution—those in favour, those against. It is carried. Mr. Snell, please take the chair.

Mr. BENNETT: This is our room.

Mr. SNELL: I propose to take the chair in accordance with the wish of the shareholders. This is a meeting of Etheridge Gold shareholders, and they have a right to appoint their own chairman.

Mr. BENNETT: This meeting is convened by Mr. Pixley and Mr. Leverson, and Mr. Snell will not be in the chair. It is an attempt to upset the meeting, which I deprecate. What is your name? (to Mr. Bladon).

Mr. BLADON: I am a considerable shareholder in the late company, and I am quite within my rights. (Cheers.)

Mr. BENNETT: That may be, but it is apparent on whose behalf you are here, and you are not going to stifle discussiou.

HAD MR. BENNETT A RIGHT TO SPEAK.

Mr. SNELL: You, Mr. Bennett, are not a shareholder, and you have no right to be here.

Mr. BENNETT: I am solicitor to the gentlemen who have called this meeting, and I am here by right.

Mr. SNELL: I say you are not, aud I do so in my capacity of chairman, for I have been asked to preside. (A VOICE: Do not be put down, Mr. Snell.)

Mr. SNELL: I do not intend to be put down. (Cheers.)

Mr. BENNETT: The only result would be litigation if Mr. Snell intends to stifle fair investigation.

Mr. SNELL: You have no business to make that remark. I want to hear the statement you have to make with regard to matters alleged to have been withheld, and theu I will make a statement as to the position of the company, and show that all you want is really embodied in an attempt——(A VOICE: Blackmail.)

Mr. LEVERSON: If you will sit down I will state my case.

Mr. SNELL: As chairman, I call upon you to sit down.

Mr. LEVERSON: I am chairman. I have called this meeting to explain the position, and if you and other people interrupt you are acting in a most irregular and discreditable manner. (Oh! oh!)

Mr. BENNETT: This is a meeting called by my clients.

Mr. SNELL: You are not a shareholder, and you have no right in this room at all, and you should be turued out.

Mr. BENNETT: We are in London, and I am surprised Mr. Snell should try and burke the fair enquiry. (No, no.) You will not get us to stop by adopting these tactics.

POSITION OF AFFAIRS.

Mr. SNELL: You have no right to be here, and no right to address me. (Cheers.) This is a meeting of Etheridge Gold shareholders, and I object to be taught by Mr. Bennett or any other solicitor that they cannot elect their own chairman. I have presided over the meetings of the company ever since it was formed, and I am not going to be dictated to by persons who choose to call a meeting for a purpose which is manifest. It is not done for the benefit of the shareholders, but is instigated by Mr. Bird, who was so exposed at the last meeting. The information which they have purported to have given was information furnished by Mr. Bird, and Mr. Bennett admitted that to be so. They called a meeting purporting to be a gathering of large shareholders, but a circular was sent to only 30 out of 600. Do you call that a representative meeting? (No.) To that meeting 30 shareholders were summoned, but how many attended? Not more than nine, among whom were Mr. Bird and his friends. They appointed Mr. Leverson, Mr. Mackay, Mr. Thorn, and Mr. Pixley (who ought to know better, because he is a director of one or two large mining compauies, and he may find that this course will hardly redound to his credit.) Mr. Pixley can answer for himself.

FOUR APPOINTED A COMMITTEE, BUT ONLY TWO ACT.

Mr. Roderick Mackay and Mr. Thorn resigned. They would have nothing to do with the committee appoiuted at that meeting, and I wish to know if the remaining two have authority to act in the name of a committee. Certainly not. (Cheers.) The whole affair was such that they refused to act, and no wonder, when we consider what the position is. It is a little clique of about eight or nine persons who are trying to damage the propety of this company and other companies, for no purpose. I am in the chair, and I should like to hear what Mr. Leverson has to say with regard to a statement of facts. First of all, this meeting is called for the purpose of submitting to the shareholders certain facts that have come to their knowledge. Mr. Thorn says it has all been thrashed out, and he will have nothing more to do with it. Then they must change their tactics. Certain facts, necessary to lay before the shareholders, were promised, but on the 21st January those facts were not in their possession. (Mr. BENNETT: Nonsense). Mr. Bennett says nonsense, but if so, why was it that he applied after the 21st for information he had not got? What are the facts? A certain property has been sold for 30,000*l.* by the company, and re-sold by the promoter for 50,000*l.*

Mr. BENNETT: We kuow that.

NOTHING TO CONCEAL.

Mr. SNELL: Theu what is the use of raking it up? There is nothing whatever to conceal in this whole matter from beginniug to end. The Canadian Company was the first formed, and that company was formed for the purpose of purchasing the Canadian property. In the prospectus, which was seut to all the shareholders, there was enclosed a circular from the secretary, which stated that the company had been formed for that purpose, and in the prospectus was set forth the contract between Mr. Massey and Mr. Lavington on behalf of the Canadian Gold Company, and following on that there was recited an agreement between the Etheridge Company and Mr. Massey—therefore showing that there was an intermediary, and that that intermediary made a profit. That was in October, 1886. Immediately after the Etheridge Gold Company was formed, and before the other companies were brought out, an application was made to the Etheridge Gold Company for the option of purchasing these properties.

ACTUAL POSITION.

The Etheridge Company were not going to be promoters and run the risk of having to pay all expenses if the company did not float. Some one applied to them—Mr. Massey—and for a consideration of 500*l.* the option was given to him to purchase some of the properties for 30,000*l.* That was early in September, directly after the Etheridge Gold Company was formed. Shortly afterwards Mr. Massey called for the option and said, "I will take the property." He formed his company, issued the prospectus, and did all that was necessary, and the contract showed that he was the vendor. This was done before Mr. Bird was a shareholder—in fact, he had nothing to do with it. He was a transferee of shares, and he was not an original shareholder. Everything was stated in the prospectus. On November 27th, 1886, a statement was made, and a circular sent to each of the shareholders, which each of them must have received who was on the register at that time, that, in all probability, the Canadian Company and Elektron Company would exercise an option they had of taking additional land and paying for it—40,000*l.* in cash or shares. It was stated that the 40,000*l.* and the 60,000*l.*, the purchase money for the property, would be available for dividend. There was a distinct notice to the shareholders of the pricc to be obtained, and now we are called together, because the Etheridge Company did not get the 50,000*l.* which somebody thinks they ought to have got. Who was going to pay the expenses of promoting the sub-companies? These are the facts, and why is this objection taken now? Because Mr. Bird says he never received that circular of the 27th November, 1886, Mr. Bird made a statement that he had not seen it.

Mr. BIRD: I deny it—I have had it all along.

Mr. SNELL: That statement was made by Mr. Bird in my office. I will refresh his memory directly, and it will not be the first time his memory has been refreshed over this matter. I distinctly say that

THIS IS ANOTHER ATTEMPT BY MR. BIRD TO DAMAGE THE COMPANY,

because he could not get from the directors and others what he tried to get, which was about 700*l.* for 300 shares held by himself and friends. Had we succumbed to that appeal and paid him the money we know we should have had a lot more rising up immediately after-

wards. Nothing whatever has been concealed, and as far as I am concerned I am prepared to make an affidavit, and I believe all the other directors are prepared to do the same, that between the 30,000*l.* and the 50,000*l.* not one penny was ever received by us, and that the profit, whatever it was, went to Mr. Massey, or to those claiming through him, and there is nothing whatever in the allegation that there has been any prospect of any part being recovered for the shareholders. If they think so, let them take the ordinary course and the usual proceedings. They are shareholders, and if they have any rights let them exercise them, and run the risk of the costs which they will have to pay if they do not succeed ; but do not let them attempt to damage the property of their fellow shareholders, and

INJURE THE INTERESTS OF THE WHOLE BODY.

(Cheers.) Now, gentlemen, I think I have explained matters, and the only course I can adopt is, as your chairman—(cheers)—to call upon Mr. Leverson to give us any statement of facts which he thinks has not been laid before the shareholders. (Cheers.)

MR. LEVERSON'S VIEWS.

Mr. LEVERSON : As chairman of this meeting—— (Cries of "No.") When you are done bawling I will give you the reasons why this meeting has been called, and I entirely deny that it has been done with any purpose of wrecking the company. On the contrary, I have no interest whatever but in the prosperity of the company. Circumstauees have, however, come to my knowledge that appear to me most suspicious. In the formation of the Etheridge, Elektron, and Canadian Compauies, certain profits have been acquired by people in sueh a manner that, owing to the refusal of the chairman to give an explanation, we are compelled to take this course. We find that the Etheridge Gold Company sold two blocks of ground to Mr. Massey for 30,000*l.* each—immediately upon which two companies, the Elektron and the Canadian, were formed, and they purchased the ground so acquired at 50,000*l.* each, leaving a nice little profit of 40,000*l.* that went into the pockets of Mr. Massey or his principals. Inquiries had beeu made of the chairman as to information concerning the manner in which this difference of 40,000*l.* was treated, and who received it. The chairman has always burked the question. (Cries of "No.") We have never obtained information upon the subject.

A DENIAL TO AN ASSERTION.

Mr. SNELL : I deny that any application has been made, and most emphatically do I repudiate the insinuation that I have ever burked it. I have always expressed myself, at every meeting, ready to give every information, and make inquiries about anything I did not know, and Mr. Leverson has no right to make such a charge against me.

Mr. LEVERSON : I will give a proof of it. At the last meeting of the Etheridge Goldfields I put the question to Mr. Snell, and his reply was that the matter had been thrashed out, and he said "I decline to give the information, and you have no right to ask for it."

Mr. SNELL : I said nothing of the sort.

Mr. LEVERSON : Those who were present must know that such was the case.

Col. MALLESON : I was present, and Mr. Snell said nothing of the sort. (Hear, hear.)

Mr. LEVERSON : Certain dissentient shareholders, desirous of having a different liquidator, opposed Mr. Lavington, because they considered that he, having been secretary of the Etheridge Gold Company, would have a bias in favour of his former patrons, and we could not expect, at the fee we paid him, an investigation such as we could wish for from an independent liquidator. That motion was lost.

Mr. SNELL : There were only two dissentients, and Mr. Leverson voted for the appointment of Mr. Lavington.

Mr. LEVERSON : I deny it.

Mr. SNELL : We have the report here from the MINING WORLD.

Col. MALLESON : You did vote for Mr. Lavington. I saw you do so. (Cheers.)

IN THE PICKWICKIAN SENSE.

Mr. LEVERSON : I tell you that what you say is not true. (Cries of "Order.") Mr. Thorn then took up the cudgels for the non-content shareholders. He had acquired a certain reputation for having called to account the directors of the Explosives Company, and we were very well satisfied in having him to take our part. He called a meeting of shareholders, and a committee was appointed, consisting of himself, Mr. Pixley and I, and then Mr. Thorn said at the end of about three weeks' time, and after he had promised to enter into negotiations with some of his friends connected with the management, that he did not see any reason for proceeding further in the matter. (Cheers.) We asked him why, and he could give us no answer, except he did not think it worth while. Mr. Pixley and I not being satisfied determined to go on with the matter, and we have now to propose a resolution regarding the proceedings we are to take. If the directors have really nothing to reproach themselves with, why do they not give a full and thorough explanation, and allow us to have this investigation that we ask for.

Mr. SNELL : I have offered to do so again and again.

Mr. LEVERSON : I accuse no man whatever—all I say is the circumstances are suspicious, and let those upon whom those suspicions rest explain them away by giving a full and fair proof of their not being tainted by anything in the way of illegality. At the time these companies were formed the appetite of the public for Queensland mines was such that it did not need the interference of an intermediary to make 40,000*l.* profit.

UNPLEASANT ALTERNATIVES.

Either the directors have been guilty of most monstrous incapacity, or they have acted with interested motives. If the former, we can only deplore having such directors to manage our affairs. If the latter, and they will prove their bonâ fides, we will sit down and take no further action. If they refuse explanation we will endeavour by process of law to enforce that which they refuse by amicable settlement.

RESOLUTIONS.

I have two resolutions to move, and they are as follows :—

(1.) "That, in the opinion of this meeting, there are circumstauces connected with the formation and promotion of this and subsidiary companies, namely, the Canadian Queensland Gold Mining Company, Limited, and the Elektron Mount Queensland Gold Mining Company, Limited, which require investigation." (2.) "That, in the opinion of this meeting, such investigation cannot, in the interest of the shareholders, be made by the present liquidator, Mr. Lavington, and that it is desirable he should be removed from the office of liquidator, and an independent liquidator be appointed in his stead."

Mr. Bennett will further explain the circumstances which have come to his knowledge, and also the legal points of the affair.

NOT A SHAREHOLDER, AND NO RIGHT TO SPEAK.

Col. MALLESON : That gentlemau is not a shareholder, and he shall not speak. He has no right in this room. (Cheers.)

Mr. LEVERSON : This is a meeting called by me, and not by the company.

Mr. SNELL : I will ask the shareholders to allow Mr. Bennett, as a matter of courtesy, to speak.

Col. MALLESON : I respond to that appeal, Mr. Chairman, and I have no objection to hear Mr. Bennett, although I must protest that he has no right to speak, and that his presence in this room is an intrusion.

Mr. BENNETT : I am obliged to Mr. Snell for throwing oil on the troubled waters. I maintain that I have a right to speak—(No)—because I represent a committee of inquiry. (No.)

Mr. SNELL : You are putting it upon wrong grounds. You are only allowed to speak as a matter of courtesy, and this is the first time in the City of London that I have heard a solicitor who is not a shareholder claim as a matter of right to speak when he is only permitted to do so as a matter ot courtesy.

Mr. BENNETT : This is not an ordinary meeting. This meeting has been convened by Mr. Leverson and Mr. Pixley, and

I AM HERE AS THEIR SOLICITOR.

We are not unsupported. My clients have something like 15,000 of the votes of the country shareholders, and we have their written supports for this meeting. They are entitled to be heard. The questions which Mr. Leverson has raised are matters of fair investigation, and it is for you to say whether they can be fairly gone into by the present liquidator. We are bouud to allege that although he was secretary he was in no way mixed up with the promotion of the company ; but we want to know who was the person who made this 40,000*l.*, because it has come out of your pockets. (No.) Nine-tenths of the capital of the subcompanies was subscribed by shareholders of this company. You have got, by the amalgamation, the properties back, less 40,000*l.*, and it is only right you should know who has had it. Mr. Snell has not told us. I have written to him, but the question has been carefully avoided.

WE ARE NOT DESIROUS OF LITIGATION,

and I am not going to advise my clients in that direction if we can get the information otherwise. I will ask Mr. Snell again to give it—and he should know, for he was not only chairman to this compauy, but solicitor to them all. The only way you can get at the books, as soon as litigation is necessary, is by removing Mr. Lavington from the position of liquidator. I see he is to be paid the sum of 10 guineas for each of these companies, and he could not with such a fee take much trouble iu the matter. My clients are determined, if these questions are not fairly answered, to move the Court of Chancery to remove Mr. Lavington, and to have another liquidator appointed. We can pass no valid resolution to-day, but an expression of opinion aloug with the support we have received will have weight with the Court. (Hear, hear.)

WILL NOT PLAY INTO THE HANDS OF A CLIQUE.

Mr. SNELL : I object very much, as I said at the last meeting, to play into the hands of a clique, and to give them information which they require for damaging the interests of the United Company. (Loud cheers.) Had the meeting, called by circular, of 30 shareholders, but only attended by nine, been a fair meeting of the shareholders, and had a committee been appointed, I would have given every information to them, but I object simply at the dictation of seven or eight people, among whom are Mr. Bird and his friends, to give this information. We have offered, and have showu everything. If they want to know the promoter, he was John Dunham Massey, and anyone with his eyes in his head can see that by looking at the prospectus.

Mr. BENNETT : Did he not sell his contract ?

Mr. SNELL : I had no knowledge of it. You will get any number of supports if you hold out to people the prospect of getting back 40,000*l.*, together with that of not being liable for the costs. (Hear, hear.) Mr. Lavington was appointed liquidator simply and solely to save expense, and his fee was small because there was almost nothing to do. Mr. Leverson voted for his appointment, and he was supported by all the shareholders present except two. Mr. Bird said that he had seen the circular of November 27th, 1886, but this is an extract from Mr. Bird's speech in the MINING WORLD : "At all events, until then (this was in November, 1887), the first occasion on which they had any figures really placed before them was when the report and balance-sheet were issued in November, 1887, and, speaking for myself, this is the first paper bearing upon the subject that I saw." That proves that he could not have seen the circular of 27th November, 1887, beforehand. (Cheers.)

Col. MALLESON : I quite agree with Mr. Leverson in the remark he made—"there is something very suspicious about this." I say there is

SOMETHING VERY SUSPICIOUS INDEED IN THE CONDUCT OF THE GENTLEMEN

who are sitting at that table. In the words that fell from them they let the cat out of the bag. They showed what they called this meeting for. Their real object is to wreck the new company, and to go into Court and fight the battle of wrecking with the money of the shareholders. If they had a conscientious conviction of the depravity of Mr. Snell and the directors they would go into Court and fight it with their own money ; but, no, gentlemen, they want to fight it with yours, and they will wreck your property with your money, aud that is the sole object with which they have called this meeting. I do hope you will not be led away by clap-trap of this sort. (Cheers.)

THEY STAND UNMASKED BEFORE YOU,

and I appeal to your self-interest not to be led away by clap-trap, or by the action of Mr. Bennett in holding up a bundle of papers of which you know nothing whatever. You heard the gentleman

who sits in the middle (Mr. Leverson), and you see Mr. Pixley. They cannot speak for themselves, but they must get a solicitor to speak for them. Could the weakness of their case be more fully demonstrated than by their actually coming here with a paid solicitor to sit by them, and prompt them, and speak for them? Do uot be led away; keep your property, and support the liquidator, whom you have chosen by an enormous majority at your last meeting, and the board, which have served your purposes well until the present moment.

QUESTIONS PROMPTLY ANSWERED.

Mr. BIRD: How many shares have you?
Col. MALLESON: 700 or 800. (Cheers.)
Mr. BIRD: How many were given you?
Col. MALLESON: Not one. (Loud cheers.)
Mr. BIRD: My iuformation is that Col. Malleson had uot paid his application money in the Elektron Company.
Col. MALLESON: It is not true. (Cheers.)
Mr. BIRD: Then I am sorry I said it. (Hear, hear.)

VIEWS OF A HOLDER OF 15,000 SHARES.

Mr. CAMPBELL: I am a large shareholder and hold about as many shares as Mr. Bennett says his party has been able to beat up—I represent about 14,000 or 15,000 shares. If the facts were sufficiently disclosed in the prospectus, and were passed by shareholders at subsequents meetings with that knowledge, how can we go back on them now? It is impossible. If there were any contracts kept back or not published, then we have the power to go against the directors, but a certain faction is trying with the money of the company to fight the battle in order to get certain shares. I say it is folly to use the company's money in that way, and it will only end in wrecking it. If a new liquidator were appointed you would have an abyss of expense. If certain individual shareholders think they have a case against directors,

LET THEM PROCEED WITH THEIR OWN MONEY, BUT NOT WITH OURS.

I do not think we ought to pass resolutions which will give outside lawyers the power to come iuto the compauy and spend its money. I do not think the shareholders quite know what they are about in this sort of thing. Half the mining companies go to the wall in this way. We have been struggling for nearly two and a-half years, and now I have advices from the other side to the effect that there is some chance of our doing some good, and if so, there is also a chauee of our shares rising, and why cannot we let them rise? If you let the lawyers get hold of the company, even if you got the 40,000 shares back (which is very improbable), they would be worth nothing, and where would you be?

VIEWS OF A DIRECTOR.

Mr. ROBERT WALKER, J.P.: As a director of the company from the beginning, aud a shareholder who has never sold a single share, it has pained me very much to sit under the insinuation conveyed in the remarks of Mr. Leverson that the directors have participated in the profits made. He says he wanted to get information. It was the simplest thing in the world to get it. The directors are ready to make a statutory declaration that they have never pocketed a single farthing of this money. I can do so for myself, and I know my colleagues can do the same. All this has been most painful to me. (Hear, hear.)

Mr. PIXLEY, in seconding the motion, said: I came here with no wish to be prompted by Mr. Bennett, and as regards the threat which Mr. Snell has held out, that iu some of the companies' meetings where I appear—all of them very happy meetings at the present time—I am to be overwhelmed by some unknown punishment, I care nothing for it.

Mr. SNELL (interrupting): I did not hold out any threat whatever.

Mr. PIXLEY: I second the motion. I have lived in the City all my life, and will stake my reputation against that of those pitted against me.

AN AMUSING SCENE.

The amusing spectacle was then witnessed of both the chairmen putting the first resolution to the meeting, and both declaring that it had been lost by 20 votes against 10. The second resolution was put in the same way, when the voting was the same.

Mr. BLADON: I beg to propose a vote of thanks to Mr. Snell, our able chairman. (Laughter and cheers.)

The motion was carried, and the proceedings of a somewhat strauge meeting were brought to a close.

LATEST REPORT.

The mining manager reports for the week ending 1st December:—Ropewalk: Three men are still employed in constructing the ore bin here. Canadian West: We are still short of the requisite number of men; operations are consequeutly slow, and not much has been done since reportiug last week. Canadian Middle: For want of men nothing has been done here for the week, and I am applying for the necessary exemption to protect ourselves. Etheridge Reefs: The levels east and west of the Nelson shaft are being driven in good-looking quartz about 2 ft. wide, and the heap of stoue in the dump is consequently increasing. Rather a heavy shower of rain fell there during the week, and a small quantity of water has accumulated in the dam. Another shower or two like it, and we shall commence crushing. Drought: At Goldsmith Creek we have had a few light showers, which have had the effect of making the grass spring out of the barren ground very rapidly, but the earth is so dry it will take very heavy rain before there will be any water in the dam. Another small lot of flour has come iu (200 lbs.), but it is not much between 60 or 70 people.

CARN BREA.

A SMALL PROFIT.

A SIXTEEN-WEEKLY MEETING of the adventurers in Carn Brea Mine was held in the Account House on Thursday—Mr. Frank Harvey, of Hale, presiding over a large attendance.

The accounts showed that the labour costs to January 12th were 9,832*l*. 3s. 3d.; merchants' bills to December, 3,821*l*. 4s. 8d.; doctor's pence, vice-warden's assessment rates, &c., bringing the total debits up to 14,161*l*. 17s. 8d. Tin sold, amounting to 243 tons 15 cwt., realising 14,166*l*. 8s. 5d.; the average price being 58*l*. 2s. 4d. per ton. Other amounts brought the receipts up to 14,211*l*. 3s. 4d., leaving a profit on the 16 weeks of 49*l*. 5s. 8d. The balance from last account was 788*l*. 3s. 11d., making the total balance in favour of the adventurers 837*l*. 9s. 7d. The average weekly sale of tin this account was 15 tons 4 cwt.; last account 13 tons 6 cwt.; the increase in the weekly sale being thus 1 ton 18 cwt.

The committee's report recommended that the balance be carried forward to the next meeting.

The CHAIRMAN proposed the adoption of the accounts. The one feature in them calling for notice was that only three months' merchants' bill were charged, as against four months' labour costs. That must occur in every mine where the system of paying labour fortnightly or four-weekly prevailed, but when they showed a profit of 49*l*. that fact must be taken into account. The statement was satisfactory. The quantity of tin sold was considerably in excess of that shown at the last account—243 tons against 212. He had much pleasure in moving the adoptiou of the accounts.

Mr. JOSE seconded.

The accounts were adopted, and the meeting closed with a vote of thanks to the chairman.

MOUNT ALBION SILVER MINING AND SMELTING CO.

GENEROUS ACTION OF THE VENDORS—VIEWS OF A GENTLEMAN WHO HAS VISITED THE PROPERTY—ALTERATION IN THE ARTICLES.

THE second ordinary general meeting of the Mount Albiou Silver Mining and Smelting Company, Limited, was held at Winchester House, Old Broad Street, on Monday, 28th January.—Mr. G. Sichel presided.

Mr. T. E. SMITH (the secretary) read the notice calliug the meeting.

WHY THE ACCOUNTS HAVE NOT BEEN PRESENTED.

The CHAIRMAN: Gentlemen, I have to request your iudulgence personally for myself, and also for the board generally, in coming before you to-day. This seat ought to be occupied by Mr. Bryce-Douglas, but we have a telegram from Paris to say it is absolutely impossible for him to be here. I have therefore taken his place. I have also to claim indulgence for not having put before you a statement of accounts, but owing to a great delay in receiving accounts from the other side, and owiug to a number of discrepancies between their accounts and our own, it has been impossible to prepare them in time for this meetiug, and our official accountants have thought it right to postpone the publication of them. We have doue the best we could, and spent a lot of money in telegrams, but you are aware how difficult it is to form a telegram in such a way that you will get the exact reply you wish. In the meantime I can tell you I think we are in a very favourable positiou, and, in spite of our not having prepared you either with accounts or report, I trust if anyone has come here to curse, he will bless before he goes away. We have had a very anxious time since we last met you. The board are simply anxious for one thing—the greatest possible success to the undertaking. I feel our outlook is good and bright.

EXTENSION OF WORKS.

When we took over the concern we had, as you will find by the prospectus, 12 mines. We have added to this in view of further and larger extension of our works. We have added to this from time to time, as Mr. Moffat has been able to get other properties, with the result that at this moment we own 21 mines, or 80 per cent. more than we had when this company was formed. Whilst our return per ton of bullion has been rather more favourable than what was sketched out in the prospectus, the result in money is less favourable. The ore has been on an average poorer than what we had been working before, and has been raised from a greater depth. Nevertheless

WE HAVE A PROFIT TO SHOW,

though that profit is not so large as we should like. Besides, we pointed out in one of our notices in the papers that we had come across some tin ore. This tin ore was in a property owued conjointly by ourselves and one of our neighbours. We realised a profit on it, but it is so infinitesimally small that we shall not lay out any money upon it. We have spent in development 18,207*l*. This is mainly accounted for in the opeuiug out of nine additional mines, aud those are at present absolutely unproductive. We have spent for machinery 4,100*l*., and ou machinery, in Queensland, 2,500*l*. We have also altered our furnace out there, which has been stopped for repairs, aud we are putting up a coucentrating plant. All this will tell in the futurc. We have thought it necessary to put up desilverising plant in order to save expense of carriage. We thought if we could bring over bullion 500 or 600 ozs. to the ton, it would be a considerable saving—uo doubt a saving of something like 7*l*. on each ton of bullion. Everything promises a much richer returu during the next six months than we have had during the past year. As we get deeper we think we shall get into much richer ore. We have increased our working shafts and levels by 2,630 ft. during the year, so that we shall be able to get into a much larger body of ore, and be quite prepared, against our furnaces being ready, to increase our production. Messrs. Moffat sent their engineer over here to superintend the building of our 60-ton furnace, of which I have already spoken, and he gave us the promise that he will be able to keep it going as soon as it is put up. It left England on 26th December. We have found ourselves in the course of our work rather short of ready cash for the necessary development of the properties, as we have already sunk 26,000*l*. in developing, in plant, and in machinery. I am pleased to say that Messrs. Moffat, anxious to give you a proof of their faith iu the property they have sold you, have put at the disposal of the board the sum of

20,000*l*. FREE OF INTEREST,

which we have accepted from them on the condition that they shall give us 12 months' notice of withdrawal. (Cheers.) I think a greater

proof of the faith of the vendors in what they have sold us could not be given. However, I have more to say on behalf of Messrs. Moffat, which I am sure will impress you favourably. We are not, as I have said, here to-day with accounts, and on this we claim your indulgence. The reason is this—that ourselves, Messrs. Moffat, and our accountants, are all at loggerheads as to the actual position of the accounts of the company. We handed Messrs. Moffat a draft of how we wanted the accounts sent us, but I am sorry they have not done it in the way we wished. They sent us monthly pay-sheets, accounting for every farthing paid, but this left us absolutely in the dark upon what I might term manufacturing expenses—what was being sunk in development, what was being spent in machinery, and so forth. As soon as we got them we pointed this out. It was only early in December that we received a statement of accounts which showed a considerable higher amount than what was stated in the prospectus. We found there was no credit given for the matte left in the bottom of the furnace after the bullion was withdrawn. We wired out to them on this point, and received a telegram stating—"1,500 tons; the cost increased through poorness of ore and necessity for further machinery to decrease the cost." We cannot say we were perfectly satisfied with this, because we did not see how the poorness of ore should make a difference in the cost. The 1,500 tons of matte was not quite satisfactory either, and we do not know whether that 1,500 tons was absolutely the property of the company, being the result of the working of the 12 months, or whether it included the amount already there when we commenced operations. We submitted the account to Messrs. Deloitte. We made that we had earned 9,600*l.*, but according to their account, which only came to hand this morning, they show a nett profit of 5,135*l.* on 10 months' working, but they do not include 41 tons of bullion on the Quetta, now afloat, and 92 tons at the furnace. Taking this 133 tons of bullion to give a profit, say of 10*l.* when sold, and taking also the value of the mat, it would make about 12,600*l.* altogether. We personally only make it about 9,600*l.* In the face of this doubt it would have been wrong of us if we declared a dividend without being fairly convinced of our position. In the meantime some telegrams have been passing between Messrs. Moffat and a gentleman on this board, the outcome of which is this—that Messrs. Moffat are willing to forego any dividend on 50,000 shares until we have had 10 per cent. on our capital. (Cheers.) I cannot speak too highly of the spirit in which these gentlemen have met us, and I hope you will coincide with us. (Cheers.) In these circumstances we are in the very pleasing position of saying we shall be able to declare a dividend of 6d. per share, payable on the 18th February next. In the meantime I beg to tell you that one of our largest shareholders being anxious about his holding in this company, and desirous of having an independent opinion, desired his brother, who is an eminent engineer, and has been a Government Inspector of Mines, to go across to the mine and inspect it. He got there early in December, and he speaks in the highest encomium of the manner in which he was met by Messrs. Moffat, and his opinion is bright beyond all we could wish, and as bright as you could desire it. I think, gentlemen,

OUR OUTLOOK IS VERY PROMISING.

Our new machinery, we trust, will come into operation in May or June, and I think we shall be able to treble our present output, and I think we may fairly expect 15 to 20 per cent. on our money invested. I do not like to prophesy, but I will go as far as the Yankee and say "I shall not prophesy until I know." I think we can look forward to good dividends. I have nothing further to say, but shall be glad to answer any questions.

THE DISCUSSION.

Mr. Henry John Puckell: In spite of the remarks you have been good enough to make, it seems to me that the position of this company is not equal to the hopes held out in the prospectus. We were told in the prospectus that we had the advantage of taking over this property as a going concern. We have already had a 6d. dividend, and I understand there is another 6*l.* in prospect, but it does not appear to me at all satisfactory. The work, we are informed, has been going on uninterruptedly, but it does not seem to produce any profits. There is another point on which I wish to speak—that no accounts have been furnished the shareholders from the beginning of the company. (Hear, hear.) Why are we to be left absolutely in the dark upon so important matter as this? It may be that the dividend we have received was all that the directors were justified in allowing, and it may be that the dividend we are to receive is all that can be paid, but it is miserably in arrear of the promises that were made. I think this needs an explanation. In the matter of accounts, I think if the company has been 12 months working the shareholders should not be kept in the dark. It is absolutely necessary that we should know what the state of the accounts is, and I consider that the mere statement given by the chairman in this way, which is almost impossible to follow in detail, is not a satisfactory way to put before shareholders in general meeting, and I think these accounts should be furnished forthwith.

Mr. Martin: I should like to say that the shareholders shall be expecting to be called together again very shortly with accounts. We sympathise with you in your position, but at the same time I think you should call us together again. I have no doubt the property is a very good one. I have no doubt that the statements in the prospectus as to the value of the different mines, which constitute this property, are perfectly correct, but it is very disappointing to be met with such a small dividend, when such large ones were expected.

QUESTIONS.

Mr. W. M. Young said it seemed rather strange that after a year's working the directors could not give them any statement of account or income, when in the prospectus they had done so almost to a penny. He asked, what was the increase in the cost of working the company on the other side, as compared with what they gathered from the prospectus? He also wished to know what salaries the managers received in Queensland? Then with regard to the water supply. He believed it was a fact that the work had been stopped for two or three months from want of water, and yet one of the strongest points in the prospectus was that of the water supply. He wished to know whether that was likely to occur again.

A Shareholder said he understood from the chairman that he estimated the profits they might receive was something like 15 to 20 per cent., whereas in the prospectus it was estimated that 45 per cent. would be paid. He would like to know whether the directors had any reason to modify the statements of the prospectus.

THE CHAIRMAN REPLIES.

The Chairman: If I may be allowed to answer the last speaker first, I should like to say that of course the dividend will depend upon the cost of labour, fuel, and freight, and also the depth to which we have to go. These are all points on which I do not care to prophesy. Personally, I am in no way responsible for the statements of the prospectus, having joined the board after the issue; but I do not wish to dissociate myself from my colleagues. That prospectus was issued with the knowledge of the vendors, and they, more than anyone else, are responsible for the statements made. I have already told you that we have made reports to them upon the subject and the way they have met us. There is such a thing as give and take. I should think every gentleman in this room who has been connected with mining matters knows that it is absolutely impossible to tell to a percentage what the mining will cost you. A gentleman here wishes to know our income. We have sold ore and bullion to the amount of 37,414*l.* If I did not mention this before it was an omission. As to the question of no accounts—no man in this room can feel it more than I do, that we have come before you, like soldiers, without our side armour, but I thought I had explained it to you. We have simply got the pay-sheets for every penny disbursed, and it is a most difficult matter for us to pick out the items. It takes three months and a half to get an answer to our letters. We have not withheld from you any information we have received. We know no more than you. Did you expect us to publish our account sales? That would have been detrimental to the interests of the company. I have apologised for the omission of the accounts, but we are not legally bound to put them before you until the statutory general meeting, which will be on the 22nd March, and we shall be able to put accounts before you sooner than that. As to the increased expenditure which one gentleman asked to be informed upon—we are unable to give you any information upon it, but we have written out to the other side on the subject. These gentlemen with whom we have to deal are straightforward, and their integrity is undoubted, and no doubt we shall receive straightforward accounts from them in due course. (Cheers.) With regard to the water supply, we were stopped in consequence of the great drought, but we have written out and asked them to build reservoirs higher up the creek. The managers' salary was arranged before the company was formed. It is 1,000*l.* a year in Queensland, and it is money well spent, for you have very efficient men. Personally I am the fourth largest shareholder, and I have worked industriously and intelligently for you, but as to giving you further information, I have none to give. No board could have managed your affairs more honestly than we have.

A SHAREHOLDER WHO VISITED THE PROPERTY.

Mr. Wilson: I think I can throw some little information in reference to the matter before the meeting, so far as the figures and the difficulty there is in giving to us the information we all think ought to be given. We must take into consideration where these mines are, and also that the peculiar position in which they are placed with the smelting works, which we may say are our head-quarters. Having been out there myself I am able to speak upon the subject. I personally visited these mines, and Messrs. Moffat placed at my disposal all the information possible. I was two days with the manager, and he took me through the mines, and I formed an opinion of them which justified me on my return in taking

5,000 SHARES IN THE COMPANY.

(Cheers.) I saw the prospectus that was laid before the general public, but I did not expect we would realise anything like that. The reason is this—anyone who is acquainted with mining, knows that the first thing they have to do is to prospect and see what they have before them, and whether it is likely the veins will produce anything worth working. Consequently there is no preparation for doing a business on an extensive scale. It is merely a question of ferreting through the ore to see the extent of the ore comeatable. They follow the ore where they think it will pay best, and this ore is brought to bank and tested. But I can assure you from what I have seen of Messrs. Moffat, that every figure they showed you were actual facts. (Hear, hear.) The reason I took the shares in this company was, I found I had come across gentlemen to whom I could entrust the whole of my capital. I never met more honourable gentlemen. (Cheers.)

Mr. Mansell James endorsed what the last speaker had said. He believed they would be justified in putting up another 60-ton smelter.

Mr. G. Sichel and Mr. W. Blyth were then re-elected as directors, and Mr. J. Wright and Mr. Jacobs were also elected.

The Chairman then moved the following resolutions, which were all carried unan. con.

That the articles of association of the company be altered in manner following, that is to say:—

1. "Art. 8.—That '5s.' in the fifth line hereof be struck out, and that '1s.' be inserted in lieu thereof."

2. "Art. 9.—That the words 'not fully paid' be inserted in the second line hereof, after the word 'shares.'"

3. "Art. 11.—That at the end hereof the following words be added: 'Provided no call shall exceed 25 per cent. of the nominal amount of the share, and be made at intervals of not less than two months.'"

4. "Art. 15.—That the words 'in such form as the board may approve' in the second line hereof be struck out, and that the words 'in the usual common form' be inserted in lieu thereof."

5. "Art. 50.—That the word 'fifth' in the third line hereof be struck out, and the word 'tenth' substituted in lieu thereof."

6. "Art. 70.—That the words 'other than the first directors and any other directors to be appointed under the next article' be struck out."

7. "Art. 73 (Sub-Sec. 11).—That the following words be inserted after the words 'or raised' in the fourteenth line, namely, 'provided that without the sanction of a general meeting, the amount borrowed shall not exceed 100,000*l.*'"

A vote of thanks to the chairman for presiding, and to the Messrs. Moffatt for their generous action, brought the meeting to a close.

THE KABOONGA (QUEENSLAND) GOLD MINE, LIMITED.

POSITION OF THE MINE GREATLY IMPROVED—THE MISSING LODE FOUND—CONFIDENCE IN KABOONGA AS A VERY RICH MINE—DIRECTORS WORK FOR NOTHING.

IN pursuance of the promise given by the board at the ordinary general meeting in July last, an ordinary general meeting of this company was held at the Terminus Hotel, on Tuesday, when it was stated :—"The chairman of the day will use the occasion to explain the development of the company's property which has taken place since July last, and the greatly improved prospects for the future"—Col. Malleson, C.S.I. (chairman of the company), presided.

Mr. WILLIAM POWTER (secretary) read the notice calling the meeting.

A MARKED CHANGE FOR THE BETTER.

The CHAIRMAN : Gentlemen, it will be in your recollection that just six months ago, on the 29th of July last, we met in another room of this hotel, and thrashed out the condition of the company up to that date. The company was not in a very flourishing conditiou at that moment, and the prospects were not eucouraging. I told you at the time that after we had sunk to a depth of 60 ft. there occurred what the miners call "a fault," which meant that we had lost the lode, and that then, acting on the advice of a professional miner, we sent out instructions to our agent on the spot to go down to a depth of 250 ft., and cross-cut. At the period when we met last we had received information, not only that our agent had sunk to a depth of 250 ft., but that the cross-cutting had begun—up to that time with no result. A month later there was a very different aspect of affairs. It so happened that when this company was first formed we had taken great pains to discover an intelligent miner, and as I told you in July, we had sent ont a young Scotchman named Reed, who had very good certificates indeed, but Mr. Reed failed altogether in finding the lode we were in search of, and from subsequent information received from Mr. Power, our agent on the spot, I regret to state that Mr. Reed did not discover that lode, because he acted in direct opposition to the opinion of the local miners. It was thus a great satisfaction to us when in the course of last year Mr. Reed resigned his appointment. Our agent at once appointed a local miner to be the captain of the miners—a man of very good reputation—and within one fortnight of his appointment we had a telegram to state that he had found free gold.

A GRATIFYING TELEGRAM.

That telegram was duly published and sent to the shareholders. It ran as follows :—"100-ft. level continues to look well ; showing free gold ; prospects very favourable." From that moment up to the present we have received fortnightly or mouthly information more and more encouraging, until about a month ago we received a letter (I wonder it was not cabled) which contained the following paragraph :—"Sample marked No. 1, 100-ft. level. composed of quartz and marasite, white iron pyrites containing 7 ozs. 7 dwts. of about 20 carat gold per ton ; silver only present as alloy with the gold." The assay of 7 ozs. 7 dwts. exceeds the prospects which were held out to the shareholders when this company was formed, and those prospects were confirmed by a telegram received only a few days ago, which was sent to the mining papers as follows :—"6½ tons crushed, 1 oz. 2¼ dwts. per ton ; 65 tons of ore on the dump. Struck upon gold 250-ft. level. It is very probable that the reef will turn out to be an extension of the 100-ft. level." This is as much to say that at last

WE HAVE FOUND THE RICH REEF

not far from where the fault occurred at the 60-ft. level, and that we have at this moueut a backing of250 ft., showing gold which averages from 1 oz. 2 dwts. to 7 ozs. 7 dwts. per ton. (Cheers.) In fact there is, if we can trnst this telegram, which I am quite certaiu we can, enough gold already in the backing to keep this mine at work, and supply us with gold for the next 10 years. (Cheers.) I think you will admit that the prospects which have been shadowed forth are most encouraging, and that we ought, instead of despairing of the mine, to look forward to a very favourable future. (Hear, hear.) On the last occasion I mentioned incidentally the great difficulties we had eucountered in managing the mine at a distance of 13,000 miles from the spot ; and the fact that we were uot made aware of the deficiency of Mr. Reed until those deficiencies proved themselves is a point in proof of the great difficulties we have had to meet. I am confident now that we shall have henceforth a very constant supply of the precious metal from our mine. I have shown these reports to a skilled mining engineer, and he tells me they are sufficient to show that we have one of the finest mines not only in Queensland, but in the world, and I fully believe that that is true. (Cheers.)

PROMISES FULFILLED.

When we met last I made you three promises ; I told you we should meet six months hence and talk over the affairs of the mine ; I told you that we should not meet on a Saturday, and I told you that the directors would not draw their fees until we met again. (Cheers.) We have strictly carried out those three promises, and we shall not draw our fees until you choose to vote them to us. We have kept a very sharp look-out on the proceedings of our agents on the spot. We have complied with all the requisitions made upon us, and the result has been a prospect which I am sure will rejoice your hearts. Now, gentlemen, I have told you the story in a few words, but those few words are, I believe, sufficient to show you what a very valuable property you possess, aud it ought to encourage those who are disappointed—I think most justly disappointed—at the result of the early working of the mine in consequence of the "fault" in the lode, which no man could foresee, and which no man could have provided against. I shall be happy to auswer any questions, but I will only say before I sit down that the moment we have received a telegram or a letter containing information from the mine it has been our invariable practice to send it as we have received it to the mining newspapers for the information of the shareholders, and we shall continue that practice as long as we retain your confidence. (Cheers.)

QUESTIONS.

A SHAREHOLDER : I have not seen any statement that the mill is completed, and in a condition to work the company's ore. Is gold the only metal we have to rely upon ? I ask this, because some 12 months ago, shortly after the rise in copper took place, I saw a statement of the manager, in which he said he anticipated a great result from the sending home of copper matte. I have wondered how it is that we have heard nothing more of this, since one would suppose that the resources of science would be equal to treating ore on the spot at a profit. I am connected with the mine, to which an expert was sent from England, whose experiments were entirely successful. Have the directors abandoned the hope of getting any dividend from the mine, except from gold ?
